FOREWORD

The Federal Power Act was originally enacted as the Federal Water Power Act, approved June 10, 1920 (41 Stat. 1063, 16 U.S.C. 791–823). The Federal Power Commission was reorganized January 1, 1931, as an independent Commission under the act approved June 23, 1930 (46 Stat. 797). By Title II of the Public Utility Act of 1935, approved August 26, 1935 (49 Stat. 838), the original Federal Water Power Act was made part I of the "Federal Power Act" and parts II and III were added. The Federal Power Act was amended May 28, 1948 (62 Stat. 275), August 7, 1953 (67 Stat. 461), August 15, 1953 (67 Stat. 587), June 4, 1956 (70 Stat. 226), and August 28, 1958 (72 Stat. 941 at 947). The Commission also administers the Natural Gas Act, approved June 21, 1938 (52 Stat. 821, 15 U.S.C. 717–717w), as amended February 7, 1942 (56 Stat. 83, 15 U.S.C. 717f), July 25, 1947 (61 Stat. 459, 15 U.S.C. 717f), March 27, 1954 (68 Stat. 36, 15 U.S.C. 717(c)), and August 28, 1958 (72 Stat. 941 at 947, 15 U.S.C. 717r), and has certain duties under the Tennessee Valley Authority Act, approved May 18, 1933 (48 Stat. 1075), and amendments thereto; the Bonneville Act, approved August 20, 1937 (50 Stat. 731); the Fort Peck Act, approved May 18, 1938 (52 Stat. 403); and under various Flood Control and River and Harbor Acts (notably the Flood Control Act of 1944, approved December 22, 1944 (58 Stat. 887)), and other statutes, as well as Executive Orders.

This volume, the thirty-fifth of a series, contains all the formal opinions and accompanying orders of the Federal Power Commission rendered, January 1, 1966 to June 30, 1966, inclusive. In addition to the formal opinions, there have been included intermediate decisions which have become final and selected orders of the Commission issued during such period.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

CITIES SERVICE GAS COMPANY, DOCKET NO. CP65-21

FINDINGS AND ORDER RESCINDING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 3, 1966)

On November 17, 1965, Cities Service Gas Company (Applicant), filed an application for an order rescinding the certificate of public convenience and necessity issued on October 28, 1964, in Docket No. CP65-21, 32 FPC 1223, authorizing the construction and operation of metering and regulating facilities and to transport natural gas to Rounds and Stewart Natural Gasoline Company, Inc. (Rounds and Stewart), on an interruptible basis for use in a pilot recycling operation, all as more fully set forth in the application.

Applicant states that subsequent to the issuance of the said certificate, Rounds and Stewart advised that the recycling operation was not practicable at this time and that it would not require the requested natural gas; and consequently Applicant does not now require the authorization to install and operate the proposed metering and regulating facilities and to transport natural gas to Rounds and Stewart.

The Commission finds:

(1) Applicant, Cities Service Gas Company, a Delaware corporation having its principal place of business in Oklahoma City, Oklahoma, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of December 28, 1943, in Docket No. G-298 (4 FPC 471).

(2) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act, and the public convenience and necessity require that the certificate of public convenience and necessity issued to Cities Service Gas Company in Docket No. CP65-21 on October 28, 1964, be rescinded as requested.

The Commission orders:

The certificate of public convenience and necessity issued to Cities Service Gas Company in Docket No. CP65-21 on October 28, 1964, is cancelled and rescinded.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

EASTERN SHORE NATURAL GAS COMPANY, DOCKET NO. CP66-61

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 3, 1966)

On August 24, 1965, Eastern Shore Natural Gas Company (Applicant), filed in Docket No. CP66-61 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction of metering and regulating facilities to deliver interruptible gas to Chesapeake Utilities Corporation (Chesapeake) at Harrington, Delaware, for resale to the Delaware State Fair Grounds, all as more fully set forth in the application.

Applicant seeks authorization to tap its present 2-inch extension line to Killen Grain Company located at a point south of Harrington, Delaware, in order to render additional gas service to Chesapeake. Chesapeake plans to extend its line to the Delaware State Fair Grounds. The additional gas will be used to heat portions of the stands, the grooms' quarters, and to cook and heat in the restaurant. Applicant states that it will not be necessary to increase the contract demand of Chesapeake nor will Applicant require any additional supply of gas.

Applicant states that the required volume of gas can be made available from the supply presently available for sale during the summer period. The annual incremental volume is estimated by Applicant at 1,324 Mcf, while the estimated peak-day requirement will not exceed 100 Mcf.

The increased service proposed will not require any additional capital expenditure by Applicant. The cost of the proposed tap and construction of metering and regulating facilities will be made at the expense of Chesapeake.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on December 29, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, Eastern Shore Natural Gas Company, a Delaware corporation having its principal place of business in Salisbury, Maryland, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 29, 1957, in Docket No. G–12059, *et al.* (18 FPC 710).

(2) The proposed construction and operation of facilities and sale and delivery of natural gas by Applicant as hereinbefore described, and as more fully described in the application and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid construction and operation of facilities and sale and delivery of natural gas is required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to the Applicant in this proceeding, authorizing the construction and operation of facilities and the sale and delivery of natural gas as hereinbefore described and more fully described in the application and exhibits in this proceeding, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations within 6 months of the date on which this order issues.

Before Commissioners: David S. Black, Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

GRAND RIVER DAM AUTHORITY, PROJECT NO. 2524

ORDER ISSUING LICENSE (MAJOR)

(Issued January 3, 1966)*

Application was filed on June 11, 1965, and supplemented on July 22, and September 10, 1965, by Grand River Dam Authority (Applicant) of Vinita, Oklahoma for a license under Section 4(e) of the Federal Power Act (Act) for the proposed Salina Pumped-Storage Project (Salina Project) designated as Project No. 2524 to be located on the Chimney Rock Hollow and Little Saline Creek, tributaries of the Grand River, in the vicinity of the Towns of Pryor, Salina and Locust Grove in Mayes and Wagoner Counties, Oklahoma.

The proposed project would be constructed in four stages, each having an installed capacity of 130,000 kw and scheduled for completion in 1968, 1971, 1974 and 1977, respectively. It would consist of two interconnected upper reservoirs; the Chimney Rock reservoir with an area of 785 acres at full pool elevation of 870 feet and providing 12,500 acre-feet of useful storage would be built in the first stage; the Little Saline reservoir with an area of 1570 acres at full pool elevation of 870 feet and providing 25,000 acre-feet of useful storage would be built in the third stage. Both upper reservoirs will have earth and rock-filled dams of the same design and overall length of approximately 2,500 feet and a maximum height of 180 feet and will be connected by a 2,500 ft. canal. The applicant proposes to use the Markham Ferry reservoir of Project No. 2183 as the lower pool of the project.

The power facilities of the project include a powerhouse ultimately containing 12 reversible pump-turbine units, three units to be installed at each stage, and certain transmission facilities as hereinafter described. The ultimate installed generating capacity of the project will be rated 520,000 kw.

The power output from the project would be used for peaking purposes and sold to Applicant's industrial, municipal and rural electric customers, with the excess capacity and energy to be delivered to Public Service Company of Oklahoma.

The ratio of the annual benefits to annual costs, as estimated by the Commission Staff on the basis of total annual benefits of $10,222,400 and total annual costs of $7,928,300 for the ultimate development of 520,000 kw, would be 1.29.

The Department of the Army has reported that the plans of the project structures are satisfactory, insofar as interests of navigation are concerned. However, it recommended that the license include a provision requiring the operation of the project to be at all times consistent with the flood control regulations prescribed for Project No. 2183, as required in Article 33 herein.

---

*By order issued August 19, 1966, Article 12 was deleted from this order, 36 FPC 484.

The Department of the Interior in reporting on the application recommended for inclusion in the license certain special conditions for the protection and preservation of fish and wildlife and for the filing of a revised Exhibit R, as set forth in Articles 16, 17, 18, 19 of attached Form L–4, and Articles 35 and 36. A recommendation that licensee be required to provide minimum releases below Markham Ferry reservoir to be determined cooperatively with the State and Federal fish and wildlife agencies is considered to be covered adequately by the provision of the present Article 25 of the license for Project No. 2183 which requires the licensee thereof to modify operation of that project in the interest of fish and wildlife resources as prescribed by the Commission upon recommendations of the State and Federal agencies. In addition, the Department requested that the Applicant cooperate with the Muskogee Area Office of the Bureau of Indian Affairs to provide for the relocation of Indians now on lands which will be affected by the project and that Applicant cooperate with the University of Oklahoma at Norman in connection with an archeological survey prior to the construction of the project, as set forth in Articles 37 and 38.

The Department of Health, Education, and Welfare reported that the project, as planned, is not expected to have any adverse effects on water supply or water quality control.

The Commission finds:

(1) Applicant is a public corporation and an instrumentality of the State of Oklahoma; it is a municipality within the meaning of Section 3(7) of the Act; and it has submitted satisfactory evidence of compliance with all applicable State laws insofar as necessary to effectuate the purpose of a license for the project.

(2) Public notice of the filing of the application has been given. No protests or petitions to intervene have been received. No conflicting applications have been filed.

(3) The project will affect a government dam. However, as hereinafter provided, such effect will not be inconsistent with the operation of the government dam.

(4) The issuance of a license for the project as hereinafter provided, will not affect the development of any water resources for public purposes which should be undertaken by the United States.

(5) Subject to the terms and conditions hereinafter included the proposed project is best adapted to a comprehensive plan for improving and developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water power development and for other beneficial public use, including recreational purposes.

(6) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charges is 693,300 horsepower, and the amount of annual charges based on such capacity, to be paid under the license for the project for the costs of administration of Part I of the Act, is reasonable.

(7) The generator leads, twelve 12.8/161-kv transformers and bus facilities at the project powerhouse, two 161-kv double circuit transmission lines from project powerhouse to the Markham Ferry 161-kv switchyard, 161/345-kv substation in the vicinity of Markham Ferry switchyard, a 345-kv single-circuit

transmission line from the 161/345-kv substation to Oneta substation of Public Service Company of Oklahoma and appurtenant facilities as set forth in paragraph B below and which were included in the application for license, are part of the project within the meaning of Section 3(11) of the Act and should be included in the license for the project.

(8) The exhibits designated and described in paragraph B below conform to the Commission's rules and regulations and should be approved as part of the license for the project to the extent therein indicated.

(9) The Markham Ferry reservoir to be utilized by the Salina project would affect the navigable capacity of the Arkansas River and thus affect the interests of interstate or foreign commerce.

The Commission orders:

(A) This license is hereby issued to the Grand River Dam Authority (Licensee) of Vinita, Oklahoma under Section 4(e) of the Federal Power Act (Act) for a period of 50 years, effective as of December 1, 1965, for the construction, operation and maintenance of Project No. 2524 on the Chimney Rock Hollow and Little Saline Creek, tributaries of the Grand River affecting navigable waters of the United States in the vicinity of the Towns of Pryor, Salina, and Locust Grove and in Mayes and Wagoner Counties, Oklahoma, subject to the terms and conditions of the Act which is incorporated herein by reference as a part of this license and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Proposed Project No. 2524 consists of:

(i) All lands constituting the project area and enclosed by the project boundary or limits which are otherwise defined, and/or interest in such lands necessary or appropriate for the purposes of the project, whether such lands or interests therein are owned or held by the Licensee or by the United States—such project area and project boundary being more specifically shown and described by certain exhibits which form part of the application for license and which are designated and described as follows:

Exhibit	FPC No.	Titled, "Grand River Dam Authority, Salina pumped-storage project"
J	2524-1	General map.
K	2524-2	First 130,000 kw installation—project map.

(ii) All project works consisting principally of: (1) two earth and rock-fill dams both of the same design and size (total length approximately 2,500 feet and maximum height 180 feet); (2) two reservoirs, one with surface area of 785 acres and useful storage capacity of 12,500 acre-feet at full pool elevation 870, the other with surface area of approximately 1,570 acres and useful storage capacity of 25,000 acre-feet at full pool elevation 870; (3) two canals, one 2,500 feet long connecting the two reservoirs, the other 1,800 feet long leading from the smaller reservoir to a forebay at the upper end of penstocks to a powerhouse; (4) reinforced concrete powerhouse with an installation of twelve reversible pump-turbine units rated at 43,300 kw each; (5) a substation; (6) three transmission lines, two being 161-kv double-circuit lines six miles long, the third being a 345-kv single-circuit line 32 miles long; (7) use of Markham Ferry reservoir (Project No. 2183) as the lower pool of the project; and (8) appurtenant facilities, the location, nature and character of which are more specifically shown and described by the exhibits hereinbefore cited and by certain other exhibits which also formed part of the application for license and which are designated and described as follows:

	FPC No.	Titled, "First 130,000 kw installation, general design drawing"
Exhibit L:		
Sheet 1	2524-3	Plan and profile.
Sheet 2	2524-4	Dam.
Sheet 3	2524-5	Canal and forebay sections.
Sheet 4	2524-6	Powerhouse.
Sheet 5	2524-7	Tailrace and forebay details.
Exhibit M revised: Consisting of three typewritten pages, filed in the Commission Aug. 12, 1965.		

(iii) All of the structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as part of the project is approved or acquiesced in by the Commission; also, all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance or operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L-4 (Revised June 1, 1964) entitled "Terms and Conditions of License for Unconstructed Project Affecting Navigable Waters of the United States" (32 FPC 839), which terms and conditions, designated as Articles 1 through 29, are attached hereto and made a part hereof, and subject to the following special conditions set forth herein as additional articles:

Article 30. The Licensee shall commence construction of the works of each of the four stages of the project described below, and shall thereafter in good faith and with due diligence prosecute such construction, and shall complete each stage as follows:

(a) Commence not later than April 1, 1966, and complete not later than May 1, 1968, the construction of Stage 1 which includes Chimney Rock dam and reservoir; a canal between such reservoir and the forebay; the forebay; powerhouse with three reversible pump-turbine units installed with necessary penstocks and transformers and with one working bay; a 161-kv double-circuit transmission line from the powerhouse to the Markham Ferry 161-kv switchyard of Project No. 2183;

(b) Commence not later than April 1, 1969, and complete not later than July 1, 1971, the construction of Stage 2 which includes an extension to the powerhouse with three reversible pump-turbine units installed with necessary penstocks and transformers and with one working bay; a 345/161-kv substation in the vicinity of the 161-kv switchyard of Project No. 2183; and a 345-kv single-circuit transmission line to the Oneta Substation of Public Service Company of Oklahoma;

(c) Commence not later than April 1, 1972, and complete not later than July 1, 1974, the construction of Stage 3 which includes Little Saline dam and reservoir; a canal between such reservoir and Chimney Rock reservoir; an extension to the powerhouse with three reversible pump-turbine units installed with necessary penstocks and transformers and with one working bay; and second 161-kv double-circuit transmission line from the powerhouse to the Markham Ferry 161-kv switchyard of Project No. 2183;

(d) Commence not later than April 1, 1975, and complete not later than July 1, 1977, the construction of Stage 4 which includes an extension to the powerhouse with three reversible pump-turbine units installed with necessary penstocks and transformers.

Article 31. The Licensee shall file with the Commission not less than six months prior to the start of construction of each of Stages 2, 3, and 4 of the project, revised Exhibits F and K, in conformity with the Commission's rules and regulations, to show additional project area, if any, necessary for project purposes under each such stage.

Article 32. The Licensee shall submit, in conformity with the Commission's rules and regulations, Exhibit L drawings for project works contemplated under each of Stages 2, 3 and 4 of the project and shall not commence construction of any such stage until the Commission shall have approved the exhibit for that stage.

Article 33. Operation of the project shall not be inconsistent with the flood control regulations for Markham Ferry Project prescribed in Section 7 of the Act of Congress approved December 22, 1944 (58 Stat. 890; 33 USC 709), shall be such as not to alter adversely the modified inflow into the Federal Ft. Gibson project, and shall not be such as to affect injuriously the operation of Project No. 2183.

Article 34. The Licensee for Salina Pumped-Storage Project is authorized to utilize the Markham Ferry reservoir of Project No. 2183 as a source of water and as a lower pool for the operation of the Salina project when operating under this license.

Article 35. Licensee shall, within one year following issuance of this license, file for Commission approval in accordance with Section 4.41 *Exhibit R* of the Commission's Regulations under the Act a revised Exhibit R for the project, to include a plan for development of the recreational resources at the lower pool (Markham Ferry reservoir). Licensee shall not commence operation of the project prior to Commission approval of its Exhibit R.

Article 36. The Licensee shall, prior to operation of the project, consult with the Oklahoma Department of Wildlife Conservation and the United States Bureau of Sport Fisheries and Wildlife in determining the feasibility of a fishing platform on or near the retaining wall over-looking the tailrace of the Salina Pumped Storage Project powerhouse, to be designed and constructed so as to provide safe angling use of the powerhouse tailwaters.

Article 37. The Licensee shall obtain the necessary rights-of-way, easements, or title to Indian lands which may be required; negotiations with respect to obtaining such interests in Indian lands shall be conducted through the Muskogee Area Office of the Bureau of Indian Affairs.

Article 38. Licensee shall cooperate with the University of Oklahoma at Norman, Oklahoma, in a survey to determine the needs for salvage of archeological materials affected by the project, and shall, upon written request of the Commission, make available to the University for archeological survey and salvage work funds not to exceed a total of $5,000 of which not more than $1,000 may be made available for archeological survey of the project area.

Article 39: The Licensee shall pay to the United States the following annual charge effective as of December 1, 1965:

For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, a reasonable annual charge as determined by the Commission in accordance with the provisions of its regulations, in effect from time to time. The authorized installed capacity for such purposes is 693,300 horsepower.

(D) The exhibits designated and described in Paragraph B above are hereby approved as part of this license to the extent therein indicated.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided by Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgement of acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP66-151

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY, AND ACCEPTING RATE SCHEDULES AND SERVICE AGREEMENTS FOR FILING

(Issued January 3, 1966)

On November 12, 1965, Northern Natural Gas Company (Applicant) filed in Docket No. CP66-151 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing temporary winter demand service to its existing customers for the period beginning with the billing month of December 1965, and ending with the billing month of March, 1966, as more fully set forth in the application.

Applicant states that a total of approximately 30,000 Mcf per day of natural gas has been made available to its customers on a prorated basis (listed in Appendix A hereto) to be utilized in the greater part for processing and peak shaving for firm and small volume consumers. No additional facilities will be required to provide the proposed service.

Concurrently with the application Applicant has tendered for filing Temporary Winter Demand (TWD) Rate Schedules as original sheets to its FPC Gas Tariff, First Revised Volume No. 1[1] and the related service agreements with customers who will receive the service.

The four rate schedules and related rates are as follows:

Rate schedule	Demand	Commodity
TWD-1	$4.50	$22.14
TWD-2	4.50	22.64
TWD-3	4.50	23.41
TWD-B	4.50	25.21

Applicant estimates these rates will generate $1,306,630 of revenues in the four month period, based on a contract demand volume of 29,780 Mcf and the sale of 3,323,650 Mcf.

Applicant proposes that the industrial and commercial customers (listed in Appendix B) be authorized to receive firm gas during the period of service without interruption.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

---

[1] TWD-1, original sheets Nos. 35a and 35b. TWD-2, original sheets Nos. 35c and 35d. TWD-3, original sheets Nos. 35e and 35f. TWD-B, original sheets Nos. 35g and 35h. Form of Service Agreement, original sheets Nos. 55a and 55b.

At a hearing held on December 29, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization, and upon consideration of the record,

The Commission finds:

(1) Applicant, Northern Natural Gas Company, a Delaware corporation having its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G-280 (3 FPC 967).

(2) The proposed sale and delivery of natural gas, as hereinbefore described and as more fully described in the application in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed sale and delivery of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(6) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that certain conditions relating to the proposed Temporary Winter Demand (TWD) service be attached to the Commission's order authorizing the proposed service, and as related hereinafter.

(7) It is appropriate in the administration of the Natural Gas Act and in the public interest to accept for filing Applicant's Temporary Winter Demand (TWD) Rate Schedules TWD-1, TWD-2, TWD-3 and TWD-B and service agreements dated October 26, 1965, and filed November 12, 1965.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Northern Natural Gas Company authorizing the sale and delivery of natural gas for the limited period beginning December, 1965, and ending March, 1966, as hereinbefore described and as more fully described in the application in this proceeding, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(C) The grant of the certificate herein shall not constitute a determination of the reasonableness or propriety of the rate Applicant proposes to charge in connection with the service herein authorized, or of the form or forms thereof, and shall not be construed as a waiver of any of the requirements of Section 4 of the Natural Gas Act or of Section 154 of the Commission's Rules and Regulations with respect to the service herein authorized, and is without prejudice to any findings or orders which have been, or may hereafter be made by the

Commission in any proceeding now pending or hereafter instituted by or against the Applicant. Further, our action in this proceeding shall not foreclose nor prejudice any future proceeding or objection relating to the rate to be charged for the service herein authorized, or any position any customer of Applicant may hereafter take with respect to the proper distribution or allocation of Applicant's cost and expenses in any proceeding where such distribution or allocation is an issue in determining the respective rates to be charged by Applicant for the various types and classifications of service rendered by it.

(D) Northern Natural Gas Company's Temporary Winter Demand (TWD) Rate Schedules TWD-1, TWD-2, TWD-3 and TWD-B and Service Agreements dated October 26, 1965, and filed November 12, 1965, are accepted for filing effective on the date of the issuance of this order.

SOUTHLAND ROYALTY COMPANY, DOCKET NO. RI66–231

ORDER GRANTING MOTION FOR RECONSIDERATION, ACCEPTING CONDITIONALLY NOTICE OF CHANGE FOR FILING AND PROVIDING FOR HEARING ON AND SUSPENSION OF PROPOSED CHANGE IN RATE

(Issued January 3, 1966)

Southland Royalty Company (Southland) filed a motion for reconsideration on December 6, 1965, of the Commission's undocketed order issued September 10, 1965, rejecting, *inter alia*, a proposed rate increase from 15.6488¢ to 16.6584¢ per Mcf [1] tendered on August 20, 1965, by Southland for the sale of gas-well gas and low pressure flash gas to El Paso Natural Gas Company under its FPC Gas Rate Schedule No. 14 in the Permian Basin Area of Texas. The contract involved here was executed prior to January 1, 1961, and thus covers a sale of old gas under Opinion No. 468. Southland's proposed rate, which exceeds the applicable just and reasonable rate ceilings determined in Opinion No. 468 for the sale of gas in the Permian Basin Area, was rejected for the reasons set forth in the order issued August 26, 1965, 34 FPC 595, in *Socony Mobil Oil Company, Inc.*

---

[1] The proposed increased rate is designated as Supplement No. 9 to Southland's FPC Gas Rate Schedule No. 14.

(Operator), et al. Details of Southland's proposed rate increase are set forth in Appendix "A" hereof.

On October 20, 1965, subsequent to the issuance of our rejection order, the Tenth Circuit in *Skelly Oil Co.* v. *F.P.C.* (CA–10, No. 8385, *et al.*) stayed through January 20, 1966, the effectiveness of Opinion Nos. 468 and 468–A, 34 FPC 159, 1068, as to Skelly Oil Company, Phillips Petroleum Company and Warren Production Corporation. By order issued November 12, 1965, 34 FPC 1288, we stayed, *inter alia*, until January 20, 1966, the effectiveness of paragraph (H) relating to the moratorium on rate increases as to all producers covered by these opinions which have not filed a petition for court review. Accordingly, we believe it appropriate to grant Southland's motion for reconsideration of the Commission's order issued September 10, 1965, rejecting Southland's rate filing, and to conditionally accept such rate increase for filing and to simultaneously suspend it for a period of five months from September 20, 1965, the date it would have become effective had it not been rejected. Our acceptance of the instant rate increase filing is expressly conditioned to provide that the rate increase will be rejected, *ab initio*, in the event the court stay referred to above is dissolved or Opinion Nos. 468 and 468–A are upheld upon judicial review insofar as ordering paragraph (H) is concerned.

Southland requests that its proposed rate increase be permitted to become effective as of August 20, 1965. Good cause has not been shown for waiving the 30-day notice requirement provided in Section 4(d) of the Natural Gas Act to permit an earlier effective date for Southland's rate filing and such request is denied.

The proposed changed rate and charge may be unjust, unreasonable, unduly discriminatory, or preferential, or otherwise unlawful.

The Commission finds:

It is necessary and proper in the public interest and to aid in the enforcement of the provisions of the Natural Gas Act that the Commission enter upon a hearing concerning the lawfulness of the proposed change, and that Supplement No. 9 to Southland's FPC Gas Rate Schedule No. 14 be suspended and the use thereof deferred as hereinafter ordered.

The Commission orders:

(A) Pursuant to the authority of the Natural Gas Act, particularly Sections 4 and 15 thereof, the Commission's Rules of Practice and Procedure, and the Regulations under the Natural Gas Act (18 CFR, Chapter I), a public hearing shall be held upon a date to be fixed by notice from the Secretary concerning the lawfulness of the proposed increased rate and charge contained in Supplement No. 9 to Southland's FPC Gas Rate Schedule No. 14.

(B) Pending such hearing and decision thereon, Supplement No. 9 to Southland's FPC Gas Rate Schedule No. 14 is conditionally accepted for filing, as noted above, and is hereby suspended and the use thereof deferred until February 20, 1966, and thereafter until such further time as it is made effective in the manner prescribed by the Natural Gas Act.

(C) Neither the supplement hereby suspended, nor the rate schedule sought to be altered thereby, shall be changed until this proceeding has been disposed of or until the period of suspension has expired, unless otherwise ordered by the Commission.

(D) Notices of intervention or petitions to intervene may be filed with the Federal Power Commission, Washington, D. C. 20426, in accordance with the Rules of Practice and Procedure (18 CFR 1.8 and 1.37(f)) on or before February 15, 1966.

TRUNKLINE GAS COMPANY v. THE SUPERIOR OIL COMPANY, DOCKET NO. RI64-273; THE SUPERIOR OIL COMPANY, DOCKET NOS. G-18168, G-20435 AND G-20577

ORDER GRANTING IN PART AND DENYING IN PART APPLICATION FOR REHEARING AND MODIFYING COMMISSION ORDER

(Issued January 3, 1966)*

On December 10, 1965, Trunkline Gas Company (Trunkline) filed an application for rehearing of our order issued November 10, 1965, 34 FPC 1284, in this proceeding. That order held: (1) that Trunkline must pay The Superior Oil Company (Superior) interest in the amount of $33,212.67, which had accrued on accumulated charges that Trunkline had not properly paid Superior for gas previously bought and received from Superior and (2) that Trunkline must pay interest on such interest at 7 percent per annum accruing from March 30, 1964, until the date the required payment is made.

Trunkline challenges both of the above holdings. Respecting the first, Trunkline contends that we erred in requiring it to make any interest payment to Superior, arguing, *inter alia*, that it unconditionally tendered the unpaid charges to Superior but Superior unjustifiably refused payment; that the "filed rate" doctrine relied on in our order does not support holding Trunkline liable for interest on the charges not paid to Superior and that certain judicial decisions cited in our order are inapplicable or indeed require the opposite result.

Trunkline's objections to the first holding above are sufficiently answered by our November 10, 1965 order which held that there is a good and sufficient basis for requiring Trunkline to pay interest on the total amount Trunkline owed Superior.

Trunkline's objections to our second holding raises an issue not heretofore argued by the parties, namely, whether Trunkline should be required to pay compound interest on the sums due Superior. Before deciding this question, we think Superior and the Commission Staff should have an opportunity to present their views. Accordingly, we will grant rehearing of our order of November 10, 1965, insofar as it relates to the question of compound interest and allow Superior and the Staff 30 days to file briefs in support of their position on this issue.

The Commission orders:

(A) Trunkline's application for rehearing of the Commission's order of November 10, 1965, in this case, insofar as it relates to whether it should be obliged to pay compound interest, is granted for the purposes of giving the question further consideration.

---

*See order issued March 4, 1966 on rehearing, etc., 35 FPC 335.

(B) Superior and the Commission Staff may file a brief in support of their position on the issue described in paragraph (A), *supra*, on or before 30 days of the date of this order.

(C) Except to the extent provided in paragraph (A), *supra*, Trunkline's application for rehearing of the Commission's order of November 10, 1965, in this case is denied.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

ALABAMA POWER COMPANY, PROJECT NO. 2146

ORDER APPROVING REVISED PROJECT EXHIBITS AND ADJUSTING AUTHORIZED INSTALLED CAPACITY AND ANNUAL CHARGES

(Issued January 4, 1966)

On February 10, 1965, Alabama Power Company, licensee for Project No. 2146, filed application for Commission approval of revised Exhibits L and M showing proposed changes and modifications to the proposed Jordan Dam No. 2 development of the project, including the installation therein of the third (ultimate) generating unit during the initial construction of the Jordan Dam No. 2 development. Project No. 2146 is situated on the Coosa River, Alabama.

The proposed changes would provide for: (1) the use of one radial type intake gate per unit which would result in a reduced width in the intake structure; (2) relocation of the powerhouse downstream to secure a flatter slope on the earthen dike between the intake structure and the powerhouse; (3) construction of a deck over the powerhouse draft tubes where the step-up substation will be relocated; and (4) the raising of the forebay dikes by one foot and provide an additional two-foot high rock berm on the dikes for required freeboard including protection against wave action.

The structures for the Jordan Dam No. 2 development, as proposed to be changed and modified, are considered stable and adequate under both normal and flood water conditions of loading.

The Secretary of the Army and the Chief of Engineers have reported that since the application and revised exhibits do not give adequate information for an analysis of velocities caused by any of the turbine releases that will affect navigation in the tailrace and intake canals, the extent and effect of power release waves on navigation in the canals will require considerable study and analysis when navigation facilities on the Coosa River are added. However, the report adds, on the basis of the drawings, along with the provisions in the license in the interests of navigation, it is believed that a satisfactory navigation plan can be developed when needed in the future, and the report concludes that the plans of the project structures affecting navigation are satisfactory.

Our approval of the revised exhibits will provide for the installation during the initial construction of the Jordan Dam No. 2 development of the 3rd generating unit of 75,000 kw having a 100,000 nominal horsepower capacity.

The Commission finds:

(1) The following described revised exhibits conform to the Commission's Rules and Regulations and should be approved as part of the license for the project:

	FPC number	Title, "Coosa River development, Jordan Dam No. 2"
Exhibit L revised:		
Sheet No. 25B	2146-221	Typical sections through intake, tailrace, and dike.
Sheet No. 26A	2146-222	General arrangement of powerhouse.
Sheet No. 27A	2146-223	Intake—Transverse section.
Sheet No. 27A-1	2146-224	Powerhouse—Transverse section.
Sheet No. 28A	2146-225	Powerhouse—Longitudinal section along center line units.
Sheet No. 29A	2146-226	Powerhouse—Plan at elevation 157.13.
Sheet No. 29B	2146-227	Powerhouse—Plan at elevation 142.75.
Sheet No. 29C	2146-228	Powerhouse—Plan at elevation 127.75.
Sheet No. 29D	2146-229	Powerhouse—Plan at elevation 110.0, center line of distributors.
Sheet No. 29E	2146-230	Powerhouse—Plan at elevation 86.50.
Exhibit M revised, Jordan No. 2 development, entitled, "General descriptions of mechanical, electrical, and transmission equipment," dated Feb. 5, 1965, and filed as part of the application.		

(2) The following described license exhibits which have been superseded should be eliminated from the license for the project: Exhibit L, Sheets Nos. 25B, 26A, 28A, 29A, 29B, and 29C (FPC Nos. 2146-203, 207, and 209 through 212, respectively) and Exhibit M, pages one and two, filed in the Commission on September 4, 1959.

(3) The authorized capacity to be installed during the initial construction of the Jordan Dam No. 2 development for the purpose of computing the capacity component of the administrative annual charge is by this order increased by 100,000 horsepower, or to a total installation of 920,000 horsepower for the entire project, and the amount of annual charges, based on such increased capacity, to be paid under the license for the project for the costs of administration of Part I of the Federal Power Act is reasonable.

The Commission orders:

(A) The revised exhibits described in finding (1) above are hereby approved as part of the license for Project No. 2146, and the superseded license exhibits described in finding (2) above are hereby eliminated from the license for the project.

(B) Article 28 of the license is hereby further amended to show the authorized installed capacity of the project as being increased to 920,000 horsepower.

(C) This license amendment is effective as of December 1, 1965.

(D) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this order. In acknowledgment of the acceptance of this order, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

ARKANSAS LOUISIANA GAS COMPANY, ET AL., DOCKET NO. G-4438, ET AL.

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY, AMENDING CERTIFICATES, PERMITTING AND APPROVING ABANDONMENT OF SERVICE, TERMINATING CERTIFICATE, AND ACCEPTING RELATED RATE SCHEDULES AND SUPPLEMENTS FOR FILING

(Issued January 4, 1966)

Each of the Applicants listed herein has filed an application pursuant to Section 7 of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale and delivery of natural gas in interstate commerce, for permission and approval to abandon service, or a petition to amend an existing certificate authorization, all as more fully described in the respective applications and petitions (and any supplements or amendments thereto) which are on file with the Commission.

The Applicants herein have filed related FPC Gas Rate Schedules and propose to initiate or abandon, add or delete natural gas service in interstate commerce as indicated by the tabulation herein. All sales certificated herein are either equal to or below the ceiling prices established by the Commission's Statement of General Policy No. 61-1, as amended, or involve sales for which permanent certificates have been previously issued.

After due notice, no petitions to intervene, notices of intervention, or protests to the granting of any of the respective applications or petitions in this order have been received.

At a hearing held on December 29, 1965, the Commission on its own motion received and made a part of the record in these proceedings all evidence, including the applications, amendments and exhibits thereto, submitted in support of the respective authorizations sought herein, and upon consideration of the record,

The Commission finds:

(1) Each Applicant herein is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission or will be engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission, and will therefore, be a "natural-gas company" within the meaning of said Act upon the commencement of the service under the respective authorizations granted hereinafter.

(2) The sales of natural gas hereinbefore described, as more fully described in the respective applications, amendments and/or supplements herein, will be made in interstate commerce, subject to the jurisdiction of the Commission, and such sales by the respective Applicants, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The sales of natural gas by the respective Applicants, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are required by the public convenience and necessity and certificates therefor should be issued as hereinafter ordered and conditioned.

(4) The respective Applicants are able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the certificate authorizations heretofore issued by the Commission in Docket Nos. G–4438, G–4780, G–6073, CI60–509, CI61–524, CI63–337, CI65–755 and CI65–1319 should be amended as hereinafter ordered and conditioned.

(6) The sale of natural gas proposed to be abandoned by Applicant in Docket No. CI66–390, as hereinbefore described, all as more fully described in the tabulation herein and in the application is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act, and such abandonment should be permitted and approved and the related certificate heretofore issued in Docket No. G–19517 should be terminated.

(7) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that the respective related rate schedules and supplements as designated or redesignated in the tabulation herein should be accepted for filing as hereinafter ordered.

The Commission orders:

(A) Certificates of public convenience and necessity are issued upon the terms and conditions of this order, authorizing the sales by the respective Applicants herein of natural gas in interstate commerce for resale, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary for such sales, all as hereinbefore described and as more fully described in the respective applications, amendments, supplements and exhibits in this proceeding.

(B) The certificate granted in paragraph (A) above are not transferable and shall be effective only so long as Applicants continue the acts or operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(C) The grant of the certificates issued in paragraph (A) above shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or of Part 154 or Part 157 of the Commission's Regulations thereunder, and is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against the respective Applicants. Further, our action in this proceeding shall not foreclose nor prejudice any future proceedings or objections relating to the operation of any price or related provisions in the gas purchase contracts herein involved. Nor shall the grant of the certificate aforesaid for service to the particular customers involved imply approval of all of the terms of the respective contracts, particularly as to the cessation of service upon termination of said contracts, as provided by Section 7(b) of the Natural Gas Act. Nor shall the grant of the certificates aforesaid be construed to preclude the imposition of any sanctions pursuant to the provisions of the Natural Gas Act for the unauthorized commencement of any sales of natural gas subject to said certificates.

(D) The grant of the certificates issued herein on all applications filed after April 15, 1965, is upon the condition that no increase in rate which would exceed the ceiling prescribed for the given area by paragraph (d) of the Commission's Statement of General Policy No. 61–1, as amended, shall be filed prior to the applicable dates, as indicated by footnotes 2 and 12 in the attached tabulation.

(E) The certificate issued herein in Docket No. CI66-342 is subject to the conditions set forth in paragraphs (E), (F) and (G) of the order accompanying Opinion No. 350 (27 FPC 35), except that said certificate shall not be subject to the Commission's ultimate determination in Docket No. R-200.

(F) The certificates heretofore issued in Docket Nos. G-4438, CI60-509 and CI65-1319 are amended by adding thereto authorization to sell natural gas to the same purchasers and in the same areas as covered by the original authorizations, pursuant to the rate schedule supplements as indicated in the tabulation herein.

(G) The authorization granted in paragraph (F) above in Docket No. CI60-509 authorizing the sale of gas by Union Producing Company to its parent, United Gas Pipe Line Company, determines the rate which legally may be paid by the buyer to the seller, but is without prejudice to any action which the Commission may take in any future rate proceeding involving either company.

(H) The certificate heretofore issued in Docket No. CI63-337 is amended by adding thereto authorization to sell additionally dedicated natural gas subject to the conditions set forth in paragraphs (C), (D) and (E) of the order accompanying Opinion No. 353 (27 FPC 449), except that the provisions relating to minimum take-or-pay of 80 percent of annual contract quantities shall not be applicable.

(I) The certificates heretofore issued in Dockets Nos. G-4780, G-6073 and CI61-524 are amended by deleting therefrom authorization to sell natural gas from acreage assigned to Applicants in Docket Nos. CI66-406, CI66-405 and CI63-337.

(J) The certificate heretofore issued in Docket No. CI65-755 is amended to include the sale of natural gas from the additional acreage and said authorization is conditioned as follows:

(a) The initial rate shall be 16.0 cents per Mcf at 14.65 psia for the gas produced from the newly dedicated acreage and 15.5 cents per Mcf at 14.65 psia for the gas attributable to the interest previously covered under Texas American Oil Corporation's FPC Gas Rate Schedule No. 1, or the applicable area rate, 16.5 cents per Mcf at 14.65 psia, less reductions therefrom for any quality deviations as determined pursuant to Ordering paragraph (B) of the Commission's Opinion No. 468, as modified by Opinion No. 468-A, 34 FPC 159, 1068, whichever is lower.

(b) No increase rate shall be filed prior to January 1, 1968, except in compliance with a specific order of the Commission, for a rate, inclusive of tax reimbursement, in excess of the applicable area rate as determined pursuant to Opinion No. 468, as modified by Opinion No. 468-A, or any subsequent order of the Commission,

(c) Applicant shall file within 90 days from the date of initial delivery a Rate Schedule-Quality Statement as specified in ordering paragraph (F) of Opinion No. 468, as modified by Opinion No. 468-A, and

(d) If the quality of the gas delivered hereunder at any time deviates from the quality standards set forth in Ordering paragraph (B) of Opinion No. 468-A so as to require a downward adjustment to the existing rate, a notice of change in rate must be filed pursuant to the provisions of Section 4 of the Natural Gas Act; *provided, however,* that adjustments reflecting changes in Btu content shall be computed by the applicable formula and charged without the filing of a notice of change in rate.

(K) Permission for and approval of the abandonment of service by Applicant in Docket No. CI66–390 as hereinbefore described and as more fully described in the application herein is granted and the related certificate heretofore issued in Docket No. G–19517 is terminated.

(L) The respective related rate schedules and supplements as indicated in the tabulation herein are accepted for filing subject to the applicable Commission Regulations under the Natural Gas Act to be effective on the dates as indicated in the tabulation herein.

---

[1] Effective date: Date of this order.

[2] Jan. 1, 1968, moratorium date pursuant to Commission's Statement of General Policy 61-1, as amended.

[3] Adds oil well gas.

[4] Effective date: date of initial delivery.

[5] Adds acreage acquired from Shell Oil Co. in Docket No. CI61-524.

[6] By letter filed 8-6-65 applicant expressed willingness to accept authorization for the additional acreage as conditioned herein.

[7] Conveys acreage from Shell Oil Co. to Pan American Petroleum Corp. (Operator), *et al.*

[8] Amends the 7-2-65 filing.

[8a] Adds interest of Sinclair Oil & Gas Co.

[9] By letter filed 12-9-65 applicant expressed willingness to accept a permanent certificate conditioned the same as its temporary certificate issued 12-1-65.

[10] Adds new acreage and interest in acreage presently covered under Texas American Oil Corp. (Operator), *et al.*, FPC GRS No. 1, in Docket No. CI64-1318, which covers Texas Crude's interest as an "*et al.*" party.

[11] Provides for a price of 15.5¢/Mcf for Crude Oil's interest in the gas produced by Texas American from section 121 and formerly sold under the latter's FPC GRS No. 1.

[12] July 1, 1967, moratorium date pursuant to Commission's Statement of General Policy 61-1, as amended.

[13] By letter filed 12-8-65 applicant expressed willingness to accept a permanent certificate conditioned as were the certificates issued in Opinion No. 350 (excluding R-200 condition).

[14] Source of gas depleted.

[15] Dedicated acreage pertains to sales from gas reserves located above the base of the Morrow Formation.

[16] Relieves seller of obligation to compress gas and gives buyer option to do so.

[17] Eliminates premature termination and indefinite pricing provision from contract.

[18] Basic contract between Stanolind Oil and Gas Co. (now Pan American Petroleum Corp.) and American Natural Gas Co. (now American Louisiana Pipe Line Co.); on file as Pan American's FPC GRS No. 156.

[19] Revises the contract quantity provision.

[20] Defines the quantity of gas in the basic contract if new contracts are entered into.

[21] Extends the time for buyer to obtain a certificate.

[22] Buyer informs seller that a satisfactory certificate has been obtained.

[23] Defines average daily quantity until an initial determination of reserves has been made.

[24] Extends the time for making a reserve determination.

[25] Extends the date for deliveries to commence.

[26] Assignment whereby applicant acquired the interests of Pan American and Amerada in the 7,300 foot Marginulia Sand of the assigned leases.

[27] Assignment whereby applicant surrenders a portion of the 10-1-62 assignment back to Pan American and Amerada while acquiring their interests in certain other leases.

[28] Basic contract between Amerada Petroleum Corp. and United Gas Pipe Line Co.; on file as Amerada Petroleum Corp. FPC GRS No. 65.

[29] Amends taxing provisions.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

BLUEBONNET GAS CORPORATION, DOCKET NO. CP66-157

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 4, 1966)

On November 17, 1965, Bluebonnet Gas Corporation (Applicant) filed in Docket No. CP66-157 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities and the sale of natural gas to Florida Gas Transmission Company (Florida Gas) for resale, as more fully described in the application.

Applicant will construct and operate metering and regulating facilities in Bayou White Field, Pointe Coupee Parish, Louisiana, to transport gas to be purchased by Applicant from Vernon J. Main, Jr. (Main). Applicant estimates that the proposed deliveries through these facilities will be 1,000 Mcf of gas per day from estimated dedicated reserves of 3,055 MMcf at 15.025 psia.

On September 27, 1965, Main filed in Docket No. CI66-238 an application for certificate authorization for the proposed sale to Applicant. Main's requested authorization is being issued simultaneously herewith under Arkansas Louisiana Gas Company, *et al.*, Docket No. G-4438, *et al.*, *supra*, p. 17.

Main will construct approximately 1.5 miles of 2½-inch gathering line from his well to a point near Florida Gas' pipeline which passes through Pointe Coupee Parish, Louisiana. Applicant's proposed facilities will connect those of Main and Florida Gas.

Applicant will purchase the gas from Main at 15 cents per Mcf and sell all of it to Florida Gas at 16.5 cents per Mcf under Applicant's Rate Schedule X-1.

The estimated cost of the proposed facilities is $13,000, which includes $3,500 to be reimbursed to Florida Gas for the cost of the tap. The installation costs will be financed through the issuance of additional common stock to Applicant's parent company, Lumar Gas Corporation. The proposal is economically feasible.

Due notice of the filing of the application was published in the Federal Register on December 3, 1965 (30 F.R. 15001). No petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on December 29, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Bluebonnet Gas Corporation, a Texas corporation with its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of May 21, 1965, in Docket No. CP65-326 (33 FPC 1032).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the sale and delivery of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed sale and delivery of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of said Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, Bluebonnet Gas Corporation, authorizing the construction and operation of the facilities and the sale and delivery of natural gas, as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be completed and placed in actual operation and the proposed sale and delivery of natural gas shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within three months from the date of this order.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

CONSUMERS POWER COMPANY, PROJECT NO. 2436

ORDER ISSUING LICENSE (MAJOR)

(Issued January 4, 1966)*

Application was filed on December 30, 1963, and supplemented on September 24, 1964, and July 19 and September 24, 1965, by Consumers Power Company (Applicant) of Jackson, Michigan, under Section 4(e) of the Federal Power Act (Act) for constructed Project No. 2436, known as the Foote Plant, located on Au Sable River in Iosco County, Michigan. No lands of the United States are affected by the project.

Construction of the Foote Plant (originally known as Rogers Bank Dam) was commenced in 1916, with commercial operation starting on January 17, 1918. The project substation was rebuilt in a different location in 1921 and the operating head was raised 2 feet in 1925. No further changes have been made to the project since 1925, except that control of the powerplant was converted to semiautomatic operation in 1962.

---

* Rehearing granted by order issued February 23, 1966.

There is ample evidence available that there was long continued and extensive use of Au Sable River for log driving operations, the quantities running into billions of board feet during the years 1867 to 1908. Large quantities of the logs were fed into the Au Sable River from points above Applicant's Mio hydroelectric development at river mile 72.7, designated as Project No. 2448, application for license for which is pending. The sawmills receiving the logs were located at the mouth of the river in the towns of Oscoda and Au Sable on Lake Huron. The Foote Plant is located on the Au Sable River at river mile 12.4.

The Secretary of the Army and the Chief of Engineers have advised that the plans of the project structures affecting navigation are satisfactory insofar as the interests of navigation are concerned.

The Department of the Interior, in reporting on the application, recommended for inclusion in any license for the project the terms and conditions in the interests of fish, wildlife, and recreation set forth in attached Form L-3.

The Department of Health, Education, and Welfare has advised that the project has no adverse effect on water supply, water pollution control or vector control, and none is expected.

The Michigan Department of Conservation has advised that it has reached an agreement with Applicant (dated November 17, 1964) under which Applicant will discharge minimum flows into the Au Sable River in the interests of fish and wildlife, and sell or lease to State or local agencies such project lands as may be reasonably required to accommodate an orderly scheme of recreational development. To protect the fishery below the project dam, we are by Article 32 requiring Applicant to discharge water below the dam in an amount comparable in quantity to the experimented minimum discharges in effect and observed by Applicant and the Michigan Department of Conservation on September 29, 1964.

We have noted that the project boundary shown on the land Exhibit K filed as part of the application for license exceeds the area limits for project reservoirs imposed by Section 4.41(iii) of the Commission's Regulations under the Federal Power Act. However, since the excess land area shown appears to have considerable value for recreation, the aforesaid extension of project boundary is justified.

Applicant has filed an Exhibit R as part of its application, showing present recreational needs which we are herein approving to the extent indicated in paragraph (D) below, as a part of this license. By Article 31 we are requiring Applicant to continue to cooperate with Federal, State and local agencies in the development and maintenance of recreational facilities including the reservation and transfer of project lands as may be appropriate for recreational purposes, and to report the results of such cooperation and development to the Commission periodically.

For the reasons set forth in our Opinion No. 357 (27 FPC 830), the license herein granted shall have a termination date of December 31, 1993. Since there was no project construction after 1935, we will make the effective date of the license April 1, 1962.

The Commission finds:

(1) The Au Sable River, from its mouth to points upstream above Mio at river mile 72.7, is a navigable waterway of the United States.

(2) Foote Plant Project No. 2436 is located on navigable waters of the United States.

(3) Applicant is a corporation organized under the laws of the State of Maine and is authorized to do business in the State of Michigan, and has sub-

mitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(4) Public notice of the filing of the application has been given. No protests or petitions to intervene have been received. No conflicting application is before the Commission.

(5) The project does not affect a Government dam, nor will the issuance of a license therefor, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

(6) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving or developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes.

(7) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is 12,000 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the project, for the costs of administration of Part I of the Act is reasonable.

(8) Exhibit R, filed as part of the application, as supplemented on July 16 and September 24, 1965, conforms to the Commission's rules and regulations and should be approved as part of this license, except to the extent that it relates to minimum water flow releases below the project dam.

(9) The exhibits designated and described in paragraph (B) below conform to the Commission's rules and regulations and should be approved as part of this license.

The Commission orders:

(A) This license is hereby issued to Consumers Power Company (Licensee) of Jackson, Michigan, under Section 4(e) of the Federal Power Act (Act) for a period effective as of April 1, 1962, and terminating December 31, 1993, for the continued operation and maintenance of the Foote Plant Project No. 2436, located on the Au Sable River, in Iosco County, Michigan, subject to the terms and conditions of the Act which is incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Foote Plant Project No. 2436 consists of:

(i) All lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined, and/or interest in such lands necessary or appropriate for the purposes of the project, whether such lands or interest therein are owned or held by the Licensee or by the United States; such project area and project boundary being more specifically shown and described by certain exhibits which formed part of the application for license and which are designated and described as follows:

Exhibit J: Sheet 1 (FPC No. 2436-1) General Map of Project.

Exhibit K: Sheet 1 to 3, incl. (FPC Nos. 2436-2 to -4, inclusive) Detail Map of Project.

(ii) A dam about 40 feet high composed of two earth embankments, total length 3,900 feet, flanking a powerhouse and spillway section of hollow concrete 214 feet long, with three spillway bays controlled by steel tainter gates; (2) a reservoir, called Foote Pond, about 11 miles long and 1,800 acres in surface area with a normal operating level of 639.17 feet; (3) a steel frame and brick powerhouse with concrete substructure containing three hydroelectric units of

3,000 kw each and appurtenant facilities; (4) a substation adjoining the powerhouse containing two 3-phase, 5,000 kva, 4.8/46 kv transformers, switch-gear and (a non-project distribution circuit connection); (5) a 46-kv transmission line extending from the substation about 600 feet to a connection with the Company's Alabaster line; and appurtenant electrical and mechanical facilities; the location, nature and character of which being more specifically shown and described by the the exhibits hereinbefore cited and by certain other exhibits which formed part of the application for license and which are designated and described as follows:

Exhibit L: Sheets 1 and 2 (FPC Nos. 2436-5 and -6) "General Design."

Exhibit M: Two typewritten pages, "General Description of Project Equipment," filed in the Commission December 30, 1963.

(iii) All of the structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as part of the project is approved or acquiesced in by the Commission; also, all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance or operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L-3 (Revised August 1, 1964) entitled "Terms and Conditions of License for Constructed Project Affecting Navigable Waters of the United States" (32 FPC 1114), which terms and conditions, designated as Articles 1 through 29, are attached hereto and made a part hereof, except Article 25 thereof, and subject to the following special conditions set forth herein as additional articles:

Article 30. The Licensee shall pay to the United States the following annual charge, effective April 1, 1962:

For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, a reasonable annual charge as determined by the Commission in accordance with the provisions of its regulations, in effect from time to time. The authorized installed capacity for such purpose is 12,000 horsepower.

Article 31. Licensee shall cooperate with Federal, State and local agencies in the development and maintenance of access areas and roads and such other facilities necessary for full recreational utilization by the public of project lands and waters, including the reservation and transfer of project lands as may be appropriate for recreational purposes, consistent with the terms of the license and the operation of the project. At the end of three (3) years from the date of issuance of this license and every fifth year, thereafter, Licensee shall advise the Commission of the results of cooperation with State and local agencies and of further recreation development at the project.

Article 32. The Licensee shall discharge a minimum flow of 333 cfs (or the inflow into the reservoir, which ever is less) at all times from the reservoir into the Au Sable River, provided that such flows may be adjusted by further order of the Commission, following studies by and upon recommendation of the Michigan Conservation Department and the U.S. Department of the Interior, after notice and opportunity for hearing.

Article 33. On the application of any person, association, corporation, Federal agency, State or municipality, the Licensee shall, after notice and opportunity for hearing, permit such reasonable use of its reservoirs or other project works or parts thereof as may be ordered by the Commission in the interest of comprehensive development of the waterway or waterways involved and the conservation and utilization of water resources of the region for water supply for steam electric, irrigation, industrial, municipal or similar purposes, consistent with the primary objective of the project. The Licensee shall receive such reasonable compensation as may be appropriate for use of its reservoirs or other project works or parts thereof for such purposes, any such compensation to be fixed either by Commission approval of an agreement between Licensee and the party or parties benefiting or by the Commission in the event the parties are unable to agree. Applications shall contain information in sufficient detail to afford a full understanding of the proposed use, including satisfactory evidence that the applicant possesses necessary water rights pursuant to applicable State law, or a showing of cause why such evidence cannot be submitted, and a statement as to the relationship of the proposed use to any State or municipal plans or orders which may have been adopted with respect to the use of such waters.

(D) The Exhibit R referred to in finding (8) above is hereby approved as part of this license, except to the extent that it relates to minimum water flow releases.

(E) The exhibits designated and described in paragraph (B) above are hereby approved as part of this license.

(F) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. CP66-83; TRANSWESTERN PIPELINE COMPANY, DOCKET NO. CP66-88

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 4, 1966)

On September 23, 1965, Panhandle Eastern Pipe Line Company (Panhandle) filed in Docket No. CP66-83 an application pursuant to Section 7(c) of the Natural Gas Act requesting a certificate of public convenience and necessity authorizing the exchange of natural gas with Transwestern Pipeline Company (Transwestern) pursuant to an agreement between Panhandle and Transwestern dated April 12, 1965, all as more fully set forth in the application.

On October 1, 1965, Transwestern Pipeline Company (Transwestern), filed in Docket No. CP66-88 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the exchange of gas with Panhandle Eastern Pipe Line Company (Panhandle) at a point located in Sherman County, Texas, all as more fully set forth in said application.

Both Panhandle and Transwestern state that the proposed exchange service can be rendered by utilizing the available capacity of both Transwestern and Panhandle. The exchange arrangement will provide for greater utilization of existing facilities, thereby eliminating the need for duplicate facilities, and resulting in savings in cost which would benefit consumers.

Transwestern will receive into its system, gas committed to Panhandle from three wells in Roberts and Hemphill Counties, Texas. These three wells produce a total average volume of less than 1,700 Mcf per day. Panhandle will construct approximately 2.7 miles of lateral connecting these wells to Transwestern under its currently authorized budget certificate. Transwestern will then re-deliver equal volumes to Panhandle through an existing interconnection located in Sherman County, Texas, authorized by order issued June 29, 1965, in Docket Nos. CP65-362 and CP65-370, 33 FPC 1304.

The only additional facilities required by Transwestern will be two minor taps and valves estimated to cost $3,020. The cost of the proposed facilities will be financed with cash on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the applications has been filed.

At a hearing held on December 29, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the applications and exhibits, submitted in support of the authorizations, and upon consideration of the record,

The Commission finds:

(1) Applicant, Panhandle Eastern Pipe Line Company a Delaware corporation having its principal place of business in Kansas City, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 17, 1945, in Docket No. G-254 (4 FPC 1081).

(2) Applicant, Transwestern Pipeline Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order issued October 10, 1963, in Docket No. CP63-290 (30 FPC 997).

(3) The proposed construction and operation of facilities and exchange of natural gas by Transwestern and operation of facilities and exchange of natural gas by Panhandle, as hereinbefore described and as more fully described in the applications and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) The aforesaid proposed construction and operation of facilities, and exchange of natural gas are required by the public convenience and necessity and certificates therefor should be issued as hereinafter ordered and conditioned.

(5) Transwestern and Panhandle are able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(6) Public convenience and necessity require that the certificates issued hereinafter and the rights granted thereunder be conditioned upon Transwestern's and Panhandle's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(2), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) Certificates of public convenience and necessity are issued to Transwestern and Panhandle authorizing the construction and operation of facilities and the exchange of natural gas by Transwestern and the operation of facilities and exchange of natural gas by Panhandle as more fully described in the applications in these proceedings, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificates issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(2), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized to be constructed and operated by Transwestern shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations within six months of the date on which this order issues.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

WESTMORE DRILLING COMPANY, INC. (OPERATOR), ET AL., DOCKET NO. RI66-96

ORDER GRANTING MOTION IN PART

(Issued January 4, 1966)

Westmore Drilling Company, Inc. (Operator), *et al.* (Westmore) filed on November 15, 1965, a motion requesting that its proposed increased rate of 14¢ per Mcf which is under suspension in Docket No. RI66-96 be made effective as of May 22, 1965. The proposed rate, designated as Supplement No. 14 to Westmore's FPC Gas Rate Schedule No. 2, was tendered for filing on September 9, 1965, and thereafter suspended by order issued October 7, 1965, for one day until October 11, 1965. Concurrently with its motion, Westmore filed an acceptable agreement and undertaking in accordance with the October 7 order. The 14¢ rate is therefore effective subject to refund as of October 11, 1965, under that order.

Westmore received temporary authorization to make the subject sale by order issued May 11, 1965, in Docket No. CI65-918 at an initial rate of 13¢ per Mcf in lieu of the 14¢ initial rate sought in its certificate application. Westmore's application covered acreage obtained by assignment from Champlin Oil & Refining Company (Champlin) which was at that time dedicated under Champlin's FPC Gas Rate Schedule No. 76. Champlin's effective rate under that rate schedule was then 13¢ per Mcf, but Champlin had filed for a rate increase to 14¢ per Mcf which was under suspension in Docket No. RI65-380 until May 22, 1965. The 14¢ initial rate sought by Westmore was not authorized in the May 11 order because there was no justification for placing Westmore in a more favorable position than the assignor. It was indicated there, however, that Westmore could file for an increased rate of 14¢ per Mcf and request a shortened suspension period to coincide with Champlin's suspension period. In response thereto Westmore filed on September 9, 1965, the notice of change which was suspended in the above-entitled proceeding. Prior thereto, Westmore had filed on June 22, 1965, a notice of change which was rejected on July 12, 1965, because it did not contain all of the information and data required under Section 154.94(f).

While there is no justification here for permitting Westmore to collect the 14¢ rate as of May 22, 1965, as requested, we have concluded from a review of this case that Westmore's filing on June 22 could have been used as a basis for a notice of change even though it did not contain all of the information required under the Regulations. We shall therefore reactivate the June 22 filing and shall treat it as though it were suspended in Docket No. RI66-96 for one day from July 22, 1965, the date it would otherwise have become effective (thirty days after filing), and will deem the agreement and undertaking submitted by Westmore concurrently with its motion to be effective as of July 23, 1965, the end of the suspension period herein.

The Commission orders:

For the reasons set forth above, Westmore's proposed 14¢ per Mcf rate is effective, subject to refund under the agreement and undertaking filed by Westmore on November 15, 1965, as of July 23, 1965 in Docket No. RI66-96, and the suspension order of October 7, 1965, in Docket No. RI66-96 is modified to the extent necessary to accord with the views expressed herein.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

ESTABLISHMENT OF FEES TO BE PAID BY APPLICANTS FOR NATURAL GAS PIPELINE COMPANY CERTIFICATES AND OTHER AUTHORIZATIONS, DOCKET NO. R-282

ORDER NO. 317

ESTABLISHING FEES FOR APPLICATIONS FILED WITH THE COMMISSION

(Issued January 5, 1966) *

On September 15, 1965, the Commission issued a notice of proposed rulemaking in this proceeding (30 F.R. 12077, September 22, 1965) wherein it proposed to establish a schedule of filing fees relating to applications by natural gas pipeline companies for certificates of public convenience and necessity as well as applications for exemptions under section 1(c) of the Natural Gas Act, for export or import authority, for an order directing a pipeline company to serve a local distributor or for abandonment authority. Copies of the notice were mailed to the persons who would be directly affected by the fees there proposed as well as to other interested persons, including agencies of the federal and state governments. Of the nine responses to the notice,[1] four[2] expressed opposition. Several of the others proposed changes in applicability but, except for those discussed below, for the most part these submitted clarifying changes many of which we have adopted. All of the comments received have been carefully considered and several of the suggestions adopted. Notwithstanding the comments in opposition, we are prescribing the regulations substantially as proposed in the notice.

---

* This order was adopted December 29, 1965, before Chairman Swidler left the Commission. Published in the Federal Register on January 13, 1966 (31 F.R. 430).

[1] Columbia Gas System Service Corporation on behalf of Atlantic Seaboard Corporation; Columbia Gulf Transmission Company; Home Gas Company; Kentucky Gas Transmission Corporation; The Manufacturers Light and Heat Company; The Ohio Fuel Gas Company and United Fuel Gas Company; El Paso Natural Gas Company; Kansas-Nebraska Natural Gas Company, Inc.; Michigan Gas Storage Company; Northern Natural Gas Company; Panhandle Eastern Pipe Line Company; Southern Natural Gas Company; Transcontinental Gas Pipe Line Corporation; Trunkline Gas Company.

[2] Northern Natural, Panhandle Eastern, Transcontinental, and Trunkline.

Several respondents contend that the Commission is without authority to prescribe the fees; that the fees exceed legal limits; that they are contrary to Presidential policy; and grossly inequitable. Some of these arguments were presented to and rejected by the Seventh Circuit Court of Appeals in *Aeronautical Radio Inc.* v. *United States and Federal Communications Commission*, 335 F. 2d 304 (1964), certiorari denied, 379 U.S. 966 (1965). The fees imposed by the Federal Communications Commission in that case, like those we are prescribing, were prescribed under the authority of Title V of the Independent Offices Appropriation Act, 1952 (5 U.S.C. 140) in which, as we said in paragraph 2 of our notice herein, Congress established the policy "that any work, service * * * benefit, privilege, authority, use, franchise, license, permit, certificate, registration, or similar thing of value or utility performed, furnished, provided, granted, prepared or issued by any Federal agency * * * to or for any person * * * except those engaged in the transaction of official business of the Government, shall be self-sustaining to the full extent possible." In furtherance of this policy, Congress authorized each agency, including the Federal Power Commission, to prescribe by regulation such fees and charges as are determined to be fair and equitable "taking into consideration direct and indirect cost to the Government, value to the recipient, public policy or interest served, and other pertinent facts." Finally, Congress provided that the regulations prescribed by agencies in the Executive branch shall be as uniform as practicable and subject to such policies as the President may prescribe. The Bureau of the Budget on behalf of the President has issued Circular No. A–25, September 23, 1959, which sets forth general policies for developing an equitable and uniform system of charges for certain Government services and property so as to implement the provisions of the Independent Offices Appropriation Act of 1952.

Aeronautical Radio in our opinion supports our conclusion that the attacks directed at our authority to impose these fees are without force. Before us, however, is a contention which was raised but not decided by the court. Northern Natural argues that we are without authority to impose filing fees —that, at most, we can exact a fee for proceedings in which a certificate is issued but not in connection with those which do not result in the granting of a certificate, license, or other thing of value. The point, however, is not well taken. Section 140 is not so limited in either its purpose or its language. On the contrary, it covers "any work, service, * * * or similar thing of value or utility performed, furnished, provided, granted, prepared or issued," as the basis upon which a fee may be prescribed. Whether or not the certificate or other authorization is eventually granted, the Commission's procedures—which is the "work" performed by us at the instance of the applicant—have been invoked by the filing of the application. Applicants who thus invoke our processes receive the benefit of having their applications processed and considered. This, then, is the governmental operation which Congress determined "shall be self-sustaining to the full extent possible."

The crux of other contentions is that the fees do not fully comply with the standards of 5 U.S.C. 140. We have determined, however, as indicated in the notice, that the regulatory activities of the Commission for which fees are being prescribed convey special benefits to the persons who will be required to pay the fees above and beyond those which accrue to the public at large. Moreover, while the maximum fees prescribed under the formula proposed are by no means nominal, in view of the magnitude of the construction activities to which such fees relate, the impact of even such a relatively high fee is not unreasonable, but rather is fair and equitable, particularly when viewed in the light of the benefit received and the fact that the amount in any event is recoverable as an allowable cost of service.

The formula upon which we have based the fees—our cost of conducting this function, the number of filings and the estimated costs of facilities for which application has been made in recent years—is, to us, entirely reasonable. Having determined that fees should be imposed, it became necessary to find a basis upon which they could be fixed. Several approaches were considered but we concluded that the formula selected was to be preferred to others which might have been adopted. It is designed to fulfill the "self-sustaining" principle required by section 140 insofar as the covered activities are concerned and should within reasonable degrees of tolerance achieve this objective.

The use of a sliding scale of fees geared to the estimated value of the certificate applied for is not in our estimation an unlawful implementation of the statute, which we do not read to require that there be a specific monetary relationship between the fee imposed and the individual benefit received. All the proceedings to which we have applied the formula are generally similar in nature and, within this framework, we are endeavoring to make the processing function self-sustaining by apportioning our costs as fairly and equitably as possible. We recognize, of course, that the work involved in processing an application may, on occasion, exceed that in processing another application for similar authority and some applications require extended hearings, at more cost to the government, while others may be completed more expeditiously. The recipient of the benefit in the latter case, however, may have benefitted from the resolution of issues in prior more costly proceedings and, as such, may fairly be required to contribute to the total cost of the function. Neither of these circumstances would, make our approach to the problem illegal. All things considered, our principal responsibility is the protection of the ultimate consumer through the regulation of the respondents by means of the proceedings to which the fees are attached.

We recognize, of course, that neither our costs nor the dollar value of facilities will remain static and, accordingly, we will revise either the $50 basic fee or the percentage factors or both as may be necessary in the light of subsequent experience.

Numerous clarifying suggestions and other modifications, which we appreciate, were made. Four, of the many changes adopted, deserve particular mention: (1) It will be unnecessary to have checks certified; (2) fees will be imposed only with respect to applications and amendments filed after the effective date of the order; (3) the portion of the fee payable following the grant of a certificate (§ 159.2(b)) is not required to be paid until the certificate is accepted by the applicant; and (4) we agree with Columbia Gas System that § 159.3(c) *Amendments to outstanding certificates* is vague, particularly as to applications to amend temporary certificates or for an extension of time to construct. We believe our addition of the phrase "which have become final" to that section and the reference to the section we have made in § 159.1(h) will make our intention clear.

Among the clarifying changes and modifications suggested by El Paso, one, of the many we have adopted, deserves specific mention: we do intend that applications to acquire, as well as those to construct and operate, facilities shall be covered and have made the several necessary changes in text. El Paso also suggested that the fees for budget-type applications (those filed pursuant to § 157.7) be based upon the actual rather than estimated costs of construction and be paid when the report of construction is made pursuant to that section. We do not adopt this suggestion though we recognize it has some merit. We doubt, however, that the spread between the estimated cost of the proposed facilities and the actual cost of those installed pursuant to the authorization need be as great as it has been in some cases. Applicants may, if they wish, file more realistic estimates and thereby reduce the fee payable.

Three respondents[3] suggested either a refund or the allowance of a credit against future filing fees where the actual cost of constructing authorized facilities is less than the estimated cost. We have not adopted the proposals, not only because no arguments were presented in support but also because we are not convinced that any significant injury will result from the lack of a refund or credit provision.

Some respondents[4] suggest that intervenors who cause, by their participation, an increase in the cost of processing a proceeding should share in that cost by the payment of fees. We think there is a vital distinction between those invoking our jurisdiction to secure a benefit which we are authorized to grant and those properly intervening to set forth their views on the matters which the applicant has put into issue. Though we believe the effect of interventions on cost of processing is irrelevent, the fact remains that while interventions in opposition to the grant of a certificate may increase the cost of processing so, too, do interventions in support. Furthermore, we doubt, as contended in the comments, that the imposition of a reasonable fee on interventions would have the effect of discouraging interventions by parties with adverse economic interests—at the same time it might well inhibit participation by local civic organizations and other groups or individuals who are properly interested in our activities which may affect them. The fees are not intended to reduce government costs by discouraging either interventions or applications but only to reimburse the government for whatever the program may cost.

Panhandle Eastern contends that fees with respect to authorizations involving exportation of gas are unconstitutional as being a burden on foreign commerce prohibited by Art. I, section 9 of the Constitution, which provides that "No Tax or Duty shall be laid on Articles exported from any State." Panhandle relies upon *Fairbank* v. *United States*, 181 U.S. 283; *United States* v. *Hvoslef*, 237 U.S. 1. We conclude otherwise. Assuming, arguendo, that the fee is a tax, the Hvoslef case itself states that the prohibition "is designed to give immunity from taxation to property that is in the actual course of * * * exportation" (237 U.S. at 13). Where the would-be exporter has not yet acquired the necessary authority from us to enter upon the export transaction, the immunity to taxation cannot have attached. Furthermore, the fees here prescribed are not in fact taxes. This is clear from *Memphis Natural Gas Co.* v. *McCanless*, 194 S.W. 2d 476, appeal dismissed 329 U.S. 670, which held that fees exacted for inspection of regulated public utilities and devoted to the regulatory program of the state fall outside the category of Taxes.

Several respondents[5] discussed the accounting requirements proposed in the notice (§ 159.4). We have considered the problems alluded to and agree that in most respects the points are well made. Accordingly, we are revising the section to provide that the fee for applications not involving construction of facilities (§ 159.1) shall be charged to Account 928 Regulatory commission expenses as will all fees relating to the acquisition of facilities. Fees for applications involving construction paid prior to final disposition of the case (§ 159.2(a)) shall be suspended in Account 186. If the certificate is granted, the amounts thus suspended shall be cleared to Account 107, Construction work in progress—Gas, and subsequently cleared to appropriate plant accounts. If the application is denied or the certificate not accepted, the suspended fees shall be cleared to Account 928, Regulatory commission expenses. All amounts paid after a certificate is granted (§159.2(b) and (c)) shall be recorded in Account 107, Construction work in progress—Gas, and subsequently cleared to plant accounts. This revision eliminates the question raised by one respondent which related to the proposed use of Account 302, Franchises and consents. Another respondent suggested that fees paid with respect to abandonment applications be cleared to the appropriate depletion or amortization reserve. We find no justification for this proposal and, further, that it would be contrary to good accounting practice since the fees are not associated with plant.

[3] Columbia, Southern Natural, and Trunkline.

[4] Kansas-Nebraska, Northern Natural and Transcontinental.

[5] Columbia, El Paso, Northern Natural, Michigan Gas Storage, and Trunkline.

The Commission finds:

In view of the foregoing, and upon consideration of all relevant matters presented, including the arguments, contentions, suggestions and other views expressed in the comments received, it is necessary and appropriate for the purpose of implementing the policies and standards set out in 5 U.S.C. 140 and Bureau of the Budget Circular No. A-25, and for the administration of the Natural Gas Act, that the Regulations Under the Natural Gas Act be amended as herein provided.

The Commission, acting pursuant to the authority set forth in Part 159, herein prescribed, and the general policies established in Bureau of the Budget Circular No. A-25, issued September 23, 1959, *orders:*

(A) Subchapter E, Regulations Under the Natural Gas Act, Chapter I, Title 18 of the Code of Federal Regulations, is amended by adding a new Part 159, to read as follows:

Part 159—Fees for Certain Applications Filed Pursuant to the Natural Gas Act

§ 159.1 Applications not involving construction or acquisition of facilities.
§ 159.2 Applications involving construction or acquisition of facilities.
§ 159.3 Miscellaneous.
§ 159.4 Accounting for fees paid pursuant to Part 159.

Authority: Part 159 issued under sec. 16, 52 Stat. 830; 15 U.S.C. 7170 and title V, sec. 501, 65 Stat. 290, 5 U.S.C. 140. Interpret or apply secs. 1(c), 3, 7, 52 Stat. 822, 824; 56 Stat. 83; 68 Stat. 36, 15 U.S.C. 717(c), 717b, 717f; Ex. Or. 10485, 18 F.R. 5397; sec. 5, 67 Stat. 464, 43 U.S.C. 1334(c).

§ 159.1 Applications not involving construction or acquisition of facilities. A filing fee of $50.00 shall accompany each of the following:

(a) Applications for exemption under section 1(c) of the Act;

(b) Applications to import or export natural gas under section 3 of the Act;

(c) Applications for permits under Executive Order 10485;

(d) Applications for, and petitions to intervene in proceedings requesting orders under section 7(a) of the Act;

(e) Applications for permission and approval to abandon under section 7(b) of the Act;

(f) Applications for certificates of public convenience and necessity under sections 7(c) and (d) of the Act;

(g) Applications for determinations by the Commission under section 5 of the Outer Continental Shelf Lands Act; and

(h) Amendments to any of the applications listed in (a) through (g) hereof and those referred to in § 159.3(c).

§ 159.2 Applications involving construction or acquisition of facilities.

In addition to the fees prescribed by § 159.1, applicants for a certificate of public convenience and necessity under sections 7(c) and (d) of the Act to construct and operate or acquire and operate facilities shall pay the following fees:

(a) Within 30 days following issuance of Notice of Application, an amount equal to 5/100 of one percent (0.0005) of the estimated cost of construction of new facilities or of facilities to be acquired;

(b) Within 30 days following grant of the certificate, an amount equal to 10/100 of one percent (0.001) of the estimated cost of construction of new facilities or of facilities to be acquired; unless applicant does not accept the certificate;

(c) If an amendment to a pending application increases the total estimated cost of construction of new facilities or of facilities to be acquired, an additional amount, computed with respect to the increase as provided in paragraph (a) hereof, shall be paid; and

(d) If the actual cost of construction of new facilities or of facilities to be acquired exceeds the estimated cost thereof, the statement of actual cost, required to be submitted by § 157.20(c)(4) and (d)(3) of this chapter, shall be accompanied by an amount equal to 15/100 of one percent (0.0015) of the excess of actual cost (plus estimated cost of facilities for which actual cost is not then recorded on the books of applicant) above estimated cost.

§ 159.3 Miscellaneous.

(a) *Method of Payment.* Fee payments shall be by check or money order payable to the Treasurer of the United States. No fees shall be refunded.

(b) *Exemption.* The provisions of this part shall not apply to independent producers as defined in § 154.91(a) of this chapter.

(c) *Amendments to outstanding certificates.* Applications to amend outstanding certificates, authorizations or orders, which have become final, will be treated as initial applications for the purposes of this part.

§ 159.4 Accounting for fees paid pursuant to Part 159.

A natural gas company subject to the provisions of this part shall account for the fees paid as follows:

(a) The fee for applications not involving the construction of facilities ($50.00 for each application or amendment thereto) shall be charged to Account 928, Regulatory commission expenses.

(b) The fee for applications involving construction of facilities shall be accounted for as follows:

(1) All amounts paid prior to final disposition of the application shall be charged to Account 186, Miscellaneous deferred debits: (i) If the certificate is granted and accepted, the amounts recorded in Account 186 shall be cleared to Account 107, Construction work in progress—Gas, and subsequently cleared to the appropriate plant accounts; (ii) if the certificate requested is not granted or is not

accepted by the applicant, the fees recorded in Account 186 shall be cleared to Account 928, Regulatory commission expenses.

(2) All amounts paid after grant of the certificate application shall be recorded in Account 107, Construction work in progress—Gas, and subsequently cleared to the appropriate plant accounts.

(c) All amounts paid in connection with applications involving the acquisition of facilities shall be charged to Account 928, Regulatory commission expenses.

(B) The said Subchapter E is further amended by amending §§ 152.3, 153.3, 153.11, 156.3(b), 157.6(b) and adding a new paragraph (f) to § 157.20 as follows:

§ 152.3 Contents of application; filing fee.

Every application shall be accompanied by the fee prescribed in part 159 of this subchapter and shall set forth in the order indicated the following:

* * *

§ 153.3 Contents of application; filing fee.

Every application shall be accompanied by the fee prescribed in part 159 of this subchapter and shall set forth in the order indicated the following:

* * *

§ 153.11 Contents of application; number of copies; filing fee.

An original and 9 conformed copies of an application under this section shall be furnished to the Commission and shall conform in all other respects with §§ 1.15 and 1.16 of this chapter. The Commission reserves the right to request additional copies. Every application shall be accompanied by the fee prescribed in part 159 of this subchapter and shall set forth in the order indicated, the following:

* * *

§ 156.3 Applications; number of copies; general requirements.

* * *

(b) *General content of application; filing fee.* Except as provided in paragraph (d) of this section, each application shall be accompanied by the fee prescribed in part 159 of this subchapter and shall set forth the following information:

§ 157.6 Applications; number of copies; general requirements.

* * *

(b) *General content of application; filing fee.* Each application filed shall be accompanied by the fee prescribed in part 159 of this subchapter and shall set forth the following information:

§ 157.20 General conditions applicable to certificates.

* * *

(f) The certificate herein issued shall be without force and effect unless the fees prescribed by § 159.2(b) and § 159.2(d), if any, of the Regulations Under the Natural Gas Act have been paid in accordance with the requirements thereof.

(C) In view of the accounting requirements prescribed in the new § 159.4, we will by later order revise the texts of Accounts 107, 186 and 928, referred to therein, so as to make appropriate reference to those requirements.

(D) The amendments herein prescribed shall be effective on February 6, 1966, and shall apply with respect to applications and amendments filed thereafter.

(E) The Secretary shall cause prompt publication of this order to be made in the Federal Register.

[LETTER—ORDER REJECTING REFUND REPORT]

January 5, 1966.*

THE MANUFACTURERS LIGHT AND HEAT COMPANY,
800 Union Trust Building
Pittsburgh, Pennsylvania.
Attention: Mr. C. A. Massa, Vice President.

GENTLEMEN: Reference is made to your report of refunds totaling $8,653,016.78 filed on January 25, 1965. The refunds reported therein are not properly computed since the report fails to allocate all refunds received as required by the settlement agreement and order in Docket No. G–20510. The report is not acceptable and is hereby rejected.

The refunds do not satisfactorily comply with Paragraph (E) of the order issued March 30, 1961, 25 FPC 595, or with the settlement agreement in Docket No. G–20510, both of which require Manufacturers to refund to its wholesale customers the "appropriately allocable" share of supplier refunds received. Manufacturers' computation of refunds in this docket seeks to apply the same method specifically provided in the prior settlement agreement in Docket No. G–12197. The impropriety of applying the identical method of computation in both settlements is clear. The refund provision in the Docket No. G–20510 does not state that the refund computation is to be made through adjustment of the stipulated cost of service as is explicitly provided in the settlement in Docket No. G–12197. Further, where it was intended in G–20510 that a computation be made through adjustment of the stipulated cost of service, such intent was specifically and explicitly stated. See Article III, Section 1 of the G–20510 settlement agreement relating to rate reductions. The result is that Manufacturers' report of refunds improperly fails to allocate among its customers $1,477,470.03 of the total refund received from Atlantic Seaboard Corporation and United Fuel Gas Company. The refund, therefore, is not properly allocated and is disapproved.

Manufacturers is hereby directed to properly allocate among its customers all of the refunds received from its suppliers and to make refund to jurisdictional customers in compliance with Paragraph (E) of the order issued March 30, 1961 in Docket No. G–20510.

By direction of the Commission.

---

*Rehearing denied March 4, 1966, 35 FPC 328. Affirmed, *The Manufacturers Light and Heat Co.* v. *F.P.C.*, 374 F. 2d 88 (CA3–1967).

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross, David S. Black and Carl E. Bagge.

SOUTH CAROLINA ELECTRIC & GAS COMPANY, PROJECT NO. 516

ORDER APPROVING PLAN FOR PUBLIC ACCESS

(Issued January 5, 1966)*

On January 14, 1965, South Carolina Electric & Gas Company (Licensee) filed an application, as amended June 4, 1965, and November 5, 1965, for approval of a public access plan as part of its license for Project No. 516, known as the Saluda Project and located on the Saluda River at Breher's Shoals, South Carolina.

---

* This order was adopted December 9, 1965 before Chairman Swidler left the Commission.

The plan consists of nine maps, (FPC Nos. 516–194 through 202) which describe the location and boundaries of public access areas, including facilities, at two existing and six proposed sites varying in size from 1.61 acres to 8.86 acres, adjacent to the reservoir, three of which lie partly without the project boundary. We shall provide in this order that Exhibit K be amended revising the project boundary to include these three areas within the project boundary. Of the eight sites, four are located on the northern side, and four on the southern side of the reservoir which is 20 miles long and covers approximately 51,000 acres. These sites will supplement thirty-five boat landings operated by concessionaires serving the public and will provide free public access to the reservoir during the remaining period of the license which expires in 1977. By letter dated October 5, 1965, the Licensee advised that upon approval of the plan by the Commission, it will proceed to develop these sites in cooperation with the State Parks Division of the South Carolina Forestry Commission; and, that if usage of the sites indicates that additional facilities are needed it will provide them.

The Commission finds:

(1) The public access plan submitted by Licensee should be approved as part of the license.

(2) Exhibit K should be amended to identify the public access areas and to include all the areas within the project boundary.

The Commission orders:

(A) The aforesaid public access plan is approved as part of the license for Project No. 516.

(B) Exhibit K is amended to identify the public access areas and to include all the areas within the project boundary.

(C) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of the foregoing order. In acknowledgment of this acceptance of the foregoing order, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NOS. CP66–55 AND RP66–18

FINDINGS AND ORDER AMENDING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND ELIMINATING THE NECESSITY FOR FURTHER HEARING

(Issued January 5, 1966)

On November 30, 1965, 34 FPC 1403, a certificate of public convenience and necessity was issued to Tennessee Gas Transmission Company (Tennessee) to sell and deliver to Pennsylvania Gas and Water Company (Penn Gas and Water) a Daily Storage Quantity of 13,500 Mcf and a Winter Storage Quantity of 1,012,500 Mcf (at 15.025 psia). The Commission authorized such service for one year and provided for a future hearing in Docket No. RP66–18 to determine whether the new rate schedule SS-E is compensatory and bears its fair share of Tennessee's cost of service.

On December 6, 1965, Tennessee filed a Petition for Rehearing requesting that the order of November 30, 1965 be modified to certificate the storage service to Penn Gas and Water on a permanent rather than a one-year basis, and objecting to the rate hearing provided for in Docket No. RP66-18. Tennessee refused to accept the certificate as conditioned and requested a modification in volumes to be supplied Penn Gas and Water.

On December 7, 1965, Penn Gas and Water applied for a rehearing and for emergency relief in the nature of requesting the Commission to direct Tennessee to provide Penn Gas and Water with emergency gas under its E-4 Schedule. Penn Gas and Water also objected to the one-year SS-E storage service because to do so would require a switch over from its present G service to CD-4 service with no assurance it could revert to G service if the SS-E schedule was not continued after one year.

On December 13, 1965, Tennessee filed a supplement to its Petition for Rehearing in which it opposed the E-4 service to Penn Gas and Water and submitted copies of letters from all of its SS-5 customers, Consolidated Edison of New York, Public Service Electric and Gas Company, Orange and Rockland Utilities, Brooklyn Union Gas Company, Central Hudson Gas & Electric Corporation, and Long Island Lighting Company, in which each indicated that it would accept a switch over of its present SS-5 service to SS-E service.

At the time of the original order in these proceedings, it was unclear whether and when the potential discrimination between those customers to be offered the new SS-E storage service and those who were receiving service under the older, and less advantageous SS-5 storage service schedule would be eliminated. Despite this fact, the SS-E service was authorized for one year to ease the emergency situation confronting Penn Gas and Water. Under the hereinbefore described circumstances, the one-year limitation on authorization of the new SS-E rate can be eliminated and the potential discriminatory problem avoided by providing that the SS-E rate may be put into effect, without limitation as to time, as soon as Tennessee makes it available, without restriction, throughout Zones 4 and 5, with the further condition that Tennessee will withdraw its SS-5 rate within twelve months from the date of putting the SS-E rate into effect.

The action in setting the SS-E rate for hearing as to its conformity with the standards of Sections 4 and 5 of the Natural Gas Act has been reconsidered and found unnecessary. While this action herein should not be understood as in any way determining that the rate level or design necessarily is just and reasonable, it is concluded that there is no necessity for setting the matter for hearing.

The Commission finds:

(1) Penn Gas and Water cannot economically and practically accept Tennessee's SS-E storage service for one year because Penn Gas and Water is not a contract demand (CD) customer but a general service (G) customer.

(2) Penn Gas and Water's request for E-4 service is denied as unnecessary because of the order hereinafter issued.

(3) A rate hearing in Docket No. RP66-18 is now unnecessary because all of Tennessee's SS-5 customers will be SS-E customers, eliminating the dual rate schedule to New York and New Jersey storage customers.

(4) Paragraph (B) of the November 30, 1965 order in this docket reserves to all parties the right to a future hearing, if necessary, as to the reasonableness or propriety of Tennessee's storage rate schedule SS-E.

The Commission orders:

(A) The certificate issued to Tennessee Gas Transmission Company on November 30, 1965 in Docket No. CP66–55 is amended and modified as herein ordered.

(B) The certificate issued in paragraph (A) of the November 30, 1965 order is amended by striking the last sentence thereof; the certificate is hereby made permanent.

(C) Tennessee is hereby authorized to place into effect its proposed SS–E Rate Schedule, without limitation as to time, as soon as such Schedule has been made available, without restriction, throughout Tennessee's Rate Zones 4 and 5 and provided that Tennessee within twelve months from the date of putting the SS–E Rate Schedule into effect shall have cancelled its existing SS–5 Rate Schedule.

(D) Tennessee within one year of the date of this order shall have cancelled its existing SS–5 Rate Schedule.

(E) Tennessee is authorized to provide the following volumes of gas to Penn Gas and Water (in Mcf at 14.73 psia):

	Contract demand	Daily storage quantity	Winter storage quantity
1965–1966	23,052	12,980	980,565
1966–1967	24,990	13,770	1,032,750

(F) Paragraphs (F), (H), (I) and (J) in the November 30, 1965 order are struck in their entirety and provisions for a future hearing are cancelled.

(G) In all other respects the certificate in Docket No. CP66–55 and the findings and order of November 30, 1965 shall remain in full force and effect.

OPINION NO. 484

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP64–211; SOCONY MOBIL OIL COMPANY, INC., DOCKET NOS. CI62–825, CI65–1355; PHILLIPS PETROLEUM COMPANY, DOCKET NO. ABELL, DOCKET NO. CI65–878; M.B. RUDMAN, ET AL., DOCKET NO. CI65–930

OPINION AND ORDER ISSUING CERTIFICATES AND DENYING MOTION FOR SEVERANCE

(Issued January 6, 1966)[*]

Syllabus

1. Claimed premium qualities offering high pressure, etc. and contracts offering special benefits to pipeline purchaser do not entitle producer-applicants to price bonus above applicable area rate ceiling. PP. 43, 44.

---

[*] This opinion was adopted December 29, 1965, before Chairman Swidler left the Commission. See order issued March 4, 1966 denying application for rehearing and stay, 35 FPC 321. Remanded, *Phillips Petroleum Co. v. F.P.C.*, 377 F. 2d 278 (CA10–1967); Judgment vacated and remanded to CA10 in light of *Permian*, 391 U.S. 365. Petition for Review denied, 405 F. 2d 6 (CA10–1969).

2. No provision was made in *Opinion No. 468* for premium price for substantial amounts of gas delivered above 500 pounds pressure. P. 44.
3. Instant proceeding is not proper one for amending quality standards set forth in *Permian Basin*. P. 44.
4. Introduction in certificate proceeding of evidence directed to changing applicable area rate, by introduction of new quality standards or otherwise, will not be permitted. P. 44.
5. Proper forum for determining any change in area rates, including quality adjustments, is in area rate proceeding. P. 44.
6. Permian area quality standards (with exception of Btu content) are minimum standards only. P. 44.
7. Price of gas should not vary in accordance with its volume, nor is a premium price justifiable by concentration of gas at a small number of delivery points. P. 45.
8. It is neither necessary nor proper to consider cost evidence in connection with determination of price to be charged for gas under Section 7 certificate—Examiner's exclusion of such evidence was correct. P. 45.
9. In determining whether residue gas derived from gas-well gas is old or new gas, the date on face of contract is controlling—extrinsic evidence to show a later execution date should not be allowed. P. 46.
10. Rule adopted in *Opinion No. 468–A*, classifying contracts for new or old gas on basis of "date set forth in contract" is supported by common sense and only rule which can be practically administered. P. 46.
11. Commission spells out procedure for fixing price variations due to quality deficiencies as to applications filed prior and subsequent to Permian Basin. P. 47.
12. Moratorium imposed on all price increase filings above applicable area rates before January 1, 1968. P. 47.
13. In a proceeding under Section 7 of the Natural Gas Act, Commission *issues* certificates of public convenience and necessity and *denies* motion for severance.

David F. Mackief, E. J. Najaiko, Malcolm T. Dungan, Jeremiah C. Collins for El Paso Natural Gas Company.

R. D. Haworth, D. L. Smith, Tom P. Hamill for Socony Mobil Oil Company, Inc.

Kenneth Heady, John R. Rebman, Stanley L. Cunningham for Phillips Petroleum Company.

John C. Snodgrass for Union Oil Co. of California.

J. R. McChesney for The Pure Oil Company, a Division of Union Oil Company of California.

F. T. Searls, M. H. Furbush, John S. Cooper, Stanley T. Skinner for Pacific Gas & Electric Company.

Richard J. Dent, Sherman S. Poland, James D. McKinney, Jr. for Skelly Oil Company.

James D. McKinney, Jr., Bernard A. Foster, Jr., Stuart J. Scott for The Atlantic Refining Company.

Warren M. Sparks, Donald R. Arnett for Gulf Oil Corporation.

John D. Ketcham, Charles E. McGee for George T. Abell.

William L. Cole, John Ormosa, Milford Springer for Southern California Gas Company, Southern Counties Gas Company of California, Pacific Lighting Gas Company.

R. W. Howell Jr. for Dalco Oil Company.

Harry S. Littman, Jack Werner, Harold Talisman, Robert Shaw, W. C. Braden, Jr., John Ferguson for Gulf Pacific Pipeline Company.

David S. Lichtenstein for the Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

SWIDLER, *Chairman:*

Eleven producers[1] of natural gas have applied for certificates of public convenience and necessity pursuant to Section 7 of the Natural Gas Act (Act) authorizing the sale in interstate commerce of natural gas from the Delaware Basin in western Texas. By orders issued March 2, April 27, and June 14, 1965, these applications, as amended and supplemented, were consolidated in this proceeding with two applications by El Paso Natural Gas Company (El Paso) for authorization to construct and operate pipeline facilities to receive and transmit this gas. By order of June 14, 1965, 33 FPC 1260, the Commission granted intervention to the People of the State of California and the Public Utility Commission of the State of California, (jointly referred to as Cal-PUC) as well as to four California gas distributors[2] (Distributor Intervenors).

After a prehearing conference on August 26, 1965, a hearing was held on October 19 and 20, 1965. At the close of the hearing, counsel for joint intervenors, Southern California Gas Company and Southern Counties Gas Company, moved that the intermediate decision be waived. On October 25, 1965, the presiding examiner referred the unopposed motion to the Commission, which granted it on November 8, 1965. The proceedings are now before us for decision on the merits.

The Applications of El Paso

El Paso filed its applications in Docket Nos. CP62-176 and CP64-211 on January 30, 1962, and March 23, 1964, respectively.

El Paso seeks authorization to construct and operate facilities, including pipeline and well ties (with meter runs, dehydrators, and meters) to enable it to receive from the various producers herein natural gas to be purchased in the Gomez, Worsham (Barstow), Coyanosa, and Waha fields in the Delaware Basin area in Pecos and Reeves Counties, Texas, included in Texas Railroad District No. 8 and within the limits of the Permian Basin Area as defined by the Commission.[3] The reserves involved are stated to aggregate approximately 2.1 trillion cubic feet, and to be required for the purpose of augmenting El Paso's overall system gas reserves. Temporary certificates were issued September 24, 1962 and December 11, 1964, authorizing the construction and operation of portions of El Paso's proposed facilities.

All participants in these proceedings support El Paso's application for certificates of public convenience and necessity authorizing the construction of the facilities in question. It appears that the new gas supplies are in close proximity to El Paso's existing facilities. They will be of particular value to El Paso in that the gas-well gas and residue gas derived from gas-well gas provide suitable diversification in the pipeline's gas supply, which now consists largely of casinghead gas and residue gas derived therefrom. The gas-well gas sources will provide El Paso with flexibility and enable it to meet peak demands which may occur in periods when the supply of casinghead gas may be curtailed. Lease reserves are adequate and warrant the construction of El Paso's proposed facilities; the proposed auxiliary facilities are within the authorization conferred by § 2.55(a) of the Commission's General Policy and Interpretations; El Paso is able and willing to do the acts and to perform the service proposed and to conform with the Act and all valid rules and regulations promulgated thereunder. Accordingly, permanent certificates will be issued to El Paso.

---

[1] Socony Mobil Oil Company, Inc. (Socony Mobil), Docket Nos. CI62-825, CI65-1355; Phillips Petroleum Company (Phillips), CI64-719; Union Oil Company of California (Successor to the Pure Oil Company) (Union), CI64-1085; The Atlantic Refining Company, (Atlantic), CI64-1130; Gulf Oil Corporation (Gulf), CI64-1153; Skelly Oil Co., (Skelly), Docket No. CI64-1225; Midwest Oil Corporation, CI64-1429; Dalco Oil Co. (Dalco), CI64-1442; W. Watson LaForce, CI65-61; George T. Abell, (Abell) CI65-878; and M.B. Rudman, *et al.*, CI65-930.

[2] San Diego Gas and Electric Company, Pacific Gas and Electric Company, Southern California Gas Company and Southern Counties Gas Company.

[3] Some minor miscellaneous services behind the Waha residue gas sales are in Loving County, which is also within District No. 8 and the Permian Basin Area.

Gulf Pacific Pipeline Company (Gulf Pacific) appeared in this proceeding for the purpose of protecting any interests which might be prejudiced in *Transwestern Pipeline Company, et al.*, Docket No. CP63-204, *et al.* Gulf Pacific has no objection to issuance of the present certificates so long as it is stated that the issuance of the present certificates shall not prejudice the determinations as to the applications in the other proceeding. El Paso has stated that regardless of the outcome in the other proceeding it would be in the public interest to construct and operate the present facilities. The issuance of certificates in the present proceeding will not prejudice the determination in *Transwestern Pipeline Company, et al.*, Docket Nos. CP63-204 and CP64-91, *Gulf Pacific Pipeline Company*, Docket No. CP63-223 and *El Paso Natural Gas Company*, Docket No. CP64-76.

The Producer Applications

These are the first producer certificate applications for the sale of gas from the Permian Basin to be considered after formal hearing by this Commission since the decision in the Permian Basin Area Rate Proceeding, Docket No. AR61-1, Opinion Nos. 468 and 468-A, 34 FPC 159, 1068. All seek permanent certificates. Temporary certificates to Socony Mobil were issued or amended May 25, 1962, January 30, 1962, June 11, 1964, July 10, 1964, and December 11, 1964. No temporary certificate has been issued to any other producer-applicant therein.

The principal contention of the producer-applicants is that because their gas offers special premium qualities and because their contracts offer special benefits to the purchaser, the gas sold under these contracts should command a price in excess of that which would be permitted under the quality standards laid down in Opinion Nos. 468 and 468-A. In this contention the producers are supported by El Paso but opposed by the intervenors and the Commission staff.

The premium qualities which the producers contend entitle them to a price above the applicable area rate are high pressure ranging from 985 to 1200 pounds per square inch, great volume, concentrated delivery points, unusual purity, unusually good deliverability, and the availability of the gas for "swing" purposes. This being gas-well gas of high pressure and purity, it can be utilized when El Paso's residue supplies from casinghead gas are lagging, especially in winter when the demand for gas is high. The contract features which would, it is contended, confer unusual benefits upon the purchaser are the notably low amounts which El Paso is required to take in the early years, and take-or-pay makeup clauses extending over the life of the contracts. A witness from El Paso testified that this was the most unique package of gas ever offered to El Paso. While all gas-well gas provides some "swing", the pressure, volume and absence of diluents cause this gas to have greater swing benefits than any other in the area.

According to the brief of Union, which was adopted by five other producers[4] the principal justification for a premium price lies in the unusually high pressure of the gas. Delivery pressures would range from 985 to 1200 pounds. One thousand pounds pressure is not unusual pressure for gas-well gas. Even 1200 pounds is not uncommon in the United States, although it is stated to be higher pressure than that of any other gas available to El Paso in the Permian Basin.[5] We do not feel that a pressure of 985 to 1200 pounds is so unusual or of such unusual benefit to the purchaser as to justify a price bonus.

It may well be that gas sold at these pressures in the Delaware Basin will be of greater benefit to El Paso than if it were to be provided at the 500 pound minimum standard for pipeline quality gas set forth in Opinion No. 468–A; since the wells in question are located in an area in which El Paso does not presently have pipeline facilities, the new pipeline facilities which will be constructed to take the gas may be cheaper, at least initially, than if the gas were to be delivered at lower pressure. However, the 500 pound pressure limits below which we stated in the Permian decision would require price differentials, was not established because we believed that gas at pressures above 500 pounds was entitled to premium rates, but rather because it appeared that in Permian a large percentage of the existing pipeline facilities has been constructed to receive gas at about this pressure, and we did not believe that producers who had sold gas at pressures geared to the available pipeline facilities should be penalized therefor. Thus no provision was made under Opinion No. 468 for premium price for the substantial amounts of gas being delivered at pressures above 500 pounds.

This proceeding is not the proper one for any attempt to amend the standards set forth in the Permian Basin area rate proceeding. We stated in Opinion No. 468: "It will therefore be our policy to certificate new sales of gas in the future at initial prices no higher than the just and reasonable price for new gas * * * unless * * * the Commission decides to reopen *this proceeding* to consider whether a different rate or rates should be adopted. * * * We expect that the just and reasonable rate for new gas would constitute the maximum price at which new gas would be initially certified, the so-called "in-line" price, until the just and reasonable rate is changed by the Commission." [*Supra*, pp. 230, 231, emphasis supplied].

In the Order Issuing Certificates of August 5, 1965, 34 FPC 418, we reiterated: "As we stated in Opinion No. 468, the just and reasonable rate fixed therein constitutes the "in-line" price required by the public convenience and necessity in granting permanent certificates."

To permit the introduction in the certificate proceeding of evidence directed to obtaining changes in the applicable area rate, whether by the introduction of new quality standards or otherwise, would give rise to delay in the processing of certificates, will result in a great and unnecessary administrative burden, and, in the long run, cause unnecessary expense to the producers. The proper forum for determining any change in area rates, including quality adjustments, is in the area rate proceeding. It should be emphasized, moreover, that these standards (with the exception of Btu content) are minimum standards only. Nor, for the reasons set forth above, do we believe that the present applications signal a situation in which institution of a supplemental proceeding in Docket No. AR61–1 to revise the area rate to provide a premium for gas sold at more than 500 pounds pressure (or sold at the particular pressures involved here) would be warranted or where, pending such a proceeding, we might wish to exercise our discretion to certificate the present sales at prices in excess of the existing Permian ceilings, subject to refund.

---

[4] Atlantic, Gulf, Skelly, Dalco, and Abell.

[5] The applicable area rates for new gas-well gas were established largely on the basis of the national average cost for new gas-well gas.

Union has stated that if a certificate at a premium price is denied it will revise its contract with El Paso to remove some of the unusual benefits conferred by that contract and will deliver the gas at a lower pressure than twelve hundred pounds. It is Union's privilege to bargain with El Paso, subject to approval by this Commission to make sure that grant of a certificate to sell gas pursuant to the modified contract at the price then proposed meets the standards of Section 7 of the Act.

Socony Mobil, delivering the residue gas involved in Docket No. CI65–1355 at one thousand pounds pressure, points out that its contract calls for delivery of large volumes of gas (138,700 Mcf daily) concentrated at only two delivery points. We do not think that the price of gas should vary in accordance with its volume, or that a premium price is justified by the concentration of the gas at a small number of delivery points. Socony Mobil gathers this gas for processing at these points for its own benefit—that is, the liquids which Socony Mobil extracts from the gas before delivering the residue to El Paso. Opinion No. 468 makes no provision for an increase in the applicable area rate by reason of either concentrated delivery points or large volumes delivered.

The Exclusion of Cost Evidence

Union and other producers tendered as evidence in this proceeding a cost study prepared by Dr. Stephen F. Sherwin (Tr. 177–190) dealing with the cost of new gas-well gas. His testimony and related Exhibit 23 were excluded by the presiding examiner. It is now contended that the exclusion of the Sherwin testimony and exhibit was error and that any reliance on a 1960-based cost to establish a price for gas to be sold in 1966 is unlawful under the Act and a deprivation of property without due process of law.

It has been determined by this Commission that it is neither necessary nor proper to consider cost evidence in connection with the determination of the price to be charged and collected for gas pursuant to a certificate issued under Section 7 of the Act. The Supreme Court has recently upheld this determination in *United Gas Improvement Co.* v. *Callery Properties, Inc.*, 382 U.S. 223, (1965), in which the Court stated:

> * * * We believe the Commission can properly conclude under § 7 that adequate protection to the public interest requires as an interim measure that gas not enter the interstate market at prices higher than existing levels. To consider in this § 7 proceeding the mass of evidence relevant to the fixing of just and reasonable rates under § 5 might in practical effect render nugatory any effort to fix initial prices. * * * (p. 227, 228).

As we stated in Opinion No. 468 and in the Order Issuing Certificates of the same date the just and reasonable area rates fixed in Opinion No. 468 and Opinion No. 468–A, as amended, constitute the "in-line" prices required by the public convenience and necessity in granting a permanent certificate.

The presiding examiner's exclusion of the proffered cost evidence was correct and must be sustained.

Motion for Severance

On October 25, 1965, Socony Mobil filed a motion to sever its Docket No. CI62–825, relating to sales from the Rojas Cabalas Field, from the above-captioned consolidated proceeding and for issuance of a permanent certificate of public convenience and necessity. In this motion for severance, and again in its initial brief Socony Mobil indicated that although the initial price provided by the gas purchase contract is 18¢ per Mcf at 14.65 psia, it is willing to accept a permanent certificate at the maximum price for new gas-well gas of this quality as defined in Opinion No. 468. That Opinion provides a maximum price for new gas of this quality of gas-well gas of 16.5¢ per Mcf in the Railroad District from which the gas herein is to be sold. The applicable area rate under contracts dated prior to January 1, 1961, is 14.5¢ per Mcf.

Although the gas purchase contract with El Paso involved herein bears a date of December 28, 1960, Socony Mobil maintains that the contract was actually "executed" by it on March 2, 1961, and by El Paso on March 3, 1961, which dates are subsequent to the cutoff date for new gas-well gas as defined in Opinion No. 468 (at p. 239), *i.e.*, January 1, 1961. In Opinion No. 468-A the Commission indicates that it had chosen "the date set forth in the contract" as determining whether contracts should be classified as contracts for new or old gas.[6]

An examination of the gas purchase agreement entered into between El Paso and Socony Mobil shows the signatures of the vice president of El Paso and the attorney-in-fact of Socony Mobil set forth at the end of the agreement after the final paragraph, which states that "The parties hereto have caused this agreement to be duly executed in duplicate originals, on this the day and year first above written." The reference, of course, is to the date in the first paragraph of the agreement, *i.e.*, December 28, 1960.

The attorney-in-fact for Socony Mobil by affidavit of September 17, 1965, states that although the agreement bears the date of December 28, 1960, material changes in the original "proposals" of the parties were negotiated during the months of January and February 1961, and that the contract was not "executed" by him on behalf of Socony Mobil until after February 28, 1961, the exact date of execution being on or about March 2, 1961.

Socony Mobil has submitted copies of nine letters exchanged between El Paso and Socony Mobil purporting to show that the contract negotiations between the parties were continuing on and after January 1, 1961. No matter what construction be placed on the correspondence between the parties subsequent to December 28, 1960, the fact remains that we are faced with a signed document dated December 28, 1960. Strictly speaking, Socony Mobil does not assert that there is any misunderstanding *between the parties* as to the terms of the agreement, including the date set forth therein. In other words, Socony Mobil does not maintain that there was any mistake as to the intention of the parties to date the contract as it appears upon its face.

We feel that to allow the employment of extrinsic evidence to change the date which appears on the face of a contract would open the door to unverifiable assertions as to the date when a contract was "executed". The latter is a conclusion of law—not a statement of fact. In the last analysis, there is a question of public policy involved herein, which would make it not only hazardous, but administratively impossible to accept extrinsic evidence to show that the date of "execution" is later than the date which appears on the contract.

We believe that the rule adopted in Opinion No. 468-A (at p. 1075) which classifies contracts for new or old gas on the basis of "the date set forth in the contract" is one which is supported by common sense, and the only rule which can be administered practically without the necessity for investigating the unique circumstances surrounding every contract submitted to the Commission. That date is precise, definite, and certain. It is conceded that the gas in question is of pipeline quality in all respects and a permanent certificate will be issued to Socony Mobil at the full area base rate of 14.5¢ per Mcf applicable to flowing gas.

---

[6] In their Joint Application for Rehearing, the producers attacked the contract date as the cutoff date for the maximum new gas price and argued for the date when deliveries are actually begun, *i.e.*, when the gas was first committed to interstate commerce. This contention was rejected in Opinion No. 468-A, at p. 1075.

Procedure for Fixing Price Variations Due to Quality Deficiencies

The question remains as to the procedure to be followed in establishing variations from the base area rates resulting from the quality deficiencies of gas to be sold by producer applicants other than Socony Mobil. We think in the case of certificate applications filed subsequent to the issuance of Opinion Nos. 468 and 468–A that the necessary information should be filed at the same time as the application itself. The applications in this proceeding, however, were filed prior to the issuance of those opinions and the applicants could have no way of knowing precisely what material should be filed. Accordingly, we think that the same procedure should be followed with respect to these applications as was laid down in the Order Issuing Certificates issued August 5, 1965, contemporaneously with Opinion No. 468. We agree that notice should be given to all interested participants as to the material upon which the ultimate price determinations will be based. Accordingly, the order herein will direct that each producer-applicant shall serve upon Distributor Intervenors and upon Cal-PUC, as well as all other participants who request it, copies of material filed for the purpose of establishing price variations resulting from quality deficiencies. In order to allow the producer-applicants to be aware of the initial price allowed them before accepting their certificates, the time for acceptance of the certificates will be extended until 30 days after the price, including adjustments for quality deviations, is finally determined.

Moratorium

We think that the public convenience and necessity requires the imposition of a moratorium upon all filings by the producer-applicants of increases in price in excess of the applicable area rates before January 1, 1968. This moratorium will not apply to price increases which do not exceed the applicable area rates, and if area rates are adjusted upward prior to January 1, 1968, the producer-applicants will be permitted to file for increases which do not exceed the new areas rates or their permitted contract rates, whichever is lower.

The Commission finds:

(1) El Paso is engaged in the transportation of natural gas in interstate commerce and the sale in interstate commerce of natural gas for resale for ultimate public consumption and is a "natural-gas company" within the meaning of the Natural Gas Act.

(2) Each producer applicant herein for a certificate of public convenience and necessity is a "natural-gas company" within the meaning of the Natural Gas Act as an independent producer of natural gas, as that term is defined in Section 154.91(a) of the Commission's Regulations, engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption and such sales together with the construction and operation of any facilities therefor are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applications for certificates of public convenience and necessity, in due form, have been filed by all applicants herein.

(4) The amount of lease reserves is adequate to warrant the construction of the facilities proposed for their connection.

(5) The need of El Paso for the facilities and reserves proposed herein is consistent with the market and reserve showing presented by El Paso in the proceeding at Docket No. CP63–204, *et al.*

(6) The acquisition of reserves and the construction and operation of facilities as proposed by El Paso herein are consistent with the public convenience and necessity independent of El Paso's applications in Docket No. CP64–76.

(7) The construction and operation of the facilities proposed by El Paso herein is feasible from the engineering standpoint.

(8) The construction and operation of the facilities proposed herein by El Paso is economically feasible.

(9) The facilities described in El Paso's application in Docket No. CP64–211 and in the evidence herein, and designated as "auxiliary facilities," do not require a certificate of public convenience and necessity, by reason of the provisions of the Commission's General Policy and Interpretations, § 2.55(a).

(10) Each applicant herein is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(11) The gas of which Socony Mobil Oil Company, Inc. is seller, involved in these proceedings, meets the quality standards prescribed by the Commission in Opinion Nos. 468 and 468–A.

(12) The sale of natural gas as proposed herein by each producer applicant herein together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor are required by the public convenience and necessity and a certificate authorizing the same should issue to each of them upon the terms and conditions of the order herein, which terms and conditions are required by the public convenience and necessity.

The Commission orders:

(A) A certificate of public convenience and necessity be and is hereby issued to El Paso Natural Gas Company to construct and operate the facilities described in its applications in Docket Nos. CP62–176 and CP64–211, and in the evidence herein. El Paso shall comply with the provisions applicable to it of paragraph (I) hereof.

(B) Certificates of public convenience and necessity are issued, upon the terms and conditions of this order, authorizing the sales, by the producer applicants herein, of natural gas in interstate commerce for resale, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary for such sales, all as hereinbefore described and as more fully described in the respective applications, amendments, supplements and exhibits in this proceeding.

(C) The certificates granted in paragraph (A) above are not transferable and shall be effective only so long as the applicants continue the acts or operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(D) The grant of the certificates issued in paragraph (A) above shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or Part 154 or Part 157 of the Commission's Regulations thereunder, and is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceedings now pending or hereafter instituted by or against the respective applicants. Further, our action in this proceeding shall not foreclose or prejudice any future proceedings or objections relating to the operation of any price or related provisions in the gas purchase contracts herein involved. The grant of the certificates aforesaid for service to the particular customers involved shall not imply approval of all the terms of the respective contracts, particularly as to the cessation of service upon termination of said contracts, as provided by Section 7(b) of the Natural Gas Act. The grant of the certificates aforesaid shall not be construed to preclude the imposition of any sanctions pursuant to the provisions of the Natural Gas Act for the unauthorized commencement of any sales of natural gas subject to said certificates.

(E) The notice provisions of Section 154.94(b) and the detailed submittal subprovisions of Section 154.94(f) of the Commission's Regulations under the Natural Gas Act are waived insofar as they apply to any reductions in rates hereby ordered.

(F) The certificate granted to Socony Mobil Oil Company, Inc. in Docket No. CI62–825, *et al.*, is conditioned upon a total initial price, including tax reimbursement, of 14.5 cents per Mcf at 14.65 psia, and within 30 days of the effective date of this order Socony Mobil Oil Company, Inc. shall file a supplement to its presently filed rate schedule reflecting the conditioned price as the initial price in lieu of the initial price provided in the present rate schedule.

(G) The certificate granted to Socony Mobil Oil Company, Inc. in Docket No. CI62–1355, *et al.*, is conditioned upon a total initial price, including tax reimbursement, of 16.5 cents per Mcf at 14.65 psia, and within 30 days of the effective date of this order Socony Mobil Oil Company, Inc. shall file a supplement to its presently filed rate schedule reflecting the conditioned price as the initial price in lieu of the initial price provided in the present rate schedule.

(H) The decision whether refunds should be ordered as a condition to the certificate granted to Socony Mobil Oil Company, Inc., in Docket No. CI62–825 is deferred for subsequent determination.

(I)(1) Ninety days after the issuance of this order, each producer-applicant (other than Socony Mobil Oil Company, Inc.) shall file with the Commission a Rate Schedule-Quality Statement in conformity with Appendix D to Opinion No. 468, as modified by Opinion No. 468–A, for each contract of such producer-applicant in this consolidated proceeding. Such statement shall set forth either that the gas accords with all pipeline quality standards established in Opinion No. 468, as modified by Opinion No. 468–A, or in which respects the gas deviates from the particular quality standards there established; the agreed cost to El Paso of processing the gas to bring it to the pipeline quality standards there established with respect to each quality deviation; any upward or downward Btu adjustment; and the resulting applicable area rate for the gas. Such statement shall be signed by both the seller and El Paso. If the seller and El Paso are unable to agree upon any or all of the particulars entering into the computation of the applicable area rate, the seller shall file the statement herein required within the prescribed time which shall indicate the absence of agreement and supply the information required to compute the applicable area rate as well as the contentions of the parties with respect to the quality and amount of the adjustment for any item in dispute. El Paso may file a separate statement setting forth its views within the period herein provided.

(2) The statement filed hereunder which reflects full agreement between the seller and El Paso shall be deemed accepted by the Commission, unless the Commission, within 60 days after such filing, shall otherwise order. In the event of disagreement between the seller and El Paso or, where the Commission otherwise determines that the statement filed is inconsistent with the provisions of ordering paragraph (B) of Opinion No. 468, as modified by Opinion No. 468–A, the Commission will, after appropriate proceedings, prescribe the applicable area rate to be applied as of the date of first deliveries of gas by each producer-applicant to El Paso under the contracts here involved.

(J) Copies of all filings made pursuant to ordering paragraphs (H) and (I) hereof shall be served at the time of filing upon all intervenors herein other than Gulf Pacific and upon all other participants who within 45 days of the issuance of this order shall so request in writing.

(K) Any participant shall have 20 days to respond to any statement, brief or memorandum filed pursuant to ordering paragraphs (H) or (I) hereof.

(L) The certificates granted to the producer applicants, other than Socony Mobil Oil Company, Inc. are hereby conditioned to a total initial price, including tax reimbursement, no greater than the applicable base area rate of 16.5 cents per Mcf at 14.65 psia subject to further reductions, effective as of the effective date of this order, for any quality deviations as determined pursuant to ordering paragraph (I) hereof, and further conditioned upon the filing by the respective applicants within 30 days of the determination of such rate of a supplement to its filed rate schedule reflecting the applicable area rate in lieu of any rate provided in the rate schedule then on file, and further conditioned upon refunds being made with interest by each applicant of the difference between the applicable area rate and any rate in excess thereof collected subsequent to the effective date of this order. The manner and time of such refunds shall be determined by the Commission in a later order.

(M) Should the quality of the gas delivered at any time deviate from the quality standards set forth in ordering paragraph (B) of Opinion No. 468-A so as to require a downward adjustment to the existing rate, a notice of change in rate must be filed pursuant to the provisions of Section 4 of the Natural Gas Act; *provided, however*, that adjustments reflecting changes in Btu content shall be computed by the applicable formula set forth in Opinion No. 468, as modified by Opinion No. 468-A, and charged without the filing of a notice of a change in rate.

(N) Each certificate granted to a producer-applicant herein is issued upon the condition that the applicant shall not file any change in rate providing for a price in excess of the applicable area rate prior to (1) subsequent order of the Commission in this proceeding permitting such filing or (2) January 1, 1968, whichever is earlier.

(O) Each certificate granted to a producer-applicant herein is issued upon the condition that the proposed rate schedule of the applicant shall be amended by the inclusion of the following language:

> From the effective date of the order of the Federal Power Commission in the Permian Basin Area Rate Proceeding AR61-1, until January 1, 1968, no increase in rates may be filed, except in compliance with a specific order of the Commission, at a rate in excess of the applicable area rate as determined pursuant to said proceeding or pursuant to later order of the Commission. Applicable area rate, as that term is used herein, shall mean the rate to be determined after all adjustments from the ceiling price because of deviations from the pipeline quality standards established in the aforesaid order of the Commission.

(P) The issuance of certificates in this proceeding shall not prejudice the determination in *Transwestern Pipeline Company, et al.*, Docket Nos. CP63-204 and CP64-91, *Gulf Pacific Pipeline Company*, Docket No. CP63-223 and *El Paso Natural Gas Company*, Docket No. CP64-76.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

GULF STATES UTILITIES COMPANY, DOCKET NO. E-7259

ORDER AUTHORIZING THE ISSUANCE OF FIRST MORTGAGE BONDS

(Issued January 6, 1966)

Gulf States Utilities Company (Applicant), incorporated under the laws of the State of Texas and doing business in that State and the State of Louisiana, with its principal business office at Beaumont, Texas, filed an application with the Federal Power Commission on November 26, 1965, for authorization, pursuant to Section 204 of the Federal Power Act, to issue and sell at competitive bidding $20,000,000, principal amount of First Mortgage Bonds, due 1966.

Applicant proposes to issue the Bonds under its Indenture of Mortgage, dated September 1, 1926, as supplemented and modified by 21 supplemental indentures and as to be further supplemented and modified by the Twenty-second Supplemental Indenture under which the Manufacturers Hanover Trust Company of New York is Trustee.

On or about January 6, 1966, Applicant proposes to invite sealed written bids for the purchase of the Bonds by newspaper publication and by distribution of a "Public Invitation for Bids for the Purchase of the Bonds", setting forth terms and conditions relating thereto. All bids, whether from a single bidder or group of bidders, must be in writing on the Form of Bid furnished by Applicant and must be for the purchase of the entire amount of the Bonds. Each bid must specify, among other things: (1) the coupon rate which shall be a multiple of ⅛ of 1%; (2) the price to be paid to the Applicant, which price shall not be less than 100% nor more than 102½% of principal amount thereof, and shall provide that accrued interest on the Bonds will be paid to the Applicant by the Purchasers; and (3) either (a) the initial public offering price at which the Bonds will be offered by the Purchasers for resale shall not exceed the amount of the bid plus 1½% of the principal amount of the Bonds, or (b) no public offering of the Bonds for resale is intended.

Unless postponed, all bids for the purchase of the proposed issuance of Bonds must be delivered to the Applicant's representative at the Manufacturers Hanover Trust Company, Room A, Fourth Floor, 40 Wall Street, New York, New York, before 11 a.m. New York time on January 18, 1966, and be accompanied by the deposit of $600,000. Unless the Applicant shall reject all bids or exclude a bid or bids for reasons set forth in the invitation, it will accept the bid which provides for the lowest cost of money.

Applicant states that the proceeds obtained from the proposed issuance of Bonds will be utilized to pay off Applicant's outstanding short-term notes, estimated to be in the amount of $17,000,000, at the time of a sale of the new Bonds, and to furnish a portion of the funds for Applicant's construction program. Applicant anticipates that the cost of its 1965 and 1966 construction program will total about $49,500,000, and $50,000,000 respectively. Principal items in this program include the completion of 440,000 kw generating unit at the Sabine generating plant, the commencement of construction of a 580,000 kw generating unit at the Willow Glen generating plant which is scheduled for completion in 1968, construction of and additions to substations and the construction of 147 miles of 500 kv transmission line.

Written notice of the application has been given to the Texas Railroad Commission and the Louisiana Public Service Commission and to the Governor of each of those states. Notice has also been given by publication in the Federal

Register on December 9, 1965 (30 F.R. 15241) stating that any person desiring to be heard or to make any protest with reference to the application should file a petition or protest on or before December 21, 1965, with the Federal Power Commission, Washington, D.C. 20426. No protest, petition or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 204 of the Federal Power Act, subject to the jurisdiction of the Commission as heretofore described and set forth in the Commission's order issued November 27, 1957, *Gulf States Utilities Company*, Docket No. E-6785 (18 FPC 701).

(2) The proposed issuance and sale of Bonds, as described above, will constitute an issuance of securities within the purview of Section 204 of the Federal Power Act.

(3) Applicant is not organized and operating in a State under the laws of which the security issue here involved is regulated by a State commission within the meaning of Section 204(f) of the Act, and the proposed issuance of securities is, therefore, not exempt by virtue of that Section from the requirements of Section 204 of the Act.

(4) The proposed issuance and sale of Bonds, as hereinafter authorized, will be for a lawful object, within the corporate purposes of the Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance by Applicant of service as a public utility and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

(5) The period of public notice given on this application is reasonable.

The Commission orders:

(A) The proposed issuance and sale of Bonds, upon the terms and conditions and for the purposes specified in the application, as described above, are authorized, subject to the provisions of this order.

(B) The proposed issuance and sale of Bonds at competitive bidding shall not be consummated until:

(i) Applicant shall have amended its application pursuant to the requirements of Section 34.2(g) of the Commission's Regulations under the Federal Power Act relating to compliance with competitive bidding requirements, and Section 34.2(h)(1) of those Regulations relating to affiliation, and shall have either filed such amendments or shall have mailed them and advised the Commission by telephone and telegraph, as contemplated in Section 34.9 of the Regulations.

(ii) The Commission, by further order, shall have approved the price to be received by Applicant for the proposed issuance of Bonds and the interest rate thereof.

(C) This authorization shall expire unless the transaction hereby authorized is consummated within 90 days from the date of issuance of this order.

(D) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determinations of cost, or any other matter whatsoever now pending or which may come before this Commission.

(E) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States with respect to any securities to which this order relates.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

CALIFORNIA-PACIFIC UTILITIES COMPANY, PROJECT NO. 1987

ORDER AMENDING LICENSE (MAJOR)

(Issued January 7, 1966)

Application was filed on November 9, 1960, and amended on May 4, 1964, by California-Pacific Utilities Company, licensee for Project No. 1987, located on Lake, Upper Lake, North Fork of Desolation, Lost and North Fork of Congo Creeks, in Baker and Grant Counties, Oregon, and affecting lands of the United States within the Umatilla and Whitman National Forests.

The aforementioned filings request Commission approval: (1) of two revised exhibits showing the actual location of the transmission line extending between the Towns of Fremont and Bourne; (2) to exclude the Upper Lake Reservoir from the license, which the licensee plans to abandon as being uneconomic to maintain; and (3) two exhibits on file with the Commission which show the Upper Lake reservoir to be eliminated from the license (10 FPC 1141).

By letter dated July 20, 1965, the Chief, Forest Service, reported that the National Forest lands formerly occupied by the Upper Lake reservoir have been restored to a condition satisfactory to the Service, and requested that the Commission approve the exclusion of the reservoir as a part of the project effective as of December 31, 1964. Exclusion from the license of the Upper Lake reservoir would reduce the area of lands of the United States occupied by the project by 84.54 acres, exclusive of those lands occupied by transmission line right-of-way, with a resultant reduction in the amount of annual charges for such occupancy.

By letter dated October 11, 1962, the Chief, Forest Service, offered no objection to Commission approval of the revised exhibits filed as part of the application for amendment, which show the correct location of the transmission line between Fremont and Bourne.

The Commission finds:

(1) Public notice of the application, as amended, has been given. No protests or petitions to intervene have been received.

(2) The license for Project No. 1987 amended as hereinafter provided is in the public interest.

(3) The reduced amount of annual charges for recompensing the United States for the use, occupancy and enjoyment of its lands by the project, exclusive of those used for transmission line right-of-way, is reasonable as hereinafter fixed and specified.

(4) The following described exhibits, on file with the Commission and revised by Commission staff on July 20, 1965 to show the exclusion therefrom of the Upper Lake reservoir, conform to the Commission's rules and regulations and should be approved as part of the license for the project:

Exhibit K-1 (FPC No. 1987-2) entitled "Fremont Project," signed California-Pacific Utilities Company by E. K. Albert, Vice President and Chief Engineer, on January 9, 1948 (revised as of February 21, 1950), including Field Notes of Survey of Ditch and Creek Channel to Convey the Waters of the North Fork of Desolation Creek to the Olive Lake Reservoir of the Fremont Power Company, Baker City, Oregon, signed L. C. Stevenson, Surveyor, March 6, 1909; and

Exhibit K–2 (FPC No. 1987–3) entitled "Fremont Project," signed California-Pacific Utilities Company by E. K. Albert, Vice President and Chief Engineer, on January 9, 1948 (revised as of February 21, 1950)

Exhibit K–3 (FPC No. 1987–4) entitled "Fremont Project," signed California-Pacific Utilities Company by E. K. Albert, Vice President and Chief Engineer, on January 9, 1948 (revised February 21, 1950);

Exhibit K–5 (FPC No. 1987–7) entitled "Fremont Project," signed California-Pacific Utilities Company by E. K. Albert, Vice President and Chief Engineer, on January 9, 1948 (revised as of February 21, 1950).

(5) *Exhibit K–4* (FPC No. 1987–13 and –14) filed as part of the application and showing the corrected location of the transmission line between Fremont and Bourne, conforms to the Commission's Rules and Regulations and should be approved as part of the license for the project.

(6) The following described exhibit on file with the Commission as a part of the license for the project and showing the structures of the dam and spillway of the Upper Lake reservoir, should be eliminated from the license for the project:

Exhibit L—Sheet 3 (FPC No. 1987–12) entitled "Fremont Project," signed California-Pacific Utilities Company by E. K. Albert, Vice President and Chief Engineer, on January 9, 1948 (revised as of February 21, 1950).

The Commission orders:

(A) The revised exhibits described in findings (4) and (5) above are hereby approved as part of the license for Project No. 1987, and the exhibit described in finding (6) above is hereby eliminated from the license for the project.

(B) The license for Project No. 1987 is hereby amended, effective as of January 1, 1965, as follows:

PARAGRAPH I. Subparagraph (b) on page 1141 of the license is eliminated therefrom.

PARAGRAPH II. A new subparagraph (b) on page 1141 of the license, to read as follows, is hereby included in the license: (b) The principal project works comprising Project No. 1987 consist of: one partly artificial reservoir, known as Olive Lake, formed in part by a dam on Lake Creek, and having an area of about 172 acres and storage capacity of about 5,591 acre-feet; a low dam on North Fork of Desolation Creek diverting water through a ditch about 7,060 feet long to Olive Lake; a pipe line from Olive Lake to the powerhouse; a low dam on Lost Creek and a conduit about 1,690 feet long diverting additional water to the pipe line; a powerhouse on the North Fork of Congo Creek containing two 900-horsepower water wheels connected to two 550-kilowatt generators; a 22-kilovolt transmission line about 18.25 miles long from the power plant to Bourne; a 2,300-volt transmission line about 5.5 miles long from the power plant to Olive Lake and a telephone line on the same poles; and appurtenant facilities.

PARAGRAPH III. Subparagraph (ii) of Article 25 of the license is amended to read as follows, effective as of January 1, 1965:

(ii) For the purpose of recompensing the United States for the use, occupancy and enjoyment of its lands, exclusive of those used for transmission line right-of-way, $331.42.

(C) This amendment in the manner set out above shall not operate to alter or amend the license in any other respect, and shall not in any way constitute a waiver of any other part, provision or condition of the license.

(D) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the

Act, and failure to file such an application shall constitute acceptance of this license amendment. In acknowledgment of the acceptance of this license amendment, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

ARKANSAS LOUISIANA GAS COMPANY, DOCKET NOS. CP66–16 AND CP66–17

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT OF FACILITIES AND ACCEPTING NOTICE OF CANCELLATION OF RATE SCHEDULE FOR FILING

(Issued January 10, 1966)

On July 16, 1965, Arkansas Louisiana Gas Company (Applicant) filed applications in Docket Nos. CP66–16 and CP66–17 pursuant to Section 7(b) of the Natural Gas Act requesting permission and approval to abandon approximately 44,530 feet of 14-inch gas pipeline and appurtenances and to abandon gas service to Oklahoma Natural Gas Company (ONG) at Enid, Oklahoma, as more fully set forth in the applications.

By its filing in Docket No. CP66–16, Applicant requests permission and approval to abandon, in the manner indicated below by segments, the 14-inch pipeline which Applicant and its predecessor, Consolidated Gas Utilities Corporation, have operated for many years in Enid and its environs:

(1) Abandon in place 1,650 feet,

(2) Abandon by sale to ONG 13,780 feet to be used by ONG for distribution, and

(3) Reclassify 29,100 feet as "Distribution Plant" instead of "Transmission Plant" as it is now classified on Applicant's books.

The 14-inch pipeline has not been used as a high pressure interstate transmission facility since changes were made in Applicant's Oklahoma system pursuant to certificate authorization issued by the Commission on December 2, 1963, in Docket No. CP63–352, 30 FPC 1385. Applicant states that the 14-inch pipeline is now used only to serve 58 rural retail customers.

By the order issued December 2, 1963, in Docket No. CP63–352, Applicant was authorized to construct and operate a 12-inch transmission pipeline to replace the 14-inch pipeline which is herein proposed to be abandoned and reclassified. The new 12-inch pipeline was constructed at a location north of the 14-inch pipeline in order to by-pass the built-up area of Enid. Due to the location of the new pipeline, it was not economical to switch the 58 rural retail customers to it.

By its filing in Docket No. CP66–17, Applicant also requests permission and approval to abandon natural gas service to ONG at Enid and to abandon the related regulating and metering facilities. The service has been rendered under Applicant's FPC Gas Rate Schedule G–4 (Original Sheet No. 6 of Applicant's FPC Gas Tariff, First Revised Volume No. 1) and under a service agreement dated September 15, 1939, which has been terminated by mutual agreement, as indicated by letter agreement dated May 4, 1965, effective May 31, 1965.

The contract between Applicant and ONG, which is incorporated in Applicant's FPC Gas Rate Schedule G–4, was terminated by mutual consent since ONG no longer desires to purchase gas from Applicant under such rate schedule. No deliveries from Applicant to ONG have been made since May 31, 1965.

ONG will continue service to the area from its own gas supply. The 13,780-foot segment of the 14-inch pipeline to be sold by Applicant to ONG will be used by the latter in its distribution operations since the City of Enid has now grown to encompass this line. ONG's Enid distribution system is now connected to its main system and is being supplied therefrom.

Eighteen of the 58 rural retail customers will be served by ONG from its supply through the 13,780-foot segment. The remaining 40 rural retail customers will continue to be served by Applicant through the 29,100-foot segment which is to be reclassified as "Distribution Plant".

Applicant has also given notice of cancellation of its FPC Gas Rate Schedule G–4 since ONG was the only customer purchasing gas under that rate schedule, which calls for delivery at Enid.

Notices of the filing of the applications in Docket Nos. CP66–16 and CP66–17 were published in the Federal Register on July 28, 1965 (30 F.R. 9415) and July 29, 1965 (30 F.R. 9500), respectively. No petition to intervene, notice of intervention or protest to the granting of either application has been filed.

At a hearing held on January 6, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the applications and exhibits submitted in support of the authorizations sought therein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Arkansas Louisiana Gas Company, a Delaware corporation with its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of January 26, 1943, in Docket No. G–252 (3 FPC 910).

(2) The facilities and service to be abandoned, as hereinbefore described and as more fully described in the applications in this proceeding, are subject to the jurisdiction of the Commission and abandonment of such facilities and service by Applicant is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) Such abandonment, as hereinbefore described and as more fully described in the applications in this proceeding, is permitted by the public convenience and necessity and an order approving same should be issued as hereinafter ordered.

(4) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that Applicant's notice of cancellation of its Rate Schedule G–4 (Original Sheet No. 6 of Applicant's FPC Gas Tariff First Revised Volume No. 1) be accepted for filing effective as of the date of this order.

The Commission orders:

(A) Permission for and approval of the abandonment by Arkansas Louisiana Gas Company of the facilities and service hereinbefore, as more fully described in the respective applications, are granted.

(B) Applicant's notice of cancellation of its Rate Schedule G–4 (Original Sheet No. 6 of Applicant's FPC Gas Tariff First Revised Volume No. 1) is accepted for filing effective the date of this order.

(C) Applicant shall advise the Commission of the date of abandonment of the facilities within 10 days thereafter.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP66-166

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 10, 1966)

On November 29, 1965, El Paso Natural Gas Company (Applicant) filed in Docket No. CP66-166 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the reinstallation and operation of an existing meter station which was previously used for a direct sale so that, upon completion of the reinstallation, the meter may be utilized for the purchase of residue gas from Sinclair Oil & Gas Company (Sinclair) in Midland County, Texas, as more fully described in the application.

The 4½-inch orifice-type purchase meter station will be reversed to measure the estimated 5,000 Mcf per day of residue gas which will be sold by Sinclair to Applicant. The station was formerly utilized in making a direct sale of gas by Applicant to Sinclair at the same location for cycling operations. Applicant will remove and reinstall the station in order to accommodate the reverse flow of gas. The estimated cost of reinstalling the meter station is $300.

Sinclair has been making wellhead deliveries of gas to Applicant at various points in Midland County, Texas, pending arrangements for the processing of the gas. Sinclair now proposes to process the gas and deliver the resulting residue to Applicant pursuant to authority heretofore granted in Docket No. G-2893.

Due notice of the filing of the application was published in the Federal Register on December 14, 1965 (30 F.R. 15383). No petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on January 6, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 29, 1942, in Docket Nos. G-242 and G-257 (3 FPC 851).

(2) The facilities hereinbefore described and as more fully described in the application in this proceeding are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the transportation of natural gas by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of said Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to El Paso Natural Gas Company authorizing the reinstallation and operation of the facilities and the transportation of natural gas as hereinbefore described and as more fully described in the application in this proceeding upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be completed and placed in actual operation and the transportation of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within three months from the date of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. Charles R. Ross, David S. Black and Carl E. Bagge.

ORDER ESTABLISHING NATIONAL POWER SURVEY REGIONAL ADVISORY COMMITTEES

(Issued January 10, 1966)*

The Federal Power Commission is directed by section 202(a) of the Federal Power Act (16 U.S.C. 792–825r) to promote and encourage voluntary interconnection and coordination of the nation's electric power facilities in the interest of economy and conservation, and is authorized by section 311 of the Act to conduct broad investigations covering all aspects of the entire power industry. In order to accomplish more effectively the objectives of the National Power Survey, a report issued by the Commission in December 1964, and in accordance with the Executive Order 11007 of February 26, 1962 (27 F.R. 1875) relating to the Formation and Use of Advisory Committees, we have concluded that it is in the public interest that the following six National Power Survey Regional Advisory Committees be, and accordingly, are established as of the date of issuance of this order: Northeast, Southeast, East Central, South Central, West Central, and West. The order issued July 7, 1965, here revised, is rescinded, 34 FPC 14.

1. *Purpose.* The Regional Advisory Committees will assist the Commission and the Executive Advisory Committee in its work with and for the Commission and specifically in encouraging the utility systems in each Region to pursue courses of action consistent with the broad goals of the National Power Survey, in reporting the progress being made in attaining those goals, and in updating the guidelines of the Survey. The Committees will facilitate the exploration of all practicable opportunities for more efficient and reliable development and

---

* This order was adopted December 22, 1965, before Chairman Swidler left the Commission. Published in the Federal Register on January 18, 1966 (31 F.R. 586).

operation of power systems in each region. Meetings of the Committees will constitute forums for the exchange of ideas and for fostering better communication and understanding among all segments of the utility industry in the region. All systems of every segment of the industry would be encouraged to support the analyses through expressions of their needs and desires. The Committees will be consultative only, and they will operate within the limits established by the Commission, recognizing the appropriate corporate and public responsibilities of utility systems, and will function in keeping with the position of the Commission enunciated on many occasions that the National Power Survey is not intended as a blueprint or as a means of compelling the construction of particular facilities.

2. *Selection of Committee Members.* All Committee members and alternates shall be selected by the Chairman of the Commission with the approval of the Commission and shall to the extent practicable, include representation from all segments of the industry engaged in the generation, transmission and distribution of electricity in each region.

3. *Conduct of Meetings.* The Chairman of the Commission, or in his absence, the Acting Chairman, or any full-time employee of the Commission designated by the Chairman or Acting Chairman of the Commission shall be present at all Committee meetings and shall be responsible for opening and for assisting in the conduct of the meetings and for adjourning meetings when, in his judgment, adjournment is in the public interest. The meetings will be conducted under the direction of the Chairman of the Regional Advisory Committee following an agenda approved in advance by the Chairman of the Commission or his designated representative.

4. *Minutes.* The Chairman of the Commission having made a finding that maintenance of a verbatim transcript would be impracticable and not in the public interest, there shall be kept by the Secretary of each Committee, in lieu thereof, a record of persons present, a description of matters discussed and conclusions reached, and copies of all reports received, issued, or approved by each Committee.

5. *Secretary of the Committee.* The Chairman of the Commission shall appoint a Secretary of each Committee from the Commission staff who shall be responsible for preparing summary minutes of all Committee meetings, notifying members of the meetings, circulating copies of an approved agenda, and maintaining all records related to organization, membership and operations of each Committee. The Secretary or his alternate shall be present during all meetings and shall certify the accuracy of all minutes.

6. *Location and Time of Meetings.* The initial meeting of each Committee will convene at the call of the Chairman or Acting Chairman of the Commission at the Office of the Federal Power Commission, 441 G Street, N.W., Washington, D.C. 20426. Subsequent meetings normally will be convened at the call of the appropriate Regional Engineer after consultation with the Chairman of the appropriate Regional Advisory Committee. Meetings shall be held in the Commission's regional offices. Ordinarily, meetings will be held during the regular working hours of the Federal Power Commission.

7. *Report to the Committee.* The reports of the Committee will be presented to the Commission and the Executive Advisory Committee in written form. These reports will be directed toward the objectives set forth under "*Purpose.*"

8. *Duration of the Committee.* Each Committee shall terminate not later than two years subsequent to its date of establishment, unless the Commission determines in writing, not more than 60 days prior to the expiration of such two-year period, that continued existence of the Committee is in the public interest. A like determination by the Commission shall be required not more

than 60 days prior to the end of each subsequent two-year period to continue the existence of each Committee thereafter.

9. The Secretary of the Commission shall cause prompt publication of this order to be made in the Federal Register in accordance with the provisions of the Bureau of the Budget Circular No. A-63.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

UNITED GAS PIPE LINE COMPANY AND SOUTHERN NATURAL GAS COMPANY, DOCKET NO. CP66-132

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 10, 1966)

On October 27, 1965, United Gas Pipe Line Company (United) and Southern Natural Gas Company (Southern), hereinafter referred to jointly as Applicants, filed in Docket No. CP66-132 an application, as supplemented on December 2, 1965, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain interconnecting facilities between United's and Southern's existing pipelines in Tangipahoa Parish, near Independence, Louisiana, the use of an existing point of interconnection near Kosciusko, Attala County, Mississippi, and the exchange of natural gas between the parties, as more fully described in the application.

Specifically, the proposal involves the installation and operation of an orifice meter, 0.6 miles of 4-inch pipeline, and related facilities in Tangipahoa Parish for the delivery of gas by Southern to United. Equivalent volumes will be redelivered by United to Southern through the existing interconnecting facilities near Kosciusko.

Southern has agreed to deliver such daily volumes as United may require from time to time, with simultaneous redeliveries being made by United. The parties have entered into a precedent agreement dated August 25, 1965.

The purpose of the proposal is to alleviate low pressure experienced by United south of Independence, Louisiana.

The estimated cost of construction of the proposed interconnection is $30,631, of which $400 is to be reimbursed by United to Southern for the tap on Southern's pipeline. United will bear the entire cost, which will be financed out of funds on hand. The project is economically feasible.

Due notice of the filing of the application was published in the Federal Register on November 17, 1965 (30 F.R. 14393). No petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on January 6, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, United Gas Pipe Line Company, a Delaware corporation with its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the

Commission in its order of November 10, 1942, in Docket No. G–232 (3 FPC 863).

(2) Applicant, Southern Natural Gas Company, a Delaware corporation having its principal place of business in Birmingham, Alabama, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 6, 1942, in Docket No. G–296 (3 FPC 822).

(3) The facilities hereinbefore described and as more fully described in the application in this proceeding are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the exchange of natural gas by Applicants are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) Applicants are able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) The construction and operation of the proposed facilities and the exchange of natural gas by Applicants are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of said Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to United Gas Pipe Line Company and Southern Natural Gas Company authorizing the construction and operation of the facilities and the exchange of natural gas as hereinbefore described and as more fully set forth in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon the Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be completed and placed in actual operation and the exchange of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within three months from the date of this order.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

CITY OF DIXON, MISSOURI AND OKLAHOMA ILLINOIS GAS PIPELINE COMPANY, DOCKET NO. CP65–175

ORDER DISMISSING APPLICATION

(Issued January 14, 1966)

On December 14, 1964, the City of Dixon, Missouri (Applicant), filed in Docket No. CP65–175 an application, as supplemented on March 15, 1965, pursuant to

Section 7(a) of the Natural Gas Act for an order directing Oklahoma Illinois Gas Pipeline Company (Respondent) to establish physical connection of its proposed facilities with those which Applicant proposed to construct and to sell and deliver natural gas to Applicant for resale and distribution in the City of Dixon and environs. On September 9, 1965, in Opinion No. 474 (34 FPC 771), *Natural Gas Pipeline Company of America, et al.*, Docket No. CP62–243, *et al.*, the Commission denied Respondent's application in Docket No. CP62–260 for a certificate of public convenience and necessity authorizing the construction and operation of facilities which would be used, *inter alia*, to serve Applicant.

The Commission finds:

The application filed by the City of Dixon, Missouri, in Docket No. CP65–175 is moot.

The Commission orders:

The application filed by the City of Dixon, Missouri, in Docket No. CP65–175 is dismissed.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP64–184

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 14, 1966)

On November 29, 1965, El Paso Natural Gas Company (Applicant), filed in Docket No. CP64–184 an application to amend the order issued in said docket on April 20, 1964, 31 FPC 959, as amended by orders issued March 29, 1965, 33 FPC 644, and September 3, 1965, 34 FPC 735, all as more fully set forth in the application to amend.

By the aforementioned orders, Applicant was authorized to construct and operate certain facilities and to sell and deliver natural gas for resale by use of such facilities. Among the authorized facilities was the Deming Ranchettes tap which was proposed to be installed and utilized for the sale and delivery of natural gas to Western Gas Service Company (Western) for resale to domestic consumers situated in the Deming Ranchettes subdivision located in the vicinity of Deming, New Mexico.

Applicant now states that these facilities have not been constructed and are not now proposed to be constructed since Western does not now propose to initiate natural gas service to the Deming Ranchettes subdivision and requests that the order issued in Docket No. CP64–184, as amended, be further amended by deleting the authorization to construct and operate the Deming Ranchettes tap and to sell and deliver natural gas to Western for resale in the said Deming Ranchettes subdivision.

Due notice of the filing of the application to amend and opportunity for hearing has been given by publication in the Federal Register on December 11, 1965 (30 F.R. 15334). No protest, notice of intervention, petition to intervene or request for hearing has been filed concerning this amendment.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act, and the public convenience and necessity require that the Commission's order issued April 20, 1964, in Docket No. CP64–184 be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued April 20, 1964, in Docket No. CP64–184 is amended so as to delete therefrom the authorization to construct and operate the Deming Ranchettes tap and to sell and deliver natural gas to Western Gas Service Company for resale in the said Deming Ranchettes subdivision.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP66–153

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 14, 1966)

On November 15, 1965, El Paso Natural Gas Company (Applicant), filed in Docket No. CP66–153 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities and the sale and delivery of natural gas to California-Pacific Utilities Company (Cal-Pac) for transportation to and resale and general distribution in the community of North Powder, Oregon, and environs, as more fully set forth in the application.

Applicant proposes to construct and operate a positive type measuring and regulating station, and necessary appurtenances, to be located adjacent to its 22-inch O.D. Northwest Division mainline in Union County, Oregon. The proposed deliveries of natural gas to Cal-Pac will be made at the outlet of such facility and Cal-Pac will then transport the gas so delivered through facilities proposed to be constructed by it to points of resale and distribution in the community of North Powder, Oregon, and environs.

Cal-Pac proposes to construct and operate approximately 3.1 miles of 4-inch and 2-inch transmission and distribution pipeline extending from Applicant's proposed measuring and regulating station to a point of termination in the immediate vicinity of North Powder, Oregon, at an estimated cost of $55,945.

The estimated maximum daily and annual natural gas requirements of Cal-Pac during the third full year of proposed natural gas service will be 119 Mcf and 12,376 Mcf, respectively. The sales and deliveries which are the subject of the instant application are proposed to be made in accordance with and at rates contained in Applicant's Rate Schedule DS–1, FPC Gas Tariff, Original Volume No. 3.

Applicant states that if the facilities and service embraced by the instant application are approved, they will be divested by Applicant to Northwest Pipeline Corporation under the authorizations sought by Applicant in Docket No. CP66–27, if such authorizations issue subsequent to the grant of the instant application. Otherwise, Northwest Pipeline Corporation will be substituted for Applicant under the instant application.

The estimated cost of Applicant's proposed modification is $6,800, which will be financed from currently available working funds.

After due notice the Public Utility Commissioner of Oregon filed a notice of intervention in the proceeding on December 6, 1965, in support of the application and waiving formal hearing. No other petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on January 13, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 29, 1942, in Docket Nos. G–242 and G–257 (3 FPC 851).

(2) The proposed construction and operation of facilities and sale of natural gas, as hereinbefore described, and as more fully described in the application and exhibits in this proceeding are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed construction and operation of facilities and sale of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon El Paso's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to the Applicant, El Paso Natural Gas Company, in this proceeding authorizing the construction and operation of facilities and sale of natural gas, as hereinbefore described and as more fully described in the application and exhibits herein, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized to be constructed and operated by Applicant shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations within six months of the date on which this order issues.

(D) Cal-Pac shall be prepared to receive natural gas from Applicant within 6 months from the date of this order.

(E) Applicant shall file pursuant to Part 154 of the Commission's Regulations an acceptable service agreement reflecting the terms and conditions of the sale and the delivery of natural gas to Cal-Pac.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

THE OHIO FUEL GAS COMPANY, DOCKET NO. CP66–118

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 14, 1966)

On October 21, 1965, The Ohio Fuel Gas Company (Applicant) filed in Docket No. CP66–118 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of 3.4 miles of 24-inch O.D. pipeline and appurtenances, as more fully described in the application.

The proposed pipeline will extend Applicant's Line L–3100 to complete the loop of its Line L–2450 between its Treat Station and Weaver Station in Knox and Richland Counties, Ohio.

The proposed pipeline will enable Applicant to increase the volume of natural gas to be transported north to storage areas during summer injection periods in order to meet required storage inventories beginning with the 1966-67 winter heating season. The 3.4 miles of 24-inch pipeline loop will provide an additional 28,000 Mcf per day of required transmission capability to the storage area when Applicant's Crawford Station is operating at its calculated 1966 design day discharge pressure of 782 psig. Operation of Crawford Station at its maximum allowable of 800 psig would result in additional capacity of 15,000 Mcf per day in excess of the 28,000 Mcf per day, after the proposed loop line is installed.

The estimated cost of construction of the proposed pipeline and appurtenances is $333,000, which will be financed through promissory notes or common stock to be issued to Applicant's parent company, The Columbia Gas System, Inc. The proposal is economically feasible.

Due notice of the filing of the application was published in the Federal Register on November 3, 1965 (30 F.R. 13914). No petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on January 13, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, The Ohio Fuel Gas Company, an Ohio corporation having its principal place of business in Columbus, Ohio, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of August 21, 1945, in Docket No. G–371 (4 FPC 1033).

(2) The facilities hereinbefore described and as more fully described in the application in this proceeding are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the transportation of natural gas by Applicant are required by the public convenience

and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of said Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to The Ohio Fuel Gas Company authorizing the construction and operation of the facilities and the transportation of natural gas in interstate commerce as hereinbefore described and as more fully set forth in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be completed and placed in actual operation and the transportation of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within one year from the date of this order.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

SINCLAIR OIL & GAS COMPANY, DOCKET NO. RI66-246

ORDER ACCEPTING CONTRACT AMENDMENT, CONDITIONALLY ACCEPTING RATE FILING AND PROVIDING FOR HEARING ON AND SUSPENSION OF PROPOSED CHANGE IN RATE

(Issued January 14, 1966)

On December 15, 1965, Sinclair Oil & Gas Company (Sinclair)[1] tendered for filing a proposed change in its presently effective rate schedule for sales of natural gas subject to the jurisdiction of the Commission. The proposed change, which constitutes an increased rate and charge, is contained in the following designated filing:

Description: Notice of Change, dated December 10, 1965.

Purchaser and Producing Area: El Paso Natural Gas Company (June Saunders Lease, Sweetie Peck Field, Midland County, Texas), (R.R. District No. 8), (Permian Basin Area).

Rate Schedule Designation: Supplement No. 6 to Sinclair's FPC Gas Rate Schedule No. 174.

Effective Date: January 15, 1966.[2]

Amount of Annual Increase: $298.

Effective Rate: 18.1978¢ per Mcf.[3] [4]

---

[1] Address is: P. O. Box 521, Tulsa, Oklahoma 74102. Attn: Mr. P. T. Davis.

[2] The stated effective date is the first day after expiration of the required statutory notice.

[3] Present rate is in effect subject to refund in Docket No. RI65-38.

[4] Subject to 3.3499¢ per Mcf reduction for gathering, treating and compressing (rate for gas gathered, treated, compressed and processed by buyer).

Proposed Rate: **18.2430¢ per Mcf.**[5] [6]
Pressure Base: **14.65 psia.**

On August 4, 1965, Sinclair tendered for filing a Letter Agreement dated June 28, 1965, which provides for seller to gather, treat, compress and process the gas in its Midland Gas Products Plant and deliver the residue gas derived therefrom into buyer's pipeline at the tailgate of the plant. We believe that it would be in the public interest to accept for filing Sinclair's aforementioned Letter Agreement to become effective as of September 4, 1965, the date of expiration of the statutory notice, but not the proposed rate contained therein which will be suspended as indicated below.

Sinclair, a producer-respondent in the Permian Basin Opinion No. 468, proposes a tax increase from 18.1978¢ to 18.2430¢ per Mcf as permitted under the above letter agreement for a sale of gas to El Paso Natural Gas Company (El Paso) in the Permian Basin Area of Texas. The proposed rate exceeds the applicable area ceiling base rate of 14.5¢ per Mcf prescribed by Opinion No. 468, 34 FPC 159.

The proposed increase involves a sale of residue gas derived from casinghead gas. The gas currently being gathered, treated, compressed and processed by El Paso under an interim sales arrangement, until such time as Sinclair can process (or have processed) such gas and deliver the residue gas derived therefrom direct to El Paso. For this service, El Paso is currently charging Sinclair 3.3499¢ per Mcf. Sinclair's current tax reimbursement (0.1978¢) is based on a taxable rate of 14.6501¢ per Mcf (18.0¢ base rate less 3.3499¢ service charge). Sinclair recently constructed a processing plant in the vicinity of the subject sale and now proposes to gather the casinghead gas into its Midland Gas Products Plant, process same and deliver the residue remaining therefrom into El Paso's pipeline at the tailgate of the plant. The arrangement is set forth in the above letter agreement which provides the basis for the proposed increased rate. The proposed tax increase of 0.0452¢ reflects this change in delivery conditions which requires the tax to be based on a taxable rate of 18.0¢ per Mcf, the base rate under the contract. While the proposed increase is ostensibly a tax increase, the increase rate sought here by Sinclair also reflects a substantial change in the net rate Sinclair will collect when the proposed rate becomes effective because that rate will not be subject to the service charge now provided for under the currently effective rate.

The just and reasonable rate prescribed by the Permian Basin Opinion No. 468 and the moratorium applicable to all sales covered by Opinion No. 468 covers the subject sale. The proposed rate is thus subject to rejection. In accordance with the decision of the Tenth Circuit on October 20, 1965, in *Skelly Oil Co.* v. *F.P.C.* (CA10 No. 8385, *et al.*) Sinclair has obtained a stay through January 20, 1966, the effectiveness of Opinion Nos. 468 and 468–A, 34 FPC 1068. Accordingly, instead of rejecting Sinclair's filing at this time, we shall conditionally accept it for filing, and simultaneously suspend the rate increase for a period of five months from January 15, 1966, the date of expiration of the statutory notice. Our acceptance of the instant rate increase is expressly conditioned to provide that the rate increase will be rejected, *ab initio,* in the event the court stay referred to above is dissolved or Opinion Nos. 468 and 468–A are upheld upon judicial review insofar as ordering paragraph (H) is concerned.

Sinclair requests waiver of the statutory notice to permit an effective date of August 15, 1965, for its contract amendment, and an effective date of December 15, 1965, for its proposed rate increase. Good cause has not been shown for waiving the 30-day notice requirement provided in Section 4(d) of the Natural Gas Act to permit earlier effective dates for Sinclair's rate filings and such request is denied.

---

[5] Tax reimbursement increase.

[6] Rate for gas gathered, treated, compressed and processed by seller.

The proposed changed rates and charge may be unjust, unreasonable, unduly discriminatory, or preferential, or otherwise unlawful.

The Commission finds:

(1) Good cause has been shown for accepting for filing Sinclair's proposed contract amendment dated June 28, 1965, designated as Supplement No. 5 to Sinclair's FPC Gas Rate Schedule No. 174, and for permitting such supplement to become effective as of September 4, 1965, the date of expiration of the statutory notice.

(2) It is necessary and proper in the public interest and to aid in the enforcement of the provisions of the Natural Gas Act that the Commission enter upon a hearing concerning the lawfulness of the proposed change, and the Supplement No. 6 to Sinclair's FPC Gas Rate Schedule No. 174 be suspended and the use thereof deferred as hereinafter ordered.

The Commission orders:

(A) Sinclair's contract amendment dated June 28, 1965, designated as Supplement No. 5 to Sinclair's FPC Gas Rate Schedule No. 174, is accepted for filing and permitted to become effective as of September 4, 1965.

(B) Pursuant to the authority of the Natural Gas Act, particularly Sections 5 and 15 thereof, the Commission's Rules of Practice and Procedure, and the Regulations under the Natural Gas Act [18 CFR, Chapter I], a public hearing shall be held upon a date to be fixed by notice from the Secretary concerning the lawfulness of the proposed increased rate and charge contained in Supplement No. 6 to Sinclair's FPC Gas Rate Schedule No. 174.

(C) Pending such hearing and decision thereon, Supplement No. 6 to Sinclair's FPC Gas Rate Schedule No. 174 is conditionally accepted for filing, as noted above, and is hereby suspended and the use thereof deferred until June 15, 1966, and thereafter until such further time as it is made effective in the manner prescribed by the Natural Gas Act.

(D) Neither the supplement hereby suspended, nor the rate schedule sought to be altered thereby, shall be changed until this proceeding has been disposed of or until the period of suspension has expired, unless otherwise ordered by the Commission.

(E) Notices of intervention or petitions to intervene may be filed with the Federal Power Commission, Washington, D.C., 20426, in accordance with the Rules of Practice and Procedure (18 CFR 1.8 and 1.37(f)) on or before March 2, 1966.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

SKELLY OIL COMPANY, ET AL., DOCKET NO. G-18638, ET AL.; SOUTH TEXAS NATURAL GAS GATHERING COMPANY, DOCKET NO. G-18907

ORDER DENYING APPLICATION FOR REHEARING

(Issued January 14, 1966)

South Texas Natural Gas Gathering Company (South Texas), on December 17, 1965, filed an application for rehearing of an order issued in these proceedings on November 19, 1965.[1] In its order of November 19, 1965, the Commission rejected Supplement No. 56 to South Texas' FPC Gas Rate Schedule No. 2, rescinded a letter of the Secretary dated July 15, 1964, accepting the said supplement, and directed South Texas to file a rate schedule and make refunds in compliance with ordering paragraph (D) of Opinion No. 362, issued August 30, 1962 (28 FPC 401).

In Opinion No. 362, South Texas was authorized to gather, transport and resell gas to Transcontinental Gas Pipe Line Corporation (Transco), under a single contract which included a dedication to this sale of all of the several small packages of gas sold to South Texas by various producers whose initial rates were at issue in the certificate proceeding in Skelly Oil Company, *et al.*, Docket No. G–18368, *et al.* The Commission conditioned the certificates for sales to South Texas by all producers proposing a price in excess of 15¢ per Mcf upon rate reduction reflecting a maximum initial price level of 15¢ per Mcf. Paragraph (D) of the Commission's order directed South Texas, as of the date of the order, and as a condition of the certificate issued to it, "to charge * * * a rate for the sale of gas to Transco that shall represent its present initial charge of 20¢ per Mcf * * * less the reduction in its average cost of purchased gas effected by this order."

On June 16, 1964, South Texas filed a refund report and Supplement No. 56 to its Rate Schedule No. 2 in purported compliance with the rate condition in Opinion No. 362. The rate reflected in Supplement No. 56 and the refund report was computed by deducting from 20 cents per Mcf only the reduction in South Texas *overall system-wide* cost of gas which resulted from the producer rate reductions effected by Opinion No. 362. By letter dated July 15, 1964, the Secretary of the Commission informed South Texas that its refund report and Supplement No. 56 complied with paragraph (D) of Opinion No. 362, and that Supplement No. 56 was accepted for filing.

A motion for an order rejecting Supplement No. 56, rescinding the Secretary's letter of July 15, 1964, and directing proper compliance with paragraph (D) of Opinion No. 362 was filed by Consolidated Edison Company of New York, Incorporated, Long Island Lighting Company, and The Brooklyn Union Gas Company (New York Companies) on December 9, 1964. The basis for this motion was the contention that compliance with paragraph (D) would require computing the South Texas-Transco rate by deducting from 20 cents per Mcf the reduction in South Texas' cost for the *gas dedicated to Transco*, not all gas purchased, which resulted from the producer rate reductions effected by Opinion No. 362. The substance of this motion was embodied in the order issued November 19, 1965.

In its application for rehearing, South Texas asserts: (1) that its Supplement No. 56, as filed on June 16, 1964, is consistent with the conditions imposed by paragraph (D) of Opinion No. 362; (2) that the rate contained in Supplement No. 56 became effective either by the action of the Secretary or upon thirty days' notice, and cannot now be modified in the manner prescribed by the Commission's order of November 19, 1965; and (3) that the motion filed by the New York Companies on December 9, 1964, was untimely and had already been denied by operation of law prior to the Commission's order of November 19, 1965.

In the challenged order of November 19, 1965, against which South Texas seeks rehearing, the Commission interpreted paragraph (D) of Opinion No. 362

---

[1] Order Directing Compliance With Paragraph (D) of Opinion No. 362 Rejecting Supplement No. 56 to South Texas Natural Gas Gathering Company FPC Gas Rate Schedule No. 2 And Rescinding A Letter of the Secretary Dated July 15, 1964, 34 FPC 1348.

to require South Texas to compute the rate reduction to Transco on the basis of the cost of gas dedicated to Transco rather than on the basis of the system-wide cost of gas. South Texas contends that the Commission's reference in paragraph (D) to its "* * * *average* cost of purchased gas effected by this order" necessarily implies the use of the *system-wide* average gas cost. However, the Commission's language must certainly be construed in the context of its normal practice of prescribing rate reductions and refunds on an incremental basis in certificate proceedings.[2] Viewed in this light, our failure to specify the use of system-wide average cost demonstrates that we did not intend to make any departure from our normal practice of requiring refunds and rate reductions calculated on an incremental basis. For the same reason, South Texas clearly errs in asserting that we were required to recite expressly that average cost should be calculated on the basis of gas dedicated to Transco in order to insure the applicability of our conventional standards.

Nor do we perceive any merit in South Texas' further contention that its filing of Supplement No. 56 constituted a rate filing, within the purview of Section 4(d) of the Natural Gas Act, which upon acceptance for filing after 30 days notice became the lawful filed rate for the sale by South Texas to Transco, and could thereafter be changed only in accordance with the procedures prescribed in Sections 4 and 5 of the Act. For, South Texas ignores the vital distinction between changes in a rate schedule made by a company pursuant to the filing and notice procedures prescribed in Section 4 of the Natural Gas Act and compliance rate filings submitted pursuant to an express condition imposed by a certificate of public convenience and necessity issued under Section 7 of that Act. In the former case, the proposed change in rates becomes effective automatically at the expiration of the 30 days notice period unless sooner suspended or found unlawful, while in the latter case the changes become effective when and if they comply with such conditions and such compliance is evidenced by an order of approval issued by the Commission or its duly authorized agent. Thus, paragraph (E) of Opinion No. 362 expressly imposed the additional condition that South Texas within 60 days of the issuance of that order file, in lieu of a pipeline form of tariff, "* * * special rate schedules for its sales to its customers in accordance with this opinion and order and Section 154.52 of our Regulations, *subject specifically to the acceptance by the Commission of the revised initial rate for the sale to Transco.*" These considerations make it plain that South Texas' Supplement No. 56 does not, unlike a Section 4(d) rate change initiated by the company, become effective upon its mere acceptance for filing. In any event, Sections 154.23 and 154.101 of the Commission's Regulations make it manifest that the "acceptance for filing of any tariff contract or part thereof is not to be considered as approval by the Commission" nor deemed "to serve in lieu of any requirements under Section 7 of the Natural Gas Act".

South Texas' Supplement No. 56 did not comply with and is inconsistent with ordering paragraph (D), so that the rate change sought to be accomplished by such filing has never become legally effective.

South Texas further argues that the missing element of Commission approval and of the necessary administrative finding that Supplement No. 56 complies with the applicable legal requirements of Opinion No. 362 is to be found in the Secretary's letter of July 15, 1964. At that time, Secretary Gutride purportedly exercised his delegated authority under Section 3.5(19) of the Commission's Rules of Practice and Procedure by accepting this rate supplement for filing and finding that it constituted "satisfactory compliance with paragraph (D) of Commission's Opinion No. 362 issued August 30, 1962." South Texas argues that the Secretary's action became final and is binding upon the Commission because it is the lawful act of its duly authorized agent. The flaw in this reasoning is that Section 3.5(19) clearly delegates to the Secretary only ministerial responsibility to accept for filing rate schedules and supplements thereto "*submitted in compliance* with conditions in certificates of public convenience and necessity * * * *when they meet the requirements prescribed* by such certificates * * *". Accordingly, a non-complying rate schedule can not be deemed to have been accepted for filing by the Secretary.

---

[2] It is noteworthy that South Texas' supplemental "Third Year Cost of Service" filed on February 1, 1962, which was before the Commission when it acted on the New York Public Service Commission's request that producer rate reductions be reflected in South Texas' price to Transco (28 FPC 401, 415), shows purchased gas costs "allocated on the basis of the average costs of reserves *contractually dedicated to each sale*" (p. 6 of South Texas' February 1, 1962 filing). [Emphasis added]

Finally, South Texas maintains that the order of November 19, 1965 cannot be legally predicated upon the motion filed by the New York Companies on December 9, 1964, since that motion was filed too late and, in any event, was already denied by operation of law prior to the date of Commission action thereon. With respect to the first contention, we reiterate our prior finding in the order of November 19, 1965 that this motion was not untimely because South Texas made an *ex parte* compliance filing and the movants' acted promptly after they first learned of the problem. In its application for rehearing, South Texas alleges (p. 10) that there is no requirement in the Commission's rules or regulations that copies of rate supplements submitted in compliance with certificate conditions be served upon all parties to the certificate proceeding involved. However, Section 1.17(b) of the Rules of Practice and Procedure provides that all pleadings, notices and all other papers, except depositions, shall be served upon all participants to the proceeding. With respect to the matter of whether the Commission had pending before it a moving pleading requesting the relief provided in our order of November 19, 1965, South Texas errs in its tacit assumption that the Commission could not act on its own initiative to compel compliance with an outstanding and unsatisfied certificate condition. In any event, moreover, there is no merit to South Texas' contention that the motion of the New York Companies was automatically denied because not acted upon within 30 days after its date of filing. If viewed as an independent motion, the pleading submitted by the New York Companies is not subject to the 30 days provision of Section 1.12(e), which plainly applies only to motions filed during the pendency of hearings and is designed to expedite interlocutory rulings. On the other hand, the motion cannot properly be viewed as a petition for rehearing within the scope of Section 19(a) of the Natural Gas Act, so that it is not subject to the 30-day time limit imposed by that statutory provision. For, the unauthorized action of the Secretary cannot be validly considered an order of the Commission subject to a petition for rehearing.

For all of the foregoing reasons, we conclude that South Texas' application for rehearing is lacking in merit and that all of the relief requested should be denied.

The Commission orders:

The application for rehearing, filed by South Texas on December 17, 1965, is denied.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NO. CP65-356; RED SNAPPER PIPE LINE COMPANY, DOCKET NO. CP66-168

ORDER GRANTING MOTION TO CONSOLIDATE, PERMITTING INTERVENTION, AND ADOPTING PROCEDURE ESTABLISHED BY PRESIDING EXAMINER

(Issued January 14, 1966)*

On December 13, 1965, Red Snapper Pipe Line Company (Red Snapper) filed a motion requesting that its application filed December 1, 1965, in Docket No. CP66-168 be consolidated for hearing with the application filed May 11, 1965, in Docket No. CP65-356 by Tennessee Gas Transmission Company (TGT). In support of its motion to consolidate Red Snapper states that it proposes to constuct a 30-inch marine pipeline, 128 miles in length, located in the Outer Continental Shelf area, and two 30-inch shore lines connecting its offshore line with terminals near Gibson, Terrebonne Parish, and Esther, Vermilion Parish, Louisiana. Upon completing construction of such facilities, Red Snapper proposes to engage in the transportation of natural gas in interstate commerce for the account of others, thereby serving as a "bridge" between newly-developed offshore reserves and onshore interstate pipeline companies.

Red Snapper was permitted to intervene in the proceeding regarding TGT's application filed in Docket No. CP65-356 wherein TGT proposes to construct offshore facilities to attach to its system its company-owned reserves located in five offshore fields. Red Snapper avers that its proposed 30-inch marine pipeline will come within close proximity to the reserves which TGT proposes to connect in Docket No. CP65-356 and that its proposal thus offers "* * * an alternative method of attaching Tennessee Gas' reserves." Red Snapper notes that the Presiding Examiner in the prehearing conferences held in the proceeding in Docket No. CP65-356 has already provided for the filing of testimony and exhibits by Red Snapper and that since Red Snapper will be proposing an alternative method for the connection of TGT's reserves in any event, it would be proper and expeditious for Red Snapper's application in Docket No. CP66-168 to be heard with TGT's application in Docket No. CP65-356 on a consolidated record.

Red Snapper contends that a consolidated record is particularly appropriate for these two applications because TGT and Red Snapper have not only presented two approaches for the development of vast offshore reserves, but have also raised complex engineering and technical concepts involving the operation of multiphase underwater pipeline systems whose anticipated performance can be determined only by analogy to existing smaller-scale facilities. Red Snapper believes that examination of these engineering concepts can best be made in a consolidated proceeding where TGT's and Red Snapper's respective engineering principles and designs can be compared and evaluated.

Red Snapper states that the consolidation it requests will not unduly delay the hearing on TGT's application and that TGT is not relying on the offshore reserves it proposes to attach in Docket No. CP65-356 to meet its market requirements for the 1966-67 heating season. Consequently, Red Snapper concludes that the requested consolidation is in the public interest because the public will suffer no detriment and there will be a saving in manpower and costs by the Commission, the applicants, and the interveners if the two applications are heard on a consolidated record.

---

*See order issued March 18, 1966 denying reconsideration, etc., 35 FPC 397.

On December 22, 1965, TGT filed an answer giving at least four reasons for opposing Red Snapper's motion to consolidate: First, TGT argues that consolidation will unduly delay the hearing on its application and keep it from being able to place in service by November 1966 the facilities for which authorization is requested in Docket No. CP65-356. Since the hurricane season prevents construction after the beginning of September, TGT points out that it has only eight months in which to obtain a certificate, order the materials, and construct the facilities in time to use them for the 1966-67 heating season. TGT avers that it has expedited its hearing by having furnished a great deal of information to all parties to the proceeding as a result of prehearing conferences held in October and November of 1965 and by having already served its direct testimony and exhibits on all parties. Barring the consolidation requested by Red Snapper, TGT believes it could obtain an early decision, but TGT states that Red Snapper has established a reputation for tardiness in fulfilling its promises and obligations. TGT documents this accusation by noting that Red Snapper in its petition to intervene in Docket No. CP65-356 promised to file an application "within the near future" but such application wasn't actually filed until six months thereafter. Likewise, Red Snapper had to request a three-week extension of time for the preparation and service of its answering testimony in the proceeding in Docket No. CP65-356.[1]

Second, TGT claims that Red Snapper's application is so deficient in failing to conform to the Commission's Regulations under the Natural Gas Act, particularly Section 157.14 thereof, that the application is not worthy of consideration and ought to be rejected. Among other things, TGT claims that Red Snapper proposes to spend $127 million to construct a pipeline system to transport natural gas and liquid hydrocarbons for unnamed and unknown onshore customers who supposedly have contracts with unknown producers who apparently have unknown quantities of reserves in unknown locations offshore. TGT also notes that any customers using Red Snapper's transportation service will have to obtain certificate authority to connect their facilities with those of Red Snapper and that any producers who might sell gas to such customers would have to obtain certificate authority to make the sales. Thus, according to TGT, Red Snapper's application depends on contracts not yet negotiated and certificates not yet requested.

Third, TGT contends that Red Snapper's application is neither mutually exclusive nor necessarily competitive with TGT's application and that Red Snapper itself made such statements in its petition to intervene in Docket No. CP65-356. TGT further points out that, since Red Snapper has referred to TGT's reserves as insignificant in comparison with the total reserves available to Red Snapper's proposed pipeline system, there is no reason why issuance of a certificate to TGT would preclude issuance of a certificate to Red Snapper. TGT argues that there is no merit to Red Snapper's claim that its proposal presents an alternative to TGT's proposal in Docket No. CP65-356 because Red Snapper has not proposed either to attach TGT's reserves or to deliver gas to any point where TGT wants gas injected into its pipeline system. Thus, TGT argues that a consolidated hearing on Red Snapper's and TGT's applications is neither required nor warranted.

---

[1] This extension was granted by the Examiner's notice of extension of time issued December 23, 1965, in Docket No. CP65-356.

Fourth, TGT cites Section 157.11 of the Commission's Regulations and contends that a proper interpretation of this provision requires the Commission to render a final decision on TGT's application prior to scheduling a hearing on Red Snapper's application because TGT's application was scheduled for formal prehearing conferences commencing on October 12, 1965, but Red Snapper's application was not filed until December 1, 1965, or 35 days after the 15-day limitation provided in Section 157.11 for the filing of competitive applications. TGT contends that, since Red Snapper has given no reason for delaying the filing of its "alternative" proposal, there is no valid excuse for waiving Section 157.11 of the Commission's Regulations just to accommodate Red Snapper.

We believe it is in the public interest to grant Red Snapper's motion to consolidate its application in Docket No. CP66–168 with TGT's application in Docket No. CP65–356. We shall consider each of TGT's arguments in opposition to Red Snapper's motion in the order presented by TGT. TGT's contention that consolidation will delay the hearing on its application is not persuasive because, as the Examiner observed in his order granting Red Snapper's request for extension of time (mimeo p. 2):

> * * * It appears *prima facie* that the Red Snapper affirmative evidence to be served December 29, 1965, may be admissible evidence in this proceeding whether or not Docket No. CP66–168 is consolidated herewith.

Further, we note that TGT's answer to Red Snapper's motion fails to take exception to Red Snapper's statement that the offshore reserves which TGT proposes to attach to its system in Docket No. CP65–356 are not relied upon by TGT to satisfy its market requirements for the 1966-67 heating season. Red Snapper's statement is additionally borne out by TGT's application in Docket No. CP66–180 where TGT seeks authorization to expand its system annual average day capacity by 176,000 Mcf to serve its customers' requirements for the 1966-67 heating season *without* reliance upon the gas reserves which it proposes to attach to its system in Docket No. CP65–356.

TGT's argument that Red Snapper's application is so lacking in specificity as to be unworthy of consideration is interrelated with its contention that Red Snapper's application fails to present a project which is an alternative to TGT's proposal or one which is competitive, or mutually exclusive with TGT's proposal. While we adhere to our recent holdings[2] to the effect that applicants must comply with our Regulations, particularly Section 157.14 thereof, we are also under a duty[3] to consider alternative proposals which may be in the public interest. Although Red Snapper's application apparently does not name the companies for whom it expects to render a transportation service, it is a fact, as shown by the map accompanying Red Snapper's motion to consolidate, that Red Snapper's proposed facilities would come in close proximity to the five fields which TGT proposes to connect to its system. The mere fact that TGT disclaims any interest in employing Red Snapper to transport its gas does not relieve us of our obligation to consider Red Snapper's alternative offer to transport gas for other companies.[4]

---

[2] *Transwestern Pipeline Company, et al.,* Docket No. G–20464, *et al.,* Opinion No. 472, issued August 31, 1965, 34 FPC 659, pp. 664, 665; *Natural Gas Pipeline Company of America, et al.,* Docket No. CP62–243, *et al.,* Opinion No. 474, issued September 9, 1965, 34 FPC 771, pp. 785–787; order issued November 29, 1965, in *Pacific Northwest Pipeline Corporation, et al.,* Docket No. G–13017, *et al.,* 34 FPC 1385, p. 1386.

[3] *City of Pittsburgh* v. *F.P.C.,* 237 F. 2d 741, 751 (CADC); *Michigan Consolidated Gas Co.* v. *F.P.C.,* 283 F. 2d 204, 224–226 (CADC), cert. denied, 364 U.S. 913; *Scenic Hudson Preservation Conference, et al.* v. *F.P.C.,* 354 F. 2d 608, at p. 612, (CA2–1965).

TGT's fourth contention is that Red Snapper's application in Docket No. CP66–168 was filed so long after the 15-day limitation on the filing of competitive applications that we are required by Section 157.11 of our Regulations to proceed to a final decision on TGT's application in Docket No. CP65–356 prior to scheduling a hearing on Red Snapper's application. We do not think that this provision of our Regulations is applicable in the circumstances of this proceeding because Red Snapper's petition to intervene in Docket No. CP65–356 stated that it would file "within the near future" an application which would propose an alternative method of transporting TGT's offshore reserves to TGT's main line on shore. Red Snapper was permitted to intervene in the proceeding regarding TGT's application and was represented by counsel at all of the prehearing conferences. Red Snapper's counsel made it clear that Red Snapper would present evidence in support of its proposal, and dates for the filing of such testimony and exhibits were fixed by the Presiding Examiner at the prehearing conference held on November 10, 1965. TGT has thus known from the commencement of the prehearing conferences that evidence concerning Red Snapper's proposal would be offered in the hearing on its application. Under these circumstances we do not think that granting Red Snapper's motion to consolidate its application in Docket No. CP66–168 with TGT's application in Docket No. CP65–356 will violate the intent of Section 157.11 of our Regulations, which is designed to prevent a competitor from deliberately and unfairly inducing an element of delay and surprise into its competitive or alternative proposals by dilatorily filing an unexpected and entirely new application well after the hearing on the original application has begun.

On December 23, 1965, the Public Service Commission of the State of New York filed a notice of intervention in Docket No. CP66–168. Petitions seeking leave to intervene in the proceeding in Docket No. CP66–168 were timely filed as indicated in the following tabulation:

Names of petitioners	*Date of filing*
Consolidated Edison Co. of New York, Inc	Dec. 23, 1965
Consolidated Gas Supply Corp., The East Ohio Gas Co., Lake Shore Pipe Line Co., The Peoples Natural Gas Co., and The River Gas Co. (joint petition)	Dec. 27, 1965
Long Island Lighting Co	Do.
Natural Gas Pipeline Co. of America	Do.
Philadelphia Electric Co	Do.

Public Service Electric and Gas Co	Dec. 27, 1965
Tennessee Gas Transmission Co	Do.
Transcontinental Gas Pipe Line Corp	Do.
Trunkline Gas Co	Do.
The Brooklyn Union Gas Co	Dec. 23, 1965
United Fuel Gas Co	Dec. 27, 1965

---

[4] As the court stated in the *City of Pittsburgh* case *supra*, the fact that we may have no authority to force an alternative to be carried out does not mean that we are without power to reject a given application (237 F. 2d 741, 751, n. 28). See also *Midwestern Gas Transmission Co.* v. *F.P.C.*, 258 F. 2d 660 (CADC), vacated as moot, 358 U.S. 280, where the court stated that it was unrealistic to assume that a prospective customer would fail to purchase gas from a competing pipeline company after the competitor had become a certificated supplier (258 F. 2d 666).

The Commission finds:

(1) It is in the public interest in the administration of the Natural Gas Act that Red Snapper Pipe Line Company's motion to consolidate its application in Docket No. CP66–168 with Tennessee Gas Transmission Company's application in Docket No. CP65–356 be granted.

(2) It is desirable to allow the companies which have filed petitions to intervene to become interveners in this proceeding in order that they may establish the facts and law from which the nature and validity of their alleged rights and interests may be determined and show what further action may be appropriate under the circumstances in the administration of the Natural Gas Act.

The Commission orders:

(A) Red Snapper Pipe Line Company's motion to consolidate, filed December 13, 1965, is granted and the applications for certificates of public convenience and necessity filed by Tennessee Gas Transmission Company in Docket No. CP65–356 and by Red Snapper Pipe Line Company in Docket No. CP66–168 are hereby consolidated for the purposes of hearing and decision thereon.

(B) The above-named petitioners are permitted to become interveners in this consolidated proceeding subject to the rules and regulations of the Commission: *Provided, however,* that the participation of such interveners shall be limited to matters affecting asserted rights and interests as specifically set forth in said petitions for leave to intervene; and *provided, further,* that the admission of such interveners shall not be construed as recognition by the Commission that they or any of them might be aggrieved because of any order or orders of the Commission entered in this proceeding.

(C) All interveners who have filed petitions to intervene in either of the dockets consolidated herein shall be considered participants in both dockets, to the extent that their alleged interests are affected, without their having to make additional filings with the Commission.

(D) Immediately upon issuance of this order TGT and Red Snapper shall serve copies of their direct testimony and exhibits, heretofore served on all parties to the proceeding in Docket No. CP65–356, upon the additional petitioners permitted by this order to intervene herein.

(E) The dates listed below for the filing of additional testimony and exhibits, as set forth in Presiding Examiner Robert M. Weston's order of procedure issued December 23, 1965, are adopted for the consolidated proceeding provided for herein:

January 19, 1966—Service of evidence by Red Snapper and all other parties in answer to TGT's evidence.

February 2, 1966—Service of rebuttal evidence by TGT.

February 15, 1966—Commencement of hearing.

Motions for extensions of time or for modification or clarification of these dates shall be addressed to Examiner Weston.

(F) The hearing provided for in paragraph (E) above shall be held commencing February 15, 1966, at 10:00 a.m. (EST) in a hearing room of the Federal Power Commission, 441 G Street, N. W., Washington, D. C. 20426.

Commissioner O'Connor *concurring* in result only.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP66-91

ORDER AMENDING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 14, 1966)

On December 7, 1965, Transcontinental Gas Pipe Line Corporation (Petitioner) filed in Docket No. CP66-91 a petition to amend the certificate of public convenience and necessity issued by the Commission on November 19, 1965, 34 FPC 1351, in said docket to permit delivery and sale of an additional 200 Mcf per day to Pennsylvania Gas Management Company (Pennsylvania Gas), an existing customer, as more fully described in the petition to amend.

The Commission's order issued in Docket No. CP66-91 on November 19, 1965, authorized additional sales by Petitioner to eight of its existing customers, who had requested such service subsequent to the filing of Petitioner's expansion application in Docket No. CP65-181, which application is presently involved in a formal hearing. Pennsylvania Gas now seeks an additional 200 Mcf per day.

Pennsylvania Gas' total allocation will be 10,900 Mcf of natural gas per day, upon the granting of the present petition to amend. The incremental volumes will be sold by Pennsylvania Gas to The New Jersey Zinc Company, which is engaged in the manufacture of anhydrous ammonia.

No new facilities will be required to render the proposed service.

The additional volumes will be sold under Petitioner's Rate Schedule CD-3.

Due notice of the filing of the petition to amend was published in the Federal Register on December 28, 1965 (30 F.R. 16173). No protest, petition to intervene, or notice of intervention has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the certificate of public convenience and necessity issued in Docket No. CP66-91 on November 19, 1965, be amended as hereinafter ordered.

The Commission orders:

(A) The certificate of public convenience and necessity issued to Transcontinental Gas Pipe Line Corporation in Docket No. CP66-91 on November 19, 1965, is amended by authorizing the sale of an additional 200 Mcf of natural gas per day to Pennsylvania Gas Management Company.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

UNION OIL COMPANY OF CALIFORNIA, DOCKET NO. CI65-539; SINCLAIR OIL & GAS COMPANY, DOCKET NO. CI65-543; SUN OIL COMPANY, DOCKET NO. CI65-583; KERR-MCGEE CORPORATION, DOCKET NO. CI65-605; GULF OIL CORPORATION, DOCKET NO. CI65-609

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY, SEVERING PROCEEDINGS, ACCEPTING OFFERS OF SETTLEMENT, ACCEPTING FPC GAS RATE SCHEDULES FOR FILING, AND REQUIRING FILING OF FPC GAS RATE SCHEDULE

(Issued January 14, 1966)

Applicants herein have filed applications pursuant to Section 7(c) of the Natural Gas Act for certificates of public convenience and necessity authorizing the sale for resale and delivery of natural gas in interstate commerce from the Permian Basin area of New Mexico to Natural Gas Pipeline Company of America, all as more fully set forth in the Appendix hereto and and in the respective applications.

Each Applicant has submitted a settlement proposal and has offered to accept 16.608 cents per Mcf at 14.65 psia, including upward Btu adjustment from a base of 1,000 Btu's per cubic foot for 1038-Btu gas.[1] By order issued August 5, 1965, 34 FPC 424, in Docket No. AR61-1, *et al.*, Applicants were ordered to show cause why they should not receive permanent certificate authorization at the rates prescribed in Opinion No. 468, 34 FPC 159. Said opinion, as modified by Opinion No. 468-A, 34 FPC 1068, prescribes an initial rate for gas sold in the New Mexico portion of the Permian Basin of 15.5 cents per Mcf plus applicable state and local production taxes in effect on September 1, 1965. The opinion, as modified, also provides for upward Btu adjustment from a maximum standard of 1,050 Btu's per cubic foot and downward Btu adjustment from a minimum standard of 1,000 Btu's per cubic foot.

Each Applicant has submitted a settlement proposal and has offered to accept a permanent certificate at the applicable area base rate of 15.5 cents per Mcf, plus applicable state and local production taxes in effect as of September 1, 1965, while retaining the upward and downward Btu price adjustment provisions. They also agree to a moratorium on increased rates until January 1, 1968, as provided by Opinion No. 468. Applicants' willingness to accept certificates with the aforementioned conditions is contingent upon the severance of their applications from the proceeding on the order to show cause and upon the issuance of certificates pursuant to the statutory hearing procedure.

Applicants' contracts contain quality standards which conform to those standards set forth in Opinion Nos. 468 and 468-A. In their settlement proposals Applicants adopt the rate schedule quality statement filed in Docket No. CI65-603 by Marathon Oil Company, operator of the jointly-owned processing plant, which statement shows that the quality of the gas, based upon plant design specifications, is within the quality standards prescribed in Opinion Nos. 468 and 468-A. Marathon Oil Company and other producers have received permanent certificates pursuant to settlement proposals to sell gas under similar settlement proposals.

---

[1] Each contract also provides for a downward Btu adjustment from a base of 1,000 Btu's per cubic foot.

Applicants' proposals are consistent with the Commission's opinion determining just and reasonable rates for producers in the Permian Basin on an area basis and afford an appropriate opportunity for the issuance of certificates under conditions which will provide a complete and effective plan of regulation. The rates to which Applicants have agreed and the moratorium by which they have agreed to abide correlate to those required by Opinion Nos. 468 and 468–A. Accordingly, the applications herein will be severed from the proceeding on the Order to Show Cause in Docket No. AR61–1, *et al.*, and certificates of public convenience and necessity will be issued under the conditions prescribed in the area rate opinion.

After due notice, no petitions to intervene, notices of intervention or protests to the granting of the applications have been received.

At a hearing held on January 13, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the applications and exhibits thereto, submitted in support of the authorizations sought herein, and upon consideration of the record,

The Commission finds:

(1) Each Applicant herein is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission.

(2) The sales of natural gas hereinbefore described, as more fully described in the Appendix hereto and in the respective applications, will be made in interstate commerce subject to the jurisdiction of the Commission, and such sales by Applicants, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicants are able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that the offers of settlement submitted by Applicants should be accepted and that the applications herein should be severed from the proceeding on the Order to Show Cause issued August 5, 1965, in Docket No. AR61–1, *et al.*

(5) The sales of natural gas by Applicants, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are required by the public convenience and necessity, and certificates therefor should be issued as hereinafter ordered and conditioned.

(6) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that the FPC gas rate schedules submitted by Applicants in Docket Nos. CI65–539, CI65–583 and CI65–605 should be accepted for filing and that Applicants in Docket Nos. CI65–543 and CI65–609 should be required to file FPC gas rate schedules.

The Commission orders:

(A) Certificates of public convenience and necessity are issued upon the terms and conditions of this order authorizing the sales of natural gas by Applicants in interstate commerce for resale, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, all as hereinbefore described and as more fully described in the Appendix hereto and in the respective applications and offers of settlement in this proceeding.

(B) The certificates granted in paragraph (A) above are not transferable and shall be effective only so long as Applicants continue the acts or operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission thereunder.

(C) The grant of the certificates issued by paragraph (A) above shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or of Part 154 or Part 157 of the Commission's Regulations thereunder and is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against the respective Applicants. Further, our action in this proceeding shall not foreclose nor prejudice any future proceedings or objections relating to the operation of any price or related provisions in the gas purchase contracts herein involved. Nor shall the grant of the certificates aforesaid for service to the particular customer involved imply approval of all of the terms of the respective contracts, particularly as to the cessation of service upon termination of said contracts, as provided by Section 7(b) of the Natural Gas Act. Nor shall the grant of the certificates aforesaid be construed to preclude the imposition of any sanctions pursuant to the provisions of the Natural Gas Act for the unauthorized commencement of any sales of natural gas subject to said certificates.

(D) The offers of settlement submitted by Applicants are accepted and the applications herein are severed from the proceeding on the Order to Show Cause issued August 5, 1965, in Docket No. AR61-1, *et al.*

(E) Applicants shall comply with the requirements of Opinion Nos. 468 and 468-A, and particularly:

(a) The initial rate shall be the applicable area rate prescribed in Opinion No. 468, as modified by Opinion No. 468-A, or the contract rate, whichever is lower, and

(b) No increase in rate in excess of that provided in (a) above shall be filed before January 1, 1968.

(F) The FPC gas rate schedules submitted by Applicants in Docket Nos. CI65-539, CI65-583 and CI65-605 are accepted for filing to be effective on the date of initial delivery and are designated as shown in the Appendix hereto. Applicants in Docket Nos. CI65-543 and CI65-609 shall each file three copies of its related gas sales contracts as FPC gas rate schedules.

(G) Each Applicant shall file three copies of a revised billing statement specifying a rate of 15.5 cents per Mcf at 14.65 psia plus the computed amount of tax reimbursement.

(H) Within 90 days of initial delivery each Applicant shall file three copies of a rate schedule quality statement in the form provided by Opinion No. 468-A.

FLORIDA GAS TRANSMISSION COMPANY, DOCKET NOS. CP65-165, CP65-393

ORDER GRANTING PETITIONS TO INTERVENE, PERMITTING WITHDRAWAL OF PETITION TO AMEND, DENYING MOTION TO CONSOLIDATE, REQUIRING SUBMITTAL OF TESTIMONY, AND SETTING DATE FOR HEARING

(Issued January 17, 1966)

On June 9, 1965, Florida Gas Transmission Company (Florida Gas) filed an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing (1) the construction and operation of natural gas facilities, and (2) the transportation of additional quantities of natural gas to Florida Power & Light Company. Notice thereof was issued June 15, 1965 (30 F.R. 8078). Pursuant to said notice, the following persons filed notices of intervention or petitions to intervene in the above-entitled proceedings:

Notice of Intervention and Date

Florida Public Service Commission, June 30, 1965.

Petitions to Intervene and Date

Sun Oil Company, July 9, 1965.
Austral Oil Company, July 12, 1965.
Gainsville Gas Company, July 12, 1965.
Florida Power & Light Company, July 12, 1965.
Pan American Petroleum Corporation, July 12, 1965.
Florida State Board of Health, October 8, 1965.
Florida Power Corporation, November 5, 1965.

The petitions to intervene of the above-named persons, with the exception of Sun Oil Company (Sun), were unopposed by Florida Gas. The Commission finds that each expresses sufficient interest to justify intervention herein.

On July 19, 1965, Florida Gas filed an answer to Sun's petition to intervene.

Florida Gas alleged that Sun showed neither the "necessary or appropriate" interest to intervene, nor "any other interest of such nature that its participation may be in the public interest." We do not agree. Sun presently sells gas produced in Texas and Louisiana to Florida Power & Light Company and to Florida Power Corporation. In both instances, Sun delivers the gas at central points in the producing fields, from which points the gas is transported by Florida Gas to the power companies. The prices received by Sun for its sales of gas to Florida Power & Light Company and to Florida Power Corporation are directly related to the transportation charges of Florida Gas. Sun's interests are clearly within the purview of § 1.8 of the Commission's Rules of Practice and Procedure. Were we to rule otherwise, any modification of Florida Gas' proposed initial rate which affects the price Sun received for its gas would not afford Sun the participation contemplated by both the Administrative Procedure Act and the Natural Gas Act.

Florida Gas further contends that Sun's participation will convert this proceeding into a rate case. This contention is incorrect. As we concluded in our order of October 21, 1965, 34 FPC 1195, which denied Sun's motion to consolidate the present proceeding with Docket No. RP66-4, the present proceeding involves questions of law and fact which are different from the rate matters involved in Docket No. RP66-4. The present proceeding is instituted pursuant to § 7 of the Natural Gas Act. The matters germane to a § 7 proceeding and the degree and kind of evidence required in a certificate case are different from those in a rate case. It is incumbent upon the hearing examiner to entertain in this proceeding only such evidence as may be relevant to a certificate case. Accordingly, we will permit Sun's intervention herein.

On October 21, 1965, Florida Gas filed a petition to amend its certificate of public convenience and necessity issued in Docket No. CP65-165 on June 8, 1965, 33 FPC 1223. Sun, on November 12, 1965, moved to consolidate Florida Gas' petition to amend with the present proceeding. In support of its motion, Sun argued that the present proceeding involves the duplication of facilities already authorized in Docket No. CP65-165, and that to avert such duplication of facilities "* * * a coordinated construction project would be required in the interest of economy." Sun further stated that "it is readily apparent that the need for facilities as proposed in the petition to amend the Docket No. CP65-165 authorization, and particularly the line to the East White Lake Field, depends in its entirety on whether authorization is forthcoming in Docket No. CP65-393." On November 30, 1965, Florida Gas filed a notice to withdraw its petition to amend, to which Sun filed objections on December 9, 1965. In its notice of withdrawal, Florida Gas stated, "Florida Gas, to meet its Florida market and gas supply commitments, must now proceed with the construction of the supply lateral facilities. It cannot defer construction further."

The withdrawal of pleadings subsequent to the commencement of a hearing is not a matter of right, see § 1.11(d) of the Commission's Rules of Practice and Procedure, but is permitted only where such withdrawal is in the public interest. If there were no need for Florida Gas' construction of the facilities authorized in Docket No. CP65-165, then we would agree with Sun that the public interest requires the consolidation of Florida Gas' petition to amend with the present proceeding. However, there is no assurance that a certificate of public convenience and necessity will issue to Florida Gas in this proceeding. If, after formal hearings, a certificate is denied to Florida Gas, we would cause a significant delay in the construction and operation of facilities and services already held to be in the public interest. Even if after formal hearings a certificate is issued to Florida Gas in Docket No. CP65-393, the delay caused by suspending for the duration of this proceeding the construction and operation of the facilities certificated in Docket No. CP65–165 would deprive Florida Gas of its present ability to meet the market needs exhibited in Docket No. CP65–165. Insofar as the public has need for this additional gas, this clearly would be contrary to the public interest. Sun's objections, alleging that the construction of both the proposed facilities and the facilities authorized in Docket No. CP65–165 will cause an unnecessary expenditure of approximately $3,000,000 may be raised in the formal hearings and in Florida Gas' rate case where such questions should be resolved. Sun's motion to consolidate will therefore be denied, and Florida Gas will be permitted to withdraw its petition to amend.

In order to expedite the disposition of this proceeding, it is desirable that Florida Gas file with the Commission and serve on all parties written direct testimony in support of its application. In addition to submitting testimony in support of the exhibits required by § 157.14 of the Commission's Rules and Regulations under the Natural Gas Act, and such other evidence as Florida Gas may deem necessary, Florida Gas should show cause why Pan American Petroleum Company (Pan Am) and Austral Oil Company (Austral) should not be subject to the provisions of the Natural Gas Act. Although we shall not now order Pan Am and Austral to file similar presentations, we welcome such presentations from these parties.

The Commission finds:

(1) It is desirable and in the public interest that all of the above-named petitioners be permitted to intervene in this proceeding.

(2) The objections of Sun Oil Company to Florida Gas Transmission Company's notice of withdrawal are without merit.

(3) This proceeding will be expedited by providing for the service of direct testimony by Florida Gas Transmission Company prior to the commencement of formal hearings.

(4) A date for the commencement of formal hearings should be set.

The Commission orders:

(A) Each of the above-named petitioners is permitted to intervene in this proceeding, subject to the rules and regulations of the Commission: *Provided, however*, that the participation of such intervenors shall not be construed as recognition by the Commission that they or any of them might be aggrieved because of any order or orders of the Commission entered in this proceeding.

(B) The objectives of Sun Oil Company to Florida Gas Transmission Company's notice of withdrawal are overruled.

(C) Florida Gas Transmission Company, pursuant to § 1.11(d)(1) of the Commission's Rules of Practice and Procedure, is granted permission to withdraw its petition to amend the certificate of public convenience and necessity issued to Florida Gas Transmission Company in Docket No. CP65–165.

(D) Sun's motion to consolidate the Florida Gas Transmission Company's petition to amend its certificate in Docket No. CP65–165 with the proceedings in Docket No. CP65–393 is denied.

(E) Florida Gas Transmission Company shall file its direct testimony and exhibits with the Commission on or before February 1, 1966. Such direct testimony and exhibits shall (1) fully explain Florida Gas Transmission Company's application, (2) conform to the Commission's Rules and Regulations under the Natural Gas Act, and (3) show cause why Pan American Petroleum Corporation and Austral Oil Company should not be subject to the provisions of the Natural Gas Act.

(F) A hearing shall be held before a hearing examiner of the Commission designated by the chief examiner. Such hearing shall commence in a hearing room of the Federal Power Commission, 441 G Street, N.W., Washington, D. C. 20426, at 10:00 a.m. (EST) on February 28, 1966.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

JAKE L. HAMON, ET AL., DOCKET NO. RI61-408, ET AL.

ORDER AMENDING ORDER CONDITIONALLY APPROVING RATE SETTLEMENT PROPOSAL

(Issued January 17, 1966)

By order issued November 5, 1965, 34 FPC 1243, in the above-entitled proceedings, the Commission approved a settlement proposal filed by Jake L. Hamon, *et al.* (Hamon) covering settlement rates under twenty one of Hamon's rate schedules, including sales under Hamon's FPC Gas Rate Schedule No. 19 which was involved in Docket No. RI60-60. It has come to our attention that by order issued August 7, 1963, in Docket No. G-2657, *et al.*, Edwin L. Cox (Cox) was substituted for Hamon as a respondent in Docket No. RI60-60. That order also accepted the surety bond filed by Cox wherein he assumed all of Hamon's refund obligations in Docket No. RI60-60 and relieved Hamon of any refund obligation therein.

In light of the above, we think it appropriate to amend our settlement order of November 5, 1965, so as to delete Docket No. RI60-60 therefrom, and to relieve Hamon of any obligations it might otherwise have had under the settlement in connection with his FPC Gas Rate Schedule No. 19 or Docket No. RI60-60.

The Commission orders:

For the reasons set forth above, our order of November 5, 1965, in the above-entitled proceedings is modified to delete all reference to Hamon's FPC Gas Rate Schedule No. 19 and Docket No. RI60-60 and to remove all obligations provided for therein with respect thereto.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

HIGH PLAINS NATURAL GAS COMPANY, DOCKET NO. CP65-401; WARREN PETROLEUM CORPORATION (OPERATOR), DOCKET NO. CI64-1466 (G-4165), RI64-602

FINDINGS AND ORDER AFTER STATUTORY HEARING, PERMITTING AND APPROVING ABANDONMENT, TERMINATING CERTIFICATE, SEVERING PROCEEDING, TERMINATING RATE PROCEEDING, APPROVING RATE SETTLEMENT, AND ACCEPTING FOR FILING NOTICE OF TARIFF CANCELLATION

(Issued January 17, 1966)

On June 16, 1965, High Plains Natural Gas Company (High Plains) filed in Docket No. CP65-401 an application together with a supplement thereto on August 13, 1965, pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon certain natural gas facilities and the sale of natural gas in interstate commerce to Canadian Valley Gas Company for resale, all as more fully set forth in the application and supplement thereto.

High Plains seeks authority for the abandonment of its interstate facilities and service by the installation of valves to separate the Texas (District No. 10) and Oklahoma (Panhandle Area) portions of its natural gas transmission system. The valves in the said line were installed by High Plains on January 7, 1964, and there has not been any interstate flow of natural gas in the system since late in January, 1964.

The facilities to be abandoned by High Plains consist of approximately 212 miles of 6⅝-inch and 4½-inch transmission pipelines, together with measuring facilities, valves and appurtenances, located in Wheeler, Hemphill, Lipscomb, Ochiltree and Hansford Counties, Texas, and in Ellis and Woodward Counties, Oklahoma. High Plains also operates some 57 miles of distribution lines in conjunction with the transmission pipelines.

The only connection between High Plains' Texas and Oklahoma properties is a single 6⅝-inch pipeline crossing the Texas-Oklahoma border between Higgins, Texas and Shattuck, Oklahoma. High Plains states that the existing transmission system lacks capacity to handle the increased volumes required by its Oklahoma customers (being one certificated sale for resale, some direct sales to ultimate consumers through three distribution systems owned by Applicant in Oklahoma, a direct sale to the Western State Hospital at Fort Supply, Oklahoma, and a minor number of rural customers). High Plains further states that installation of additional capacity is uneconomical and that acquisition of new gas supplies nearer its markets is economical.

High Plains proposes to serve its Oklahoma customers from Oklahoma production near its system in Oklahoma, which sources required it to agree there would be no interstate sales or transportation of gas. Similarly with its Texas consumers, sources of gas in Texas were available only on condition that none of the gas would be transported or sold in interstate commerce. To meet the requirements of the Oklahoma and Texas suppliers High Plains installed a check valve on the Oklahoma side of its existing transmission line running from Texas into Oklahoma, which prevents the westward flow of any Oklahoma gas into Texas, and has installed and closed a plug valve on the Texas side of the same existing transmission line, which plug prevents the eastward flow of any Texas gas into Oklahoma. High Plains asserts it has been able to greatly increase its reserves and its dependability of service to its wholesale and retail customers in both states by terminating the interstate feature of its operations.

High Plains proposes to abandon the sale of natural gas in interstate commerce to Canadian Valley Gas Company and has filed a notice of cancellation of its FPC Gas Tariff Original Volume No. 1. In lieu of the present gas tariff and service agreement High Plains proposes to continue the service of gas under a new contract with Canadian Valley Gas Company on a wholly intrastate basis.

With respect to the actions of High Plains in terminating the interstate flow of natural gas through its interstate system, and the continuation of its operation of two intrastate systems, without having obtained permission and approval of the Commission, it is clearly in violation of the Natural Gas Act and the Rules and Regulations of the Commission related thereto, and issuance of this order shall not be construed nor interpreted as a condonation of Applicant's illegal actions.

Due notice of the filing of the application in Docket No. CP65-401 was published in the Federal Register on June 26, 1965 (30 F.R. 8243). No petition to intervene, notice of intervention or protest to the granting of the application has been filed in said docket.

On June 9, 1964, Warren Petroleum Corporation (Operator) (Warren) filed in Docket No. CI64-1466 an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon the sale of natural gas to High Plains from the tailgate of Warren's McLean (Sitter) Gasoline Plant in Wheeler County, Texas, all as more fully set forth in the application.

The subject sale by Warren was authorized in Docket No. G-4165 on May 31, 1956, and made pursuant to the provisions of a gas contract dated December 9, 1953, designated by the Commission as Warren's FPC Gas Rate Schedule No. 29.

After due notice published in the Federal Register on June 23, 1964 (29 F.R. 7956), an order was issued on August 28, 1964, in Docket No. CI64-1466 authorizing abandonment of the sale of natural gas to High Plains as requested. The said proceeding was reopened by order of the Commission issued October 23, 1964, 32 FPC 1179, and the City of Perryton, Texas, was granted intervention pursuant to its request filed September 24, 1964.

The City of Perryton, Texas, filed on March 8, 1965, a motion to reinstate the order of the Commission issued August 28, 1964, granting Warren authorization to abandon the sale of natural gas to High Plains.

No petition to intervene, notice of intervention or protest to the granting of the application, other than that of the City of Perryton has been filed in Docket No. CI64-1466.

Following expiration of its 1953 contract with High Plains, Warren on January 10, 1964, filed an unilateral rate increase from 10.0 cents per Mcf to 17.0 cents per Mcf, which was suspended in Docket No. RI64-602[1] and collected subject to refund therein from October 29, 1964. Thereafter, on April 28, 1964, the parties executed a new contract which provides that the gas is to be disposed of on an intrastate basis. The contract includes a two-block rate form under which it is estimated that High Plains' annual average cost will be approximately 14.34 cents per Mcf. Warren has agreed to refund, with applicable interest, the amounts collected in Docket No. RI64-602 in excess of the rate under its new contract. Warren will refund approximately $11,000, exclusive of interest, under its proposal. In view of the unusual circumstances here, we believe that the settlement of the refund issue as proposed is appropriate.

High Plains has indicated in its application that it would flow through a "portion" of the amounts proposed to be refunded by Warren, but the specific details as to disposition of all of such refund amounts have not been submitted. For the reasons set forth in our order in *Humble Oil & Refining Company*, Docket No. G-9287, *et al.*, 32 FPC 49, we shall require Warren to retain the refund amounts until further order of the Commission directing the nature of their disposition and shall require that a report be submitted by High Plains showing its proposed disposition of the entire refund to be received from Warren.

At a hearing held on January 13, 1966, the Commission on its own motion received and made a part of the record in these proceedings all evidence including the applications, supplement and exhibits, submitted in support of the authorizations sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, High Plains Natural Gas Company, a Texas corporation having its principal place of business in Dallas, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 10, 1963, in Docket No. CP63-226 (29 FPC 721).

---

[1] Consolidated with Docket No. AR64-1, *et al.*

(2) Applicant, Warren Petroleum Corporation (Operator), is engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission and is, therefore, a "natural-gas company" within the meaning of the Natural Gas Act.

(3) The facilities and service proposed to be abandoned by High Plains as hereinbefore described and as more fully described in the application herein are subject to the jurisdiction of the Commission, and such abandonments are subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(4) The proposed abandonment of service and of the aforesaid facilities by High Plains are permitted by the public convenience and necessity and approval thereof should be granted as hereinafter ordered.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that High Plains' Notice of Cancellation of its FPC Gas Tariff, Original Volume No. 1, be accepted for filing and that said acceptance and cancellation be effective on the date of the issuance of this order.

(6) The sale of natural gas proposed to be abandoned by Warren as hereinbefore described, all as more fully described in the application in this proceeding, is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(7) The abandonment by Warren hereinbefore described is permitted by the public convenience and necessity and should be approved as hereinafter ordered.

(8) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that the certificate of public convenience and necessity heretofore issued in Docket No. G–4165 on May 31, 1956, should be terminated.

(9) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Docket No. RI64–602 should be severed from the proceeding in Docket No. AR64–1, *et al.*, that the proposed settlement be approved and that the proceeding in Docket No. RI64–602 be terminated.

The Commission orders:

(A) Permission for and approval of the abandonment of facilities and service as requested by High Plains, as hereinbefore described, and as more fully described in the application filed in this proceeding, is granted.

(B) The Notice of Cancellation of High Plains' FPC Gas Tariff, Original Volume No. 1, is accepted for filing and the acceptance and cancellation are effective on the date of the issuance of this order.

(C) Permission for and approval of the abandonment of the sale of natural gas by Warren to High Plains, as hereinbefore described, and as more fully described in the application in this proceeding, is granted.

(D) The certificate of public convenience and necessity heretofore issued to Warren in Docket No. G–4165 on May 31, 1956, is terminated.

(E) The proposed settlement is approved in accordance with the provisions of this order.

(F) Warren shall compute the difference between the rate collected subject to refund and the settlement rate to the date of this order for sales to High Plains in Docket No. RI64–602, with applicable interest to the date of this order. and shall within 30 days from the date of issuance of this order submit a report to the Commission, with a copy to High Plains, setting out the amount of refunds (showing separately the principal and applicable interest), the basis used for such determination, the period covered, and within ten days thereafter a letter from High Plains agreeing to the correctness of such amounts.

(G) Warren shall retain the amounts shown in the report required under paragraph (F) above, subject to further order of the Commission directing the disposition of those amounts.

(H) If Warren elects to commingle these retained refunds with its general assets and use them for its corporate purposes, it shall pay interest thereon at the rate of 4½% per annum on all funds thus available from March 1, 1966, to date on which they are paid over to the person ultimately determined to be entitled thereto in a final order of the Commission.

(I) If Warren elects to deposit the retained refunds in a special escrow account, Warren shall tender for filing on or before March 1, 1966, an executed Escrow Agreement, conditioned as set out below, accompanied by certificate showing service of a copy thereof upon High Plains. Unless notified to the contrary by the Secretary within 30 days from the date of filing thereof, the Escrow Agreement shall be deemed to be satisfactory and to have been accepted for filing. The Escrow Agreement shall be entered into between Warren and any bank or trust company used as a depositor for funds of the United States Government and the agreement shall be conditioned as follows:

(1) Warren, the bank or trust company, and the successors and assigns of each, shall be held and formally bound unto the Federal Power Commission for the use and benefit of those entitled thereto, with respect to all amounts and the interest thereon deposited in a special escrow account, subject to such agreement, and such bank or trust company shall be bound to pay over to such person or persons as may be identified and designated by final order of the Commission and in such manner as may be therein specified, all or any portion of such deposits and the interest thereon.

(2) The bank or trust company may invest and reinvest such deposits in any short-term indebtedness of the United States or any agency thereof or in any form of obligation guaranteed by the United States which is, respectively, payable within 120 days as the said bank or trust company in the exercise of its sound discretion may select.

(3) Such bank or trust company shall be entitled to such compensation as is fair, reasonable and customary for its services as such, which compensation shall be paid out of the escrow account to such bank or trust company. Said bank or trust company shall likewise be entitled to reimbursement for its reasonable expenses necessarily incurred in the administration of this escrow account, which reimbursement shall be made out of the escrow account.

(4) Such bank or trust company shall be liable only for such interest as the invested funds described in Paragraph (2) above will earn and no other interest may be collected from it.

(5) Such bank or trust company shall report to the Secretary quarterly, certifying the amount deposited in the bank or trust company for the quarterly period.

(J) High Plains shall, within 30 days after its receipt of the report from Warren referred to in Paragraph (F) above, file a report with the Commission showing High Plains' proposed disposition of the amounts involved.

(K) Upon notification by the Secretary of the Commission that Warren has complied with the terms and conditions of this order, Docket No. RI64–602 will be considered severed from the proceeding in Docket No. AR64–1, *et al.*, and the rate proceeding in Docket No. RI64–602 will be considered terminated.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

OTTER TAIL POWER COMPANY, DOCKET NO. E-7254

ORDER AUTHORIZING ISSUANCE OF PROMISSORY NOTES

(Issued January 17, 1966)

Otter Tail Power Company (Applicant), a corporation, organized under the laws of Minnesota and doing business in the States of Minnesota, North Dakota and South Dakota with its principal business office in Fergus Falls, Minnesota, filed application on November 17, 1965, for authorization pursuant to Section 204 of the Federal Power Act to issue short term unsecured Promissory Notes in an aggregate principal amount not to exceed $10,000,000 at any one time.

The proposed notes will be issued from time to time prior to December 31, 1968 for periods of one year or less and will be payable to such commercial bank or banks from which the Applicant may borrow. Applicant will pay no finder's fee or other fee, commission or renumeration in connection with the issuance of the aforesaid notes. The notes will not be issued pro-rata to existing holders of securities and will not have voting rights.

The interest rate for each borrowing will be determined by an agreement between the Applicant and the lender as respective loans are made at a rate contemplated to be the current Minneapolis prime rate which is the rate offered by commercial banks and which is currently 5% for such loans. However, the interest rate to be paid is not to exceed 5½% per annum.

Applicant states that the purpose for which such unsecured notes are to be issued is for the renewal of the company's bank loans incurred and to be incurred in 1965 to finance temporarily the balance of the 1965 construction program and to provide funds to finance temporarily the company's 1966-68 construction program, prior to arranging for long-term financing, thereby enabling the company more effectively to plan such long-term financing and to control the timing thereof.

The Applicant's 1966-68 construction program is summarized as follows:

Classification	1966	1967	1968
Electric production	$216, 000	$299, 000	$354, 000
Electric transmission line and substations	3, 551, 000	3, 630, 000	2, 965, 000
Electric distribution	1, 715, 000	1, 300, 000	1, 300, 000
Electric general and other utility	788, 000	584, 000	664, 000
Total	6, 270, 000	5, 813, 000	5, 283, 000

Written notice of the application has been given to the Minnesota Railway and Warehouse Commission, North Dakota Public Service Commission and South Dakota Public Utilities Commission and to the Governor of each of those States. Notice has also been given by publication in the Federal Register on December 8, 1965 (30 F.R. 15187), stating that any person desiring to be heard or to make any protests with reference to the application should file a petition or protest on or before December 17, 1965, with the Federal Power Commission, Washington, D.C. 20426. No protest, petition or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 204 of the Federal Power Act, subject to the jurisdiction of the Com-

mission as heretofore described and set forth in the Commission's order issued October 25, 1957, *Otter Tail Power Company*, Docket No. E-6776 (18 FPC 538).

(2) The proposed issuance of promissory notes in the aggregate principal amount of $10,000,000, all as described above, will constitute an issuance of securities within the purview of Section 204 of the Act.

(3) The proposed issuance of promissory notes in the aggregate principal amount of $10,000,000, all as described above, will be in excess of 5% of the par value of the other securities of Applicant and therefore, will not be exempt by virtue of Section 204(e) from the requirements of Section 204(a) of the Act.

(4) Applicant is not organized and operating in a State, under the laws of which the security issue here involved is regulated by a State Commission within the meaning of Section 204(f) of the Act, and proposed issuance, therefore, not exempt by virtue of that Section from the requirements of Section 204 of the Act.

(5) The proposed issuance of Promissory Notes will be exempt from the competitive bidding requirements of Section 34.1a of the Commission's Regulations under the Federal Power Act by reason of Paragraph 34.1a(a)(2) thereof.

(6) The proposed issuance of securities, as hereinafter authorized, will be for a lawful object, within the corporate purposes of Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance of service by Applicant as a public utility, and which will not impair its ability to perform that service, and is reasonably necessary and appropriate for such purposes.

(7) The period of public notice given in this matter is reasonable.

The Commission orders:

(A) The proposed issuance of Promissory Notes in the aggregate principal amount of $10,000,000 outstanding at any one time, whether an original issue or a renewal note, upon the terms and conditions and for the purposes set forth in the application, all as described above, is hereby authorized, subject to the provisions of this order.

(B) This authorization is granted upon the condition that all notes issued pursuant thereto shall be issued prior to December 31, 1968 and shall mature within one year from the date of issuance.

(C) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determinations of cost or any other matter whatsoever now pending or which may come before this Commission.

(D) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States in respect to any security to which this order relates.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

QUINAULT LIGHT COMPANY, PROJECT NO. 1487

ORDER ACCEPTING SURRENDER OF LICENSE (MAJOR)

(Issued January 17, 1966)

On July 29, 1965, Quinault Light Company, licensee for major Project No. 1487, filed under Section 6 of the Federal Power Act for surrender of its license for the project located on Zeigler Creek, a tributary to Quinault River, in Grays Harbor County, Washington, and affecting lands of the United States within the Olympic National Forest.

According to the application, the licensee is purchasing power from Bonneville Power Administration, the project was put on an inactive reserve status eight years ago and during that period the plant deteriorated and its rehabilitation would not be economically feasible.

Annual charges under the license for the project have been paid through December 31, 1964.

By letter dated November 24, 1965, the Chief, Forest Service, acting for the Secretary of Agriculture, who has supervision over the Olympic National Forest, has reported that the lands of the United States affected by the project have been restored to a condition satisfactory to the Service.

The Commission finds:

(1) Public notice of the application has been given. No protests or petitions to intervene have been received.

(2) Acceptance of surrender of the license for the project is appropriate as hereinafter provided.

The Commission orders:

Surrender of the license for Project No. 1487 is hereby accepted, effective as of November 24, 1965, subject to the payment of annual charges under the license for the project through said date in the amount of $16.80 for the costs of administration of Part I of the Federal Power Act and in the amount of $14.33 for the occupancy by the project of lands of the United States within the Olympic National Forest.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

WYOMING GAS COMPANY, DOCKET NO. CP66-139

DECLARATION OF EXEMPTION

(Issued January 17, 1966)

Wyoming Gas Company (Applicant) filed an application on November 1, 1965, for exemption from the provisions of the Natural Gas Act, pursuant to Section 1(c) thereof, of certain natural gas facilities located in the State of Wyoming, all as more fully set forth in the application.

Applicant, a Maine corporation with its principal place of business in Basin, Wyoming, is engaged in the transportation and sale of natural gas in the State of Wyoming, and in connection therewith sells and delivers natural gas to the public within various municipalities and certain rural areas in Washakie, Big Horn, Park and Hot Springs Counties in Wyoming, including the communities of Basin, Greybull, Manderson, Thermopolis, East Thermopolis and Worland, and to the Empire Oil Company at the Thermopolis and the Magnet Cove Barium Corporation at Greybull, Wyoming.

Applicant purchases natural gas from Montana-Dakota Utilities Co. (Montana-Dakota) at several delivery points along the so-called Riverton Dome-Worland natural gas transmission line of Montana-Dakota. Natural gas purchased from Montana-Dakota for distribution and sale in Thermopolis and East Thermopolis (Docket No. CP65-108) is transported through a 21 mile lateral extending from a point of connection with Montana-Dakota in Hot Springs County, Wyoming, to said communities. All of Applicant's facilities are located in Wyoming, and the natural gas purchased and received from Montana-Dakota, and local producers in Wyoming is consumed in the State of Wyoming.

The Public Service Commission of Wyoming has certified to the Federal Power Commission that it has regulatory jurisdiction over the rates, service and facilities of the Applicant to be exempted and is exercising such jurisdiction.

Wherefore, the Commisson declares, by reason of the foregoing:

> Wyoming Gas Company is exempt from the provisions of the Natural Gas Act, and the orders, rules and regulations of the Commission issued thereunder.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Carl E. Bagge.

GULF STATES UTILITIES COMPANY, DOCKET NO. E-7259

SUPPLEMENTAL ORDER AUTHORIZING ISSUANCE OF FIRST MORTGAGE BONDS

(Issued January 18, 1966)

By order issued January 6, 1966, *supra*, p. 51, in the above-entitled matter, the Commission authorized Gulf States Utilities Company, (Applicant), to issue and sell at competitive bidding $20,000,000, principal amount of First Mortgage Bonds, due 1996, subject among others, to the provisions set forth in paragraph (B) of that order as follows:

> (i) Applicant shall have amended its application pursuant to the requirements of Section 34.2(g) of the Commission's Regulations under the Federal Power Act relating to compliance with competitive bidding requirements, and Section 34.2(h)(1) of those Regulations relating to affiliation, and shall have either filed such amendments or shall have mailed them and advised the Commission by telephone and telegraph, as contemplated in Section 34.9 of the Regulations.
>
> (ii) The Commission, by further order, shall have approved the price to be received by Applicant for the proposed issuance of Bonds and the interest rate thereof.

Applicant, on January 18, 1966, filed an amendment, pursuant to the requirements of the aforementioned Commission order, setting forth, among other things, that it proposes to accept as providing the lowest annual cost of money to it, the bid of Salomon Brothers & Hutzler and Eastman Dillon Union Securities & Co., to purchase the proposed issuance of $20,000,000, principal amount of Bonds, for the price of 100.70999% of principal amount, with an interest rate of 5%.

The Commission finds:

(1) Applicant has satisfactorily complied with the requirements of paragraph (B) of the Commission's order issued January 6, 1966, in the above docket, and under the bid it proposes to accept for the Bonds, the price to be received by Applicant therefor and the interest rate thereof are reasonable.

(2) The proposed issuance and sale of Bonds, as hereinafter authorized, will be for a lawful object, within the corporate purposes of the Applicant and compatible with the public interest, which is appropriate for and consistent

with the proper performance by the Applicant of service as a public utility and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

The Commission orders:

(A) The price to be received by Applicant for the proposed Bonds and the interest rate thereof under the bid referred to above, are approved as reasonable.

(B) The proposed issuance and sale of Bonds referred to above upon the terms and conditions and for the purposes specified in the application, as supplemented by the amendment referred to above, are authorized, subject only to the provisions of paragraphs (A), (C), (D) and (E) of the Commission's order issued January 6, 1966, in the above docket.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

HARRELL DRILLING COMPANY, DOCKET NO. G–17074

ORDER ACCEPTING OFFER OF SETTLEMENT, REQUIRING FILING OF NOTICE OF CHANGE, SEVERING AND TERMINATING PROCEEDING, AND REQUIRING REFUNDS

(Issued January 18, 1966)*

On November 23, 1965, Harrell Drilling Company (Harrell) filed an offer of settlement in this proceeding pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure, and in conformity with the Second Amendment to the Commission's Statement of General Policy No. 61–1 (18 CFR 2.56). The offer involves a proposed increased rate for the sale of natural gas to Tennessee Gas Transmission Company (TGT) in the Magnet-Withers Fields, Wharton County, Texas (Texas Railroad Commission District No. 3), under Harrell's FPC Gas Rate Schedule No. 1, at a presently effective rate of 16.16947¢ per Mcf, at 14.65 psia, inclusive of tax reimbursement, being collected subject to refund. The proposed increased rate was suspended by order of the Commission for the statutory period, and was made effective, subject to refund, on July 6, 1959, by Harrell filing a proper motion in accordance with the Natural Gas Act. Harrell now proposes a settlement rate of 15.0¢ per Mcf, at 14.65 psia, inclusive of present tax reimbursement, for the remaining term of the contract with TGT. Additionally, Harrell proposes to eliminate the periodic price escalation, price redetermination and favored-nation clauses from the subject rate schedule. However, Harrell reserves the right to file for three-fourths reimbursement of any possible future tax increases.

Approval of the proposed settlement will result in Harrell refunding approximately $18,850, exclusive of interest, and a decrease in its annual revenues of approximately $365 below that which it currently collects and charges TGT for the subject sale of natural gas.

The proposed settlement is consistent with the provisions of the Second Amendment to the Commission's Statement of General Policy No. 61–1, issued December 20, 1960, 24 FPC 1107, as amended by Order No. 264, issued March 27, 1963, 29 FPC 589, and its acceptance would serve the public interest.

However, we desire to make it clear that acceptance of Harrell's offer of settlement shall not be construed as approval of any future increased rate filed in accordance with its reservations of the right to file increases to cover future tax increases, and is without prejudice to any findings or order of the Commission in any future proceedings, including area rate or other similar proceedings, involving Harrell's rate and rate schedule.

---

* This order was adopted December 1, 1965, before Chairman Swidler left the Commission.

The Commission finds:

The proposed settlement of the above-designated proceeding, on the basis described herein, as more fully set forth in the offer of settlement filed with the Commission by Harrell on November 23, 1965, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved and made effective as hereinafter ordered.

The Commission orders:

(A) The offer of settlement filed with the Commission by Harrell on November 23, 1965, is hereby approved in accordance with the provisions of this order.

(B) Harrell shall file, within 30 days from the date of issuance of this order, a notice of change in rate providing for the 15¢ per Mcf rate specified in its offer of settlement, and an executed contractual amendment to its FPC Gas Rate Schedule No. 1 eliminating the favored-nation, price redetermination, and the periodic escalation provisions therefrom. The notice of change and the contractual amendment shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(C) Harrell shall refund to TGT to the date of issuance of this order the difference between the rate collected subject to refund under the rate schedule herein and the settlement rate of 15¢ per Mcf of natural gas at 14.65 psia, with applicable interest computed to the date of this order, and shall report to the Commission, in writing, within 30 days from the date of issuance of this order, the amount of such refund, showing separately the amount of principal and interest, and the bases used for such determination, together with a release from TGT.

(D) Upon notification by the Secretary of the Commission that Harrell has complied with the terms and conditions of the order, the rate and charge of 15¢ per Mcf at 14.65 psia, specified in its offer of settlement shall be effective as of the date of issuance of this order, the above designated proceeding shall be deemed terminated, and severed from the consolidated area rate proceeding (Texas Gulf Coast Area) in Docket No. AR64–2 without further order of the Commission.

(E) The acceptance by the Commission of Harrel's offer of settlement is without prejudice to any findings or determinations that may be made in any proceeding now pending, or hereafter instituted by or against Harrell including area rate or other similar proceedings.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

THE MONTANA POWER COMPANY, DOCKET NO. CP66–102

ORDER AUTHORIZING EXPORTATION OF NATURAL GAS

(Issued January 18, 1966)

On October 8, 1965, The Montana Power Company (Applicant) filed in Docket No. CP66–102 an application pursuant to Section 3 of the Natural Gas Act for authorization to export natural gas from the United States to Canada for sale and delivery to Border Utilities, Ltd., and Milk River Gas Company, Limited, all as more fully set forth in the application.

Applicant proposes to transport natural gas from its Cobb Storage Field in Toole and Glacier Counties, Montana, to a point on the international boundary between the United States and Canada at Sweetgrass, Montana, and to export gas at that point for sale and delivery to Border Utilities, Ltd., and Milk River Gas Company, Limited. Border Utilities, Ltd., will resell and distribute gas in Coutts, Alberta, Canada, the community adjacent to Sweetgrass, Montana; and Milk River Gas Company, Limited, will resell and distribute gas in Milk River, Alberta, Canada, a community approximately twelve miles north of Coutts.

Applicant proposes to export a maximum of 120,000 Mcf of gas annually. Gas will be sold and delivered at the international boundary at a rate of 37.0 cents per Mcf from the date of initial delivery to December 31, 1967, 39.0 cents per Mcf from January 1, 1968, to December 31, 1969, and 41.0 cents per Mcf from January 1, 1970, to December 31, 1972, and thereafter until changed by agreement of the parties. Volumes are measured at a pressure base of 14.9 psia.

The maximum volume of gas proposed to be exported is approximately 0.26 percent of Applicant's system requirements in 1964 and is approximately 0.43 percent of the gas which Applicant is presently importing from Canada. The rates at which the gas will be sold are comparable to those at which gas is sold to the domestic market. Hence, it appears that Applicant's proposal is not inconsistent with the public interest.

Concurrently with the subject application Applicant filed in Docket No. CP66–103 an application pursuant to Executive Order No. 10485 for a permit authorizing the construction and operation of facilities at the international boundary in order to sell and deliver the gas proposed to be exported. A permit is being released concurrently herewith.

Applicant will export, sell and deliver natural gas for resale and delivery in Coutts and Milk River in lieu of Treasure State Pipe Line Company (Treasure State) which is presently authorized to export natural gas for use in those communities. Treasure State was authorized to transport natural gas to the international boundary in Docket No. G–1984, to export natural gas in Docket Nos. G–1982 and G–2147, and to construct and operate facilities at the international boundary in Docket No. G–1983 as modified in Docket No. G–2148. Due to depletion of reserves of its sole supplier, Hardrock Oil Company, Treasure State has filed applications in Docket Nos. CP66–99, CP66–100 and CP66–101 to cease its exportation of natural gas, to abandon the transportation and facilities in the United States and to surrender its permit. An order is being issued in Docket Nos. CP66–99, CP66–100 and CP66–101 concurrently herewith, *infra*, p. 96.

After due notice no petition to intervene, notice of intervention or protest to the granting of the application has been received.

The Commission finds:

The exportation of natural gas by Applicant, The Montana Power Company, as hereinabove described and as more fully set forth in the application in Docket No. CP66–102, will not be inconsistent with the public interest within the meaning of Section 3 of the Natural Gas Act provided that said exportation be on the terms and conditions hereinafter set forth:

(a) Applicant shall file statements or reports with the Commission from time to time under oath and in such details as the Commission may require with respect to the whole or any part of the instant export operation.

(b) The authorization granted herein is not transferable or assignable and shall remain in full force and effect only so long as Applicant continues the acts or operations herein authorized in accordance with the terms and conditions herein set forth.

(c) The authorization granted herein shall automatically terminate upon termination or expiration of the contracts between Applicant and the gas purchasers attached as exhibits to the subject application.

(d) Applicant shall not, during the term of the authorization granted by this order, materially change or alter its export operations without first obtaining permission and approval of the Commission.

(e) In the event that Applicant should abandon or permanently cease for any reason whatsoever all or any part of the instant export operation prior to the termination date of the contracts described in (c) above, Applicant shall forthwith notify the Commission of said fact and the reason therefor.

(f) The authorization granted herein is conditioned upon the receipt by the gas purchasers of any necessary authorizations to import gas into Canada.

(g) The annual volume of natural gas exported and sold by Applicant shall not exceed 120,000 Mcf at 14.9 psia.

The Commission orders:

(A) Authorization is granted to Applicant to export natural gas from the United States to Canada, as hereinabove described and as more fully set forth in the application in Docket No. CP66-102, upon the conditions herein set forth and subject to the provisions of the Natural Gas Act and the Commission's Regulations thereunder.

(B) The authorization granted herein is conditioned upon the gas purchasers' obtaining any authorizations issued by Canada or any political subdivision thereof for the importation of natural gas.

(C) The annual volume of natural gas exported and sold by Applicant shall not exceed 120,000 Mcf at 14.9 psia.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

TREASURE STATE PIPE LINE COMPANY, DOCKET NOS. CP66-99, CP66-100 AND CP66-101

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT OF FACILITIES AND SERVICE, TERMINATING CERTIFICATE, TERMINATING AUTHORIZATION TO EXPORT NATURAL GAS, AND REVOKING PRESIDENTIAL PERMIT

(Issued January 18, 1966)

On October 8, 1965, Treasure State Pipe Line Company (Applicant) filed in Docket No. CP66-99 an application to terminate its authorization to export natural gas from the United States to Canada heretofore issued in Docket Nos. G-1982 and G-2147 pursuant to Section 3 of the Natural Gas Act, all as more fully set forth in the application. Concurrently with the application in Docket No. CP66-99 Applicant filed in Docket No. CP66-100 an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon the facilities and the transportation of natural gas in the United States heretofore authorized in Docket No. G-1984; and in Docket No. CP66-101 Applicant filed an application to surrender its Presidential Permit issued in

Docket No. G–1983, as modified in Docket No. G–2148, pursuant to Executive Order No. 8202 authorizing the facilities at the international boundary, all as more fully set forth in the applications.

Applicant is authorized to transport natural gas from the Cut Bank Field in Glacier and Toole Counties, Montana, to a point on the international boundary between the United States and Canada near Sweetgrass, Montana, and sells and delivers gas at said point to Coutts Gas Company, Limited, of Coutts, Alberta, Canada, for resale and distribution in Coutts and for reale to Milk River Gas Company, Limited, for resale and distribution in Milk River, Alberta, Canada. The total volume of gas authorized to be exported is 120,000 Mcf per year.

Applicant's export authorization provides that Applicant shall reduce or terminate its sales and deliveries to Coutts Gas Company, Limited, to the extent necessary to meet Applicant's domestic market requirements. Applicant has been advised by its parent corporation, Hardrock Oil Company, its sole source of supply, that reserves have become depleted to the extent that sufficient quantities of natural gas cannot be delivered to Applicant for export. Accordingly, Applicant has filed the subject applications.

On October 8, 1965, The Montana Power Company filed in Docket No. CP66–102 an application pursuant to Section 3 of the Natural Gas Act for an order authorizing the exportation of natural gas and in Docket No. CP66–103 an application pursuant to Executive Order No. 10485 for a permit authorizing the construction and operation of facilities at the international boundary in order to sell and deliver gas to Border Utilities, Ltd., and Milk River Gas Company, Limited, for resale and distribution in Coutts and Milk River, Alberta, Canada, respectively. An order is being issued and a permit released concurrently herewith.

After due notice no petition to intervene, notice of intervention or protest to the granting of the applications has been received.

At a hearing held on January 13, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the applications and exhibits thereto, submitted in support of the authorizations sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Treasure State Pipe Line Company, a Montana corporation having its principal place of business in Great Falls, Montana, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order issued November 19, 1952, in Docket No. G–1984 (11 FPC 1450).

(2) The facilities and service proposed to be abandoned as hereinbefore described, all as more fully described in the application in Docket No. CP66–100, are subject to the jurisdiction of the Commission, and the abandonment thereof is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The abandonment by Applicant as hereinbefore described is permitted by the public convenience and necessity and should be approved as hereinafter ordered.

(4) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that the authorization issued to Applicant in Docket Nos. G–1982 and G–2147 to export natural gas from the United States to Canada should be terminated as requested in the application in Docket No. CP66–99.

(5) It is necessary and appropriate in properly conducting the foreign

relations of the United States and within the intent of Executive Order No. 10485 that the Presidential Permit issued to Applicant in Docket No. G–1983, as modified in Docket No. G–2148, should be revoked as requested in the application in Docket No. CP66–101.

The Commission orders:

(A) Permission for and approval of the abandonment by Applicant of the service and facilities hereinbefore described, all as more fully described in the application in Docket No. CP66–100, are granted; and the certificate of public convenience and necessity heretofore issued in Docket No. G–1984 is terminated.

(B) Applicant shall advise the Commission of the date of the abandonment authorized in paragraph (A) above within ten days thereof.

(C) The authorization heretofore issued to Applicant in Docket Nos. G–1982 and G–2147 to export natural gas from the United States to Canada is terminated as requested in the application in Docket No. CP66–99.

(D) The Presidential Permit heretofore issued to Applicant in Docket No. G–1983, as modified in Docket No. G–2148, is revoked as requested in the application in Docket No. CP66–101.

(E) The abandonment, termination and revocation in paragraphs (A), (C) and (D) above shall be effective as of the date on which The Montana Power Company commences the exportation of natural gas authorized in Docket No. CP66–102 through the facilities permitted in Docket No. CP66–103.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

AREA RATE PROCEEDING, ET AL. (HUGOTON-ANADARKO AREA), DOCKET NO. AR64–1, ET AL.

ORDER GRANTING MOTION FOR STAY OF PROCEEDINGS ON PIPELINE PRODUCTION ISSUE

(Issued January 19, 1966)

Staff Counsel filed a motion addressed to the Commission, on December 30, 1965, seeking severance of the pipeline production issue presently consolidated in the Hugoton-Anadarko Area Rate Proceeding therefrom, initiation of a separate new proceeding, prehearing conference, phased hearings and an immediate stay of all hearings and other procedural steps respecting that issue pending Commission action upon said motion. The Municipal Gas Group[1] filed a motion on January 7, 1966 requesting a continuance of any further proceedings in such consolidated dockets relating to the pipeline production issue pending decision on Staff's motion. The Texas Independent Producers & Royalty Owners Association (TIPRO) joined in Staff's motion on January 7, 1966.

The Cities Service Companies[2] filed, on January 6, 1966, a request to extend by one week the 10 day period prescribed by Section 1.12(c) of the Rules of Practice and Procedure for submittal of answers thereto. The Pipeline Production Group[3] joined in this request on January 10, 1966. Superior Oil

---

[1] Consisting of the American Public Gas Association, the Cities of Chicago and Denver and the Memphis Light, Gas and Water Division.

[2] Cities Service Company, Cities Service Oil Company, Columbian Fuel Corporation, Coltexo Corporation and Hydrocarbon Production Company, Inc.

[3] Consisting of 13 pipeline companies.

Company filed, on January 12, 1966, a request for a two week extension of time to reply to Staff's motion. By notice issued January 14, 1966, the Commission granted these requests and extended the time for filing such answers to January 24, 1966.

Hearings have been proceeding on an expedited basis on the independent producer aspects of the Hugoton-Anadarko Area Rate case but have not yet begun on the pipeline production aspects presently consolidated therein. However, at a scheduling conference held on January 5 the Examiner fixed January 31, 1966 as the date for the commencement of continuous cross-examination of pipeline production witnesses. Furthermore, cost evidence upon both the independent production and pipeline producer aspects of the consolidated proceeding involved in Docket No. AR64–1, *et al.* is scheduled to be served on February 15, 1966. Since answers to Staff's motion will only be filed on January 24, 1966 it is manifestly impossible for the Commission to consider and decide the issues thereby presented by January 31, 1966 or shortly thereafter. Accordingly, a stay of all presently scheduled hearings and other procedural steps relating to the pipeline production issue pending our final action upon this motion would obviate the danger of wasted funds, time and effort by all concerned. In these circumstances, we will grant the requested stay.

The Commission orders:

Presiding Examiner Kane shall stay and postpone all hearings and other procedural steps, including the submission of evidence and cross-examination, respecting the pipeline production issue now consolidated in the Hugoton-Anadarko Area Rate Proceeding in Docket No. AR64–1, *et al.*, pending final Commission action upon Staff Counsel's motion for severance and related relief submitted on December 30, 1965.

OPINION NO. 485

THE CINCINNATI GAS & ELECTRIC COMPANY, DOCKET NO. E–7125; THE UNION LIGHT, HEAT AND POWER COMPANY, DOCKET NO. E–7203

OPINION AND ORDER DETERMINING JURISDICTION AND DENYING ORAL ARGUMENT

(Issued January 19, 1966)*

Syllabus

1. Where a utility which is part of an electrically integrated interstate power network makes sales for resale from the network, Commission jurisdiction attaches. P. 101.
2. In an integrated power network it is not necessary to show by tracing techniques that specific units of interstate energy reach each wholesale customer where interstate power can, and at times does, permeate the company's transmission system lines leading to wholesale purchasers. PP. 101; 116, *et seq.*
3. Whether or not sales are made through local distribution facilities does not exempt them under Section 201(b) of the Power Act. PP. 101; 120.

---

* Initial decision appears on p. 104. See order modifying Opinion No. 485 and denying rehearing issued March 8, 1966, 35 FPC 365. Affirmed, *The Cincinnati Gas & Electric Co.* v. *F.P.C.* 376 F. 2d 506 (CA6–1967); cert. denied, 389 U.S. 842 (1967).

4. Even if nature of facilities were relevant, record shows that facilities here are not solely used in local distribution. PP. 101; 120.
5. Commission *finds* that wholesale rates at issue are from an integrated, interstate electric system, are pool sales and are sales of electric energy in interstate commerce within meaning of Section 201 of the Federal Power Act. P. 102.
6. In a proceeding under Section 201 of the Federal Power Act, Commission *determines* jurisdiction and denies motion for oral argument.

Commissioner O'Connor *concurring in result only.*

Walter E. Beckjord, *Douglas M. Mansfield*, and *Edward H. Laylin* for The Cincinnati Gas & Electric Company and The Union Light, Heat and Power Company.

Ernst Liebman for the Staff of the Federal Power Commission.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

Ross, *Commissioner:*

This is a proceeding to determine whether ten wholesale sales made by The Cincinnati Gas & Electric Company (CG&E) in Ohio, and one wholesale sale made by its subsidiary, The Union Light, Heat and Power Company (Union) in Kentucky, are subject to this Commission's jurisdiction under Section 201(b) of the Federal Power Act. The proceeding was instituted by an order directing CG&E to show cause why the Commission should not determine that certain of its sales at wholesale are subject to Sections 205 and 206 of the Act. A hearing was held and Presiding Examiner Harry C. Shriver issued an initial decision on October 6, 1965. The matter is now before us on exceptions filed by the Respondents.

In his decision, the examiner held that under pertinent Commission and court decisions the sales at issue are in interstate commerce under Section 201, and are not within the exemption of Section 201(b), and therefore are subject to our jurisdiction under the Act.

The basic findings of fact and the conclusions of law in the comprehensive initial decision of the hearing examiner are fully supported by the evidence of record and nothing in Respondents' exceptions calls for any modification thereof, except as noted herein.[1]

We agree with the examiner that the sales by CG&E and Union at issue in this case are subject to our jurisdiction under the Act and that the companies must file with the Commission appropriate rate schedules for them. Since we shall adopt the examiner's detailed decision, only a brief discussion of Respondents' exceptions is needed to dispose of this case.

The examiner correctly held that this case is governed by our decisions in *Indiana & Michigan Electric Company*, Docket No. E-7089, Opinion No. 458 and accompanying order issued April 14, 1965, 33 FPC 739, and in *Arkansas Power & Light Company*, Docket No. E-7090, Opinion No. 473 and accompanying order issued September 7, 1965, 34 FPC 747. Moreover, the situation here cannot be distinguished from that presented in the recent case involving Public Service Company of Indiana, Inc.[2] the facilities of which are interconnected with those of CG&E. Though there are necessarily factual differences among the cases, the rationale underlying the decisions is evident—where a utility which is part of an electrically integrated interstate power network makes sales for resale from the network, Commission jurisidiction attaches. The evidence presented by the Staff in this case as in the others referred to above, demonstrates why, as a matter of systems engineering, this is necessarily the case with respect to CG&E.

---

[1] Respondents state that the examiner misapprehended their position with regard to wholesale sales to West Harrison and the defense of Butler County Rural Electric Coop., Inc. We note here that Respondents have not conceded the Commission's jurisdiction as to the applicability of the local distribution exemption to West Harrison's facilities or to deliveries to Butler County in Indiana. We agree with Respondents that these minor changes, however, will not affect the examiner's conclusions.

[2] *Public Service Company of Indiana, Inc.*, Docket No. E-7163, Opinion No. 483 and accompanying order issued December 22, 1965, 34 FPC 1513.

The main objection advanced by CG&E in its exceptions is that Staff failed to trace the flow of units of energy from out-of-state sources of generation to their actual delivery for particular loads, and that such tracing is requisite to a finding of jurisdiction. We pointed out in our *Indiana & Michigan*, *Arkansas Power*, and *Public Service Company of Indiana, Inc.* opinions that in an integrated power network it is not necessary to show by tracing techniques that specific units of interstate energy reach each wholesale customer where interstate power can and at times does permeate the company's transmission system lines leading to the wholesale purchasers. The evidence summarized by the examiner shows that such is the case here. Furthermore, we agree with the examiner's finding that the evidence shows that CG&E, Union and West Harrison form an integrated and coordinated interstate electric system. Accordingly, we find no merit in this objection of CG&E.

In their exceptions CG&E and Union also argue that their lines leading to the points of delivery for the eleven sales in issue are "facilities used in local distribution" within the meaning of the exemption in Section 201(b) and so, along with the sales made thereby, are exempt from our jurisdiction by this provision. Whether or not the facilities used to make the sales are used in local distribution, however, does not exempt the sales. This very contention was considered by the Commission in the *Indiana & Michigan Electric Co.* opinion and was rejected.[3] Even if the matter were relevant, the record shows that the CG&E facilities involved in the sales in question are not solely used in local distribution, and hence the sales would not be exempt under Section 201(b).

From the above discussion, it is evident that no useful purpose would be served by oral argument in this case and CG&E's and Union's motion therefore will be denied.

We have considered with care the exemptions to the examiner's decision not discussed herein, but have concluded that they are without substantial support in fact or reasonable basis in law, or are immaterial to decision in this case, and should therefore be denied. With the modifications described hereinabove, the presiding examiner's decision should be adopted herewith, as our decision in this case, effective as of the date of issuance of this opinion.

The Commission further finds:

(1) The Cincinnati Gas & Electric Company (CG&E) is a corporation organized and existing under the laws of the State of Ohio with its principal business office at Cincinnati, Ohio. The Union Light, Heat and Power Company (Union), a subsidiary of CG&E, is a corporation organized and existing under the laws of the State of Kentucky. West Harrison, a wholly-owned subsidiary of CG&E, is a corporation organized and existing under the laws of the State of Indiana.

(2) CG&E and Union own and operate facilities, among others, for the transmission and sale at wholesale of electric energy which is transmitted among the States of Ohio, Kentucky, and Indiana and consumed outside the state in which it is generated. Such facilities are in addition to and do not include facilities used for the generation of electric energy, facilities used in local distribution, facilities only for the transmission of electric energy in intrastate commerce,

---

[3] See pp. 747, 748, *Indiana & Michigan Electric Co., supra.*

and facilities for the transmission of electric energy consumed wholly by the transmitter.

(3) CG&E, Union and West Harrison are public utilities within the meaning of that term as used in the Federal Power Act.

(4) CG&E and Union, the latter constituting in effect a part of CG&E's system, are located in the midst of a large power pool and operate their facilities as part of an integrated, interstate electric network. CG&E receives on its system energy from this multi-state power network. As a result, the wholesale sales at issue are sales from an integrated, interstate electric system, are pool sales, and are sales of electric energy in interstate commerce within the meaning of Section 201 of the Federal Power Act.

(5) CG&E, entirely or through its subsidiary Union, sells electric energy to the eleven customers referred to hereinabove and each such sale is a sale at wholesale in interstate commerce within the meaning of Sections 201, 205, and 206 of the Federal Power Act.

(6) CG&E filed, under protest, rate schedules for service to certain wholesale customers consisting of the Villages of Bethel, Blanchester, Georgetown, Hamersville, and Ripley, in Ohio and CG&E's subsidiary, West Harrison, and CG&E should maintain these on file for service to such customers, as we have heretofore provided and may hereafter provide.

(7) To the extent that CG&E and Union have not filed rate schedules for service to their other wholesale customers in this case, consisting of the City of Hamilton, Ohio; Inter-County Rural Electric Cooperative, Inc. and Butler Rural Electric Cooperative, Inc., in Ohio; The Dayton Power and Light Company in Ohio; and the City of Willliamstown, Kentucky, they have been and are continuing to violate the provisions of Section 205 of the Federal Power Act and Part 35 of the Commission's Regulations promulgated thereunder.

The Commission orders:

(A) CG&E shall maintain on file, in accordance with Part 35 of the Commission's Regulations and Section 205 of the Federal Power Act, the rate schedules on file with the Commission as of this date, referred to above, as its rate schedules for its sales at wholesale of electric energy to such customers. Such rate schedules shall remain effective until superseded by a change filed pursuant to Section 205(a) of the Act and Section 35.3 of the Regulations thereunder or until changed pursuant to order of this Commission.

(B) Within 30 days after this order becomes the final act of the Commission, CG&E and Union shall file in accordance with Part 35 of the Commission's Regulations and Section 205 of the Federal Power Act, their contracts with each of their wholesale customers referred to hereinabove with respect to which they have not filed rate schedules, as their rate schedules for the sales at wholesale of electric energy to such customers. Such rate schedules shall remain effective until and unless superseded by a change filed pursuant to Section 205(d) of the Act and Section 35.3 of the Regulations thereunder, or changed pursuant to order of this Commission.

(C) The decision of the presiding examiner, to the extent not inconsistent herewith, is adopted as the decision of the Commission.

(D) Exceptions not granted herein are denied.

(E) CG&E's and Union's motion for oral argument is denied.

(F) Except to the extent set forth above, this proceeding is terminated.

Commissioner O'Connor *concurring in the result only.*

O'CONNOR, *Commissioner, concurring in result only:*

This jurisdictional proceeding is the fourth in a series which commenced with ***Indiana & Michigan Electric Company***, Docket No. E-7089, Opinion No. 458

(issued April 14, 1965). We there determined that "* * * where a public utility participates in and is dependent upon an integrated interstate power pool, all of its sales for resale are subject to the jurisdiction of this Commission." That there were limits upon this evidentiary presumption was made clear by our determination in *Arkansas Power & Light Company*, Docket No. E-7090, Opinion No. 473 (issued September 7, 1965), that "There may be situations where a public utility which is part of an integrated interstate power system can show that some of its wholesale sales are isolated from the interstate network, and, as such, are not in interstate commerce." Neither opinion purported to define exactly what operating circumstances would constitute an "integrated interstate power pool," so reference must be had to the facts of company operations in those decisions.

The term "power pool" is oftentimes used rather loosely to describe any group of companies which may be interconnected, but this label is misleading. The mere fact that utilities are interconnected does not mean they have achieved the economies of scale or the reliability of service afforded by a fully integrated power system or pool. It is my opinion, under present circumstances of electric company pooling operations, that the integrated power pool should mean no more than a pool which is designed, planned, and operated as a unit so that each part will fully reflect the duty which might be imposed upon it as a part of the overall system. In *Indiana & Michigan* and *Arkansas P&L* we were confronted with such a grid, and it could reasonably be concluded that each wholesale was dependent upon the interstate pool. That is not the situation now before us, for CG&E is not a member of an integrated power pool with supply operations in more states than one. Although it conducts operations in two other states, its entire generating capacity is located in a single state so that the widespread distribution to its electric loads is supplied largely from power generated within Ohio.

As today's majority determined in *Public Service Company of Indiana, Inc.*, Docket No. E-7163, Opinion No. 483 (issued December 22, 1965), neither integration into an interstate system nor dependence on out-of-state power supply is necessary to assuming all wholesales should be jurisdictional. Thus, by the majority's view, the remote possibility that at some time, presumably when the company might lose all its generating capacity, out-of-state power might be able to reach all loads. In *PSCI* they proceeded to determine that such a possibility is nevertheless sufficient to attach federal regulatory standards, even though such unlimited jurisdictional bias supplanted five decades of state regulation. I did not concur in that determination (see my concurring and dissenting statement 34 FPC 1513 at p. 1522), nor do I concur in the majority rationale today.

The manner of operation of CG&E and its affiliates does not raise the serious policy questions presented in *PSCI*. There we were confronted with operations concerning but one state, whereas CG&E, through its affiliates and by its affiliates, operates in three states. It thus raises problems of the feasibility of state commission regulation where costs might be freely transferred between the companies. The sole issue in this proceeding, therefore, is whether there is a reasonable certainty that out-of-state energy reaches each sale for resale which would be embraced within a single regulatory standard.

As to the sales by Union in Kentucky, power generated in Ohio must necessarily be present. Similarly, the sale to West Harrison in Indiana involves out-of-state power. The determination is not so facile for the nine sales for resale in Ohio. Certainly it cannot be presumed power received at the interconnections across state lines permeates the entirety of the CG&E system. On the record before us, however, there was a comprehensive engineering and tracing study presented by the Staff which establishes that, for our purposes, out-of-state energy reaches each point of resale. Although the majority places no reliance on this evidence, Staff's meter studies indicate substations in the immediate vicinity of the resale loads receive out-of-state power. These meter studies do not provide the measure of proof utilized in *City of Colton* v. *Southern California Edison Co.*, 26 FPC 223 (1961), aff'd. 376 U.S. 205 (1964), but we are not required to determine each point of wholesale on the basis of such comprehensive evidence. It was there determined that less demanding evidence would suffice, at least in the absence of proof of effective isolation by virtue of intervening loads and points of supply. Furthermore, for a company geographically situated as CG&E is, it is doubtful the company could make the necessary showing even with careful studies of bus-bar transfers. In this respect it should be noted that tracing is possible within the approach utilized by Staff in this proceeding. Therefore, I concur in the order today that CG&E be considered to negotiate all of its sales for resale in interstate commerce, and that it file such rate schedules with the Commission.

One further point deserves mention. In its brief on exceptions CG&E makes the telling point that, if ever a sale is considered as involving facilities for "local distribution," it is the sale made to West Harrison. It is an anomaly to determine jurisdiction over this one sale. The small voltages involved and the limited transmission lines utilized would not suffice under the Act to render CG&E a public utility. See *Connecticut Light & Power Co.* v. *F.P.C.*, 324 U.S. 515 (1945). However, while the facilities are non-jurisdictional for status determination, they are jurisdictional for rate purposes. Were precedent not compelling that "local distribution" is a limited exception and that in this proceeding it would be difficult to make the exception because of overriding difficulties with regard to filling the gap left by *P.U.C.* v. *Attleboro Steam and Electric Co.*, 273 U.S. 83 (1927), it would be necessary to register a dissent as to this sale. This conclusion is made the more compelling by our letter-order of May 27, 1965, excusing Home Light & Power of Colorado from any federal regulation. As there determined, size of transmission lines can and should play an important role in this Commission's regulatory efforts, for certainly there are limits to centralized control of matters requiring continuing review.

INITIAL DECISION
OF THE PRESIDING EXAMINER DETERMINING JURISDICTION UPON AN ORDER TO SHOW CAUSE

(Issued October 6, 1965)

SHRIVER, *Presiding Examiner*. This is a proceeding under Section 201 of the Federal Power Act to determine whether certain wholesale sales made by the Concinnati Gas & Electric Company (Cincinnati) and its corporate affiliate, The Union Light. Heat and Power Company, (Union), to their customers in Ohio and in Kentucky involve the transmission of electric energy from one state to another and accordingly are subject to the jurisdiction of the Commission. Cincinnati receives some out-of-state energy, Union has no generation of its own.

On September 4, 1963, 30 FPC 641, the Commission issued an order against Cincinnati to show cause why the Commission should not find and determine that certain sales to seven of Cincinnati's customers are sales at wholesale in interstate commerce subject to Sections 205 and 206 of the Act and Part 35 of the Commission's Regulations thereunder.[1] The Commission's order instituted an investigation into the lawfulness of certain rate schedules of Cincinnati, ordered that Cincinnati file rate schedules for service to the seven purchasers, file cost and revenue data showing its costs of rendering service to each of the seven customers for the test period beginning July 1, 1962 and ending June 30, 1963,[2] and ordered a hearing at a time to be specified by further order.

In its answer of April 24, 1964, Cincinnati, among other things, denied that the Commission has jurisdiction over the sales to the seven customers named in the Commission's order of September 4, 1963, within the meaning of Section 201(b) of the Act and denied that it operates in the States of Indiana and Kentucky. Cincinnati claimed that it is and has been generating within the State of Ohio far more electric energy than has been necessary to meet the requirements of the seven customers, that it has been delivering energy to each of said customers solely within the State of Ohio and that each of the sales is made only by means of facilities used in local distribution.

On January 27, 1965, 33 FPC 109, however, the Commission issued a further order terminating the rate investigation of Cincinnati and consolidated Docket No. E-7125 with Docket No. E-7203 involving the wholesale for resale sales by The Union Light, Heat and Power Company to Williamstown, Kentucky, (FPC Rate Schedule No. 6). By this order, the Commission also accepted a settlement proposal made by Cincinnati on January 18, 1965, whereby it would reduce its wholesale electric rates and charges to its corporate affiliate, Union, by approximately $670,000 annually commencing December 1, 1964, and would reduce its wholesale rates and charges to the five municipally-owned electric distribution systems operating within the State of Ohio (Bethel, Blanchester, Georgetown, Hamersville, and Ripley), and another corporate affiliate, West Harrison Gas and Electric Company (West Harrison), in the event these wholesale sales are determined to be within the regulatory jurisdiction of the Commission, Sections 205 and 206 of the Federal Power Act, such reductions to be in an estimated aggregate amount of $80,560 annually and to be retroactive to December 1, 1964. The Commission's order in addition provided that the rate schedules accompanying Cincinnati's settlement relative to each customer or affiliate named above were accepted for filing and that they would become effective December 1, 1964, but only in the event they were finally determined to be jurisdictional, and if so determined, Cincinnati shall refund to such customers any charges collected in excess of amounts payable under the rate schedules accepted for filing[3] if applied for on and after December 1, 1964, together with simple interest at 6⅛ percent per annum. The order of January 27, 1965, further provided for a hearing and that (1) Cincinnati shall show cause why the

---

[1] The order refers to seven purchasers for which Cincinnati had not submitted rate schedules for filing with the Commission. The purchasers consisted of five municipalities, one cooperatively-owned utility, and one investor-owned utility, namely: The City of Hamilton, Ohio; Village of Blanchester, Ohio; Village of Georgetown, Ohio; Village of Hamersville, Ohio; Village of Ripley, Ohio; Inter-County Rural Cooperative, Inc.; and The Dayton Power and Light Company.

[2] By an order dated December 6, 1963, 30 FPC 1427, the Commission amended its order of September 4, 1963 changing the test period to the calendar year 1963 and requiring that Cincinnati answer in writing on or before April 15, 1964. By a Commission notice issued on April 11, 1964 the time for answering was extended until April 24, 1964.

[3] Rate schedule designation and other party:
FPC No. 22, Village of Bethel, Ohio;
FPC No. 23, Village of Blanchester, Ohio;
FPC No. 24, Village of Georgetown, Ohio;
FPC No. 25, Village of Hamersville, Ohio;
FPC No. 26, Village of Ripley, Ohio; and
Supplement No. 2 to FPC No. 15, West Harrison Gas & Electric Co.

Commission should not find and determine that the sales at wholesale for resale by Cincinnati to the five municipals, to its affiliate, West Harrison, to the City of Hamilton, Ohio, to Dayton Power and Light Company (Dayton), and to the Inter-County Rural Cooperative, Inc., (Inter-County) are sales of electric energy at wholesale for resale in interstate commerce, subject to the provisions of Sections 201, 205 and 206 of the Federal Power Act and Part 35 of the Commission's Regulations thereunder, and (2) Union shall show cause why the Commission should not make a similar finding in respect to its wholesale sales for resale to Williamstown, Kentucky. At the hearings, Cincinnati raised the question of the Commission's jurisdiction over Cincinnati's wholesale sales to the Butler County Rural Electric Cooperative, Inc.

Hearings were held in the case on May 4-7, 10-14 and on June 8, 1965. An Oral Argument was had before the Examiner on July 8, 1965.

The Staff contends that the sales of electric energy by Cincinnati and by Union to their wholesale customers named herein constitute wholesale sales for resale in interstate commerce within the meaning of Section 201(b) of the Federal Power Act.[4] The Respondents, Cincinnati and Union contend that these sales do not involve the actual delivery of out-of-state energy in interstate commerce to their customers, and that even if they did such sales are made from local distribution facilities and are thus exempt from the Commission's rate jurisdiction under Section 201(b). The only issues in the case are (1) whether there is in fact a delivery of out-of-state energy in interstate commerce for resale to the Respondents' customers, and (2) whether the Respondents' facilities are used in local distribution and therefore exempt under Section 201(b).

At the outset, it is admitted that both Cincinnati and Union are public utilities within the meaning of the Federal Power Act. 17 FPC 669; 25 FPC 1195; T. 243. Neither Union nor West Harrison, Cincinnati's subsidiaries, own or operate any generating facilities. They are total requirements customers of Cincinnati. It is conceded that the Commission has jurisdiction over Cincinnati's sale of electric energy at wholesale to Union and to West Harrison. Both are out-of-state as to Cincinnati. There is also no dispute that out-of-state energy is delivered by Union to Williamstown, Kentucky, and to the Butler County Rural Electric Cooperative, Inc. T. 6, 8, 9, 11.

The Cincinnati Gas & Electric Company is a corporation organized under the laws of Ohio with its principal place of business in the City of Cincinnati. The Union Light, Heat and Power Company is a subsidiary of Cincinnati. It is incorporated under the laws of Kentucky and maintains its principal place of business in Covington, Kentucky.

Cincinnati and its subsidiaries, Union, and West Harrison, operate in contiguous territory in Southwestern Ohio, Northern Kentucky and Eastern Indiana. They are managed by the same officers. Cincinnati's service territory covers approximately 2,158 square miles and an estimated population of about 1,261,000. Union's service area covers about 475 square miles and an estimated population of about 234,000, while West Harrison's service area is limited to a small community on the Indiana-Ohio boundary. The area served by the Cincinnati system is rather heavily populated and highly industrialized.

---

[4] Section 201(b) of the Act reads as follows: *The provisions of this Part shall apply to the transmission of electric energy in interstate commerce and to the sale of electric energy at wholesale in interstate commerce,* but shall not apply to any other sale of electric energy or deprive a State or State commission of its lawful authority now exercised over the exportation of hydroelectric energy which is transmitted across a State line. *The Commission* shall have jurisdiction over all facilities for such transmission or sale of electric energy, but *shall not have jurisdiction,* except as specifically provided in this Part and the Part next following, over facilities used for the generation of electric energy or *over facilities used in local distribution* or only for the transmission of electric energy in intrastate commerce, or over facilities for the transmission of electric energy consumed wholly by the transmitter. [Emphasis supplied.]

The parent company, Cincinnati, owns and operates three electric generating stations: namely, the Miami Fort Station, the West End Station and the W. C. Beckjord Station. These stations are interconnected by transmission lines through Ohio and Kentucky. The lines in Kentucky are owned by Union. The three stations have a total of 17 generating units with a combined nameplate rating of 1,498,950 kw, and in 1963 generated a net of 6,430,589,000 kwh. These generating stations, interconnection points and load centers are joined by a transmission network consisting of some 322 miles of 132 kv transmission line, 408 miles of 66 kv transmission line and 471 miles of 33 kv line. Cincinnati also leases 40 miles of 132 kv transmission line in Kentucky and Indiana from the Miami Power Corporation and 35 miles of 66 kv transmission line in Kentucky from Union. Cincinnati also has an agreement for the joint use with Union for the use of 25 miles of 132 kv transmission line and 8 miles of 66 kv transmission line in Kentucky. Aside from the lines either leased or used jointly with Cincinnati, Union owns 41 miles of 66 kv transmission line and 60 miles of 33 kv transmission line.

The Cincinnati system is connected with eight other companies at ten interconnection points.* Cincinnati's 132 kv interconnections include circuits to the Ohio Power Company at Portsmouth, to the Indiana & Michigan Electric Company, at Muncie, to The Dayton Power and Light Company, to the Ohio Valley Electric Company, and the Public Service Company of Indiana, Inc. The 132 kv line leased from The Miami Power Corporation provides an interconnection with The Louisville Gas and Electric Company and the Indiana-Kentucky Electric Corporation. The 132 kv, the 66 kv, and the 33 kv transmission networks are interconnected at various substations.

The major transmission networks of these eight companies with which Cincinnati is interconnected in turn are interconnected with other utilities, which constitute the American Electric Power System. Ex. 54, T. 114, 115. This system of which the Indiana & Michigan Electric Company and the Ohio Power Company are members, covers an area extending over seven states and is interconnected with 19 power systems at 66 locations. *Indiana & Michigan Electric Company*, Docket No. E-7089, Opinion No. 458, April 14, 1965, 33 FPC 739, at p. 744.

Cincinnati's interconnections with other utilities are not simply for emergency or stand-by purposes. The interconnections with the Louisville Gas and Electric Company and with the Public Service Company of Indiana were originally constructed with a view to supplying energy to these companies by Cincinnati. Other lines were constructed for the interchange or sale of energy with the Indiana & Michigan Electric Company and the Ohio Valley Electric Corporation. Large amounts of energy are transmitted between the Cincinnati system and its neighboring utilities over Cincinnati's high voltage lines. In 1963, Cincinnati (according to records kept for billing purposes), received about 709,511,000 kwh from six different companies and delivered 935,552,000 kwh to these companies. Ex. 26. During the same year, it delivered 718,656,000 kwh to its affiliate, Union, and 2,896,000 kwh to West Harrison, another affiliate. In 1963, the total energy received by Cincinnati at all points of connection was equal to 11 percent of its total net generation, and the total energy delivered to the Cincinnati system directly from out-of-state sources equaled 9 percent of Cincinnati's generation. The transfer of electric energy at Cincinnati's points of connection with other electric systems varies from moment to moment and hour to hour throughout the year. The network with which Cincinnati is interconnected operates in synchronism (at the same frequency).

---

* See in this connection in passing Ex. No. 53, reproduced in Appendix A hereto.

The sale or transfer of energy between the Cincinnati system and the companies with which it is interconnected is made pursuant to agreements. These agreements are either bi-party or three-party in character and generally cover one or more services such as the sale of firm capacity, short term power, economy energy, emergency services, sharing of reserve capacity, sharing of diversity capacity energy, and the purchase of surplus power.

Aside from the foregoing agreements, Cincinnati also has agreements with The Dayton Power and Light Company, and the Columbus and Southern Ohio Electric Company. They are styled as basic transmission and basic generating agreements. They are dated as of October 1, 1964, but may not come into full force and effect until in the future. The agreements contemplate, among other things, a power pooling arrangement between the three companies. These arrangements are described in Cincinnati's Annual Report of 1963 in part as follows:

> The Company, along with The Dayton Power and Light Company, and Columbus and Southern Ohio Electric Company, has announced the formation of a Central and Southwestern Ohio power pool. The agreement provides that future generating units will be owned and operated by the three companies together.
>
> The first generating unit to be constructed will be a 400,000 kilowatt unit at the Company's Walter C. Beckjord Station, scheduled to go into service June 1, 1968. . . The unit will be held in undivided ownership by the three companies with Cincinnati owning 37½%.
>
> So that each company may receive its portion of power from the new unit, some additional transmission lines have been constructed and rights-of-way are being acquired for other transmission lines on which construction will begin in 1964.
>
> The major advantages to the Company include: (1) a reduction in required reserve generating capacity, resulting in considerable capital saving; (2) lower construction costs per kilowatt of capacity due to the larger size units; and (3) increased efficiency of the larger units resulting in lower operating costs per kilowatt-hour of output.

Cincinnati's system (including Union and W. Harrison) is connected with its nine wholesale customers at various delivery points on its 66 kv or 33 kv network. The Village of Ripley, however, is connected with a 13.2 kv transmission line. The service to each is covered by a separate agreement. Cincinnati sells energy to the City of Hamilton, the Village of Blanchester, Village of Georgetown, Village of Hamersville, Village of Ripley, Village of Bethel, Inter-County Electric Cooperative, Inc. and the Butler Rural Electric Cooperative, Inc. Union sells to the City of Williamstown.

At the hearing four witnesses testified for the Staff[5] and two for the Respondents.[6]

The Staff's first witness testified briefly as to Cincinnati's relationship with its subsidiaries. He stated that Cincinnati and its subsidiaries use the same system of accounts, that the parent company prepares consolidated financial statements, and files consolidated Federal income tax returns. The Staff's second witness described Cincinnati's system operations with relation to the other utility companies with which it is interconnected, and to its subsidiaries and wholesale customers particularly in reference to the generating stations, substations, and transmission lines and loops as evidenced by various maps, diagrams, charts, log sheets, and agreements.

---

[5] They were Messrs. Bruce M. Hurt, Robert E. Cackowski, Harold E. Miller and Dr. Joseph J. A. Jessel.

[6] Mr. Howard W. Grate and Dr. Herbert H. Woodson.

The witness Miller testified that Cincinnati's Miami Fort Station receives energy from its six generating units, and from the Louisville Gas and Electric Company, the Indiana-Kentucky Electric Corporation, and the Public Service Company of Indiana, Inc.; that energy is supplied from the Miami Fort Station to points of interconnection with other utilities and to other points on the Cincinnati system, that is, over one 132 kv circuit to the Public Service Company of Indiana, Inc., over two 132 kv circuits to Port Union substation, over two 132 kv and two 66 kv circuits to the Terminal substation, and over two 66 kv circuits to the Front Street substation. He stated that in 1963, Cincinnati received 86,000 kwh from the Public Service Company of Indiana, Inc., and delivered 334,360,000 kwh to this company. He also testified that energy is supplied from Miami Fort to the Port Union substation, the Terminal substation, the Front Street substation, and to other substations, and that energy from both inside and outside the State of Ohio is commingled and supplied to all of these substations. He indicated that Port Union also receives energy generated in Ohio and generated outside of Ohio from Beckjord; that the Terminal substation receives energy generated outside of Ohio from Beckjord; that the Trenton substation receives energy from the Indiana & Michigan Electric Company, and from the Ohio Power Company; that the Hamilton substation receives energy from the Public Service Company of Indiana, Inc.; that the Trenton substation receives energy generated in Indiana and some from West Virginia; and that the Hamilton substation receives some out-of-state energy.

Mr. Miller testified that he had made a study of the reports required to be filed with the Commission by the utility companies with which Cincinnati is interconnected and had made a field study of Cincinnati's system including relevant charts, diagrams, logs and operating data.

He testified further that the City of Hamilton, the Butler Rural Electric Cooperative, Inc. (both in Ohio) and the West Harrison Gas & Electric Company (Indiana) receive out-of-state energy. His testimony revealed that energy originating from out-of-state permeates Cincinnati's high voltage lines at various busses and at times is commingled, and by means of the stations, substations, network and circuits is delivered to its customers in Ohio. On cross-examination, Mr. Miller amplified his direct testimony and explained how by means of metering, circuits, connections, and the nature of electrical phenomena energy gets from source to load. He also disclosed on cross-examination that as a means of determining whether out-of-state energy reached Cincinnati's wholesale for resale customers he relied in part upon the law of conservation of energy and the hydraulic analogy.

Dr. Jessel testified at some length as to the characteristics of Cincinnati's electric system, its sources of power supply, voltage of transmission lines, location of substations, interconnections with other electric systems, and how Cincinnati operates in relation to its customers and neighboring utilities. He stated he had examined numerous company reports, forms, and agreements executed between Cincinnati and other utilities, and prepared exhibits relative to the sources and distribution of the Cincinnati system of energy. He testified that Cincinnati is interconnected with the Ohio Valley Electric Corporation including its subsidiary, Indiana-Kentucky Electric Corporation, the Louisville Gas and Electric Company, American Electric Power System including Indiana & Michigan Electric Company and the Ohio Power Company, The Dayton Power and Light Company, the East Kentucky Rural Electric Cooperative Corporation, and stated that there is a free flow in power and energy throughout the network formed by this group of systems. He stated that he studied the maps of the

Cincinnati, and the Union electrical system and substations, 22 kv and above, transmission system maps, wiring diagrams, power flow diagrams, maps showing the interconnected electric system and annual reports to stockholders of Cincinnati and other companies.

Dr. Jessel testified that Cincinnati and its subsidiary companies are all operated as a single system within the States of Ohio, Kentucky and Indiana. He stated that during the year 1963, Cincinnati both received or delivered electric energy to the Public Service Company of Indiana, Inc., operating in Indiana; Indiana & Michigan Electric Company operating in Indiana and Michigan as part of the American Electric Power System operating in Tennessee, Virginia, West Virginia, Kentucky, Ohio, Indiana and Michigan; Indiana-Kentucky Electric Corporation operating in Indiana; Ohio Valley Electric Corporation operating in Ohio and Kentucky; The Dayton Power and Light Company operating in Ohio; City of Hamilton Municipal System operating in Ohio; that the East Kentucky Rural Electric Cooperative Corporation operating in Kentucky supplied energy to the Union Light, Heat and Power Company which in turn received practically all of its power and energy from Cincinnati. He stated that Cincinnati had billing transactions with these companies as well as with the Louisville Gas and Electric Company and the Tennessee Valley Authority.

Staff witness Jessel testified that it was his opinion, based on a reasonable engineering and scientific certainty, that out-of-state electric energy entering the Cincinnati Gas & Electric Company system in Ohio from other electric systems was delivered to The Dayton Power and Light Company, the City of Hamilton and the Villages of Bethel, Blanchester, Georgetown, Hamersville, Ripley and to the Butler Rural Electric Cooperative, Inc., and the Inter-County Rural Electric Cooperative, Inc. He was also of the opinion based on a reasonable engineering and scientific certainty that electric power and energy supplied to the City of Williamstown, Kentucky, and the Union Light, Heat and Power Company by Cincinnati included electric energy and power transmitted into Kentucky from outside the State of Kentucky, and that the electric power and energy received in Indiana by the West Harrison Gas & Electric Company from Cincinnati included power and energy from states other than Indiana.

The witness stated that his opinion was supported, among other things, by his inspection of Cincinnati's system and operating records, by exhibits that he had prepared, and by the following factors:

(1) That Cincinnati operates a three-state interconnected electric system consisting of electric lines and facilities operating at 132 kv, 66 kv, 33 kv and lower voltages; the 132 kv and 66 kv electric lines and facilities of Cincinnati have relatively large capacities and they are the means by which the major transfers of electric power and energy are effected throughout the Cincinnati system, and the three-phase Cincinnati interconnected electric system is so designed, constructed and located that its electric loads can be supplied adequately regardless of the sources and combinations of power supply;

(2) That Cincinnati's system is interconnected with and continuously operates in synchronism with the electric system of the Public Service Company of Indiana, Inc. operating in Indiana, Louisville Gas and Electric Company operating in Kentucky, Ohio Valley Electric Corporation operating in Ohio and Kentucky, Indiana-Kentucky Electric Corporation operating in Indiana, Indiana & Michigan Electric Company and Ohio Power Company operating as part of the AEP System in Indiana, Michigan, Ohio, Kentucky, West Virginia, Virginia and Tennessee and The Dayton Power and Light Company operating in Ohio; these systems with which Cincinnati is interconnected are in turn connected to many other electric systems; the Cincinnati system along with the electric systems of the above-named companies constitute an interconnected electric network

throughout which there is a free flow of electric power and energy; and all of these systems are part of the Interconnected Systems Group, sharing the benefits thereof including a maintenance of a high standard of frequency, a minimum of time error, and automatic assistance from the entire Interconnected Systems Group at times of emergency;

(3) That electric energy is generated as needed because it can not be stored in electric form; it is delivered at a speed of about 186,000 miles per second; it is automatically delivered upon the addition of an electric load; it cannot be supplied to one connected load and denied to another connected load; it is delivered by each phase of a three-phase system in the form of 120 positive power pulsations or 120 positive power pulsations plus 120 negative power pulsations in a 60 cycle per second system; and the power pulsations of individual loads and individual generating sources do not coincide at all times; that electric energy is delivered only when there is electric load or when energy is being stored in some other form;

(4) That all generating units connected to a common electrical network are coupled electromagnetically and their outputs are delivered to such network which acts as a single unit from which all the electric loads are supplied; all generating units operating in synchronism have mechanical energy or rotation stored in their spinning components, which is automatically converted to electric energy when there is a decrease in frequency; conversely there is a conversion of electric energy to mechanical energy when there is an increase in frequency; all generating units do not have the same amount of spinning mass and consequently do not respond equally to an accelerating force caused by a moment to moment difference between power supply and electric load including losses, as reflected by a change in frequency; and the amount of energy converted from mechanical to electrical form at each generating unit upon a decrease in frequency is porportional to the rotating mass and the difference between the squares of the initial and subsequent frequencies;

(5) There is an automatic transfer of electric loads among generating units of Cincinnati and other systems in response to continually occurring changes in frequency because of non-uniform response attributable to unequal rotating masses at generating units; there is an automatic transfer of electric loads among parts of an electric system and among electric systems because of the addition of load at one location or on one system and the simultaneous reduction of the load at another location or on another system; there is an automatic transfer of electric loads among generating units of Cincinnati and other systems when the power pulsations of the loads and the generators do not correspond exactly; there is transfer of loads among generating units of Cincinnati because of the changes in loading schedules by the dispatchers on the operating generating units; there is a transfer of electric power and energy among Cincinnati and other electric systems because of the free flow characteristics of electric network; there is a transfer of electric power and energy among Cincinnati and other electric systems because of scheduled transactions between Cincinnati and other connected electric systems and because of scheduled transactions between such other systems which are connected to Cincinnati; and the transmission lines and facilities constituting such networks are so located and designed as to make possible such free flow operations in the interest of: maintenance of high continuity of service and frequency, automatic assistance during emergencies, and realizations of benefits of connected operations;

(6) The electric system of Cincinnati is situated in a large power pool; Cincinnati regularly takes part in power and energy transactions with other electric systems in accordance with the provisions of existing agreements.

Dr. Jessel buttressed his opinion with a detailed description of the nature of electric utility systems. He testified further that:

(a) The electric loads of electric systems varied from moment to moment as does the total generation; that electric systems such as Cincinnati's and others have no control over the actual transfers of electric power and energy over any particular transmission interconnection with another electric system if there is more than one interconnection. Similarly, utilities have no control over the actual transfers of electric power and energy with any particular electric system if there are interconnections with two or more electric systems. In each instance, this is due to the free flow characteristics of the electric network. However, all systems operating together on an interconnected basis schedule the amounts of power and energy transactions among themselves on an hour to hour basis and each sets on its own net interchange controller the net amount of scheduled transactions. Each system measures the actual transfers at each point of connection with another electric system and the difference between scheduled transactions and actual transfers are balanced out as soon as practical. In order that the method may work efficiently all interconnected systems must and do share in adhering to schedules as close as possible.

(b) An electric utility system, such as Cincinnati, is essentially an electromechanical system to which all operating generators on the interconnected network are interlocked electromagnetically. This means that electric generators, under ordinary operating conditions, run either at exactly the same speed or at a speed ratio such as 1800 or 3600 revolutions per minute for a frequency of 60 cycles. No operating generator can change its speed by itself as long as it operates connected to the network. All generators connected to the same network must follow each other as to speed and frequency whenever there is a change in frequency, and the frequency of all interlocked generators is always exactly the same.

(c) An electric system such as that of Cincinnati and others automatically requires at constant frequency that at every moment total generation always be equal to total load plus losses; otherwise, there is an unbalance causing a change in frequency. An electric system cannot supply one connected load and not supply another connected load. For any particular loading on an electric system, all of the electric energy produced by all of the generating units is delivered to the common transmission network which acts as a single unit from which all of the customers are supplied. For any change in a load or generation, there is an electrical effect through a change in voltage and current at all generators and at all loads.

(d) All generating units are coupled electromagnetically to the prime movers which drive the rotors of the generators. As the power output of a generator is increased, there is an angular displacement between a point on the stator and a point on the rotor which initially are opposite to each other electrically at no generation. As the power output on a generator is increased, this angular displacement increases until a spread between these two points of 90 electrical degrees is reached. Further loading on a generator would cause a break in the electromagnetic link between the generator and the electric network, and result in a condition called an out-of-step condition. During actual operations this angular displacement may be limited to about 40 electrical degrees because of the swings on the rotors caused by load changes and disturbances on the networks. For each moment to moment change in electric load on an electric system, there is a change in frequency and a change in the angular displacement among the rotors of the genera-

> tors; and, this causes a swapping of loads among the generators for each change in load.
>
> (e) Each generating unit when operating at a speed corresponding to 60 cycles has mechanical energy of rotation stored in its rotating components, which is automatically convertible to electric energy when there is a decrease in frequency and corresponding drop in revolutions per minute. Thus, when a load is added suddenly to an electric system or a generator is taken suddenly out of service, every generating unit operating on the entire system of Cincinnati and connected systems almost instantly experiences a loss in speed, so that the mechanical energy of rotation of every generator is converted to electric energy. The sum total of the electric energy so obtained through conversion from mechanical energy of rotation, supplies part of the new load or takes the place of some of the lost generation. The amount of assistance from this rotational energy source depends on the mass of the rotating equipment and the difference between the squares of the speeds for the condition just prior to and just after the change in frequency. This conversion of mechanical energy of rotation has a stabilizing effect such that the frequency is relatively small. If there were not energy of rotation in the generators and other equipment, and if a relatively large power unbalance were suddenly to take place, the drop in frequency would be large and the electric systems could fall apart electrically before any action could be taken to restore the balance.

On cross-examination Dr. Jessel was examined freely, fully, and indeed on the nature of electrical phenomena. He strongly maintained that Cincinnati's municipal customers receive out-of-state energy. We now turn to the testimony of the Respondents.

The first witness for the Respondents, Dr. Herbert H. Woodson, testified that he had made a one day inspection trip of the facilities of Cincinnati where he observed the "Power Supervisor's Office, five substations of Cincinnati, the Pierce substation of Ohio Valley Electric Corporation, and part of the system of the West Harrison Gas & Electric Company." He prefaced his conclusions by a statement on the nature of scientific fact. He stated that "A scientific fact is knowledge about a physical phenomenon. This knowledge must be obtained from experimentally-verified scientific theory * * * . Without experimental verification, the theories and conclusions drawn from it (a scientific theory) are purely conjectural and not scientific facts * * *. With respect to electricity, a scientific fact is knowledge of electromagnetic phenomenon involving both a theory and experimental verification of the theory."

In particular reference to Cincinnati he stated that:

> * * * in a power system such as the CG&E (Cincinnati) system, all generators operate at the same frequency. As a result energy from one source is indistinguishable from energy from any other source—that is all measurable properties of energy supplied from each source is exactly the same * * *.
>
> In the more complex arrangement of a modern power system, such as the CG&E system (Cincinnati), where there are several generators, supplies of energy from out-of-state, and many loads, it is not often possible to determine as a scientific fact which generator, generators or out-of-state source or sources supply a particular load. This is true because it is not often possible to describe circumstances in which the experiment of changing the power supplied by a particular source in a prescribed way will yield a unique variation in the power consumed by a particular load every time the experiment is performed * * *.
>
> When several sources are supplying a large number of relatively small loads through a complex transmission and distribution system, the experi-

> ment of changing the output power of a particular generating unit or of opening a particular transmission line will be inconclusive with respect to attempting to determine which source or sources supply a particular load. The results of such an experiment will be a function of the electrical characteristics of the system and of the operating conditions at the time of the experiment. Thus, because the experiment will not yield the same change in load power every time it is performed, I conclude that there is no unique relation, based on scientific principles and experiments, between the power fed into the system by a particular source and the power drawn from the system by a particular load. Therefore, it is my opinion that, under such conditions, scientific principles and experiments are incapable of determining uniquely the source or sources of energy consumed by a particular load.

The witness was asked in his direct testimony whether under certain assumptions, including among others, that electric energy generated, transmitted and distributed by Cincinnati is carried by current alternating at approximately 60 cycles per second, that the electric energy generated by Cincinnati at its generators within the State of Ohio at all times exceed the aggregate quantity of energy delivered by Cincinnati to its wholesale customers involved in this proceeding, and in view of the existing Cincinnati electrical facilities with interconnections with other utility companies—whether it is possible to determine that energy transmitted from another state is delivered by Cincinnati to its wholesale municipal customers named in this proceeding, and the witness stated, "It is my opinion, based on scientific grounds and on the assumptions you have stated that it is not possible to determine that energy transmitted from another state is delivered by CG&E (Cincinnati) to any of the wholesale customers named." He stated further that, "As I have testified, the circumstances in which it is possible to establish as a scientific fact that a particular generator is a source of energy for a particular load are limited."

The witness also testified on direct examination that in his opinion Staff Witness Miller's testimony did not state "a scientific or engineering theory that has experimental verification." Similarily, he stated that, "It is my opinion that his conclusions (Staff Witness Jessel's opinions) are not based on relevant scientific facts."

On cross-examination, however, Dr. Woodson stated that he did not examine any substation records. He admitted that he had not considered in giving his opinion any records of energy transferred at the interconnection points between the Cincinnati system and other systems; nor had he considered the actual output of the generating stations on the Cincinnati system; nor the actual records of reported transfers from electric systems in Ohio among themselves and with other systems located outside the State of Ohio; nor did he inspect any hourly operating records of the Cincinnati system (except Exhibits 8 and 9 prepared by Dr. Jessel). He stated that he made no attempt to find out where any of the 1,300,497,000 kwh, metered in 1963 (Exhibit 26, part B) into the Cincinnati system from interconnecting systems went after it entered the Cincinnati system. He stated that although he had disagreed with the conclusions expressed in Dr. Jessel's direct testimony it was not completely clear to him exactly on what Dr. Jessel based his conclusions. He did admit, however, that he considered actual energy flow information as recorded on the hourly records of Cincinnati to be information of "scientific and engineering fact."

The crux of Dr. Woodson's opinion, as amplified on cross-examination is that there is no scientific way by which one can determine that energy from out-of-state sources is reaching any one of the wholesale customers involved in this proceeding with the exception of Williamstown, Kentucky and West Harrison, Indiana. Accordingly, Staff's basis for determination of delivery, in Dr. Woodson's view, is unscientific and incorrect.

Dr. Woodson appears, however, to have made but scant study of Cincinnati's records and system operations in reaching his opinion. He did admit that energy coming across the Ohio state border into the Cincinnati system was used together with energy generated by Cincinnati to fulfill its system requirements. He also admitted the converse of his main conclusion. He testified that "one can't say as a scientific fact that it does not go." (Out-of-state energy does not go to the municipalities.)

Electric energy is not matter. It is formless, colorless and cannot be seen. As the Respondents assert, out-of-state energy cannot be differentiated from intrastate energy through the senses. Electric energy is manifested in its capacity to perform work. The experts cannot fully describe it or explain how it can be used without resort to material analogies. At times they speak of the flow of energy, at others they say it does not flow. Some experts say there is no such thing as commingling of electric energy, that this term is applicable to liquids and fungible substances, and yet they admit in effect that there is a commingling but that there is no satisfactory term of description. The inherent nature of electric energy makes it difficult to identify, *i.e.*, energy utilized at one place but eminating from several sources. It is generally agreed that there is no way of identifying specific units of electrical energy from numerous sources, transmitted over a common line, at numerous loads. But this is not our concern in the instant case. Here the Respondents admit that out-of-state energy is received in Cincinnati's system but say that it is not delivered to its municipal customers. Here the Respondents claim on the one hand that there must be actual delivery to sustain jurisdiction, and on the other (because of the nature of electric energy) that delivery cannot be proven, and certainly not by experimentation. What the distinction is between actual delivery and delivery we are not told by the Respondents. The statute makes no such distinction.

But it has been suggested by way of answer to the Respondents' contentions that there are some facts of electrical phenomena which are universally accepted based on knowledge other than experimentation, and further for example that if an electric load receives energy through a line or at a point from five equal sources (excluding losses) the load must receive energy from each source. Similarily, in the same illustration if five equal loads are substituted for the one that it cannot be denied that each load receives energy from each source.

The principal issue in this case is: whether there is a delivery of energy in interstate commerce to the Respondents' municipal customers. The Respondents in effect ignore the import of the Staff's testimony but argue that it does not mean what it says. Even though the Staff Witnesses Miller and Jessel testified that there was a delivery of out-of-state energy to Cincinnati's system and that Cincinnati's municipal customers receive such energy, the Respondents argue that the method or methods utilized by them in reaching their conclusions involved in fact the law of conservation of energy and are therefore invalid. But the facts in the case which were brought to bear by the Staff Witnesses in support of their opinions are so conclusive that they cannot be ignored. In contrast, the Respondents' only witness in opposition gave but meager consideration to the specific facts in the case, made no attempt to find out what became of the energy which he admitted entered the Cincinnati system from out-of-state, or whether there was in fact a delivery or non-delivery of such energy to Cincinnati's municipal customers.

As already indicated the Respondents' chief witness based his conclusion on the general premise that the delivery of particular sources of electric energy to load can not be proven experimentally, but at the same time admitted that out-of-state energy might be delivered to the Respondents' municipal customers. Based on the evidence of record there is only one inference that can be drawn from the testimony of the Staff Witnesses in respect to the delivery of out-of-state energy here, namely, that energy from out-of-state was in fact delivered in interstate commerce to the Respondents' municipal customers, and we so hold.

The Respondents argue in effect that each kilowatt hour must be traced from each generator across state lines to the customer to establish jurisdiction. The Respondents say their position is sustained by the courts. But we do not construe the court decisions as being so restrictive. Neither *Jersey Central Power & Light Co.* v. *Federal Power Commission*, 319 U.S. 61 (1943) nor *Connecticut Light and Power Co.* v. *Federal Power Commission*, 324 U.S. 515 (1945) referred to by the Respondents specifically dealt with the delivery of electric energy in interstate commerce.

In *Pennsylvania Water & Power Company* v. *Federal Power Commission*, 343 U.S. 414 (1952) it was contended that some of Penn Water's sales at wholesale were to Pennsylvania customers—about 83 percent of Pennsylvania generated power. It appeared that Penn Water and the Safe Harbor Water Power Corporation had hydroelectric plants on the Susquehanna River in Pennsylvania, and the Consolidated Gas Electric Light and Power Company operated large steam plants in Baltimore. The three companies operated "under contracts for the coordinated sale and distribution of electric power in Maryland and Pennsylvania." The production and distribution of power produced by the three companies was completely integrated and pooled so that during periods of high flow in the river Consolidated received hydro energy which was more cheaply produced, while in times of low flow Penn Water received steam generated energy from Baltimore. In support of its holding of jurisdiction over the interstate sales, the Supreme Court quoted the Commission (p. 420):

> The central fact disclosed by the record about Penn Water's sales in Pennsylvania is that they are not sales of the output of Penn Water's own plant, but sales of output of the integrated and coordinated interstate electric system of which Penn Water's facilities are an integral part * * *
>
> In this manner energy crossing the State boundary, with other system energy, is used to fulfill system requirements. There result times when system energy generated in Pennsylvania is used, *mixed or unmixed, in meeting system requirements in Maryland.* Similarly, there are occasions when system energy from Maryland is used, mixed or unmixed, in meeting system requirements in Pennsylvania. Energy flows in, across, and out of the system transmission network as the needs of the interconnected members develop from minute to minute and day to day.
>
> It is accordingly evident that the operations of the unified system enterprise are completely interstate in character, notwithstanding the fact that system energy transactions at some particular times may involve energy never crossing the State boundary. 8 FPC 1, 12, 15.

The Supreme Court held that the Commission had complete authority to regulate all the commingled power flow, citing *Safe Harbor Water Power Corp.* v. *Federal Power Commission*, 179 F. 2d 179, affirming 5 FPC 221. The Court stated, "The Commission's power does not vary with the rise and fall of the Susquehanna River."

The same result was reached in the recent case of *Federal Power Commission* v. *Southern California Edison Company*, 376 U.S. 205 (1964). In that case the Circuit Court of Appeals assumed that there was support for the Commission's finding that energy received by the Southern California Edison system from the government dams out-of-state and then transmitted by the Edison Company to its wholesale customer, the City of Colton, in California. Here too the out-of-state energy was fused into the Edison system which supplied Colton. The Supreme Court said, "We have examined the proofs. They are in sharp conflict but we hold that the engineering and scientific evidence received by the Commission on the subject from the Commission's own experts afforded substantial evidence upon which to rest the findings which trace out-of-state energy to the City of Colton." (p. 209, note 5.)

But if there is any doubt as to jurisdiction based on the evidence in the instant case under the Court decisions, which we do not intimate, there can be none under the Commission's decisions. In *Otter Tail Power Company*, 8 FPC 393, 396-397, the Commission stated:

> The company's transmission system crosses the state boundaries at 12 major crossings carrying electric energy back and forth as the lines of the system indicate * * *
>
> The generation from plants in each of the three states contributes to the requirements of the system in all three of the states. No attempt or effort is made at any time to limit generation at any plant because of state boundaries. Here, as in the Penn Water case, the facilities in the different states are operated at all times for complete integration.

Again in *Wisconsin Michigan Power Company*, 10 FPC 170, 176 in determining jurisdiction over sales for resale the Commission noted that "the generation from plants in each of the states contributes to the requirements of the system in all of the states."

In the instant case the Respondents only employee witness testified that the company was completely integrated[7] and that it was operated "as a unit without regard to state lines." Cincinnati operates in Ohio, Indiana, and Kentucky. The generating facilities of the system and customer loads are tied together by a network of transmission lines which cross state boundaries, and the system is operated as an integrated coordinated multi-state unit to provide the capacity and energy necessary to supply the loads at maximum economy without regard to state lines. In 1963 Cincinnati received some half a billion kilowatt-hours from out-of-state.[8] Admittedly, energy coming across the Ohio state boundary from neighboring states into the Cincinnati system is used together with other energy of the Cincinnati system to fulfill its system requirements. Conversely, Cincinnati in turn supplies energy to neighboring companies from its three generating stations within Ohio with which it is interconnected. Cincinnati participates in pooling operations with its neighboring companies. Except for the magnitude of operations in *Indiana & Michigan Electric Company*, Opinion

---

[7] An integrated system is described in, *The Integrated Power System*, by Philip Sporn, McGraw-Hill Book Company, Inc. (N.Y.1950) where he says in part (pp. 19-20):

From a technical standpoint, what is mean by 'integration' is this: that all facilities of the system are connected physically into or gathered within the system, and that they all are made to work continuously as part of the system. The presumption is that no facility is needlessly idle; no part of the system is left hanging loose, so to speak; no part of the system is left without the resources and support of the system as a whole.

Applied to energy generation, this means the ability to develop all energy resources capable of economic exploitation and the development of all the resources to their maximum, as well as the elimination of all barriers to development such as local inability to absorb the resources. Again, it means the ability to use the largest units justified by the requirements of the system for any particular station or source, regardless of the requirements of the local area. Still further, it means the ability, as the system grows and develops, to exploit the most efficient units capable of technical projection because other units relatively recently installed but perhaps not so technically advanced can be relegated to a lesser system use. The combined or integrated effect of these is conservation on a vast scale.

[8] 709,511,000 kwh for billing purposes as shown in FPC Forms No. 1 and 12, Ex. 26.

No. 458, April 14, 1965, Cincinnati's operations are similar to those in Indiana & Michigan and as disclosed by the recital of facts herein are supported by the same engineering and economic principles. The differences between Cincinnati and Indiana & Michigan claimed by the Respondents are more apparent than real.

It is a curious fact that the insistence upon exact tracing so pressed by the Respondents as a prerequisite to the determination of jurisdiction is based upon the analogy of the flow of liquids while at the same time the Respondents argue that such tracing is impossible since it violates both the law of hydraulics and the law of conservation of energy. But it would be singularly anomalous if the States are powerless to regulate the transmission of electric energy across state lines, and that the Federal Government would also be powerless under the Federal Power Act while admittedly there is transmission but it can not be proven with nicety. Surely Congress did not intend that the reach of the Act should diminish as the reach of electric power lines and the vast interconnections of companies expanded, and the courts very properly have not so construed the Act.

The Respondents argue that "once the out-of-state and in-state energy have met at a junction, there is no means of differentiation or identifying unless it is by means of a concept". They say there is thus no delivery. But if the Respondents' argument is accepted then in-state energy is mixed or commingled with out-of-state energy and as the Supreme Court said in the Penn Water case, the Commission has jurisdiction when this occurs. Although it may be objected that commingling and fusing are mere concepts it may be answered that concepts are involved in scientific proof.

The Respondents say that the Indiana-Michigan case is not analogous to the instant case. We think that insofar as the essential principles established in that case are concerned, they are controlling here. There, as here, out-of-state energy was received by the Respondent's system and then transmitted to their wholesale customers. In the Indiana-Michigan case the Commission stated (p. 745):

> To determine jurisdiction in such circumstances, we need not know the precise nature of the flow of electric current. * * * The Power Act applies to the transmission and sale of "electric energy", which represents an attribute of electric current, and its practical effect. We know further that, whatever its physical nature, this electric energy moves from generation to load with the speed of light. Practically it cannot be stored as such, but must be generated as needed. In accordance with the practice of all modern systems in the United States, the generation occurs in the form of 60 cycle alternating current. Its voltage is increased by transformers; it is transmitted in accordance with the system's electrical characteristics, which change from minute to minute; its voltage is reduced by other transformers in various substations; and it is delivered to the system customers. In determining whether sales of electric energy generated by the system are in interstate commerce, we must consider the physical characteristics of integrated system operation as well as the administrative and contractual aspects.
>
> * * * When a new load develops at any given point it may not be possible to determine the precise energy flows involved but it is clear that the power resources of the whole interstate system and of interconnected systems are used to meet this load and all other loads. In fact, all loads must, in effect, be supplied from total generation, for it is not possible to supply one load without supplying all the other loads.

> Thus we are not dealing merely with a single flow of energy or multiple flows of energy, but an interstate pool of energy to which the generators of the system, or other interconnected systems contribute power, and from which all loads, and sometimes the loads of other systems, are supplied.

In *Arkansas Power & Light Company*, Opinion No. 473, September 7, 1965, the Commission stated (at p. 751):

> An interstate electric network is dynamic and ever changing both with respect to load and to generation source. It is an oversimplification, therefore, to talk in terms of a flow of electricity from point to point in an integrated power network of the type involved here. Instead, generation from each source in the system contributes directly or indirectly, and to an ever varying extent, to the energy present in all parts of the system which are not isolated from out-of-state energy sources.

Although the numerous contentions made by the respondents in respect to delivery have been considered, it is unnecessary to answer them in detail. It is accordingly held that Cincinnati's wholesale sales for resale here involved are subject to the Commission's jurisdiction and are governed by the Indiana-Michigan and the Arkansas Power & Light Company cases and the court cases previously cited. We turn now to the question of whether the respondent's facilities are used in local distribution so as to exempt Cincinnati's wholesale sales under Section 201(b) of the Act.

Even if the wholesale sales for resale are in interstate commerce, the Respondents contend that they are not subject to the Commission's jurisdiction because they are made from facilities used in local distribution and are thus exempt under Section 201(b) of the Act. In support of this contention, the Respondents' Witness Grate testified that "all of the facilities used in effecting the wholesales * * * are used in local distribution". (T. 182, 197.) Mr. Grate testified further that "those lines which deliver relatively large blocks of energy from one substation to another and which usually have capacities of the same order of magnitude as the transformers in their terminal substations, and which are not usually tapped, I define as transmission". (T. p. 198.) He said that as the electric loads grew it became necessary to tap and extend the lower voltage lines for distribution purposes, and that the Cincinnati system transmission voltage increased to 33 kv, then 66 kv, and then 132 kv.

On cross-examination he indicated that the entire service area of Cincinnati and it subsidiaries was a local area and that all the lines were in local distribution (T. pp. 1050-1051) and indeed that Cincinnati's "entire operation from coal pile to residential meter is engaged in the distribution of electric energy". The witness said that this concept included energy deliveries to the Ohio Valley Electric Corporation and the Dayton Power and Light Company (T. p. 1065). He admitted, however, that some of Cincinnati's higher voltage lines serve as connections with other systems, but when asked whether his company's higher voltage lines were used for transmission purposes and to transmit the electric energy to and from other electric systems, he said he "wouldn't know without tracing."

The Staff Witness Miller disagreed with the Company's witness. On rebuttal Mr. Miller defined transmission and transmission lines by quoting from the "*Glossary of Electric Utility Terms Financial and Technical 1961*" published by the Edison Electric Institute of which Cincinnati is a member.[8] Mr. Miller explained his disagreement by saying that the Company's witness limited the facilities used in effecting the wholesale sales to those in the immediate vicinity of the point of transfer of energy to the customer, whereas he should have included all the facilities from the source through the transmission system to the point of transfer. Secondly, he has characterized as facilities used in local distribution the lower transmission feeders to the point of transfer. Mr. Miller indicated that Cincinnati's facilities are not designed solely for the purpose of producing and distributing electric power to customers within its service area; that some are interconnected and operated in synchronism with neighboring companies; that the 24 mile, 132 kv steel tower line constructed in 1940, from the Trenton substation to the Indiana-Ohio line, for example, was constructed to enable Cincinnati to interchange and sell electric energy at wholesale to the Indiana & Michigan Electric Company, and that certain other facilities are used to transmit electric energy in bulk from substation to substation, rather than for distribution purposes.

---

[8] Mr. Miller stated that transmission is defined as "The act or process of transporting electric energy in bulk from a source or sources of supply to other principal parts of the system or to other utility systems. Also a functional classification relating to that portion of utility plant used for the purpose of transmitting electric energy in bulk to other

Although there is a clear distinction on principal as between facilities used in transmission and in distribution, the distinction is not always clear in application. In many circumstances each shades off into the other. This is partly true in respect to Cincinnati and its system. But this is not to say that a line can not be drawn between the facilities utilized in transmission and distribution here. On the contrary, the record clearly shows that the respondents' facilities which are physically used to deliver electric energy to its wholesale for resale customers are not used solely in local distribution as contended and we so hold.

But the Commission's jurisdiction under Section 201(b) of the Act does not turn on whether the facilities used to make the wholesale sales for resale in interstate commerce are used in local distribution. Jurisdiction is not dependent on the nature of the facilities involved in effecting the sale. The nature of the facilities only applies to the determination of the status of an electric company as a "public utility" under Part II of the Act. *Wisconsin Michigan Power Company*, 10 FPC 170, 176; and *Interstate Light and Power Company*. 10 FPC 225, 230. In *Indiana & Michigan Electric Company*, Opinion No. 458, April 14, 1965, the Commission stated (at pp. 747–748):

> * * * if a company owns or operates *any* jurisdictional facilities it is a public utility despite the fact that it might also own or operate facilities exempted by Section 201(b), and *all* wholesale sales for resale in interstate commerce made by a public utility are subject to the provisions of Sections 205 and 206 of the Act regardless of whether the particular sale involved jurisdictional facilities. See *Interstate Light and Power Co.* 10 FPC 225, 230, affirmed *sub nom.* *Wisconsin* v. *F.P.C.*, 201 F. 2d 183 (CADC), certiorari denied 345 U.S. 934; *Wisconsin Michigan Power Co.*, 10 FPC 170, 176-177, affirmed by 197 F. 2d 472 (CADC) certiorari denied 345 U.S. 934.

The Respondents cite the *Colton* case and *Connecticut Light & Power Company* v. *F.P.C.*, 324 U.S. 515 (1945) as holding that the local distribution clause applies to wholesale jurisdiction. We disagree. In *Connecticut Light & Power Company* the court held that the Commission shall have jurisdiction over all facilities for the transmission of electric energy in interstate commerce and to the wholesale sales in interstate commerce, but not over the facilities in local distribution.

As to *F.P.C.* v. *Southern California Edison Co.* 376 U.S. 205 (the *Colton* case), the Respondents rely upon the first three sentences of the court's footnote 6 at

---

principal parts of the systems or to other utility systems, or to expenses relating to the operation and maintenance of transmission plant". He defined transmission line as "a line used for bulk transmission of electricity between a generating or receiving point and major substations or delivery points".

page 210 in support of their contention but they disregard the remaining portion of the footnote where the court referred to the Commission's finding that, "There are facilities owned by Edison which it uses exclusively to effect the wholesale to Colton and not for local distribution." The court stated that the Commission's findings had ample support. Here, as there, there is ample support that the Respondents' facilities are not for local distribution but are used to effect its wholesale sales in interstate commerce to its several wholesale customers. After considering the cases and the entire record it must therefore be concluded that Respondents are not exempt under Section 201(b) of the Act.

FINDINGS AND CONCLUSIONS

Upon consideration of the record, the briefs, and arguments of counsel, it is found and concluded in addition to the findings and conclusions heretofore stated that:

(1) The Cincinnati Gas & Electric Company (Cincinnati) is a company organized and existing under the laws of the State of Ohio.

(2) The Union Light, Heat and Power Company (Union) is a corporation organized and existing under the laws of the State of Kentucky. Union is a subsidiary of Cincinnati, which owns 99.8 percent of its voting securities.

(3) The West Harrison Gas and Electric Company (West Harrison) is a corporation organized and existing under the laws of the State of Indiana. West Harrison is a wholly owned subsidiary of Cincinnati.

(4) Cincinnati sells electric energy at wholesale to the City of Hamilton, Ohio; the Villages of Blanchester, Georgetown, Hamersville, Ripley, and Bethel, Ohio; Inter-County Rural Electric Cooperative, Inc., and Butler Rural Electric Cooperative, Inc., in Ohio; and the Dayton Power and Light Company in Ohio. Cincinnati also sells electric energy at wholesale to West Harrison, Indiana, and to Union in Kentucky.

(5) Union in Kentucky sells electric energy at wholesale to the City of Williamstown, Kentucky.

(6) Each of the sales to the customers named above in (4) and (5) is a sale at wholesale for resale in interstate commerce within the meaning of Sections 201, 205, and 206 of the Federal Power Act.

(7) The facilities of Cincinnati and of Union by means of which they deliver electric energy to their wholesale customers named above in (4) and (5) are used for the transmission and sale at wholesale of electric energy in interstate commerce and are not "facilities used for local distribution" within the meaning of Section 201(b) of the Federal Power Act.

(8) Each of the three companies named above in (1), (2) and (3) own and operate facilities, among others, for the transmission and sale at wholesale of electric energy which is transmitted in the States of Ohio, Indiana, and Kentucky and consumed outside of the State in which it is generated, which facilities do not include the facilities used for the generation of electric energy, facilities used in local distribution or only for the transmission of the electric energy in intrastate commerce, or facilities for the transmission of electric energy consumed wholly by the transmitter. Cincinnati, Union, and West Harrison are public utilities within the meaning of the Federal Power Act.

(9) The three companies named above in (1), (2), and (3) comprise the Cincinnati system which is an integrated and coordinated interstate electric system operating in the States of Ohio, Kentucky, and Indiana. The Cincinnati system is directly interconnected with the Public Service Company of Indiana, Inc., in Indiana, the Indiana & Michigan Electric Company in Indiana, the

Louisville Gas & Electric Company in Kentucky, and the Ohio Valley Electric Corporation, the Ohio Power Company, and the Dayton Power and Light Company, operating in Ohio. The Cincinnati system operates continuously in synchronism with the aforesaid companies and other electric systems in the States of Indiana, Ohio, Kentucky, Illinois, Tennessee, West Virginia, and Virginia, as well as other States.

(10) At times each of the wholesale customers named above in (4) and (5) receives out-of-state electric energy from the multi-state power network of which the Cincinnati system is a part, such energy having been commingled with the Cincinnati system energy.

(11) The integrated and coordinated Cincinnati interstate electric system and the systems with which it is interconnected and operating in synchronism form an integrated and operating power pool, and the sales of electric energy by the Cincinnati system to its wholesale customers named above in (4) and (5) are pool sales and by reason of the interstate nature of the pool are sales in interstate commerce.

(12) All of the rate schedules for sales by Cincinnati and Union to the wholesale customers referred to above in (4) and (5) have not been filed with the Federal Power Commission. Accordingly, Cincinnati and Union have been and are in violation of the provisions of Section 205 of the Federal Power Act and Part 35 of the Commission's Regulations promulgated thereunder.

(13) Cincinnati and Union will be ordered to file with the Commission their rates or charges for service to their wholesale customers referred to above in (4) and (5), including the classification, practices, and regulations affecting such rates and charges, together with the contracts which in any manner affect or relate to such rates or charges, classifications or services pursuant to the provisions of Section 205 of the Federal Power Act and the Regulations promulgated thereunder.

ORDER

WHEREFORE, *it is ordered*, subject to review by the Commission on appeal, or review on its own motion, as provided in its Rules of Practice and Procedure that:

Within thirty days after this order becomes the final act of the Commission, The Cincinnati Gas & Electric Company and The Union Light, Heat and Power Company shall file in accordance with Part 35 of the Commission's Regulations and Section 205 of the Federal Power Act, their contracts with each of their municipal, cooperative, or other customers referred to in (4) and (5) above, their rate schedules for their sales at wholesale of electric energy to those twelve customers. Such rate schedules shall remain effective until and unless superseded by a change filed pursuant to Section 205(d) of the Act and Section 35.3(c) of the Regulations thereunder, or changed pursuant to order of this Commission.

ALABAMA POWER COMPANY, PROJECT NO. 82

ORDER DEFERRING FURTHER ACTION

(Issued January 20, 1966)*

By a separate notice issued this day we have initiated a comprehensive rulemaking proceeding looking towards the establishment of criteria for determining the net investment of a licensed hydroelectric project within the meaning of Section 3(13) of the Federal Power Act.[1] The amortization reserve for licensed projects established by Section 10(d) of the Act, which is the subject of the instant proceeding, has as its primary purpose the establishment of a fund which could serve, if necessary, as one of the several items specified in Section 3(13) by which project net investment can be reduced to the extent such items are derived from project earnings in excess of a fair return.

This proceeding was started as a test case at a time when the Commission was focusing on the amortization reserve to the exclusion of the net investment calculation of which it is a part.[2] Since net income not paid out in dividends or posted to a reserve account will usually be recorded in unappropriated surplus another deductive item under Section 3(13) there will normally be no need to call upon an amortization reserve fund unless the system of which the project is a part pays out in dividends an amount more than the fair return, or makes net appropriations from surplus to pay dividends not earned. Moreover, the amortization reserve established by Section 10(d) only comes into play after the first twenty years of project operation and can only be utilized to reduce net investment to the extent that has been derived from earnings in excess of a fair return—a calculation which is part of the Section 3(13) determination but is not required under Section 10(d) (the amortization reserve is based on a specified return which may be more or less than the fair return). Finally, it is clear that to the limited extent it might be necessary to call upon Section 10(d) to reduce project net investment this can be done at the time the ultimate Section 3(13) determination is made; the obligation to establish an amortization reserve is statutory, as well as being a part of each license, and the failure of a licensee to establish the fund on its books of accounts prior to the time the Commission makes its Section 3(13) determination can no more preclude Commission consideration of the amounts required to be in such a reserve by the terms of the license in making its Section 3(13) calculations, than the previous failure of the licensee to establish such fund could now preclude the separate retroactive establishment thereof.

In view of these various factors, we believe that the public interest would be served by deferring any further action on the Section 10(d) amortization reserve for Alabama Power Company's Project No. 82 until it can be taken in the light of the outcome of the rulemaking proceeding with respect to Section 3(13). Any loss of precedental value which might result from an early determination here is outweighed by the advantages of reaching any ultimate determination which might be warranted herein in the light of our conclusions in the Section 3(13) rulemaking docket. On the other hand, since an evidentiary record has been developed which could be of value in the event a determination of the amounts required to be in Alabama Power's amortization reserve for Project No. 82 should become necessary, we shall not terminate the proceeding.

---

*See order issued March 15, 1966 re rehearing, 35 FPC 391.

[1] Notice of Proposed Rulemaking, Docket No. R-297, 31 F.R. 1079, January 27, 1966 (Editor's note).

[2] See order fixing hearing issued August 18, 1961, 26 FPC 392, and Presiding Examiner's Initial Decision issued October 8, 1963 (Editor's note).

The Commission orders:

In light of the foregoing the proceedings herein are deferred pending further action by the Commission.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

VERMONT ELECTRIC COOPERATIVE, INC. v. CENTRAL VERMONT PUBLIC SERVICE CORPORATION AND VERMONT ELECTRIC POWER COMPANY, INC., DOCKET NO. E-7205

ORDER ACCEPTING RATE SCHEDULES FOR FILING, PERMITTING WITHDRAWAL OF APPLICATION SEEKING AN INTERCONNECTION AND WHOLESALE ELECTRIC SERVICE PURSUANT TO SECTION 202(B) OF THE FEDERAL POWER ACT AND TERMINATING PROCEEDING

(Issued January 20, 1966)

Pursuant to rate schedules accepted for filing hereinafter, Vermont Electric Cooperative, Inc., Johnson, Vermont, will receive wholesale electric service for its Hinesburg, Vermont, utility service area through a 34.5 kv interconnection at Williston, Vermont. That service will supplement Cooperative's present single power source for the Hinesburg area, a 34.5 kv interconnection with Central Vermont Public Service Corporation at Underhill, Vermont.

To complete this additional service Central Vermont Public Service Corporation (Central Vermont), Rutland, Vermont, will make available up to a maximum of 2,500 kw of power and associated energy at the Essex substation of Vermont Electric Power Company, Inc. (Velco), Rutland, Vermont. Thereafter such power and energy will be wheeled over facilities of Green Mountain Power Corporation (Green Mountain), Burlington, Vermont, with delivery to Cooperative at Williston. Central Vermont, Velco and Green Mountain submitted their respective rate schedules for filing pursuant to Section 205 of the Federal Power Act, all as identified and designated in Attachment A hereto. Those schedules, submitted for filing on November 1, 1965, were accompanied by requests for waiver of the Commission's 30-day prior notice requirement to permit them to become effective as of October 28, 1965, the date of commencement of service to the Cooperative at Williston.

On February 1, 1965, Cooperative filed an application for an order of this Commission directing Central Vermont and Velco, pursuant to Section 202(b) of the Federal Power Act, to provide service to the Cooperative at the 115 kv Essex substation of Velco in the vicinity of Burlington, Vermont. Following answers thereto by Central Vermont and Velco, respectively, filed March 3, 1965, and notice of intervention filed on behalf of the Vermont Public Service Board on February 23, 1965, prehearing conferences were held, attended by representatives of interested parties and Commission staff. The proffered rate schedules were developed as a result of those conferences.

Pursuant to the proffered rate schedule filings, Central Vermont will provide the power and energy to Cooperative at Velco's Essex substation at the unit rates and charges which are applied by the State of Vermont to its allottees for power and energy received from the Power Authority of the State of New York (St. Lawrence and Niagara projects). Based upon estimates for the 12-month period beginning November 1, 1965, 2,402,789 kilowatt hours will be supplied at an average demand charge of $2.64 per kw, and an average energy charge of 2.84 mills per kilowatt hour. And since Velco (not Central Vermont) is the owner of facilities at the Essex substation, Velco will receive $75 per month for the use of its substation, transformation and switching facilities for the delivery of the initial 1,000 kw of firm power per month and an additional $37.50 per month for each 500 kw block thereafter up to the maximum of 2,500 kw per month. Velco's charges for the estimated deliveries during the 12-month period beginning November 1, 1965, would amount to 0.375 mills per kilowatt hour.

Upon receipt of the power and energy by Green Mountain at the Essex substation, the latter will transmit it to Cooperative's facilities at Williston, Vermont (Hinesburg area) at a charge of $38.50 per month. Based on the projected deliveries for the 12-month period commencing November 1, 1965, Green Mountain's average charges would be .2 mills per kilowatt hour.

Cooperative's request for permission to withdraw its application (complaint) was filed December 16, 1965, pursuant to Section 1.11 of the Commission's Rules of Practice and Procedure. On December 17, 1965, Central Vermont and Velco, respectively, advised that they had no objection to the requested withdrawal. Earlier, on October 14, 1965, the Vermont Public Service Board in anticipation of the proffered rate filings had advised that it had no objection to withdrawal of the complaint.

The Commission finds:

It is necessary and appropriate for purposes of the Federal Power Act and the Commission Regulations thereunder, and good cause has been shown to accept the proffered rate schedules of Central Vermont Public Service Corporation, Vermont Electric Power Company, Inc., and Green Mountain Power Corporation, respectively, to become effective as of October 28, 1965; to permit withdrawal of the application of Vermont Electric Cooperative, Inc., filed February 1, 1965; and to terminate this proceeding.

The Commission orders:

(A) The 30-day notice period as provided in Section 205 of the Federal Power Act and Section 35.3 of the Commission's Regulations thereunder, is waived with respect to the proffered rate schedules as referred to and designated in Attachment A hereto, and they are allowed to take effect as of October 28, 1965, all as indicated in that Attachment.

(B) The issuance of this order shall constitute full notice of the filing and publication of the rate schedules in question insofar as their effective dates are concerned.

(C) Acceptance of the rate schedules as referred to in Paragraph (A) above is without prejudice to any findings or order which have been or may hereafter be made by this Commission in any proceeding by or against the filing Companies. Moreover, nothing in this order shall be construed as a waiver in any other respect of the requirements of Section 205 of the Federal Power Act or Section 35.3 of the Commission's Regulations thereunder; nor shall this order be construed as constituting approval by this Commission of any service, rate, charge, classification or any rule, regulation, contract or practice affecting such services or rates provided for in the rate schedules referred to and designated in Attachment A; nor shall this order be deemed as recognizing any claimed contractual right or obligation affecting or relating to such services or rates.

(D) Permission is granted for Vermont Electric Cooperative, Inc., to withdraw its applications filed February 1, 1965, and the above entitled proceeding is terminated.

ST. MICHAELS UTILITIES COMMISSION, ET AL. v. EASTERN SHORE PUBLIC SERVICE COMPANY OF MARYLAND, ET AL., DOCKET NO. E-7114, ET AL.

ORDER DENYING PETITIONS FOR LEAVE TO PARTICIPATE IN ORAL ARGUMENT AS AMICUS CURIAE

(Issued January 21, 1966)

On January 10, 1966, petitions for leave to participate in the oral argument scheduled for February 1, 1966, in the above-entitled proceeding, as *amicus curiae*, were filed with the Commission by the North Carolina Municipally-Owned Electric Systems, a voluntary association of 73 cities and towns in the State of North Carolina, and by 10 cities in the State of Florida, namely, Alachua, Bartow, Bushnell, Fort Meade, Lake Helen, Leesburg, Mount Dora, Newberry, Ocala and Williston.

Good cause has not been shown for granting the petitions for leave to participate in the oral argument in the above-entitled proceeding as *amicus curiae*.

The Commission orders:

The petitions filed by the North Carolina Municipally-Owned Electric Systems and by the 10 Florida cities mentioned above for leave to participate in the oral argument in the above-entitled proceeding on February 1, 1966, as *amicus curiae* are hereby denied.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

AREA RATE PROCEEDING, ET AL. (TEXAS GULF COAST AREA), DOCKET NO. AR64-2, ET AL.

ORDER REJECTING APPEAL

(Issued January 24, 1966)*

On December 1, 1965, Hunt Oil Company and thirteen other Hunt entities filed an appeal from a ruling of the presiding examiner denying a request of Hunt that all respondents who had completed the all areas questionnaire be required to provide additional data. Such data allegedly would have permitted a separation of costs and volumes of gas produced from leases having intrastate sales in 1962. Humble Oil & Refining Company, *et al.*, Associated Gas Distributors and the staff opposed the Hunt request.

The presiding examiner found that the requested data would not be used in support of an issue material to the proceeding and denied the Hunt request.

Section 1.28(a) of the Commission's Rules of Practice and Procedure provides: "Rulings of presiding officers may not be appealed from during the course of hearings except in extraordinary circumstances where prompt decision by the Commission is necessary to prevent detriment to the public interest." The appeal sets forth no facts which would constitute extraordinary circumstances warranting our consideration of the appeal and it should therefore be rejected.

The Commission orders:

The appeal filed by Hunt Oil Company, *et al.* on December 1, 1965, is rejected.

---

*Reconsideration denied by order issued March 14, 1966, 35 FPC 128.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

CITIES SERVICE GAS COMPANY, DOCKET NOS. CP66-226, CP65-140, CP64-131; ARKANSAS LOUISIANA GAS COMPANY, DOCKET NOS. CP64-125, CP62-219; EL PASO NATURAL GAS COMPANY, DOCKET NO. CI65-1267, CI65-1271

ORDER GRANTING MOTIONS TO CONSOLIDATE, PERMITTING INTERVENTION, PRESCRIBING PROCEDURES, AND FIXING DATE OF HEARING

(Issued January 24, 1966)

On January 17, 1966, Cities Service Gas Company (Cities), a Delaware corporation with its principal place of business at Oklahoma City, Oklahoma 73101, filed in Docket No. CP66-226 an application, pursuant to Section 7 of the Natural Gas Act, for a certificate of public convenience and necessity authorizing the construction and operation of facilities to be used in interstate commerce for the transportation by the year 1969 of an additional 100,000 Mcf of natural gas per day from supply sources in the Kansas-Hugoton area through Cities' Hugoton-Kansas City 26-inch pipeline for the purpose of meeting increases in Cities' system gas requirements, all as hereinafter described, subject to the jurisdiction of the Commission, as more fully represented in the application in Docket No. CP66–226 which is on file with the Commission and open for public inspection.

Cities' application states that its increased purchases from producers in the Kansas-Hugoton area will be taken into its system in two stages, each at the rate of 50,000 Mcf per day, with the first increment to be received in the year 1968 and the second to be taken in 1969. The increased volumes to be purchased from the Kansas-Hugoton area are projected for use beginning two years in the future on Cities' assumption that its increased requirements for 1966 and 1967 will be satisfied primarily by the Commission's issuance of a certificate to Arkansas Louisiana Gas Company (Arkla) in Docket No. CP64–125 authorizing Arkla to sell 100,000 Mcf of gas per day to Cities with such deliveries commencing in the fall of 1966.

Cities alleges that the additional volumes of gas which it proposes to transport will be received from wells already connected to its existing facilities in the Kansas-Hugoton Field and also from wells to be drilled by the producers to develop the Panoma Council Grove Field and other deep formations which underlie a portion of the Kansas-Hugoton Field. In order to take these additional volumes of gas into its system Cities proposes to construct and operate the following facilities: (1) 6,000 horsepower of additional compression at its Hugoton Station, (2) 176.64 miles of 26-inch loop at intervals along its 26-inch pipeline extending from the Kansas-Hugoton area to Kansas City, Missouri, (3) a new 6,000 horsepower compressor station in the northern part of the Hugoton Field to be known as the North Ulysses Station, (4) a new 4,000 horsepower compressor station in the southern portion of the Hugoton Field to be known as the South Ulysses Station, (5) 2,000 horsepower of additional compression at its United Station, (6) 135,000 Mcf per day of additional dehydration capacity at its Hugoton Station, (7) 13 miles of 20-inch, 6 miles of 16-inch, and 3 miles of 6-inch additional field pipelines, and (8) about 301 four-inch well ties connecting Cities' gathering system with the new wells to be drilled in the Panoma Council Grove Field. The application states that these additional facilities will increase the capacity of Cities' Hugoton-Kansas City line from about 505,000 Mcf per day to 605,000 Mcf per day.

The total estimated cost of the proposed facilities is $25,569,000 which Cities plans to finance by the issuance of first mortgage pipeline bonds which Cities believes can be sold at an interest rate not exceeding 5⅛ percent.

On December 27, 1965, the Commission received from Chairman William L. Mitchell of the State Corporation Commission of the State of Kansas (Kansas Commission) a summary of the results of an informal conference jointly held on December 17, 1965, by the applicants and parties to the separate consolidated proceeding in Docket No. CP65–140, *et al.*,[1] and Docket No. CP64–125, *et al.*[2] According to Chairman Mitchell's report, Cities agreed at the informal confer ence to file the application in Docket No. CP66–226, hereinbefore described, in which Cities proposes to construct $25.6 million of facilities in order to take an additional 100,000 Mcf of gas per day from the Kansas-Hugoton area to help meet its system requirements commencing with the year 1969.

---

[1] Hereinafter referred to as the Hugoton Field proceeding. This proceeding was initiated by the Commission's order issued August 27, 1965, in *Cities Service Gas Company, et al.*, Docket No. CP65–140, *et al.*, which consolidated for hearing the applications of: Cities in Docket No. CP65–140, El Paso Natural Gas Company (El Paso) in Docket No. CP65–384, Northern Natural Gas Company (Northern) in Docket No. CP65–389, and Sinclair Oil & Gas Company (Sinclair) in Docket Nos. CI65–1267 and CI65–1271, and the petition to amend a prior certificate filed by Ashland Oil & Refining Company (Ashland) in Docket No. G–3912.

[2] Hereinafter referred to as the Arkla proceeding. This proceeding was initiated by paragraph (E) of the order accompanying Opinion No. 472 issued August 31, 1965, in

The Kansas Commission's report also indicates that Arkla and Cities have agreed to withdraw their opposition [3] to the Kansas Commission's and El Paso's motions filed November 16, 1965, and November 18, 1965, respectively, requesting that the Hugoton Field proceeding be consolidated with the Arkla proceeding. Additionally, Arkla and Cities agreed at the informal conference not to oppose the consolidation of Cities' new application filed in Docket No. CP66–226 with the other applications involved in the Arkla and Hugoton Field proceedings. Since the interrelated nature of all of the applications hereinbefore discussed is self-evident, and since neither Arkla nor Cities nor any other party any longer opposes the Kansas Commission's and El Paso's motions to consolidate, it is unnecessary to discuss the detailed reasons given by the movants in support of their motions to consolidate.

The remainder of the Kansas Commission's report of the informal conference relates to the parties' unanimous recommendation that we adopt certain dates and procedures for the filing of testimony, for the commencement of the hearing, and for the general conduct of the hearing once it has begun. We believe that the recommended procedures will expedite the progress of the hearing on these related applications and our order will hereinafter incorporate all of the parties' procedural recommendations.

However, it will be essential to add some further procedural steps to those agreed to by the participants at the informal conference in order to provide for the receipt by the parties in the Arkla proceeding of the prepared testimony and exhibits which had already been served by the applicants in the Hugoton Field proceeding on the parties in that proceeding prior to the filing of any motions to consolidate. The instant order will allow the interveners who have heretofore been permitted to intervene in either the Arkla or the Hugoton Field proceeding to become participants in this newly consolidated proceeding. Any doubt as to identity of parties will be eliminated by the tabulation below which lists all the applicants and interveners [4] who are now considered to be participants in the consolidated proceeding provided for herein, such parties having been permitted to intervene by our orders issued in the Hugoton Field (Docket No. CP65–140, *et al.*) proceeding on August 27, 1965, and in the Arkla (Docket No. CP64–125, *et al.*) proceeding on April 29, 1964, and October 25, 1965:

Transwestern Pipeline Company, et al., Docket No. G–20464, *et al.*, 34 FPC 659, which provided for a supplemental hearing at which Arkla and any other companies who might be interested could present evidence in support of proposals "* * * designed to meet Cities' need for additional gas service." In Opinion No. 472 we also noted the interrelationship of the Hugoton Field proceeding with the Arkla proceeding and stated "* * * In the remanded hearing provided by our order, we anticipate that the parties will fully explore the possibility of supplying Cities' remaining gas requirements from this source [Kansas-Hugoton Field]" (p. 666).

[3] Arkla and Cities, on December 28, 1965, and January 4, 1966, respectively, filed "Withdrawals" of their answers, filed November 23, 1965, and November 26, 1965, respectively, in opposition to the granting of the Kansas Commission's and El Paso's motions to consolidate.

[4] On December 6, 1965, the People of the State of California and the Public Utilities Commission of the State of California filed a notice of withdrawal of their intervention in the Arkla proceeding stating that issuance of a certificate to Transwestern Pipeline Company by the order accompanying Opinion No. 472 *supra* had terminated their interest in the Arkla proceeding. This order hereinafter permits the withdrawal of these parties.

The Commission finds:

(1) It is in the public interest in the administration of the Natural Gas Act that the Kansas Commission's and El Paso's motions to consolidate the Arkla proceeding with the Hugoton Field proceeding be granted.

(2) The interrelated application of Cities filed in Docket No. CP66-226 should be consolidated with the other applications involved herein for expedition of the hearing thereon and for elimination of duplication of effort by the applicants, the interveners, and the Commission.

(3) It is desirable to allow the interveners heretofore permitted to intervene in either the Hugoton Field or the Arkla proceeding to become interveners in this newly consolidated proceedings, including participation in all matters related to Cities' application in Docket No. CP66-226, in order that they may establish the facts and law from which the nature and validity of their alleged rights and interests may be determined and show what further action may be appropriate under the circumstances in the administration of the Natural Gas Act.

The Commission orders:

(A) The Kansas Commission's and El Paso's motions to consolidate, filed November 16, 1965, and November 18, 1965, respectively, are granted and the applications in the Arkla proceeding (Docket No. CP64-125, *et al.*), the applications and petition to amend in the Hugoton Field proceeding (Docket No. CP65-140, *et al.*), and Cities' application in Docket No. CP66-226 are hereby consolidated for the purposes of hearing and decision thereon.

(B) The interveners who have already been permitted to intervene in either the Arkla or the Hugoton Field proceeding are hereby permitted to become interveners in this consolidated proceeding, including participation in all matters related to Cities' application in Docket No. CP66-226, subject to the rules and regulations of the Commission: *Provided, however,* that the participation of such interveners shall be limited to matters affecting asserted rights and interests as specifically set forth in their respective petitions to intervene or reasonably related to such asserted rights and interests in light of the broadened aspects of this proceeding; and *provided, further,* that the admission of such interveners shall not be construed as recognition by the Commission that they or any of them might be aggrieved because of any order or orders of the Commission entered in this proceeding.

(C) Protests or petitions to intervene in this consolidated proceeding with respect to Cities' application in Docket No. CP66-226 may be filed with the Federal Power Commission, 441 G Street, N.W., Washington, D.C. 20246, in accordance with the Rules of Practice and Procedure (18 CFR 1.8 or 1.10) on or before February 7, 1966. It shall be unnecessary for the interveners who have been permitted to intervene by paragraph (B) above to make additional filings under this paragraph in order to participate fully in this consolidated proceeding.

(D) Upon receipt of this order counsel for the applicants (Cities, El Paso, Northern, Sinclair, and Ashland) in the Hugoton Field proceeding shall serve the prepared direct testimony and exhibits heretofore served on the parties in the Hugoton Field proceeding upon all other parties to this consolidated proceeding who have been permitted to intervene by paragraph (B) above and upon any additional parties who may subsequently be permitted to intervene herein.

(E) Upon receipt of this order counsel for Cities shall serve the answering testimony and exhibits heretofore served on the parties in the Hugoton Field proceeding upon all other parties to this consolidated proceeding who have been permitted to intervene by paragraph (B) above and upon any additional parties who may subsequently be permitted to intervene herein.

(F) The applicants' and interveners' unanimous procedural recommendations for expediting this consolidated proceeding, as set forth in the Kansas Commission's report of the informal conference held December 17, 1965, are adopted as follows:

(1) The direct cases of Arkla and Cities are to be filed on or before February 7, 1966.

(2) The answering cases of the applicants and the staff are to be filed on or before February 28, 1966.

(3) The answering cases of the interveners are to be filed on or before March 7, 1966.

(4) The hearing is to commence on March 15, 1966.

(5) The order of procedure at the hearing shall be as follows:

(5)(a) Cross-examination of Arkla's direct case, to be followed by;

(5)(b) Cross-examination of the answering cases, if any, relating to Arkla's direct presentation, to be followed by;

(5)(c) Cross-examination of witnesses whose testimony relates to Cities' market requirements, to be followed by;

(5)(d) Continuation of the hearing commencing with the cross-examination of those witnesses whose testimony relates to reserves and deliverability in the Kansas Hugoton area, subject to interruption, and out of order if necessary, by; and

(5)(e) Arkla's presentation of its rebuttal case, if any, at the earliest possible date following completion of the cross-examination of Cities' witnesses relating to market requirements.

(6) At the conclusion of cross-examination of all the cases previously served, dates for the service of rebuttal testimony, if any, shall be considered.

(G) Pursuant to the authority contained in, and subject to the authority conferred upon the Federal Power Commission by the Natural Gas Act, including particularly Sections 7, 15, and 16, and the Commission's Rules and Regulations under that Act, a public hearing shall be held, before a duly designated presiding examiner, commencing March 15, 1966, at 10:00 a.m. (EST), in a hearing room of the Federal Power Commission, 441 G Street, N.W., Washington, D.C., concerning the matters involved in and the issues presented by the applications and petition to amend which have heretofore been filed with the Commission and consolidated for hearing by paragraph (A) above.

(H) Arkla's and Cities' withdrawals of their answers in opposition to the Kansas Commission's and El Paso's motions to consolidate are permitted pursuant to Section 1.11(d)(1) of the Commission's Rules of Practice and Procedure.

(I) The withdrawal of intervention herein by the People of the State of California and of the Public Utilities Commission of the State of California is hereby permitted pursuant to Section 1.11(d)(1) of the Commission's Rules of Practice and Procedure.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

CRISP COUNTY POWER COMMISSION, PROJECT NO. 659

ORDER APPROVING MODIFICATION OF LICENSE AND DELETING THEREFROM EXHIBIT L DRAWINGS RELATING TO EMERGENCY SPILLWAY

(Issued January 24, 1966)

Application was filed on October 3, 1961, by Crisp County Power Commission, licensee for Project No. 659, for Commission approval of deletion from the license of Article 31 and certain Exhibit L drawings. The project is located on the Flint River in Crisp County, Georgia.

Article 31 of the license, included therein by Commission order issued January 23, 1953, 12 FPC 808, and made effective February 1, 1953, requires the licensee to commence construction of an emergency spillway and reconstruction of the spillway gates within one year from the effective date of the order and to complete such construction not later than two years from said effective date.

The licensee has modified the spillway bridge deck to allow the raising of the spillway gates an additional two and one-half feet. Following its study of the change, Commission staff has concluded that: the added capacity of the larger gate opening substantially equals that of the emergency spillway required by Article 31 of the license; the project will not cause an added hazard to life; and construction of the emergency spillway is no longer necessary.

The Commission finds:

Public notice of the application has been given. No protests or petitions to intervene have been received.

The Commission orders:

(A) Article 31 of the license for Project No. 659 is hereby deleted from the license.

(B) The following described Exhibit L drawings are hereby eliminated from the license for the project:

Exhibit L "Plan Profile, Sheet 1, Proposed Spillway Bypass" (FPC No. 659-74), and

Exhibit L "Plan Profile, Sheet 2, Proposed Spillway Bypass" (FPC No. 659-75).

(C) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this order. In acknowledgement of the acceptance of this order, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP66-6

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 24, 1966)

On December 6, 1965, El Paso Natural Gas Company (Applicant) filed in Docket No. CP66-6 a petition to amend the order of the Commission issued in said docket on September 24, 1965, 34 FPC 965, by requesting authorization to make additional sales and deliveries of natural gas to Intermountain Gas Company (Intermountain) for transportation to and resale and distribution in the communities of Ucon and Lewisville, Idaho, all as more fully set forth in the application to amend.

By the aforementioned order issued in Docket No. CP66-6, Applicant was authorized, inter alia, to sell and deliver natural gas to Intermountain for transportation to and resale and distribution in the communities of Rigby and Rexburg, Idaho. Applicant's sales and deliveries pursuant to the aforementioned order are made at the outlet of its existing Idaho Falls Meter Station which is situated on Applicant's 22-inch O.D. Northwest Division mainline.

Intermountain has requested from Applicant a supply of natural gas necessary for the initiation of natural gas service by Intermountain to consumers in the communities of Ucon and Lewisville, Idaho, and their respective environs. The proposed supply of natural gas will be delivered at the outlet of Applicant's Idaho Falls Meter Station.

Applicant states the communities of Ucon and Lewisville are situated to the north of Idaho Falls and adjacent to Intermountain's Idaho Falls-Rexburg lateral pipeline. Intermountain proposes to construct approximately 3,000 feet of 4-inch transmission pipeline connecting Ucon with its Idaho Falls-Rexburg lateral pipeline and approximately 2,000 feet of 4-inch transmission pipeline connecting Lewisville with such lateral, together with the necessary distribution facilities in each such community.

The application to amend states that the estimated maximum daily and annual natural gas requirements of Intermountain for the communities of Ucon and Lewisville aggregate 509 Mcf and 53,222 Mcf, respectively. No additional facilities will be required.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act, and the public convenience and necessity require that the Commission's order issued September 24, 1965, in Docket No. CP66-6 be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued September 24, 1965, in Docket No. CP66-6 is amended so as to authorize Applicant to sell and deliver an additional volume of natural gas to Intermountain Gas Company for resale and distribution in Ucon and Lewisville, Idaho, and their respective environs as more fully described hereinbefore, and in the application to amend.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

MICHIGAN WISCONSIN PIPE LINE COMPANY, DOCKET NO. CP65-367; PHILLIPS PETROLEUM COMPANY (OPERATOR), ET AL., DOCKET NO. CI65-1005; SINCLAIR OIL & GAS COMPANY, DOCKET NO. CI65-1150; NORTHERN NATURAL GAS PRODUCING COMPANY, DOCKET NO. CI65-1160

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY AND ACCEPTING RATE SCHEDULES FOR FILING

(Issued January 24, 1966)

Michigan Wisconsin Pipe Line Company (Michigan Wisconsin) on May 19, 1965, filed in Docket No. CP65-367 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities, all as more fully set forth in the application.

Michigan Wisconsin proposes to construct and operate a 20-inch gas supply line extending approximately 93 miles from the existing terminus of its main transmission line at the Edgar G. Hill Compressor Station in Hansford County, Texas, to the Gageby Creek Field in Wheeler County, Texas, together with a gathering system, meter stations and dehydration facilities. Contracts for the purchase of all the natural gas reserves in the Gageby Creek Field (Texas RR District No. 10) have been executed by Michigan Wisconsin with Phillips Petroleum Company (Operator), *et al.* (Phillips) in Docket No. CI65-1005, Sinclair Oil & Gas Company (Sinclair) in Docket No. CI65-1150 and Northern Natural Gas Producing Company (Northern Natural) in Docket No. CI65-1160.

Phillips, Sinclair and Northern Natural propose a price of 17.0 cents per Mcf at 14.65 psia, subject to upward and downward Btu adjustment. The 17.0 cents rate is equal to the area rate ceiling, but the downward Btu adjustment is not a full proportional adjustment from a base of 1,000 Btu's per cubic foot, and thus is not consistent with the standard set forth in Opinion No. 464 issued June 10, 1965, 33 FPC 1228, as supplemented October 4, 1965, 34 FPC 1098 (*Texaco Inc., et al.*, Docket No. G-8087, *et al.*). The certificates issued to Phillips, Sinclair and Northern Natural shall be conditioned to require that they submit, as rate schedule supplements, agreements with Michigan Wisconsin modifying the Btu adjustment provisions of the contracts so as not to conflict with Opinion No. 464. The named producers have indicated a willingness to accept certificates so conditioned.

Michigan Wisconsin by letter filed January 4, 1966, has expressed a willingness to accept a certificate conditioned to exclude from its rate base in any subsequent rate filing, for rate making purposes, the prepayments for natural gas made to the producers, aggregating $1,700,000. The certificate issued hereinafter to Michigan Wisconsin will be so conditioned.

The estimated cost of the proposed facilities of Michigan Wisconsin is $5,740,000, which will be financed from the proceeds of bank loans after the utilization of available treasury refunds.

After due notice published in the Federal Register on May 29, 1965 (30 F.R. 7260), in Docket No. CP65-367, petitions to intervene were filed by Iowa Southern Utilities Company on June 7, 1965, and by Iowa Electric Light and Power

Company on June 14, 1965, in support of the application, and by Great Lakes Gas Transmission Company and Trans-Canada Pipe Lines Limited, both on June 21, 1965. Notices of withdrawal of interventions were filed by Trans-Canada and Great Lakes on July 29, 1965. No other petitions to intervene, notices of intervention or protests to the application have been filed.

At a hearing held on January 20, 1966, the Commission on its own motion received and made a part of the record in these proceedings all evidence including the applications filed in the respective dockets, and exhibits thereto, submitted in support of the authorizations sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, Michigan Wisconsin Pipe Line Company, a Delaware corporation having its principal place of business in Detroit, Michigan, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of November 30, 1946, in Docket No. G–669 (5 FPC 953).

(2) Applicant, Phillips Petroleum Company, a Delaware corporation having its principal place of business in Bartlesville, Oklahoma, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of March 26, 1963, in Docket No. G–14244 (29 FPC 581).

(3) Applicant, Sinclair Oil & Gas Company, a Maine corporation having its principal place of business in Tulsa, Oklahoma, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of May 7, 1963, in Docket No. G–20297 (29 FPC 898).

(4) Applicant, Northern Natural Gas Producing Company, a Delaware corporation having its principal place of business in Denver, Colorado, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of September 28, 1956, in Docket No. G–5716.

(5) The facilities hereinbefore described, as more fully described in the application in Docket No. CP65–367, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(6) Michigan Wisconsin is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(7) The construction and operation of the proposed facilities by Michigan Wisconsin are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(8) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Michigan Wisconsin's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(9) The sales of natural gas by Phillips, Sinclair and Northern Natural to Michigan Wisconsin hereinbefore described, and as more fully described in the applications in Docket Nos. CI65–1005, CI65–1150 and CI65–1160, respectively, will be made in interstate commerce, subject to the jurisdiction of the Commis-

sion and such sales by Phillips, Sinclair and Northern Natural, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(10) The sales of natural gas by Phillips, Sinclair and Northern Natural, together with the construction and operation of any facilities, subject to the jurisdiction of the Commission necessary therefor, are required by the public convenience and necessity and certificates therefor should be issued as hereinafter ordered and conditioned.

(11) Phillips, Sinclair and Northern Natural are able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder

(12) Public convenience and necessity require that the certificates issued hereinafter to Phillips, Sinclair and Northern Natural and the rights granted thereunder be conditioned upon compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(13) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Michigan Wisconsin be issued a certificate in Docket No. CP65-367 conditioned to provide that it will not include the advance payments totaling $1,700,000 attributable to the Gageby Creek Field in its rate base in any subsequent rate filing, in accordance with its letter filed with the Commission on January 4, 1966.

(14) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that certificates issued herein to Phillips, Sinclair and Northern Natural be conditioned to require that they submit, as rate schedule supplements, agreements with Michigan Wisconsin modifying the Btu adjustment provisions of the contracts involved so as not to conflict with Commission Opinion No. 464; and that Northern Natural at such time as it makes its related rate schedule filing shall include therewith the supplement providing for the prepayment to it.

(15) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that the related rate filings of Phillips and Sinclair be accepted for filing effective on the date of initial delivery of natural gas to Michigan Wisconsin.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Michigan Wisconsin, in Docket No. CP65-367, authorizing the construction and operation of facilities and transportation of natural gas as hereinbefore described, all as more fully described in the application and exhibits filed in Docket No. CP65-367, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above, and the rights granted thereunder are conditioned upon Michigan Wisconsin complying with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized by paragraph (A) above shall be constructed and placed in operation within 6 months from the date of issuance of this order.

(D) Certificates of public convenience and necessity are issued to Phillips, Sinclair and Northern Natural authorizing the sales and delivery of natural gas to Michigan Wisconsin, as hereinbefore described, all as more fully described in the applications and exhibits filed in Docket Nos. CI65–1005, CI65–1150 and CI65–1160, respectively, upon the terms and conditions of this order.

(E) The certificates issued by paragraph (D) above and the rights granted thereunder are conditioned upon Phillips, Sinclair and Northern Natural's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of such Regulations.

(F) The certificates issued to Phillips, Sinclair and Northern Natural are not transferable and shall be effective only so long as Phillips, Sinclair and Northern Natural continue the acts or operations authorized in accordance with the provisions of the Natural Gas Act, and the applicable rules, regulations and orders of the Commission.

(G) The grant of the certificates issued in paragraph (D) above shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or of Part 154 or Part 157 of the Commission's Regulations thereunder, and is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against Applicants. Further, our action in this proceeding shall not foreclose nor prejudice any future proceedings or objections relating to the operation of any price or related provisions in the gas purchase contracts herein involved. Nor shall the grant of the certificates aforesaid for service to the particular customer involved imply approval of all of the terms of the respective contracts, particularly as to the cessation of service upon termination of said contracts, as provided by Section 7(b) of the Natural Gas Act. Nor shall the grant of the certificates aforesaid be construed to preclude the imposition of any sanctions pursuant to the provisions of the Natural Gas Act for the unauthorized commencement or any sales of natural gas subject to said certificates.

(H) Michigan Wisconsin shall not include the advance payments totaling $1,700,000 attributable to the Gageby Creek Field in its rate base in any subsequent rate filing, in accordance with its letter filed with the Commission on January 4, 1966.

(I) Phillips, Sinclair and Northern Natural shall submit, as rate schedule supplements, agreements with Michigan Wisconsin modifying the Btu adjustment provisions of the contracts involved so as not to conflict with Commission Opinion No. 464; and at such time as Northern Natural makes its related rate schedule filing it shall include therewith the supplement providing for the prepayment to it.

(J) The related rate filings of Phillips and Sinclair are accepted for filing effective on the date of initial delivery of natural gas to Michigan Wisconsin, and are designated as follows:

Docket No. and filing date	Description	Designation
CI65-1005 4-12-65	Contract, 3-5-65	Phillips Petroleum Co. (Operator), *et al.* FPC Gas Rate Schedule No. 413.
	Supplemental agreement 3-5-65	Supplement No. 1.
CI65-1150 4-29-65	Contract 4-15-65	Sinclair Oil & Gas Co., FPC Gas Rate Schedule No. 340.
	Supplemental agreement 4-15-65	Supplement No. 1.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

NATURAL GAS PIPELINE COMPANY OF AMERICA,
DOCKET NO. CP66-148

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 24, 1966)

On November 12, 1965, Natural Gas Pipeline Company of America (Applicant), filed in Docket No. CP66-148 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale and delivery of an additional daily contract quantity of 163 Mcf of natural gas to Wilson Gas Service Company, Inc. (Wilson Gas), an existing customer of Applicant, as more fully set forth in the application.

Wilson Gas has advised Applicant by letter dated October 15, 1965, that it has elected, pursuant to Paragraph 17 of the general terms and conditions of Applicant's FPC Gas Tariff, to receive service under Applicant's Rate Schedule G-2, to be effective December 1, 1965, in lieu of continuing to receive service under Applicant's Rate Schedule CD-2; and that it requires and will contract for an additional Daily Contract Quantity of 163 Mcf of natural gas. Applicant proposes to sell and deliver the additional volumes of gas from its unallocated capacity of 30,171 Mcf of gas authorized by order issued in Docket No. CP65-404 on August 24, 1965, 34 FPC 568. Wilson Gas has an existing Daily Contract Quantity of 587 Mcf of gas. No additional facilities are required for the proposed sale and delivery and said sale and delivery will be made at an existing delivery point.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on January 20, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization, and upon consideration of the record,

The Commission finds:

(1) Applicant, Natural Gas Pipeline Company of America, a Delaware corporation having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 7, 1958, in Docket No. G-9966 (20 FPC 694).

(2) The proposed sale and delivery of natural gas by Applicant to Wilson Gas, as hereinbefore described, and as more fully described in the application and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed sale and delivery of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's

compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b) and (e) of Section 157.20 of such Regulations.

(6) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act, and the public convenience and necessity require that Applicant's service agreement with Wilson Gas dated October 22, 1965, and filed November 1, 1965, be accepted for filing effective on the date of issuance of this order, and that with respect thereto the notice requirements of Section 154.22 of the Commission's Regulations be waived.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to the Applicant in this proceeding, authorizing the sale and delivery of natural gas to Wilson Gas, as more fully described in the application and exhibits in this proceeding, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b) and (e) of Section 157.20 of such Regulations.

(C) The service authorized shall be commenced as provided in paragraph (b) of Section 157.20 of the aforesaid Regulations within sixty days of the date on which this order issues.

(D) The service agreement between Applicant and Wilson Gas dated October 22, 1965, and filed November 1, 1965, is accepted for filing effective on the date of issuance of this order.

(E) The notice requirements of Section 154.22 of the Commission's Regulations with respect to the service agreement filing are waived.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

NEW BEDFORD GAS AND EDISON LIGHT COMPANY AND PLYMOUTH COUNTY ELECTRIC COMPANY, DOCKET NO. E-7255

ORDER AUTHORIZING SALE OF FACILITIES

(Issued January 24, 1966)

New Bedford Gas and Edison Light Company (New Bedford) and Plymouth County Electric Company (Plymouth), both subsidiaries of New England Gas and Electric Association, filed a joint application on November 18, 1965 for an order pursuant to Section 203 of the Federal Power Act authorizing Plymouth to sell and New Bedford to acquire certain electric transmission and distribution facilities.

New Bedford is a corporation organized under the laws of the State of Massachusetts qualified to do business in Massachusetts with its principal business office located in New Bedford, Massachusetts. New Bedford owns and operates a system engaged in the generation, purchase, transmission, and distribution of electric energy in Bristol and Plymouth Counties, Massachusetts and in the production, purchase and distribution of gas in its electric service area.

Plymouth is a corporation organized under the laws of the State of Massachusetts and authorized to do business in the State of Massachusetts, with its principal place of business in Cambridge, Massachusetts. Plymouth purchases electricity from New Bedford and sells it at retail in thirteen communities in Bristol, Plymouth and Barnstable Counties, Massachusetts.

Pursuant to a purchase and sale agreement, dated November 15, 1965, New Bedford has agreed to purchase and Plymouth has agreed to sell all of the properties and assets of Plymouth, including all of its powers, rights, locations, licenses, privileges and franchises owned by Plymouth on the date of closing, except any franchise to generate, transmit and sell electricity for wholesale in the Town of Sandwich, its franchise to be a corporation, and real and personal property relating to the Cape Cod Canal steam-electric plant, the first unit of which is now under construction. New Bedford has also agreed to assume all liabilities of Plymouth with the exception of an "Open Account-Canal Plant" payable to New England Gas and Electric Association.

It is anticipated that New Bedford's acquisition of Plymouth's facilities will permit it to operate on an integrated system basis for the same purposes as formerly. The merger of the facilities of the two Companies will eliminate a gap in New Bedford's transmission system, as New Bedford will acquire the Tremont-Kingston portion (approximately 16 miles) of 115 kv line, connecting New Bedford and Boston Edison Company, now owned by Plymouth. There is to be no change in the power supply. New Bedford's current residential rates are considerably lower than Plymouth's. Upon the consummation of the acquisition, New Bedford will put into effect new retail rates which will result in a reduction of $177,600, of which $129,700 will apply to customers of Plymouth.

The consideration for the property plant and equipment included in this sale amounts to $9,341,064 and represents the depreciated original cost per books of such facilities to be transferred, calculated as of January 1, 1966. The amount of $4,500,419 of the consideration is to be paid in cash, and the remainder will consist of liabilities of Plymouth which will be assumed by New Bedford. The transaction will not create acquisition adjustments on the books of New Bedford and it will not create a gain or loss on the books of Plymouth.

Written notice of the application has been given to the Massachusetts Department of Public Utilities and the Governor of that State. Notice was also published in the Federal Register on December 11, 1965 (30 F.R. 15339) stating that any person desiring to be heard or to make any protest with reference to the application, should on or before December 27, 1965 file petitions or protests with the Federal Power Commission, Washington, D.C. 20426. No petitions or protests requesting to be heard in opposition to the granting of the application have been received. The Department of Public Utilities of the State of Massachusetts, in an order issued December 8, 1965, has approved the transaction described herein.

In a letter dated November 24, 1965, Middleboro Gas and Electric Department of the Town of Middleboro, a municipal utility, requested that the Commission in authorizing the instant sale require that New Bedford turn over to Middleboro 345 customers served by it in the territory of Lakeville and in return accept 37 customers served by Middleboro in the territory of Rochester. In a letter dated December 30, 1965, New Bedford states that it opposes any such conditions and points out that the entire matter was reviewed by the Massachusetts Department of Public Utilities in 1959 and again at the time of its consideration of the sale proposed herein, but that it did not impose such conditions. Middleboro's request appears to be based on a long standing controversy and is unrelated to the proposed transaction. Furthermore, it concerns an adjustment of franchise territory which is outside of the scope of Federal Power Commission jurisdiction. Accordingly, we are unable to accede to the request of the Town of Middleboro.

The Commission finds:

(1) Applicants are both corporations organized and existing under the laws of the State of Massachusetts. They own and operate facilities among others, for the transmission and sale at wholesale of electric energy which is transmitted between the States of Rhode Island, Vermont and New Hampshire, and the State of Massachusetts and which is consumed at points outside the States in which it is generated, all of which facilities are in addition to, and do not include, facilities used for the generation of electric energy or facilities used in local distribution or solely for the transmission of electric energy in intrastate commerce, or facilities for the transmission of electric energy consumed wholly by the transmitter. Applicants, therefore, are public utilities within the meaning of that term as used in Section 201 of the Federal Power Act.

(2) By the proposed transactions, Plymouth, will dispose of all of its transmission and distribution facilities, subject to the jurisdiction of the Commission which have a value in excess of $50,000 and New Bedford in acquiring such facilities, will merge or consolidate its facilities, subject to the jurisdiction of the Commission with those of Plymouth, another person within the meaning and subject to the requirements of Section 203 of the Federal Power Act.

(3) The proposed sale of facilities by Plymouth and the proposed acquisition of these facilities by New Bedford as described above, upon the terms and conditions set forth in the application and subject to the provisions of this order will be consistent with the public interest as expressed in Section 203 of the Federal Power Act.

The Commission orders:

(A) The proposed sale by Plymouth and the proposed acquisition by New Bedford of the aforementioned transmission and distribution facilities, all as described above, are authorized and approved upon the terms and conditions and for the purposes set forth in the application subject to the provisions of this order.

(B) The Applicants shall record the proposed transaction herein authorized and the facilities and properties referred to above as provided in the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees.

(C) This authorization shall expire unless the transaction herein authorized and approved is consummated within 90 days from the date of issuance of this order.

(D) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuations, estimates or determinations of cost, or any matter whatsoever now pending or which may come before this Commission or any other regulatory body and nothing herein shall be construed as an acquiescence by this Commission in any estimate or determination of cost or any valuation of property claimed or asserted by the Commission.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP66-86

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 24, 1966)

On September 29, 1965, Northern Natural Gas Company (Applicant) filed in Docket No. CP66-86 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the reduction of the certificated contract demand volumes of gas for sale to Coon Rapids, Iowa, from 850 Mcf to 750 Mcf per day, as more fully set forth in the application.

Natural gas service to Coon Rapids by Applicant commenced on September 22, 1953, and the maximum volumes were increased from time to time, as indicated in the following dockets:

Docket No.	Authorized volumes	Year
G-2063	605 Mcf	1954
G-4259	705 Mcf	1955
G-14779	755 Mcf	1959
G-18756	780 Mcf	1961
CP63-219	850 Mcf	1964

In Docket No. CP64-112, Applicant was authorized to deliver an additional 50 Mcf of contract demand to Coon Rapids for the 1964-65 heating season. However, before commencement of delivery, the Commission granted Applicant's petition to rescind the increase. The reason for that reduction was that Coon Rapids contemplated the building of a peak shaving plant with a capacity of 35 Mcf per hour and would not need the increased volume. The reason for the 100 Mcf reduction hereinafter authorized is to permit Coon Rapids to more efficiently utilize its peak-shaving facilities which went into operation in the fall of 1965.

Coon Rapids proposes to meet its 1965-1966 peak day requirement of 1,100 Mcf by purchasing the 750 Mcf still authorized to be sold to it by Applicant and 350 Mcf from its peak shaving plant.

Due notice of the filing of the application was published in the Federal Register on October 10, 1965 (30 F.R. 13178). No protest, petition to intervene or notice of intervention has been filed in this proceeding.

At a hearing held on January 20, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorizations sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Northern Natural Gas Company, a Delaware corporation with its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order issued on April 6, 1943, in Docket No. G-280 (3 FPC 967).

(2) The sales of natural gas involved in this proceeding, as hereinbefore described and as more fully described in the application in this proceeding,

are sales for resale in interstate commerce subject to the jurisdiction of the Commission and are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The sales of reduced volumes of natural gas, as proposed in the application, are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, Northern Natural Gas Company, authorizing the reduction in contract demand volumes of natural gas from 850 Mcf per day to 750 Mcf per day to Coon Rapids, Iowa, as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(C) The service agreement between Applicant and Coon Rapids, dated September 14, 1965, is accepted for filing to become effective as of the date of this order.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

TRANSWESTERN PIPELINE COMPANY, DOCKET NO. CP66-178

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 24, 1966)

On December 2, 1965, Transwestern Pipeline Company (Applicant) filed in Docket No. CP66-178 an application pursuant to Section 7(c) of the Natural Gas Act, as implemented by Section 157.7(c) of the Regulations under the Act, for a certificate of public convenience and necessity authorizing the construction during the calendar year 1966 and operation of natural gas facilities for the sale of natural gas to existing distributors for resale in existing market areas, all as more fully set forth in the application in this proceeding.

Applicant proposes to construct a maximum of 35 new delivery points, 10 miles of lateral or loop lines of no more than 4-inches in diameter, 35 taps and 5 meters in order to sell gas for resale as stated above. Further, Applicant states that no facility will be installed and no sale will be made which does not meet the requirements set forth in Section 157.7(c) of the Commission's Regulations.

The total estimated cost of facilities proposed under this application will not exceed a maximum of $150,000 exclusive of the costs for which Applicant will be reimbursed for taps under Article 8 of Applicant's Service Agreement, Form C, which is contained in its FPC Gas Tariff. The total deliveries to any one consumer will not exceed a maximum of 100,000 Mcf of natural gas per year.

Since Applicant's Service Agreement, Form C, provides for certain reimbursements for costs of taps and valves, Applicant requests a waiver of the provisions of Section 157.7(c)(1)(i) of the Commission's Regulations which prohibit the filing of an abbreviated application when a distributor is required to make a contribution to the Applicant for cost of construction of facilities.

The cost of facilities will be financed from funds on hand or funds available from company operations.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on January 20, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Transwestern Pipeline Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of August 10, 1959, in Docket No. G-14871, *et al.*, (22 FPC 391).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirement, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(6) The authorization hereinafter granted should be limited to construction during the calendar year 1966 and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $150,000, with the total deliveries to any one customer not to exceed a maximum of 100,000 Mcf of natural gas per year.

(7) It is necessary and appropriate in carrying out the provision of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, a statement in compliance with Section 157.7(c)(8) of the Commission's Regulations under the Natural Gas Act.

(8) Good cause has been shown for waiver of that portion of Section 157.7(c)(1)(i) of the Commission's Regulations under the Act which prohibits the filing of an abbreviated application where contribution toward the cost of the facilities is to be required of distributors.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity is issued authorizing Applicant, Transwestern Pipeline Company, to construct during the calendar year 1966 the proposed facilities and to operate such facilities to sell natural gas to distributors for resale, as hereinbefore described, and as more fully described in the application in this proceeding.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(C) The authorization granted in paragraph (A) above is limited to construction during the calendar year 1966 and the total expenditures for facilities to be constructed thereunder are limited to a maximum of $150,000, with the total deliveries to any one customer limited to a maximum of 100,000 Mcf of natural gas per year.

(D) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with Section 157.7(c)(8) of the Commission's Regulations under the Natural Gas Act.

(E) The certificate issued hereinabove is granted on the express condition that any interruptible service which may result from the authorization therein shall be curtailed or interrupted to the extent required to meet existing or future contracted maximum delivery obligations of Applicant for firm service to its customers.

(F) Applicant's request for waiver of that portion of Section 157.7(c)(1)(i) of the aforesaid Regulations which prohibits the filing of an application where contribution to the cost of facilities is to be required from distributors is granted.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

ATLANTIC SEABOARD CORPORATION, DOCKET NO. CP66-235

ORDER TO SHOW CAUSE

(Issued January 25, 1966)

On November 4, 1964, Atlantic Seaboard Corporation (Seaboard), in Docket No. CP65-122, filed an application for a certificate of public convenience and necessity under Section 7(c) of the Natural Gas Act for the construction and operation of additional facilities for the transportation and sale of natural gas.

The application was subsequently amended and consolidated with other applications in Columbia Gulf Transmission Co., *et al.*, Docket No. CP65-102, *et al.*, for a comparative hearing.

Testimony given and exhibits submitted by Seaboard employees and officers during the course of the aforesaid hearing revealed that Seaboard has been, is currently engaged in and indicates its intent to continue acts which may constitute the abandonment, construction, and operation of pipeline facilities for the transportation and sale of natural gas subject to the jurisdiction of this Commission without having obtained prior authorization of the Commission as required by the Natural Gas Act, particularly Sections 7(b) and 7(c), and the Commission's Rules and Regulations, particularly Section 157 of the Commission's Regulations.

Seaboard is a Delaware corporation having its principal place of business in Charleston, West Virginia. It operates facilities engaged in the transportation and sale of natural gas in West Virginia, Virginia and Maryland.

Seaboard's principal pipelines consist of four major facilities: a 26-inch outside diameter west-to-east looped pipeline approximately 250 miles length from United Fuel Gas Company's (United Fuel) Cobb, West Virginia Compressor Station to Dranesville, Virginia; a 20-inch single line west-to-northeast of approximately 200 miles length from United Fuel's pipeline near White Sulfur Springs, West Virginia, at the Virginia-West Virginia state line to Dranesville, Virginia; a 24-inch diameter pipeline of approximately 50 miles length, from Seaboard's Lost River Compressor Station, West Virginia, southeasterly to its Bickers, Virginia Compressor Station, said 24-inch line interconnecting the main 26-inch and 20-inch west-to-east pipelines of Seaboard; and 20-inch, 26-inch, and 30-inch pipelines of various loops and segments of approximately 85 miles length from Dranesville, Virginia to a connection with The Manufacturers Light and Heat Co. at the Maryland-Pennsylvania state line northeast of Baltimore, Maryland.

The facilities involved in the instant order are related to Seaboard's abandonment of its existing 20-inch pipeline, the construction of a new 20-inch pipeline in its place, and the operation of these replaced facilities.

Seaboard's 20-inch pipeline was constructed in 1930-1931 to serve the Washington, D. C. area and points west thereof; it was subsequently extended to serve Baltimore, Maryland and points northeast thereof to the Pennsylvania state line. Because the 20-inch line obtained its gas supply from limited local production in the Kentucky and West Virginia Appalachian Region, the parent company of Seaboard, Columbia Gas System, Inc., expanded Seaboard's facilities in 1950 by the construction of a new 26-inch line which obtained its supply of gas principally from the southwest United States.

In 1964, Seaboard decided to abandon the 20-inch existing line, which operates up to 425 psig maximum, and replace it with a like diameter but stronger pipe capable of operation at 1000 psig maximum.

The replaced line of approximately 285 miles in length will cost an estimated $25,000,000. Subordinate thereto, but not directly subject to this order, are necessary co-ordinate facilities of United Fuel, Seaboard's affiliate in the Columbia Gas System, costing an estimated $11,500,000, consisting of 20-inch pipelines, all as more fully described in the record in Docket No. CP65–102, *et al.*, particularly Exhibit 102.

Seaboard did not, and has not, filed an application for a certificate to perform the acts herein described.[1]

Seaboard's apparent replacement schedule is as follows.

In 1964 Seaboard replaced approximately 37 miles of the 20-inch line between Covington and Lexington, Virginia.

---

[1] Seaboard seeks authority in its application in Docket No. CP65-122 to replace approximately 16 miles of its 20-inch line with 26-inch diameter pipe between Owings Mill and Manor Road, Maryland at a cost of $2.03 million. It did not apply for abandonment of the existing line under Section 7(b).

In 1965, Seaboard replaced approximately 35 miles between Waynesboro and Bickers, Virginia (Tr. 1237, 6535-6567).

In 1966, Seaboard intends to replace 35 miles between Bickers and the Rappahanock River. (Tr. 6531).

In 1967, Seaboard intends to replace 40 miles between the Rappahanock River and Dranesville, Virginia (Tr. 6536).

In 1968, Seaboard intends to replace 35 miles between Lexington and Waynesboro, Virginia. (Tr. 6536).

In 1969, Seaboard intends to replace 16 miles between the West Virginia state line and Covington, Virginia. (Tr. 6536).

In 1970, Seaboard intends to replace 43 miles of pipeline in two segments between Lindenchurch, Maryland and Owings Mill, and from Manor Road to Pennsylvania state line. (Tr. 6536).

The 26 miles of pipeline between Dranesville, Virginia and Lindenchurch, Maryland are to be "retired." (Exh. 102)

The 16 miles of 20-inch pipeline between Owings Mill and Manor Road, Maryland are to be replaced with a 26-inch pipeline as proposed in Docket No. CP65-122.

Seaboard has apparently proceeded without certificate authority under its interpretation of the Commission's Rules of Practice and Procedure, Section 2.55, which as pertinent reads:

> For the purposes of Section 7(c) of the Natural Gas Act, as amended, the word "facilities" as used therein shall be interpreted to exclude:
>
> (b) *Replacement of facilities.* Facilities which constitute the replacement of existing facilities which have or will soon become physically deteriorated or obsolete to the extent that replacement is deemed advisable: *Provided*, That such replacement will not result in a reduction or abandonment of service rendered by means of such facilities; *Provided, further, That such replacement shall have substantially equivalent designed delivery capacity as the particular facilities being replaced.* [Emphasis added.]

As demonstrated in the heretofore described hearing in Docket No. CP65-102, *et al.*, the replacement of an existing pipeline operating at 425 psig maximum by another of the same diameter but capable of operating at 1000 psig maximum pressure increases the design delivery capacity of the pipeline by a substantial amount. Consequently, said replacement program is not an equivalent replacement but constitutes an expansion of facilities. Moreover, there is no evidence that the existing pipeline is or will be physically deteriorated, particularly in view of the fact that Seaboard is negotiating for the sale of portions of the 1930-1931 line to another gas company, namely, Washington Gas Light Company. Furthermore, abandonment of an existing yet useful facility involves undecided issues of retention of undepreciated investment in Seaboard's rate base, questions of economic feasibility, costs of construction, utilization of alternate means to supply existing customers, and other matters normally determined in a certificate case under Section 7 of the Natural Gas Act.

Additionally, this Commission takes notice, without deciding any of the issues involved, that the facilities, rate base, and services of Atlantic Seaboard Corporation are essential elements of other pending cases of Seaboard before the Commission, namely, Docket No. G-16401 (partial requirements tariff on remand from Court of Appeals); and Docket No. RP65-49 (restructured tariff and rates case), and that the construction of a new pipeline by Seaboard and the implacement of $25,000,000 of new facilities involves irreversible decisions and acts by a utility which ultimately may be contrary to the public interest and the objectives of the Natural Gas Act.

The Commission finds:

In view of the foregoing, it is necessary and appropriate that Atlantic Seaboard Corporation show cause, if there be any, why it has not applied for a certificate of public convenience and necessity authorizing the abandonment of pipeline facilities, and the construction and use of new pipeline facilities on its 20-inch outside diameter pipeline between West Virginia and Pennsylvania and why such failure to apply for and obtain such a certificate prior to commencing the abandonment, construction and use of such facilities should not be held to be a violation of the Natural Gas Act and the Commission's Rules and Regulations issued thereunder.

The Commission orders:

Atlantic Seaboard Corporation shall show cause, if there be any, under oath and in writing, within thirty days from the date of issuance of this order, why the Commission should not find and determine that Atlantic Seaboard Corporation is in violation of the Natural Gas Act and the Commission's Rules and Regulations thereunder by failing to apply for and receive a certificate of public convenience and necessity authorizing the abandonment, construction and use of pipeline facilities on its 20-inch diameter line between West Virginia and Pennsylvania.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

COLUMBIAN FUEL CORPORATION, DOCKET NO. G–14101, ET AL.; CITIES SERVICE OIL COMPANY, DOCKET NO. G–20302, ET AL.

ORDER REJECTING APPLICATION FOR REHEARING AND DENYING APPLICATION FOR RECONSIDERATION

(Issued January 25, 1966)

United Fuel Gas Company (United Fuel), on January 7, 1966, filed an application for rehearing and reconsideration of the Commission's order in these proceedings issued December 8, 1965.[1] That order approved a settlement proposal in which the respondent companies agreed, among other things, to refund monies collected in excess of the settlement rates in the various dockets involved. The order directed the release of those refunds which a Commission study had revealed would flow through to the limits of our jurisdictional reach. The remainder of the refunds, including certain amounts which had been collected by Columbian Fuel Corporation (Columbian Fuel) from United Fuel, were ordered to be retained "until further order of the Commission directing the nature of their disposition." (p. 1425)

---

[1] Order Approving Rate Settlement Proposal, Severing and Terminating Proceedings and Prescribing Refunds 34 FPC 1424.

In its application, United Fuel asserts that the Commission lacks authority to order the retention of refunds by Columbian Fuel. United Fuel contends also that it is not obligated to flow through the portion of refunds receivable from Columbian Fuel which we ordered the latter to retain. United Fuel asks that rehearing be granted, that the retention requirement be vacated, and that Columbian Fuel be directed to release to United Fuel its portion of the refunds which were ordered to be retained.

The Commission has been presented with filings similar to the application of United Fuel on several previous occasions.[2] As we said on those occasions, an application for rehearing is not appropriate when the order in question merely directs the retention of refunds pending a determination of the method and outcome of their eventual disposition. With respect to the question of refunds, the Commission's order issued December 8, 1965 in these proceedings is not a final action by the Commission. That order was only an interlocutory directive with respect to refunds and does not in any way aggrieve United Fuel. United Fuel will be granted a full opportunity to be heard with respect to its claims that it is entitled to receive and retain the potential refunds from Columbian Fuel affected by our order of December 8, 1965. We have made no determination with respect to United Fuel's claim, and will continue our policy of deferring such a determination until after all interested parties have been given an opportunity to be heard. In view of the fact that the retention requirement is merely interlocutory, and not final action within the meaning of Section 1.34 of our Rules of Practice and Procedure, United Fuel's application for rehearing must be rejected.

Treating United Fuel's filing as an application for reconsideration, we find nothing in the application which demonstrates a need for re-examining or modifying the procedures prescribed in our order issued December 8, 1965. The policies underlying our requirement that Columbian Fuel retain that portion of its refunds which United Fuel and others of its pipeline customers are not expressly obligated to flow through were fully described in our order in *Humble Oil & Refining Company*, Docket No. G-9287, *et al.*, 32 FPC 49. In addition, United Fuel makes no persuasive objection to our procedure of separating unquestioned flow through obligations from those which are controverted on the basis of our own analysis of prior settlements and orders rather than by using the alternative technique of requiring reports of intended disposition.[3]

The Commission orders:

(A) United Fuel's application for rehearing of our order issued December 8, 1965, is rejected.

(B) United Fuel's application for reconsideration is denied.

---

[2] Order Rejecting Application for Rehearing and Denying Request for Reconsideration, issued February 19, 1965, *United Gas Pipe Line Company*, Docket Nos. RP61-18, RP63-1 and RP65-1, 33 FPC 304. Order Rejecting Application for Rehearing and Denying Request for Reconsideration, issued June 14, 1965, *Humble Oil & Refining Company*, Docket No. G-9287, *et al.*, *United Fuel Gas Company*, Docket No. RP65-22, and *Texas Eastern Transmission Corporation*, Docket No. RP65-27, 33 FPC 1263.

[3] United Fuel makes no contention that it is obligated to flow through refunds which we ordered Columbian Fuel to retain or that it is not obligated to flow through amounts which we ordered released.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC., PROJECT NO. 2338

ORDER FIXING HEARING ON REMAND

(Issued January 25, 1966)

In *Scenic Hudson Preservation Conference, Towns of Cortlandt, Putnam Valley and Yorktown* v. *F.P.C., et al.*, 354 F. 2d 608 (CA2-1965), the Court on December 29, 1965, set aside three orders including our order of March 9, 1965, accompanying our Opinion No. 452, 33 FPC 428, granting a license to Consolidated Edison Company of New York, Inc. (Consolidated Edison) for the construction and operation of the Cornwall Pumped Storage Project, Project No. 2338.[1]

By our order of March 9, 1965, we authorized certain project works of the Cornwall project, including the reservoir, tunnel, powerhouse, and submarine and underground transmission facilities from the powerhouse to and including the Cornwall East Switching Station at Nelsonville, New York, in the Town of Philipstown. A finding was made that the remainder of the transmission line between Nelsonville and the point of interconnection with Consolidated Edison's existing transmission grid should be by overhead lines and not by additional underground cable installation.

In our order of March 9, 1965, we provided for a supplemental hearing for two purposes: (1) to determine which transmission line route from Nelsonville would involve the least scenic impairment and economic loss to the communities involved, and the width of the right-of-way; (2) for the reception of evidence as to the design of fish protection facilities. The supplemental hearing took place in May of 1965. See Opinion No. 452-B, October 4, 1965, 34 FPC 1083.[2]

The Court, remanding the case for further proceedings in accordance with its opinion, pointed out that a project, under Section 10(a) of the Federal Power Act, must be best adapted to a comprehensive plan for improving or developing a waterway for beneficial public uses, including recreation, which "encompasses the conservation of natural resources, the maintenance of natural beauty, and the preservation of historic sites." The Court found that, in applying this standard, we relied on a record which was insufficient as to the adequacy of certain alternatives to the project. In this aspect the Court found the record should be supplemented as to the availability of gas turbines as a possible alternative to the pumped storage project on the basis of savings in cost and other benefits. We should also investigate the availability of sufficient power from interconnected systems to meet Consolidated Edison's peaking needs.

---

[1] The Court, besides affirmatively ordering the taking of testimony under Section 313(b) of the Federal Power Act, set aside the following orders: (1) the order of March 9, 1965, issuing a license (Op. No. 452); (2) the order of May 6, 1965 (Op. No. 452-A, 33 FPC 965) denying rehearing of the order issuing license; and (3) a separate order of May 6, 1965, 33 FPC 964, denying joint motions to expand the scope of the supplemental hearing provided for in Opinion No. 452.

[2] The United States Court of Appeals for the Second Circuit points out that it was not asked to review our order of October 4, 1965 (Opinion No. 452-B) relating to the supplemental hearing of May, 1965. *Scenic Hudson Preservation Conference* v. *F.P.C., supra,* fn. 1. *Cf.* fns. 6 and 8. But the Court's action in setting aside the original authorization, plus the order refusing to expand the scope of the second hearing, has the result of leaving the October 4, 1965 order without status as an action requiring or authorizing any action by the Applicant.

On remand, the Court said, we should also examine, on the basis of a supplemented record, the practicality of underground transmission. In the light of the annual savings of the pumped storage project over a steam plant of equivalent capacity, there should be inquiry into the capital and annual costs of running segments of the transmission underground "in those areas where the overhead structures would cause the most serious scenic damage."

As to the fish conservation issue, the Court directed that this whole question should be taken into consideration, on remand, before deciding whether the Cornwall project is to be licensed.

We do not understand the Court's order as restricting any further proceedings to the specific matters on which it found the present record insufficient to support our previous determinations and we do not believe it would be in the public interest to do so. The record in the first two hearings in the proceeding will, of course, be part of the present hearing. But all parties will be free to offer timely presentations of evidence on all matters relevant to the question whether a license should be granted.

In ordering a further hearing herein, we are not setting the dates for introduction of supplementary evidence or cross-examination thereof. Instead we believe that such scheduling can best be done by the Presiding Examiner in the light of a prehearing conference which we are here ordering.

The Commission finds:

A hearing should be held to supplement the record in accordance with the opinion of the United States Court of Appeals for the Second Circuit, rendered December 29, 1965.

The Commission orders:

(A) A prehearing conference will be held on March 22, 1966, at 10:00 a.m. in the Colonial Room, Sheraton-Atlantic Hotel, Broadway and 34th Streets, New York, New York, before the Presiding Examiner. The prehearing conference will develop means of facilitating the hearing, including the consideration of an appropriate date for the hearing.

(B) Pursuant to the authority contained in and subject to the jurisdiction conferred upon the Federal Power Commission by the Federal Power Act, particularly Sections 4(e), 10(a), 308 and 313 thereof, and the Commission's Rules of Practice and Procedure, a public hearing shall be held respecting the matters involved and the issues presented in this proceeding. The hearing shall commence in the State of New York at a time and place to be designated by the Presiding Examiner.

(C) Petitions to intervene in the supplementary proceedings may be filed with the Federal Power Commission, Washington, D.C. 20426, in accordance with the Rules of Practice and Procedure of the Commission (18 CFR 1.8 or 1.10). The last day upon which petitions to intervene may be filed is February 25, 1966. Those persons or groups already granted intervention in the course of any of the prior proceedings in this proceeding need not file new petitions.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

PLATEAU NATURAL GAS COMPANY, DOCKET NO. CP66–154

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 25, 1966)

On November 15, 1965, Plateau Natural Gas Company (Applicant) filed in Docket No. CP66–154 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the acquisition by merger and the operation of all the jurisdictional natural gas facilities of Applicant's wholly-owned subsidiary, Kansas-Colorado Utilities, Inc. (K-C), and the continuation of all sales and services heretofore rendered by K-C, as more fully set forth in the application.

Applicant has heretofore been a nonjurisdictional natural gas distributing company, operating distribution systems in six unconnected divisions. These operations are carried on in the States of Colorado, Kansas, New Mexico, Oklahoma and Texas. Applicant's natural gas requirements are supplied by K-C, Colorado Interstate Gas Company (CIG), El Paso Natural Gas Company, and from certain intrastate sources.

In addition to general plant items, production and gathering facilities and a transmission system in east-central Colorado (Burlington Line) which has heretofore been exempted from the jurisdiction of the Commission by our order issued December 1, 1961, in Docket No. CP62–8, Applicant proposes to acquire from K-C its jurisdictional transmission facilities which comprise two isolated systems. These are the 4- to 8-inch pipeline system extending from the Kansas Hugoton Field into southeastern Colorado (Kansas Line) and the 22-inch pipeline system extending from near Bivins in the Texas Panhandle to Clayton in northeastern New Mexico (Bivins Line). K–C makes no direct sales from any facilities.

The nonjurisdictional Burlington Line is utilized only for service to Applicant for distribution to numerous communities and irrigation customers in Colorado. K-C supplies its Burlington Line requirements by transmission line purchases from CIG.

Deliveries from the Kansas Line are likewise made only to Applicant. Service from the Kansas Line is rendered under K-C's jurisdictional F–1 (Kansas) and G–1 (Colorado) Rate Schedules for distribution to numerous communities and irrigation customers in southeastern Colorado and southwestern Kansas. K-C supplies the requirements of the Kansas Line by Field purchases from producers in Colorado and Kansas and by purchases from CIG.

Until recent years, the operating characteristics of Applicant and K-C were readily distinguished between distribution and transmission functions. In order to serve its growing irrigation market, Applicant has been extending its lines from the distribution centers and has become more like a transmission company.

Applicant proposes to operate the acquired facilities in conjunction with its existing facilities as an integrated company. Applicant will continue K-C's present service in the same manner and at the same rates, except that the existing service by K-C to Applicant will cease.

After the acquisition by merger, Applicant's only jurisdictional sales for resale will be those made from the Bivins Line to Felt Water Development

Company under the I–1 rate schedule (irrigation service) for resale in the Oklahoma Panhandle, to Pioneer Natural Gas Company under the GS–1 rate schedule (general service) for resale in Texline, Texas, and to Southern Union Gas Company under the GS–1, IS–1 (interruptible service) and I–1 rate schedules for resale in Clayton, New Mexico, and irrigation customers in northeastern New Mexico. Service is presently being rendered to these customers by K-C under the indicated rate schedules. Accordingly, the three rate schedules providing for service from the Bivins Line are the only rate schedules to be contained in Applicant's tariff which will supersede K-C's existing rate schedules. The designation, rate level, and conditions of service under Applicant's proposed schedules will be the same as in K-C's existing rate schedules. The merger will not result in any additional capacity, facilities, markets or service, nor will there be any change in gas supply presently available to Applicant and K-C.

Applicant states that the merger will result in increased efficiency and operational flexibility and will result in savings of at least $10,000 per year as a result of the simplification or elimination of duplicate costs which exist in the separately operated parent and subsidiary companies.

Applicant will record the acquired facilities at original cost, together with the related depreciation and depletion reserves, as they presently appear on the books of K-C. Applicant will continue to use the same depreciation rates heretofore used by K-C. There will be an adjustment of $222,019 which represents the unamortized portion of $306,277 excess over net underlying book value incurred by Applicant in acquiring K–C as a subsidiary company in 1956.

Due notice of the filing of the application was published in the Federal Register on December 3, 1965 (30 F.R. 5001). No petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on January 20, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein and upon consideration of the record,

The Commission finds:

(1) Applicant, Plateau Natural Gas Company, a Colorado corporation with its principal place of business in Colorado Springs, Colorado, will be engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission, and will, therefore, be a "natural-gas company" within the meaning of the Natural Gas Act upon the completion of the acquisition by merger and the commencement of service pursuant thereto, under the authorization hereinafter granted.

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, will continue to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the acquisition and operation thereof and the sale of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The acquisition and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (d) and (e) of Section 157.20 of said Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Plateau Natural Gas Company authorizing the acquisition and operation of the facilities and the sale of natural gas as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (d) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within one year from the date of this order.

(D) The Bivins Line shall not be operated at a pressure in excess of 150 psig, the pressure at which the line is presently being operated.

(E) The certificate issued by paragraph (A) above is further conditioned upon Applicant's receiving all necessary state approvals of the proposed merger.

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross, David S. Black and Carl E. Bagge.

SINCLAIR OIL & GAS COMPANY (OPERATOR), ET AL. AND BENEDUM-TREES OIL COMPANY, ET AL., DOCKET NOS. G-16669, G-19821, RI61-120, RI62-126, RI63-113, RI64-155 AND RI65-244

ORDER ACCEPTING OFFER OF SETTLEMENT, REQUIRING FILING OF NOTICE OF CHANGE, SEVERING AND TERMINATING PROCEEDINGS, AND REQUIRING REFUNDS

(Issued January 25, 1966) *

On November 12, 1965, Sinclair Oil & Gas Company (Sinclair) filed an offer of settlement in these proceedings pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure, and the Commission's Statement of General Policy No. 61-1, as amended (18 CFR 2.56). The offer involves proposed increased rates for the sale of natural gas to Texas Eastern Transmission Corporation (TETC) under Sinclair's FPC Gas Rate Schedule No. 335 in the DeLate Charco Field, Brooks County, Texas (Texas Railroad Commission District No. 4). These proposed rates were suspended in the above-entitled proceeding and thereafter were placed in effect subject to refund.

The presently effective rate is 15.8¢ per Mcf of natural gas at 14.65 psia, and Sinclair proposes a settlement rate of 15.0¢ per Mcf at 14.65 psia for the remainder of the term of the contract and to refund, with applicable interest, all amounts collected in excess of the settlement rate by Sinclair or its predecessor in interest, Benedum-Trees Oil Company.[1] Sinclair also agrees to eliminate the periodic price escalation and favored-nation's provisions from the contract underlying the subject rate schedule.

---

* This order was adopted December 9, 1965, before Chairman Swidler left the Commission.

TETC has agreed to the settlement proposal and no protest herein has been filed.

The proposed settlement is consistent with the provisions of the Second Amendment to the Commission's Statement of General Policy No. 61–1 issued December 20, 1960, 24 FPC 1107, as amended by Order No. 264 issued March 27, 1963, 29 FPC 589, and its acceptance would serve the public interest.

For the reason set forth in the *Humble* order issued July 8, 1964, 32 FPC 49, in Docket No. G–9287, *et al.*, we will require Sinclair to retain the refunds resulting from this settlement as hereinafter provided.

Our action in accepting this settlement proposal shall not be construed as approval of any future increased rate filed in accordance with Sinclair's reservation of the right to file increases to cover future tax increases and is without prejudice to any findings or order of the Commission in future proceedings, including area rate or similar proceedings, involving Sinclair's rates and rate schedules.

The Commission finds:

The proposed settlement of the subject proceeding on the basis described herein, as more fully set forth in the settlement proposal filed by Sinclair on November 12, 1965, is in the public interest and it is appropriate in carrying out the provisions of the Natural Gas Act that it be approved and made effective as hereinafter ordered, that the proceedings herein which are consolidated with the area rate proceedings in Docket No. AR64–2, *et al.* be severed, that all of the proceedings herein be terminated and that refunds be made as hereinafter provided.

The Commission orders:

(A) The offer of settlement filed with the Commission by Sinclair on November 12, 1965 is approved in accordance with the provisions of this order.

(B) Sinclair shall file, within 45 days from the date of issuance of this order, a notice of change in rate under its FPC Gas Rate Schedule No. 335 to reflect the settlement rate of 15.0¢ per Mcf and an executed contract amendment as provided for in the said offer of settlement. The notice of change and the contract amendment shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(C) Sinclair shall compute all revenues collected in excess of the 15.0¢ per Mcf settlement rate in Docket Nos. RI62–126, RI63–113, RI64–155 and RI65–244, with applicable interest computed to the date of issuance of this order, and shall within 45 days from the date of issuance of this order submit a report to the Commission, with a copy to TETC, setting out the amount of refunds (showing separately the principal and the interest), the basis used for such determination, the period covered, and ten days thereafter shall submit to the Commission a copy of a letter from TETC agreeing to the correctness of such amounts.

(D) Sinclair shall retain the refunds shown in the report required under Ordering Paragraph (C) above, subject to further order of the Commission.

(E) Sinclair may deposit the retained refunds in a special escrow account, and shall tender for filing within 60 days of the date of issuance of this order an executed Escrow Agreement, conditioned as set out below, accompanied by a certificate showing service of a copy thereof upon TETC. Unless notified to the contrary by the Secretary within 30 days from the date of filing thereof, the Escrow Agreement shall be deemed to be satisfactory and to have been accepted for filing. The Escrow Agreement shall be entered into between Sinclair and any bank or trust company used as a depositor for funds of the United States Government and the agreement shall be conditioned as follows:

---

[1] The amount of refund, exclusive of interest, through December 1, 1965 is approximately $5,400.

(1) Sinclair, the bank or trust company, and the successors and assigns of each, shall be held and formally bound unto the Federal Power Commission for the use and benefit of those entitled thereto, with respect to all amounts and the interest thereon deposited in the special escrow account, subject to such agreement, and such bank or trust company shall be bound to pay over to such person or persons as may be identified and designated by final order of the Commission and is such manner as may be therein specified, all or any portion of such deposits and the interest thereon.

(2) The bank or trust company may invest and reinvest such deposits in any short-term indebtedness of the United States or any agency thereof or in any form of obligation guaranteed by the United States which is, respectively, payable within 120 days as the said bank or trust company in the exercise of its sound discretion may select.

(3) Such bank or trust company shall be liable for such interest as the invested funds described in Paragraph (2) above will earn and no other interest may be collected from it.

(4) Such bank or trust company shall be entitled to such compensation as is fair, reasonable and customary for its service as such, which compensation shall be paid out of the escrow account to such bank or trust company. Said bank or trust company will likewise be entitled to reimbursement for its reasonable expenses necessarily incurred in the administration of this escrow account, which reimbursement shall be made out of the escrow account.

(5) Such bank or trust company shall report to the Secretary quarterly certifying the amount deposited in the bank or trust company for the quarterly period and any interest accrued thereon.

(F) If Sinclair elects to commingle the retained refunds with its general assets and use them for business purposes, it shall notify the Secretary of the Commission of its intention to do so within sixty days of the issuance of this order, and shall pay interest on such monies at the rate of 4.5% per annum from the date of issuance of this order to the date on which they are paid over to the person or persons ultimately determined to be entitled thereto by final order or orders of the Commission.

(G) Upon notification by the Secretary of the Commission that Sinclair has complied with the terms and conditions of this order, the proceedings in Docket Nos. G-16669, G-19821, RI61-120, RI62-126, RI63-113 and RI64-155 are severed from the area rate proceedings in Docket No. AR64-2, *et al.*, and terminated, and Docket No. RI65-244 is terminated.

(H) The Secretary of the Commission shall, by separate letter, direct the pipeline purchaser to report its plans for distribution of the refunds provided for herein. In the event that the pipeline purchaser states that it will flow-through the entire amount of refunds received, the Secretary of the Commission is authorized to advise Sinclair to release the escrowed refunds.

(I) The approval by the Commission of Sinclair's offer of settlement is without prejudice to any findings or determinations that may be made in any proceeding now pending, or hereafter instituted by or against Sinclair and is without prejudice to claims or contentions which may be made by Sinclair, the Commission staff, or any affected party hereto, in any proceeding.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

ATLANTIC SEABOARD CORPORATION, DOCKET NO. RP65-49; UNITED FUEL GAS COMPANY, DOCKET NO. RP66-2

ORDER PERMITTING INTERVENTIONS AND DENYING MOTION FOR PRELIMINARY HEARING AND SUBPOENA DUCES TECUM

(Issued January 27, 1966)

These proceedings, which have been consolidated for hearing and decision, involve proposed restructured tariffs of Atlantic Seaboard Corporation (Seaboard) and United Fuel Gas Company (United Fuel) which are both affiliates of the Columbia Gas System. We have previously suspended these tariffs and they have been made effective, subject to refund and hearing in the above-docketed proceedings.

Appalachian Power Company, Kentucky Power Company, Ohio Power Company, and Wheeling Electric Company (Electric Interests) on August 18, 1965, jointly filed a petition for leave to intervene in United Fuel's proceeding in Docket No. RP66-2. Fuels Research Council, Inc., National Coal Association, and United Mine Workers of America (Coal Interests) on October 15, 1965, jointly filed a petition for leave to intervene in Docket No. RP66-2. By order issued August 26, 1965, 34 FPC 593, Appalachian Power Company, and the Coal Interests were permitted to intervene in Seaboard's proceeding in Docket No. RP65-49.[1]

Electric Interests' petition for intervention in United Fuel's rate proceeding in Docket No. RP66-2 alleges that they will be directly injured by the proposed restructured rates because their sales of electric energy compete with sales of natural gas by distributors purchasing gas from United Fuel. Petitioners also cite the fact that United Fuel has intervened in seven State commission proceedings, complaining of electric space heating rates.

Coal Interests also seek intervention in United Fuel's rate proceeding in Docket No. RP66-2 alleging that coal is marketed in competition with natural gas transported and sold by United Fuel, either directly or for resale by distributors, and that the proposed restructured tariffs could result in substantial displacement of boiler fuel sales of gas. Both Electric and Coal Interests contend that having been permitted intervention in Seaboard's rate proceeding in Docket No. RP65-49 they are entitled to intervene in United Fuel's rate proceeding in Docket No. RP66-2, especially since Seaboard's cost of gas is affected by United Fuel's rates.

United Fuel and Seaboard (respondents) filed joint answers, on August 27 and November 15, 1965, opposing the respective petitions for intervention in Docket No. RP66-2 filed by the Electric and Coal Interests and asking that our prior order of August 26, 1965 permitting intervention in Docket No. RP65-49 by the Coal Interests be vacated and set aside. However, they do not seek to have the same order set aside with respect to Electric's intervention. Alternatively, if the Commission denies such relief to respondents they request that a preliminary hearing be held at which the Electric and Coal Interests would be afforded an opportunity to develop an evidentiary record supporting their allegations of threatened competitive injury in Docket No. RP66–2 and a similar opportunity would be afforded to the Coal Interests alone with respect to Docket No. RP65–49. Respondents supplement their request for such alternative relief by additionally seeking the issuance of a subpoena duces tecum in Docket Nos. RP66–2 and RP65–49 directing Coal Interests to provide certain data including the names and identity of all coal unions and coal companies comprising the memberships of the associations seeking intervention, the tonnages and routes of shipments of coal, and all billings and invoices showing prices of delivered coal.

---

[1] *Atlantic Seaboard Corporation*, Docket No. RP65-49, Order Denying Reconsideration, issued September 27, 1965, 34 FPC 970. Reconsideration denied by order issued July 29, 1966, 36 FPC 322.

Respondents' contentions are substantially similar to those previously advanced in their opposition to the participation of the petitioners as interveners in Docket No. RP65–49. We have previously considered these very objections and found them insufficient in our prior orders issued therein permitting intervention and denying reconsideration.

The principal objection advanced against intervention by the Electric and Coal Interests, in both dockets, is that neither of the petitioners has alleged specific evidentiary facts supporting its general claim of competitive injury. However, Respondents do not dispute the crucial claim of petitioners that sales of natural gas made by Seaboard and United Fuel are in competition directly or indirectly through their distributor purchasers with sales of electricity and coal made by the parties seeking intervention.

Nor have respondents themselves made any showing which would indicate the likely invalidity of the petitioners' claim that the proposed restructured rates could have an adverse impact upon their sales of electricity and coal. In part, the respondents have sought to justify their restructured rates on the theory that they are necessary to enable "* * * United's wholesale customers to restructure their rates in a manner that makes them more competitive * * *" and that Seaboard purchases the bulk of its gas supply requirements from United.[2] It is equally noteworthy that United Fuel has also sought to justify the restructured rates because they would afford the wholesale customers of Columbia Gas Systems Companies "* * * an opportunity to hold industries which, without proper gas rates, might be lost."

For these reasons, we adhere to the view expressed in our August 26 order permitting intervention that there is no need for a preliminary hearing on the standing of either petitioner since respondents have not raised sufficient question as to the likelihood of competitive injury to warrant the delay and expense of such procedures.

We think that the participation of Electric and Coal Interests may well promote the development of a sounder and more complete record since competitive considerations constitute a major claimed justification for the restructured tariff.

The Commission stated in its Northern Natural Gas Company order in Docket No. G–19040, *et al.*,[3] "It would be improper for the Commission to consider only the evidence introduced by Northern relating to the competitive relationship between coal and gas in support of its alleged rate tilt without providing an opportunity to the parties directly affected to contest the allegations and conclusions concerning their [Coal Interveners] own industry."

---

[2] Statement of Reasons Justifying United Fuel's Rate Filing of July 20, 1965, at page 4.

[3] *Northern Natural Gas Co.*, 23 FPC 708, 710

As the Commission further held in *Northern*, Section 15(a) of the Natural Gas Act affords the Commission discretionary authority to permit the intervention of either competitors of a party to such a proceeding or of any other person whose participation in the proceeding may be in the public interest. The Electric and Coal Interests qualify under both these standards, and should be permitted to participate to the extent previously indicated.[4]

The Commission finds:

(1) Intervention by Electric and Coal Interests in the proceedings in Docket No. RP66-2 may be in the public interest.

(2) Respondents' joint motion for an order setting aside the order granting intervention by Coal Interests in Docket No. RP65-49 is lacking in merit and should be denied.

(3) Respondents' joint motion requesting alternative relief, in the form of a preliminary hearing upon the intervention issue held for the purpose of requiring the Electric and Coal Interests to adduce evidence supporting their claim of threatened competitive injury, is lacking in merit and should be denied.

(4) Respondents' joint motion for the issuance of a subpoena duces tecum directed toward the Coal Interests in Docket Nos. RP66-2 and RP65-49 is lacking in merit and should be denied.

The Commission orders:

(A) Electric Interests and Coal Interests are hereby permitted to intervene in proceedings in Docket No. RP66-2, subject to the rules and regulations of the Commission; *Provided, however*, that the participation of such petitioners shall be limited to matters relevant and material to a determination of whether the rate schedules contained in the proposed revised tariff meet the standards of Sections 4 and 5 of the Natural Gas Act; and *Provided, further*, that the admission of such interveners shall not be construed as recognition by the Commission that they might be "aggrieved" by any order or orders issued in these proceedings.

(B) Respondents' joint motions filed August 27, 1965 and November 15, 1965, are hereby denied.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

ATLANTIC SEABOARD CORPORATION, DOCKET NO. RP65-49; UNITED FUEL GAS COMPANY, DOCKET NO. RP66-2; THE MANUFACTURERS LIGHT AND HEAT COMPANY, DOCKET NO. RP66-5; HOME GAS COMPANY, DOCKET NO. RP66-6; THE OHIO FUEL GAS COMPANY, DOCKET NO. RP66-7; KENTUCKY GAS TRANSMISSION CORPORATION, DOCKET NO. RP66-8

ORDER DENYING CONSOLIDATION OF PROCEEDINGS

(Issued January 27, 1966)

Appalachian Power Company, Wheeling Electric Company, Ohio Power Company and Kentucky Power Company (Electric Interests) filed a motion, on November 23, 1965, seeking consolidation of all six of the above-identified proceedings involving subsidiaries of the Columbia Gas System. All six Respondents and eight of their distributor-customers filed timely answers in opposition.[1] Each of the foregoing proceedings proposes revisions in the rates and tariffs of such subsidiaries and embodies a redesign of rate schedules and the provision of special service under new Winter Service (WS) rate schedules. These proposed tariff changes have been suspended and made effective, subject to refund, by orders issued herein.

---

[4] See footnote 1.

Appalachian has been permitted to intervene in Seaboard's pending rate proceeding in Docket No. RP65–49 [2] and by an order issued concurrently herewith the Electric Interests have also been permitted to intervene in United's pending rate proceeding in Docket No. RP66–2, which proceedings have previously been consolidated with Docket No. RP65–49.[3]

The motion to consolidate is based on two grounds: (1) that there are basic issues presented in each of the proceedings which are common; and (2) that consolidation would permit a more expeditious disposition of these proceedings. Significantly, the Electric Interests do not allege that consolidation is necessary or appropriate in order adequately to protect its interests. In this regard, our failure to consolidate does not preclude (to the extent it can be shown to be relevant and material) consideration of the sales and market factors of other affiliates in the determination of just and reasonable rates for United Fuel and Seaboard. Thus, to the extent that the competitive situation of a particular affiliate affects or is alleged to affect the proposed changes in United Fuel's or Seaboard's rate evidence pertaining thereto can and should be received in the underlying consolidated proceeding. Nevertheless, for the reasons stated below, we do not believe that consolidation of these proceedings would expedite their disposition or otherwise would be appropriate.

It is true, as the Electric Interests allege, that there are underlying issues common to each of the proceedings. However, the underlying facts are not the same in most cases. It is also true that some of the initial evidence introduced in these proceedings is substantially identical; but much of it is unrelated. This is particularly true respecting the fundamental cost of service data. Moreover, the Electric Interests concede that the level of restructured rates of the various affiliates were arrived at by inconsistent, *i.e.*, different procedures.

Furthermore, consolidation would compel each intervenor to participate in a complex and massive proceeding dealing with a host of issues in which it has no interest and a relatively small number of issues in which it has a direct interest. On balance, we believe that consolidation would create an unwieldy proceeding where the rights of the distributor-customers would be lost in a maze of testimony and exhibits not pertinent to the particular supplier of an individual customer.

We therefore find that consolidation of the above-identified six rate proceedings in a single docket for the purposes of simultaneous hearing and decision would delay rather than expedite these proceedings, and is inappropriate, and not in the public interest.

The Commission orders:

The motion of Electric Interests filed November 23, 1965, for consolidated hearing and decision in the above-captioned proceedings, is denied.

---

[1] The eight distributor-customers who filed answers to the motion to consolidate are: Baltimore Gas & Electric Company; City of Charlottesville, Virginia; Cincinnati Gas & Electric Company and Union Light, Heat and Power Company; Commonwealth Natural Gas Corporation; Dayton Power and Light Company; New York State Electric and Gas Corporation; and Roanoke Gas Company.

[2] Order Granting Intervention issued August 26, 1965, 34 FPC 593, and Order Denying Reconsideration issued September 27, 1965, in Docket No. RP65–49, 34 FPC 970.

[3] Order issued September 14, 1965 in Docket No. RP65–49.

IDAHO POWER COMPANY, PROJECT NO. 1971

ORDER AMENDING AND SUPPLEMENTING ORDERS PRESCRIBING FISH FACILITIES

(Issued January 28, 1966)

On December 29, 1965, Idaho Power Company, licensee for Project No. 1971 consisting of the Brownlee, Oxbow and Hells Canyon developments on the Snake River, filed a motion for issuance of a proposed order which would amend and supplement previous orders prescribing fish facilities for Project No. 1971. Together with the motion there were filed copies of a stipulation, with respect to fish facilities for Project No. 1971, entered into by the licensee, the Department of the Interior and the fish and game agencies of the States of Oregon and Idaho. By said stipulation the parties thereto agreed and proposed that the Commission require the construction, maintenance and operation of fish facilities substantially as ordered herein. The stipulation implements in substantial part the recommendations of the interested State and Federal fishery agencies set out in a revised statement, dated August 18, 1965, titled "Policy for the Perpetuation and Management of Anadromous Fish in Snake River Drainage Upstream from Salmon River".

The Oregon agencies request that this order be issued without prejudice to their asserting claims in the future for additional facilities for steelhead trout or for modification of the steelhead smolt distribution program. As we noted in our order issued December 11, 1963 (30 FPC 1471), these orders are interim in nature and are subject to such further changes as may be necessary.

The Commission finds:

It is consistent with the public interest that an order be issued amending and supplementing previous orders prescribing fish facilities for Project No. 1971 pursuant to Article 35 of the license.

The Commission orders:

(A) The Licensee shall construct, operate and maintain or provide for the construction, operation and maintenance of floating trap and hoist devices for trapping upstream migrants at the Hells Canyon powerhouse, said facilities to be completed, tested and ready for operation before closure of the Hells Canyon diversion tunnel; on closure of the Hells Canyon diversion tunnel all upstream migrants shall be trapped at said facilities.

(B) The Licensee shall construct, operate and maintain or provide for the construction, operation, and maintenance of a redesigned sorting and holding facility for adult fall chinook and steelhead migrants at the Oxbow artificial propagation facility heretofore prescribed, the reconstructed facility to be in operation by September 1, 1966.

(C) Paragraphs (B), (C), and (D)(ii) of the Commission's order issued December 11, 1963 (30 FPC 1471), are hereby modified to provide for the alternate handling of steelhead trout and spring chinook salmon as provided herein, and for transporting to the Rapid River hatchery adult spring chinook salmon or steelhead trout in number equal to the capacity of its holding pond. All adult fall chinook salmon and adult steelhead trout up to the capacity of the Oxbow holding facility shall be transported by the Licensee to the Oxbow holding and sorting facility. Immature (jack) migrants and adult spring chinook salmon and steelhead trout in excess of the capacity of the holding ponds at Oxbow and Rapid River shall be released in Snake River below Oxbow dam or in some other stream entering the Snake River below Oxbow dam as determined by the fishery agencies, pending further provisions.

(D) For the conservation of the steelhead trout fishery resource, the Licensee shall:

(i) Acquire the necessary land and construct and maintain fish hatchery and appurtenant facilities near Snake River in the vicinity of Buhl, Idaho, suitable for hatching from eggs and rearing to smolt size 200,000 pounds of steelhead trout annually, said hatchery and appurtenant facilities to be ready for operation by July 1, 1966;

(ii) Acquire the required land and construct and maintain smolt holding (acclimation) ponds and appurtenant facilities in Lemhi County, Idaho, near the confluence of Big Springs Creek and Lemhi River (in or near Section 13, Township 16 North, Range 25 East, BM), with an aggregate volume of 140,000 cubic feet, said ponds and appurtenant facilities to be ready for operation by March 1, 1967;

(iii) Construct and maintain at the site of the Idaho Fish and Game Department upstream trapping facilities near Lemhi, Idaho, holding and sorting facilities and egg-eyeing facilities capable of incubating 3,300,000 steelhead trout eggs, together with appurtenant facilities, said facilities to be ready for operation by February 1, 1970;

(iv) Be responsible for annual transportation of smolts from the facilities near Buhl to the Lemhi River facilities during a six weeks period each spring previous to smolting as determined by the Idaho Department of Fish and Game; and

(v) Contract with the Idaho Department of Fish and Game for operation, for a period of eight years, of the facilities prescribed in this Paragraph D, and for transportation to the Buhl facilities of eyed eggs from the Licensee's Oxbow hatchery or alternately from the Lemhi facilities; Licensee shall pay all reasonable costs of operation of facilities and transportation of eggs, including the operating cost of the presently installed weir on the Lemhi River;

(vi) Provided, that on review and evaluation of the operation of the aforesaid facilities for steelhead trout, any changes, modifications, plans for continuing operations or termination, including disposition of facilities, at the end of the contract period, shall be made by stipulation of the Licensee and the interested State and Federal fishery agencies as approved by the Commission or by order of the Commission on its own motion or upon application of any interested party after opportunity for hearing.

(E) Licensee shall not commence construction of the facilities prescribed herein until the Commission shall have approved functional drawings which shall be prepared by the Licensee in accordance with the stipulation respecting fish facilities entered into by the Licensee, the Department of the Interior and the fish and game agencies of the States of Oregon and Idaho and dated December 29, 1965, and which shall be submitted by the Licensee for prior approval by a coordinating engineer designated by the State and Federal agencies.

(F) The Licensee shall consult and cooperate with the fishery agencies in determining upon a mutually satisfactory program to be financed by the Licensee for the purpose of evaluating and recording the degree of success achieved, in terms of maintenance of the fishery resource, by the artificial propagation and other facilities heretofore prescribed and as supplemented by this order. Should the Licensee and the fishery agencies be unable to agree upon the terms of the program, the Commission reserves the right to determine the same after notice and opportunity for hearing. The Licensee shall furnish to the Commission on a timely basis reports on evaluation studies and operations financed by the Licensee.

(G) Paragraph (C)(ii) of the Commission's order issued February 12, 1958 (19 FPC 237), is modified to provide for discontinuance of use of the Oxbow dam spillway trap after June 1966 and abandonment of the underwater foundation features of the proposed Oxbow powerhouse trapping facilities.

(H) Paragraph (C)(i) of the Commission's order issued November 17, 1960 (24 FPC 962), as modified by the order of May 17, 1963 (29 FPC 1058), is modified to provide that the Licensee shall release a minimum flow of 100 cfs through the Oxbow spillway at all times.

(I) Nothing herein shall be construed as full compliance with the provisions of Article 35 of the license for Project No. 1971.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. CP66-50

ORDER PERMITTING INTERVENTION AND SETTING DATE OF HEARING

(Issued January 28, 1966)*

The above-docketed application of Panhandle Eastern Pipe Line Company (Applicant) filed in Docket No. CP66-50 on August 13, 1965, was the subject of Commission notice issued August 23, 1965, and published in the Federal Register on August 28, 1965 (30 F.R. 11156). In essence Applicant seeks certificate authorization for the transportation of natural gas in interstate commerce and the construction and operation of a new measuring and regulating station and approximately 15.3 miles of 4-inch and 8-inch laterals in Callaway and Audrain Counties, Missouri, for delivery of up to 3,000 Mcf daily of natural gas on an interruptible basis to H. K. Porter Company, Inc., (Porter) for use by Porter in the firing of brick kilns. Supplemental information was filed by Applicant on October 13, 1965.

The City of Fulton, Missouri, filed a petition to intervene in the proceeding on October 29, 1965, which was answered and objected to by Applicant on November 22, 1965. The Reply of The City of Fulton to the objection and answer of Applicant was filed November 26, 1965.

The Commission finds:

It is desirable to allow The City of Fulton, Missouri, to become an intervenor in this proceeding in order that it may establish the facts and law from which the nature and validity of its alleged rights and interests may be determined and show what further action may be appropriate under the circumstances in the administration of the Natural Gas Act.

The Commission orders:

(A) The City of Fulton, Missouri, is permitted to become an intervenor in this proceeding subject to the rules and regulations of the Commission: *Provided, however*, that the participation of such intervenor shall be limited to matters affecting asserted rights and interests as specifically set forth in its said petition for leave to intervene; and *provided, further*, that the admission of such intervenor shall not be construed as recognition by the Commission that it might be aggrieved because of any order or orders of the Commission entered in this proceeding.

---

* Rehearing denied by order issued March 14, 1966, 35 FPC 377.

(B) Pursuant to the authority conferred on the Federal Power Commission by the Natural Gas Act and the Commission's Rules of Practice and Procedure, a hearing will be held on February 28, 1966, at 10:00 a.m. (EST) in a Hearing Room of the Federal Power Commission, 441 G Street, N.W., Washington, D.C., concerning the matters involved in and the issues presented by the application and supplemental information filed in this proceeding.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

ST. MICHAELS UTILITIES COMMISSION, ET AL. v. EASTERN SHORE PUBLIC SERVICE COMPANY OF MARYLAND, ET AL., DOCKET NO. E-7114, ET AL.

ORDER DENYING PETITION FOR LEAVE TO PARTICIPATE IN ORAL ARGUMENT AS AMICUS CURIAE

(Issued January 28, 1966)

On January 24, 1966, petitions for leave to participate in the oral argument scheduled for February 1, 1966 in the above-entitled proceeding, as *amicus curiae*, were filed with the Commission by ten municipal utilities in Wisconsin, namely, the Cities of Boscobel, Columbus, Cuba City, Juneau, Lodi, Plymouth, Princeton, Sheboygan Falls, Sun Prairie and Waupun.

Good cause has not been shown for granting the petitions for leave to participate in the oral argument in the above-entitled proceeding as *amicus curiae*.

The Commission orders:

The petition filed by the ten municipal utilities in Wisconsin mentioned above for leave to participate in the oral argument in the above-entitled proceeding on February 1, 1966, as *amicus curiae* are hereby denied.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

UNITED NATURAL GAS COMPANY AND EMPIRE GAS AND FUEL COMPANY, DOCKET NO. CP66-145

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 28, 1966)

On November 9, 1965, United Natural Gas Company (United) and Empire Gas and Fuel Company (Empire), wholly-owned subsidiary companies of National Fuel Gas Company (National), filed in Docket No. CP66-145 an application, as supplemented on November 26, 1965, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing United to acquire by merger and to operate all of the jurisdictional natural gas facilities of Empire and to perform all acts, sales and services now being performed by Empire, as more fully described in the application.

Empire currently produces natural gas from its own wells in Sharon and Oswayo townships, Potter County, Pennsylvania. This production is delivered to Iroquois Gas Corporation (Iroquois), another wholly-owned subsidiary of National. Iroquois distributes and sells the gas in the State of New York. Empire's service to Iroquois is rendered pursuant to a contract dated December 9, 1938, which is Rate Schedule L–1, Empire's FPC Gas Tariff, Original Volume No. 1.

Upon consummation of the merger, the facilities acquired by United will be operated by the employees of United in the same manner as they are now operated by Empire. United will maintain separate records of the plant, revenues and expenses related to the production of gas in Potter County, Pennsylvania, and its delivery and sale to Iroquois. United will continue the service to Iroquois by adopting and filing Empire's contract designated as Rate Schedule L–1 and redesignating it as United's Rate Schedule X–8, FPC Gas Tariff, Original Volume No. 2.

The purpose of the merger, as stated in the application, is to simplify the corporate structure of National in line with the policies of the Securities and Exchange Commission under the Public Utility Holding Company Act of 1935.

The merger will be effected by United issuing 6,802 shares of no-par capital stock to National in exchange for the 2,000 shares of Empire's $100 par capital stock now held by National. The proposal is economically feasible.

The merger has been approved by the Pennsylvania Public Utility Commission by its order issued December 13, 1965.

Due notice of the filing of the application was published in the Federal Register on November 25, 1965 (30 F.R. 14696). No petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on January 27, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) United Natural Gas Company, a Pennsylvania corporation having its principal place of business in Oil City, Pennsylvania, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of March 30, 1943, in Docket No. G–328 (3 FPC 959).

(2) Empire Gas and Fuel Company, a Pennsylvania corporation having its principal place of business in Buffalo, New York, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued June 1, 1943, in Docket No. G–300 (3 FPC 1013).

(3) The facilities hereinbefore described and as more fully described in the application in this proceeding are being used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the acquisition thereof and the sales of natural gas to be continued by United are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) United is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) The acquisition and operation of the facilities and the transportation and sale of natural gas by United are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon United's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (d) and (e) of Section 157.20 of said Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to United Natural Gas Company and Empire Gas and Fuel Company authorizing the acquisition by merger of Empire by United, the operation of the acquired facilities and the sale of natural gas as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon United's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (d) and (e) of Section 157.20 of such Regulations.

(C) This order is not to be construed as in any way altering the obligations of United under the rate settlement agreement approved by the Commission on June 13, 1962, in Docket No. G-17763, 27 FPC 1241.

(D) The acquisition by merger authorized by paragraph (A) above is conditioned upon United's receipt of authorization for the merger from the Securities and Exchange Commission.

(E) Empire's Rate Schedule L-1, FPC Gas Tariff, Original Volume No. 1 is redesignated as United's Rate Schedule X-8, FPC Gas Tariff, Original Volume No. 2.

(F) The acquisition shall be completed and the facilities placed in actual operation and the sale of natural gas by United, as authorized in paragraph (A) above, shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within one year from the date of this order.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

MISSISSIPPI RIVER TRANSMISSION CORPORATION,
DOCKET NO. CP65-227

ORDER AMENDING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 31, 1966)

On December 9, 1965, Mississippi River Transmission Corporation (Petitioner) filed in Docket No. CP65-227 a petition to amend the certificate of public convenience and necessity issued in said docket on May 4, 1965, 33 FPC 956, by extending to March 31, 1966, the time allowed to construct a portion of the 900 horsepower authorized for Petitioner's Woodlawn Field, Harrison County, Texas, as more fully described in the petition to amend.

Petitioner states that subsequent to the authorization for the 900 additional horsepower it made additional studies which indicated additional compression would not be required and therefore made no plans to install the authorized facilities.

Actual operation during the present heating season resulted in a pressure decline greater than anticipated and Petitioner will require an additional 225 horsepower to maintain production at the rate needed for operation during the present heating season.

Petitioner states that although it began preparation for the prompt installation of the 225 horsepower compressor as soon as the need for it became apparent, delivery and work schedules are such that installation cannot be completed in the time allowed in the aforementioned order.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's certificate issued May 4, 1965, in Docket No. CP65–227 be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order in Docket No. CP65–227 issued May 4, 1965, is amended by extending to March 31, 1966, the allowed time during which Petitioner may install 225 compressor horsepower in the Woodlawn Field, Harrison County, Texas, as hereinbefore described and as more fully set forth in the petition to amend.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

NATURAL GAS PIPELINE COMPANY OF AMERICA,
DOCKET NO. CP66–140

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND ACCEPTING SERVICE AGREEMENT FOR FILING

(Issued January 31, 1966)

On November 3, 1965, Natural Gas Pipeline Company of America (Applicant) filed in Docket No. CP66–140 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale and delivery of an additional daily contract quantity of 1,000 Mcf of gas to Iowa Electric Light and Power Company (Iowa Electric), an existing customer, all as more fully set forth in the application in this proceeding.

Applicant states that it has been advised by Iowa Electric that the latter desires the additional daily contract quantity for resale to Monsanto Company, an existing industrial customer of Iowa Electric. Monsanto now uses natural gas and will use the requested additional quantities of gas as a raw material in the manufacture of agricultural fertilizers.

The proposed additional volume will increase Iowa Electric's daily contract quantity with Applicant from the present 39,496 Mcf to 40,496 Mcf.

No additional facilities will be required for the proposed sale.

On November 5, 1965, Applicant tendered for filing a service agreement between the two parties, dated October 29, 1965, providing for the proposed sale.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on January 27, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Natural Gas Pipeline Company of America, a Delaware corporation having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 13, 1942, in Docket No. G–235 (3 FPC 830).

(2) The proposed sale and delivery of natural gas hereinbefore described, as more fully described in the application in this proceeding, will be made in interstate commerce, subject to the jurisdiction of the Commission and such sale and delivery by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The proposed sale and delivery of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3) and (e) of Section 157.20 of such Regulations.

(6) The service agreement between Applicant and Iowa Electric, dated October 29, 1965, tendered for filing on November 5, 1965, should be accepted for filing to become effective on the date this order issues.

The Commission orders:

(A) A certificate of public convenience and necessity is issued authorizing Applicant, Natural Gas Pipeline Company of America, to sell and deliver natural gas as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3) and (e) of Section 157.20 of such Regulations.

(C) The sale and delivery of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within one month from the date on which this order issues.

(D) The service agreement between Applicant and Iowa Electric, dated October 29, 1965, tendered for filing on November 5, 1965, is accepted for filing to become effective on the date this order issues.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

UNITED GAS PIPE LINE COMPANY AND TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP66-114

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND ACCEPTING RATE SCHEDULES FOR FILING

(Issued January 31, 1966)

On October 18, 1965, United Gas Pipe Line Company (United) and Transcontinental Gas Pipe Line Corporation (Transco) filed in Docket No. CP66-114 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities and the exchange of natural gas on a gas for gas basis pursuant to the terms of a contract between United and Transco dated June 23, 1965,[1] all as more fully set forth in the application.

United and Transco propose to install two separate interconnections between their respective systems, with deliveries being made by Transco to United through facilities located at Point *A*, and redeliveries being made by United to Transco through Point *B*, described and identified as follows:

POINT A

United Gas Pipe Line Company [2]

Install positive meter station and appurtenant facilities on Transcontinental Gas Pipe Line Corporation's 6-inch Gueydan Field lateral at Gueydan Booster Station No. 13 site, in Section 33, Township 11 South, Range 1 West, Vermilion Parish, Louisiana, to render natural gas service to Gueydan, Vermilion Parish, Louisiana.

Transcontinental Gas Pipe Line Corporation

Install 2-inch tap on 6-inch Gueydan Field lateral located on Gueydan Booster Station No. 13 site, in Section 33, Township 11 South, Range 1 West, Vermilion Parish, Louisiana.

POINT B

United Gas Pipe Line Company

Construct approximately 800 feet of 2⅜-inch pipeline, orifice meter station and appurtenant facilities beginning at approximately Milepost 26 on the Lirette-Napoleonville 24-inch pipeline in Section 35, Township 17 South, Range 16 East, Terrebonne Parish, Louisiana, and ending at a point on Transcontinental Gas Pipe Line Corporation's 20-inch pipeline Compressor Station No. 062 site in Section 35, Township 17 South, Range 16 East, Terrebonne Parish, Louisiana.

Transcontinental Gas Pipe Line Corporation

Install 2-inch tap on 20-inch pipeline at Compressor Station No. 062 site in Section 35, Township 17 South, Range 16 East, Terrebonne Parish, Louisiana.

---

[1] Designated as United's Rate Schedule X-18 (Original Sheet Nos. 109-116 to United's FPC Gas Tariff, Original Volume No. 2), and as Transco's Rate Schedule X-43 (Original Sheet Nos. 330-335 to Transco's FPC Gas Tariff, Original Volume No. 2). These were filed on November 5 and 15, respectively.

[2] Application for Exemption pursuant to Section 1(c) of the Natural Gas Act filed October 29, 1965, and granted by order issued concurrently herewith in Docket No. CP66-137, *infra*, p. 172.

United proposes to construct, own, operate and maintain any and all lines and facilities necessary to effect the exchange of natural gas; provided, Transco will install and own, in accordance with Transco's standard specifications, such tap and flange connections as may be necessary on Transco's facilities at the points of delivery (United to reimburse Transco for the cost of such tap and flange connections). The cost to United, including the cost of Transco's tap and flange connections is estimated to be $22,991, and will be defrayed from funds on hand.

United and Transco with respect to their respective rate filings request waiver under Section 154.22 of the Commission's Regulations; United requests an effective date of November 15, 1965, and Transco requests as an effective date the date of certificate authorization. Waiver is deemed appropriate with an effective date being the date of issuance of this order.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on January 27, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, United Gas Pipe Line Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 10, 1942, in Docket No. G–232 (3 FPC 863).

(2) Applicant, Transcontinental Gas Pipe Line Corporation, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 18, 1948, in Docket No. G–1143 (7 FPC 139).

(3) The proposed construction and operation of facilities and exchange of natural gas as hereinbefore described, and as more fully described in the application and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) The aforesaid construction and operation of facilities and exchange of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) United and Transco are able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(6) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon United and Transco's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(7) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act, and the public convenience and necessity require that United's proposed Rate Schedule X–18 and Transco's proposed Rate Schedule X–43 filed on November 5, and 15, respectively, be accepted for filing, effective

on the date of the issuance of this order, and that with respect thereto the requirements of Section 154.22 of the Commission's Regulations be waived.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to United and Transco in this proceeding, authorizing the construction and operation of facilities and the exchange of natural gas as hereinbefore described and as more fully described in the application and exhibits in this proceeding, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon United and Transco's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations within 6 months of the date on which this order issues.

(D) United's proposed Rate Schedule X-18 (Original Sheets Nos. 109-116 to United's FPC Gas Tariff, Original Volume No. 2), and Transco's Rate Schedule X-43 (Original Sheet Nos. 330-335 to Transco's FPC Gas Tariff, Original Volume No. 2), filed November 5 and 15, respectively, are accepted for filing effective on the date of issuance of this order.

(E) The notice requirements of Section 154.22 of the Commission's Regulations with respect to the rate filings of United and Transco are waived.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP66-137

DECLARATION OF EXEMPTION

(Issued January 31, 1966)

United Gas Pipe Line Company (Applicant) filed an application on October 29, 1965, for exemption from the provisions of the Natural Gas Act, pursuant to Section 1(c) thereof, of certain natural gas facilities and service proposed to be rendered thereby, to be located near Gueydan, Louisiana, all as more fully set forth in the application.

Applicant, a Delaware corporation with its principal place of business in Shreveport, Louisiana, is engaged in the transportation and sale of natural gas in the State of Louisiana, and in connection therewith proposes to install and operate natural gas facilities, and to sell and deliver natural gas to the Town of Gueydan, Louisiana, under its G-SWL Rate Schedule, which is on file with and approved by the Louisiana Public Service Commission.

The facilities requested to be exempted consist of a tap, metering, and regulating facilities at a point on Transcontinental Gas Pipe Line Corporation's Gueydan Field lateral in Vermilion Parish, Louisiana, which will be utilized in providing the proposed natural gas service, and to which the distribution facilities of the Town of Gueydan will be connected. The natural gas for the proposed service will be obtained from Transcontinental Gas Pipe Line Corporation pursuant to certificate authorization sought in Docket No.

CP66–114 and granted by order issued therein concurrently herewith, *supra*, p. 170.

Applicant states that all of the gas obtained from Transcontinental Gas Pipe Line Corporation will be sold and delivered to the Town of Gueydan, Louisiana, for consumption in the State of Louisiana; and that the said gas is produced in the State of Louisiana.

The Louisiana Public Service Commission has certified to the Federal Power Commission that it has regulatory jurisdiction over the rates, service and facilities of the Applicant to be exempted and is exercising such jurisdiction.

Wherefore, the Commission declares, by reason of the foregoing:

The facilities of United Gas Pipe Line Company consisting of a tap, metering and regulating facilities near the Town of Gueydan, Louisiana, located at a point on Transcontinental Gas Pipe Line Corporation's Gueydan Field lateral in Vermilion Parish, Louisiana, and the service to be rendered thereby to the Town of Gueydan are exempt from the provisions of the Natural Gas Act, and the orders, rules, regulations of the Commission issued thereunder.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

SOUTHERN UNION GAS COMPANY, G-513; DEL NORTE NATURAL GAS COMPANY, CP66-104; EL PASO NATURAL GAS COMPANY AND EL PASO GAS TRANSPORTATION CORPORATION, CP66-105; DEL NORTE NATURAL GAS COMPANY, CP66-106

ORDER DENYING REHEARING AND STAY

(Issued February 1, 1966)

On January 14, 1966, Juarez Gas Company, S. A. (Movant), filed a motion for stay and an application for rehearing of the orders of the Commission issued December 29, 1965, in Docket Nos. G-513, CP66-104 and CP66-105, 34 FPC 1584, 1588, and the permit released concurrently therewith in Docket No. CP66-106. By order issued in Docket Nos. CP66-104 and G-513 the Commission authorized Del Norte Natural Gas Company (Del Norte) to export natural gas from the United States to Mexico in lieu of Southern Union Gas Company (Southern Union) and terminated the authorization theretofore issued to Southern Union in Docket No. G-513. Del Norte proposes to continue the sale and delivery of natural gas to Movant for resale and distribution in Ciudad Juarez, Chihauhau, Mexico, and to initiate the sale of natural gas to Gas Natural de Juarez, S.A. (Gas Natural), a new distributor, for resale and distribution in Ciudad Juarez. Del Norte will lease existing and new facilities from Southern Union to export gas. Said order also denied the petition for leave to intervene filed by Movant in Docket Nos. G-513, CP66-104, CP66-105 and CP66-106. By order issued in Docket No. CP66-105 the Commission permitted and approved the abandonment of the sale of natural gas by El Paso Natural Gas Company to Southern Union and authorized the sale of natural gas to Del Norte. Said order also permitted and approved the abandonment of the transportation of natural gas by El Paso Gas Transportation Corporation for Southern Union and authorized the initiation of such service for Del Norte, together with the construction and operation of facilities therefor. In Docket No. CP66-106 the Commission released a permit authorizing Del Norte to operate, maintain and connect facilities at the international boundary to export natural gas and revoking the permit theretofore issued to Southern Union.

In its petition for leave to intervene Movant had alleged that it is not consistent with the public interest to authorize the exportation of natural gas pursuant to Section 3 of the Natural Gas Act for the purpose of enabling a new and second distribution company to invade the franchise territory of an existing supplier and further that Gas Natural probably would not be able to secure the requisite federal, state and municipal authorizations to import and distribute gas. These allegations are reiterated in the application for rehearing. It was pointed out in the order denying the petition for leave to intervene that it is not within the Commission's province to determine which of two distributors has the legal right to distribute natural gas in a community within a state where the issue has been raised. *American Louisiana Pipe Line Company, et al.*, Docket No. G-2306, *et al.*, 28 FPC 41. With respect to the allegation that Gas Natural probably will not receive the necessary import and distribution authorizations, it should be noted that the order authorizing the exportation of natural gas issued in Docket No. CP66-104 is conditioned upon the receipt of appropriate import authorization and is without prejudice to any action taken by any authority in Mexico.

We said in the order denying Movant's petition and we repeat here that the Federal Power Commission is not the proper forum in which Movant can receive relief from the alleged detriments to it occasioned by the distribution of natural gas by Gas Natural. Any such determinations must be made in Mexico by the Mexican authorities having jurisdiction over such matters. If Gas Natural is denied authorization in Mexico to import and/or distribute natural gas, then Del Norte cannot export natural gas for delivery to Gas Natural.

The application for rehearing does not set forth any new facts or principles of law which indicate that the Commission was in error in denying Movant's petition or in issuing the orders and permit.

The Commission finds:

The assignments of error and grounds for rehearing set forth no new facts or principles of law which either were not fully considered by the Commission when it issued the orders in Docket Nos. G-513, CP66-104 and CP66-105 and the permit in Docket No. CP66-106, or which having now been considered, warrant any change or stay of said orders and permit.

The Commission orders:

The application for rehearing and the motion for stay filed January 14, 1966, by Juarez Gas Company, S. A., are denied.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

AREA RATE PROCEEDING AND MONSANTO COMPANY, DOCKET NO. AR61-1

ORDER REJECTING QUALITY STATEMENT

(Issued February 2, 1966)

Monsanto Company (Monsanto), a respondent in the *Permian* case, submitted on January 10, 1966, in purported compliance with paragraph (F)(1) of Opinion No. 468, as amended by Opinion No. 468-A, 34 FPC 159, 1068, a quality statement with respect to the sale of "old" residue gas (derived from casinghead gas) to El Paso Natural Gas Company (El Paso) from the Dollarhide Plant in the Permian Basin of Texas under Monsanto's FPC Gas Rate Schedule No. 5. The quality statement, which was signed by both Monsanto and El Paso, shows that the quality of the gas meets the standards prescribed in Opinion Nos. 468 and 468-A. However, it also shows an upward adjustment of 0.21¢ per Mcf for the sale of gas at a delivery pressure of 550 psig, 50 psig in excess of the 500 psig minimum standard provided in Opinion No. 468-A. Monsanto thus proposes to establish a total rate of 14.71¢ per Mcf (14.5 area base rate, plus 0.21¢ adjustment for delivery pressure).

As indicated below, our *Permian* decision does not authorize an upward adjustment for gas delivered at pressures in excess of 500 psig. We must therefore reject as unacceptable the quality statement tendered by Monsanto and shall require it to submit a new quality statement in accordance with Opinion Nos. 468 and 468-A.

In Opinion No. 468 we provided for a downward adjustment from the applicable area base rate for the sale of gas at a delivery pressure below 800 psig, and in Opinion No. 468-A we reduced the minimum delivery pressure standard from 800 psig to 500 psig. The modification was made in Opinion No. 468–A because certain existing pipeline facilities in the Permian area were constructed to receive gas at approximately 500 psig. The lower delivery pressure requirement did not reflect in any way a belief that when gas was delivered at pressures in excess of 500 psig the producer should receive a higher rate. In Opinion No. 484 issued January 6, 1966, 35 FPC 40, *El Paso Natural Gas Company, et al.*, Docket No. CP64–211, *et al.*, where this same point was involved in a certificate case, we refused to allow the producers there to obtain premium rates for the sale of "new" gas above the applicable just and reasonable rate ceilings determined in *Permian* based on delivery pressures in excess of the 500 psig minimum standard. Similarly here we reject Monsanto's attempt to obtain an unwarranted premium rate.

The Commission orders:

For the reasons set forth above, the quality statement tendered by Monsanto on January 10, 1966, with respect to sales under its FPC Gas Rate Schedule No. 5 is rejected. Monsanto shall within 75 days of the date of issuance of this order submit a satisfactory quality statement in accordance with the provisions of Opinion Nos. 468 and 468–A.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

JAMES P. EVANS, JR., ET AL., DOCKET NO. RI60–237; UNITED GAS PIPE LINE COMPANY, DOCKET NO. RP65–15

ORDER AMENDING ORDER RELEASING REFUNDS

(Issued February 2, 1966)

On January 10, 1966, United Gas Pipe Line Company (United) filed a motion in the above-docketed proceeding requesting amendment of the Commission's order of July 7, 1965, 34 FPC 10, which required James P. Evans, Jr., *et al.* (Evans) to make the refunds to United that we had previously ordered Evans to retain pending further order of the Commission in approving its settlement offer in Docket No. RI60–237 on November 4, 1964, 32 FPC 1269. In the order of July 7, 1965, we ordered United to retain certain of the refund monies it would receive from Evans pending further order of the Commission. United, *inter alia*, was given the option of commingling such retained monies with its general assets, and to use them for its corporate purposes with the obligation to pay interest thereon at the rate of 6% per annum from November 30, 1965, to the date they are paid by United pursuant to the final order of the Commission. United elected to commingle such retained funds and pay interest thereon.

United now requests that we amend the order of July 7, 1965, to conform with our determination in Opinion No. 468, *Area Rate Proceeding*, Docket No. AR61–1, *et al.*, 34 FPC 159 (issued August 5, 1965) that the proper rate of interest for refund monies so retained and commingled with general corporate funds was 4.5% per annum, that being the prime rate of interest at the time of issuance of said opinion. Such prime interest rate also prevailed at the time of issuance herein of the order of July 7, 1965. It is appropriate that we accordingly amend the order of July 7, 1965, to provide for an interest rate of 4.5% per annum on the monies United has elected to retain.

The Commission orders:

(A) The Motion for Amendment of the order issued in these proceedings on July 7, 1965, filed by United on January 10, 1966, is granted.

(B) Ordering Paragraph (C) of the order issued herein on July 7, 1965, is amended so as to provide that United shall pay interest on the refund monies it has elected to commingle with its general assets at the rate of 4.5% per annum from November 30, 1965, to the date on which the refund monies ordered to be retained are paid over to the person or persons ultimately determined to be entitled thereto in a final order of the Commission.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

GENERAL AMERICAN OIL COMPANY OF TEXAS, DOCKET NO. RI66–274; A. H. MEADOWS, DOCKET NO. RI66–275

ORDER PROVIDING FOR HEARINGS ON AND SUSPENSION OF PROPOSED CHANGES IN RATES[1] AND REJECTING QUALITY STATEMENTS

(Issued February 2, 1966)

General American Oil Company of Texas (General American)[2] and A. H. Meadows (Meadows),[3] respondents in the *Permian* case, severally tendered for filing on January 3, 1966 notices of change wherein they propose periodic and partial tax reimbursement increases in rates from 17.1843¢[4] per Mcf to 18.1978¢[4] per Mcf at 14.65 psia for their jurisdictional sales of residue gas derived from casinghead gas to El Paso Natural Gas Company (El Paso) from leases in Sweetie Peck Field, Midland County, Texas District No. 8. The said notices of change are designated as follows:

Respondent	Rate schedule No.	Supplement No.	Amount of annual increase	Effective date
General American	32	6	$66	Feb. 3, 1966[6]
Meadows	[5] 1	3	48	Feb. 3, 1966[6]

In support of the proposed increased rates, respondents concurrently tendered for filing Rate Schedule-Quality Statements, in purported compliance of Ordering Paragraph (C) of Opinion No. 468–A, 34 FPC 1068 at 1079, wherein they indicate that the applicable area rate for the two sales is 15.32¢ per Mcf. Respondents' quality statements indicate the following quality adjustments for the casinghead gas delivered to El Paso: (1) cost of 0.1¢ per Mcf for removal of water content, (2) cost of 3.08¢ per Mcf for compression from 30 psig to 500 psig minimum standard, and (3) a Btu upward adjustment of 4.0¢ per Mcf from the maximum standard of 1050 Btu's to 1340 Btu's, which is the Btu content of the casinghead gas. The quality statements further indicate that the rate established for the two sales based on contract provisions is 14.6501¢ per Mcf, exclusive of tax reimbursement. This rate is equivalent to the contract base of 18.0¢ per Mcf, less 3.3499¢ per Mcf contract charge for the aforementioned service performed by El Paso. To the 14.6501¢ per Mcf rate, the respondents add 0.1978¢ per Mcf tax reimbursement, and result in a total contract rate of 14.8479¢ per Mcf. Respondents thus contend that the applicable area ceiling rate of 15.32¢ per Mcf, after all quality adjustments, exceeds the increased rates filed for herein. The contracts underlying the rate schedules involved herein are of the *Spraberry* type, discussed on page 209 of Opinion No. 468, 34 FPC 159, except for the fact that the respondents do not share the revenues that El Paso receives from the sale of the extracted liquids.

---

[1] These proceedings are not consolidated for hearing.

[2] Address is: 1800 First National Bank Building, Dallas, Texas 75206.

[3] Address is: Meadows Building, Dallas, Texas 75206.

[4] Subject to deduction of 3.3499¢ per Mcf for gathering, treating and compression.

[5] A. H. Meadows' currently collected rate of 17.1843 cents per Mcf is in effect subject to refund in Docket No. RI60–248.

[6] The stated effective date is the effective date requested by respondents.

The issue presented by the subject filings is whether the quality provisions of Opinion No. 468 as amended by Opinion No. 468–A are applicable to the residue gas or whether the quality provisions are applicable at the wellhead, as the respondents and El Paso contend.

In Opinion No. 468–A, we commented at page 1070 therein on the application of the Btu adjustment for flowing gas as follows:

> The Btu adjustment will be applied to the area base rate before price adjustments for quality. In view of the fact that a majority of contracts for gas-well gas provide for a payment for liquids removed by the purchaser, Btu content should be measured after the removal of such liquids where such payment is made.[2] To measure Btu's prior to extraction of the liquids and then pay a bonus for high Btu content in the form of liquids would be a double payment.

[2] The same principle would also apply in the case of similar contracts for residue or casinghead gas.

Respondents, in effect, argue that "where such payment is made" would appear to imply that where the producer does not share in the liquids, the Btu adjustments should be applied at the wellhead and treating costs should be absorbed by the seller by deducting them from the area base rate. In making the aforementioned statement, we were referring to the point of Btu adjustment when a producer sold the wet stream to the pipeline and was paid for this wet stream on the basis of wellhead volumes. Where, as herein involved, the producer is paid on the basis of residue volumes, we do not believe that there is justification for determining the Btu adjustment at different points (at the wellhead or at the tailgate) depending on whether or not the producer is entitled under its contract to share in the liquid revenue. The proper point for determining the quality of the gas in the present cases is thus the tailgate of the plant.

For the foregoing reasons, we shall reject the respondents' quality statements and shall direct the filing of quality statements consistent with the foregoing discussion. Consistent therewith we shall suspend the subject notices of change as hereinafter provided. If respondents file quality statements which will support the rates sought here the suspension proceedings shall be terminated as of the date of filing satisfactory quality statements.

The Commission orders:

(A) The quality statements tendered for filing on January 3, 1966, by General American under its FPC Gas Rate Schedule No. 32 and by Meadows under his FPC Gas Rate Schedule No. 1 are rejected. General American and Meadows shall, within 75 days of the date of issuance of this order, submit a satisfactory quality statement in accordance with the provisions of Opinion Nos. 468 and 468–A.

(B) Pursuant to the authority of the Natural Gas Act, particularly Sections 4 and 15 thereof, the Commission's Rules of Practice and Procedure, and the Regulations under the Natural Gas Act [18 CFR, Chapter I], a public hearing shall be held upon a date to be fixed by notice from the Secretary concerning the lawfulness of the proposed increased rate and charge contained in Supplement No. 6 to General American's FPC Gas Rate Schedule No. 32 and in Supplement No. 3 to Meadows' FPC Gas Rate Schedule No. 1.

(C) Pending such hearing and decision thereon, the aforementioned supplements in paragraph (B), above, are hereby suspended and the use thereof deferred until July 3, 1966, and thereafter until such further time as they are made effective in the manner prescribed by the Natural Gas Act.

(D) Neither the supplements hereby suspended, nor the rate schedules sought to be altered thereby, shall be changed until these proceedings have been disposed of or until the period of suspension has expired, unless otherwise ordered by the Commission.

(E) Notices of intervention or petitions to intervene may be filed with the Federal Power Commission, Washington, D.C. 20426, in accordance with the Rules of Practice and Procedure [18 CFR 1.8 and 1.37(f)] on or before March 21, 1966.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

TEXACO INC., DOCKET NO. CI65-1365

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND ACCEPTING FPC GAS RATE SCHEDULE FOR FILING

(Issued February 2, 1966)

On June 25, 1965, Texaco Inc. (Applicant) filed in Docket No. CI65-1365 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale for resale and delivery of natural gas in interstate commerce to Texas Gas Transmission Corporation (Texas Gas) from the Mound Point and Tiger Shoal Fields, offshore Vermilion Parish, Louisiana, all as more fully set forth in the application.

Applicant originally proposed to sell gas to Texas Gas at initial rates of 19.5 cents per Mcf for gas produced from the Federal Domain and 21.25 cents per Mcf for gas produced from acreage subject to the taxing jurisdiction of the State of Louisiana. Rates are stated at a pressure base of 15.025 psia. On November 8, 1965, Applicant submitted a settlement proposal and agreed to accept a certificate at the initial rates of 19.0 cents per Mcf for gas produced from the Federal Domain and 20.625 cents per Mcf for gas produced from the taxing jurisdiction of the State of Louisiana. There is a downward Btu adjustment from a base of 1,000 Btu's per cubic foot.

The terms of the sale proposed in the application as supplemented by the settlement proposal are as follows:

(1) Reduced initial prices are to be effective during the moratorium which shall be in effect until November 1, 1970, at which time the originally proposed 19.5-cent and 21.25-cent prices would become applicable until January 1, 1972, with periodic increases of 1.0 cent per Mcf each five years thereafter;

(2) 50 percent reimbursement of any increases in existing taxes during the moratorium period and 75 percent reimbursement thereafter;

(3) A gradual increase in daily contract quantities which will reach a maximum of 133,928 Mcf on November 1, 1970;

(4) Take-or-pay obligation for deficient takes during the first five-year period deferred until the end of that period with a subsequent five-year make-up period, and a five-year make-up period for any deficient takes occurring in any given contract year thereafter;

(5) Take or pay for volumes equal to a sum of 70 percent of the daily contract quantities; and

(6) Pipeline quality gas to be delivered onshore through existing facilities at the outlet of Applicant's Erath Processing Plant.

Applicant agrees that its proposal shall be subject to any orders which may be issued in the South Louisiana Area Rate Proceeding, Docket No. AR61-2, *et al.*

The contract between Applicant and Texas Gas will permit Applicant to deliver varying quantities of gas from either the Federal Domain or that area subject to the taxing jurisdiction of the State of Louisiana provided that such deliveries will not result in a weighted average monthly price more than 0.3 cent below or 0.5 cent above the average price determined by the sum of (1) the price of gas from the area of state jurisdiction multiplied by 17 percent and (2) the price of gas from the Federal Domain multiplied by 83 percent. Applicant thereby will be permitted to vary deliveries from the area of state jurisdiction from none to 50 percent of the total monthly deliveries.

Applicant has dedicated "Economically Recoverable Reserves," not to exceed 750 million Mcf of gas, in the Mound Point and Tiger Shoal Fields. All reserves committed in excess of 750 million Mcf, and/or to the extent that the reserves located in the area subject to state jurisdiction exceed 17 percent of the totally committed reserves, shall be considered surplus gas. During the first ten contract years Applicant may substitute, subject to Texas Gas' acquiescence, volumes of gas from some other similar reservoir or reservoirs, and this period of time may be extended for at least three years following the date of final demarcation between the State of Louisiana and the offshore Federal Domain.

The contract provides for a uniformly incremented five-year build-up in contract quantity to a rate of take of 1 to 5,600 as follows:

Contract year ending November 1	*Contract quantity (Mcf per day)*
1966	21, 428
1967	42, 857
1968	64, 286
1969	85, 714
1970	107, 143
Thereafter	133, 928

The minimum daily takes for each contract year are approximately 70 percent of the daily contract quantity. Upon the request of Texas Gas, Applicant will deliver 125 percent of the daily contract quantity if the excess volumes are available and not in excess of regulatory allowables.

After due notice a notice of intervention was filed by the Public Service Commission of the State of New York. Petitions for leave to intervene were filed by the Memphis Light, Gas and Water Division of the City of Memphis, Tennessee, Long Island Lighting Company, Philadelphia Gas Works Division of The United Gas Improvement Company, and Texas Gas. Prior to tne filing of the settlement proposal the City of Memphis advised the Commission that the City would not object to the issuance of a certificate based upon a settlement proposal such as that which was ultimately filed by Applicant and similar to that involved in Docket No. CI64–475 (*Texas Gas Transmission Corporation, et al.*, Docket No. CP64–94, *et al.*, 31 FPC 1125). Subsequent to the filing of the settlement proposal Philadelphia Gas Works Division of The United Gas Improvement Company withdrew its petition because it considers Applicant's project as part of the same transaction involved in Docket No. CI64–475. Long Island Lighting Company has advised the Commission that it has no objection to the issuance of a certificate in light of the settlement proposal. The Public Service Commission of the State of New York has advised the Commission that it will not seek rehearing or judicial review of any order based upon the application as modified by the settlement proposal but that it is not joining in the settlement. Texas Gas' petition is in support of the application. No other notices or petitions to intervene have been received.

Thus, the application is before the Commission in the nature of a settlement concurred in by the Applicant and the staff and without objection from the interveners. While the prices are in excess of the in-line determinations (32 FPC 254) they are below the guideline prices set forth in the Statement of General Policy No. 61–1 and are packaged with other contract provisions more favorable than those usually provided in this area. Accordingly, the application will be granted.

At a hearing held on January 27, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits thereto, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Texaco Inc., is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission.

(2) The sale of natural gas hereinbefore described, as more fully described in the application herein, will be made in interstate commerce subject to the jurisdiction of the Commission, and such sale by Applicant, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, is subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The sale of natural gas by Applicant, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, is required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

The Commission orders:

(A) A certificate of public convenience and necessity is issued upon the terms and conditions of this order authorizing the sale by Applicant of natural gas in interstate commerce for resale, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, all as hereinbefore described and as more fully described in the application in this proceeding.

(B) The certificate issued in paragraph (A) above is granted upon the condition that Applicant comply fully with the terms of this order and the settlement proposal filed herein, which settlement is expressly approved as a part of the application herein.

(C) The certificate granted in paragraph (A) above is not transferable and shall be effective only so long as Applicant continues the acts or operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(D) If Applicant desires to deliver natural gas from reservoirs other than those specifically referred to herein, it shall advise the Commission of the names and locations of said reservoirs and request approval for such deliveries.

(E) The grant of the certificate issued in paragraph (A) above shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or of Part 154 or Part 157 of the Commission's Regulations thereunder and is without prejudice to any findings or orders which have been or which hereafter may be made by the Commission in any proceeding now pending or hereafter instituted by or against Applicant. Further, our action in this proceeding shall not foreclose nor prejudice any future proceedings or objections relating to the operation of any price or related provisions in the gas purchase contract involved. Nor shall the grant of the certificate aforesaid for service to the particular customer involved imply approval of all of the terms of said contract, particularly as to the cessation of service upon termination of said contract, as provided by Section 7(b) of the Natural Gas Act. Nor shall the grant of the certificate aforesaid be construed to preclude the imposition of any sanctions pursuant to the provisions of the Natural Gas Act for the unauthorized commencement of sales of natural gas subject to said certificate.

(F) The contract dated June 4, 1965, between Applicant and Texas Gas is accepted for filing to be effective on the date of initial delivery and is designated as Texaco Inc. FPC Gas Rate Schedule No. 362. Applicant shall file three copies of its settlement proposal as a supplemental to said rate schedule.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

TRANSWESTERN PIPELINE COMPANY, DOCKET NO. G-20464, ET AL.; COLORADO INTERSTATE GAS COMPANY, DOCKET NO. CP63-344 (PHASE II)

ORDER AMENDING OPINION AND ORDER

(Issued February 2, 1966)

On January 3, 1966, Colorado Interstate Gas Company (Colorado Interstate) filed a motion to amend and clarify the Commission's Opinion No. 472, issued on August 31, 1965, in the above-captioned proceeding, 34 FPC 659. Colorado Interstate seeks to make it clear that in addition to authorizing the abandonment of Colorado Interstate's 20-inch line from Colorado Springs to Denver, Colorado, paragraph (C) of the order accompanying Opinion No. 472 also authorizes the retirement of Colorado Interstate's 3,200 horsepower McClintock compressor station located on said line near Colorado Springs. Colorado Interstate correctly avers that it was the intention of the order to authorize the abandonment of the said compressor station. No opposition to the motion has been filed.

The Commission finds:

It is in the public interest and appropriate to carry out the provisions of the Natural Gas Act to amend the aforesaid Opinion No. 472, as provided by this order.

The Commission orders:

Paragraph (C) of the order accompanying the Commission's Opinion No. 472, issued on August 31, 1965, in the above-captioned proceeding, 34 FPC at 667, is hereby amended to read as follows:

> (C) Colorado Interstate's application for authorization to abandon its Colorado Springs to Denver 20-inch line and to construct and operate a replacement therefor; to retire its McClintock compressor station consisting of 3,200 horsepower; and to construct and operate additional compressor facilities required to complete its Rocky Mountain expansion program, all as proposed in its application herein, is granted. In all other respects the application by Colorado Interstate in Docket No. CP63–344 (Phase Two) is denied.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

EL PASO ELECTRIC COMPANY, DOCKET NO. E–7258

ORDER AUTHORIZING ISSUANCE OF PROMISSORY NOTES

(Issued February 4, 1966)

El Paso Electric Company (Applicant), a Texas corporation, qualified to transact business in the State of New Mexico with it principal place of business at El Paso, Texas, filed an application with the Federal Power Commission pursuant to Section 204 of the Federal Power Act seeking authority to issue promissory notes up to and not exceeding at any one time the aggregate principal amount of $12,000,000.

Applicant proposes to issue up to but not exceeding $12,000,000 promissory notes, payable to such bank or banks from which the Applicant may borrow the funds. The notes are to be issued for a period not exceeding 12 months from the date of original issue or renewal thereof, and such notes, issued either originally or upon renewal from time to time, will have maturity dates not later than December 31, 1968. The notes are to bear interest at a rate per annum not in excess of one-quarter of 1% over the New York City prime rate in effect at the time of borrowing.

According to the application the notes are to be issued to furnish a portion of the funds needed for the Applicant's construction program which has an estimated cost of $5,628,000 in 1966, $9,030,600 in 1967, and $11,104,800 in 1968. In order to carry out its commitment to the "Western Energy Supply and Transmission Associates", a group of 17 utilities in a nine-state area. Applicant proposes to join in the installation of 1500 mw of generating capacity in the Navaho plant and to construct 202 miles of 345 kv transmission line to interconnect with Public Service Company of New Mexico. The Applicant's 1966 construction program includes $202,000 for these generating facilities, its 1967 construction program includes $1,793,000 for these generating facilities and $3,650,000 for these transmission facilities, and its 1968 construction program includes $4,040,000 for these generating facilities and $3,650,000 for these transmission facilities.

Written notice of the application has been given to the El Paso Electric Company, Texas Railroad Commission and the New Mexico Public Service Commission. Notice was also published in the Federal Register on December 8, 1965 (30 F.R. 15186), stating that any person desiring to be heard or to make any protest with reference to said application should on or before December 22, 1965 file with the Federal Power Commission, Washington, D.C. 20426, petitions or protests in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10). No protest, petition or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 203 of the Federal Power Act subject to the jurisdiction of the Commission as heretofore described and set forth in the Commission's order issued July 14, 1958, *El Paso Electric Company*, Docket No. E-6828 (20 FPC 30).

(2) The proposed issuance of Promissory Notes in the aggregate principal amount of $12,000,000, all as described above, will constitute an issuance of securities within the purview of Section 204 of the Act.

(3) The proposed issuance of Promissory Notes in the aggregate principal amount of $12,000,000, all as described above, will be in excess of 5% of the par value of the other securities of Applicant, and, therefore, will not be exempt by virtue of Section 204(e) from the requirements of Section 204(a) of the Act.

(4) Applicant is not organized and operating in a State, under the laws of which the issue here involved is regulated by a State Commission within the meaning of Section 204(f) of the Act, and the proposed issuance is, therefore, not exempt by virtue of that section from the requirements of Section 204 of the Act.

(5) The proposed issuance of Promissory Notes will be exempt from the competitive bidding requirements of Section 34.1a of the Commission's Regulations under the Federal Power Act by reason of paragraph 34.1a(a)(2).

(6) The proposed issuance of securities, as hereinafter authorized, will be for a lawful object within the corporate purposes of Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance of service by Applicant as a public utility, and which will not impair its ability to perform that service, and is reasonably necessary and appropriate for such purposes.

The Commission orders:

(A) The proposed issuance of Promissory Notes in the aggregate principal amount of $12,000,000, outstanding at any one time, upon the terms and conditions and confined to the purposes set forth in the application, all as described above, is hereby authorized, subject to the provisions of this order.

(B) This authorization is expressly conditioned upon the final maturity of said notes being not later than December 31, 1968.

(C) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determination of cost or any other matter whatsoever now pending or which may come before this Commission.

(D) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States in respect to any security to which this order relates.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP61-92

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 4, 1966)

On November 15, 1965, El Paso Natural Gas Company (Applicant) filed in Docket No. CP61-92 an application to amend the order of the Commission issued in said docket January 11, 1965, 33 FPC 34, which order authorized Applicant to construct and operate certain facilities and to deliver natural gas to Northern Natural Gas Company (Northern), on an exchange basis, at points in Ochiltree County, Texas, as a part of the previously authorized exchange under Applicant's Rate Schedule Z-1, FPC Gas Tariff, Third Revised Volume No. 2. By the instant filing, Applicant requests the further amendment of the certificate to authorize the construction and operation of approximately 0.25 mile of 4½-inch O.D. pipeline and a measuring and regulating station which are necessary to connect a recently developed well in Ochiltree County, Texas, all as more fully set forth in the application to amend.

Applicant states that it now has additional quantities of gas available for delivery to Northern which are to be produced from the well denominated as Buzzard No. 1. Northern and Applicant have agreed, by letter agreement dated August 17, 1965, to supplement Exhibit B to Applicant's Rate Schedule Z-1, FPC Gas Tariff, Third Revised Volume No. 2, by addition of the aforementioned well. This agreement provides for delivery by Applicant to Northern, on an exchange basis under Rate Schedule Z-1, of natural gas attributable to Applicant's interest in such well.

The estimated cost of the facilities to be constructed is $6,900, which cost is to be financed from working funds.

Due notice of the filing of the application to amend and opportunity for hearing thereon has been given by publication in the Federal Register on December 13, 1965 (30 F.R. 14822). No petition to intervene, notice of intervention, or protest to the granting of the application has been filed.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued January 11, 1965, in Docket No. CP61-92 be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued January 11, 1965, in Docket No. CP61-92 is amended so as to authorize the construction and operation of approximately 0.25 mile of 4½-inch O.D. pipeline extending from the Buzzard No. 1 well located in the SW/4 of Section 59, Block 13, T&NO Rd. Survey, Ochiltree County, Texas, to a point of connection with Applicant's existing facilities interconnecting with Northern Natural Gas Company's system in the SE/4 of Section 57, Block 13, of Ochiltree County, Texas.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

TOWN OF MIDDLEBOROUGH, MASSACHUSETTS AND ALGONQUIN GAS TRANSMISSION COMPANY, DOCKET NO. CP66-68

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued February 4, 1966)

On September 3, 1965, the Town of Middleborough, Massachusetts (Applicant) filed in Docket No. CP66-68 an application, as supplemented on October 1, October 8, and December 9, 1965, pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Algonquin Gas Transmission Company (Respondent) to establish physical connection of its transportation facilities with the facilities proposed to be constructed by Applicant and to sell and deliver to Applicant volumes of natural gas for resale and distribution in Middleborough and environs, as more fully set forth in the application.

Applicant proposes to construct and operate approximately four miles of 8-inch transmission pipeline from the proposed interconnection with Respondent's transmission pipeline southeast of Middleborough, together with certain additions to its existing distribution system in order to serve future increased loads.

Applicant's estimated natural gas requirements, to be purchased under Respondent's Rate Schedules F-1 and I-1, are as follows:

	First year	*Second year*	*Third year*
Annual (Mcf)	221, 147	251, 226	225, 587
Peak day (Mcf)	745	767	790

The natural gas presently used by Applicant is purchased from the Brockton Taunton Gas Company (Brockton) and is delivered through a 39-year-old 6-inch main under an existing contract dated June 20, 1955, subject to termination upon 2 years' notice. The contract between Brockton and Applicant will expire on August 31, 1966.

Applicant also transports gas through its existing distribution system for Brockton for distribution in the Town of Lakeville, Massachusetts. Applicant and Brockton have entered into a gas service agreement dated December 8, 1965, whereby Applicant will sell and deliver, for the account of Brockton, all of Lakeville's gas requirements.

Applicant proposes to purchase all of its present and future natural gas requirements directly from Respondent and will, from the proposed additions to its present distribution system, include service to a large new industrial customer, the Kelsey Ferguson Brick Company. This industrial customer, a new brickyard, has executed a letter of intent, to Applicant, indicating that agreement has been reached with Applicant on all items of the proposed service except the charge for gas conversion adjustment and the exact volume, between 300 Mcf and 400 Mcf, to be used for firm maximum daily requirements.

The estimated total cost of the facilities to be constructed by Applicant is $410,352, which will be financed with funds on hand and funds from the issuance of $200,000 in 10-year bonds. The project is economically feasible.

Respondent was notified of the filing of the application by letter dated September 8, 1965. Respondent indicated by letter filed September 24, 1965, that it has no objection to rendering the service proposed by Applicant.

Due notice of the filing of the application was published in the Federal Register on September 21, 1965 (30 F.R. 12052). Brockton filed a letter on October 7, 1965, asking the Commission to condition its authorization by requiring Applicant to continue to provide the Lakeville transportation service for Brockton. As indicated above, Applicant has so agreed by its contract with Brockton dated December 8, 1965. No other protests, petitions to intervene or notices of intervention have been filed.

The Commission finds:

(1) Algonquin Gas Transmission Company, a Delaware corporation with its principal place of business in Boston, Massachusetts, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in the order accompanying Opinion No. 206, issued February 26, 1951, in Docket No. G–1319 (10 FPC 35).

(2) Applicant is a municipality in the State of Massachusetts and is authorized to construct and operate facilities to distribute and sell natural gas to inhabitants of the communities along its system.

(3) It is necessary and desirable in the public interest that Respondent be directed to establish physical connection of its transportation facilities with the facilities proposed by Applicant and to sell and deliver up to 790 Mcf of natural gas per day to Applicant, as hereinbefore described and as more fully set forth in the application, as hereinafter ordered and conditioned.

(4) The requirement that Respondent serve Applicant, as requested, will not place an undue burden upon Respondent nor impair its ability to render adequate service to existing customers.

The Commission orders:

(A) Respondent is directed to establish physical connection of its natural gas transmission system with the facilities to be constructed by Applicant and to sell and deliver up to 790 Mcf of natural gas per day to Applicant, all as hereinbefore described and as more fully described in the application.

(B) Applicant shall be prepared to receive natural gas from Respondent within one year from the date of this order.

(C) Respondent shall notify the Commission of the commencement of service within 10 days thereof.

(D) Respondent shall execute and file with the Commission a service agreement with Applicant in accordance with the Commission's Regulations.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

VILLAGE OF THEBES, ILLINOIS AND TEXAS EASTERN TRANSMISSION CORPORATION, DOCKET NO. CP66–146

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued February 4, 1966)

On November 10, 1965, the Village of Thebes, Illinois (Applicant) filed in Docket No. CP66–146 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Texas Eastern Transmission Corporation (Respondent) to establish physical connection of its transportation facilities with the facilities proposed to be constructed by Applicant and to sell and deliver to Applicant volumes of natural gas for resale and distribution in Thebes, as more fully set forth in the application.

Applicant proposes to interconnect a lateral line with the facilities of Respondent at a point approximately three miles north of Thebes. From this point of connection Applicant proposes to construct a 2-inch high pressure lateral extending southward along Illinois State Route No. 3 to the town border station to be located at the northeast side of Thebes. Applicant also proposes to construct a complete distribution system to serve all prospective customers in Thebes, its vicinity, and along the proposed lateral line. The project appears economically feasible.

Estimated peak day and annual volumes required by Applicant are stated to be:

	First year	*Second year*	*Third year*
Annual (Mcf)	12, 772	16, 774	20, 895
Peak day (Mcf)	176	230	284

Total estimated cost of Applicant's proposed distribution system is $100,000, which cost will be financed through the issuance of gas revenue certificates pursuant to an agreement between Applicant and Midwest Securities Co.

On December 13, 1965, Respondent filed an answer to the application filed by Applicant in this proceeding stating it would render the requested service on order of the Commission favorably determining the merits of the application.

Due notice of the filing of the subject application and opportunity for hearing thereon have been given by publication in the Federal Register on November 25, 1965 (30 F.R. 14696). No protest, petition to intervene or request for hearing has been filed in this proceeding.

The Commission finds:

(1) Texas Eastern Transmission Corporation a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 11, 1947, in Docket No. G-880 (6 FPC 171).

(2) Applicant, Village of Thebes, Illinois, is legally authorized to engage in the local distribution of natural gas to the public within the meaning of Section 7(a) of the Natural Gas Act.

(3) It is necessary and desirable in the public interest to direct Texas Eastern to establish physical connection of its transmission facilities with the facilities proposed to be constructed and operated by Applicant, and to sell and deliver to Applicant under a service agreement to be executed by Applicant with Texas Eastern in accordance with the Commission's Regulations, up to 284 Mcf per day of natural gas for distribution and resale as hereinbefore described.

(4) The requirement that Respondent serve Applicant, as hereinafter ordered, will not impair Respondent's ability to render adequate service to its existing customers.

(5) Applicant should be prepared to receive natural gas from Respondent for distribution in Thebes, Illinois, environs, and along said lateral within one year from the date of the issuance of this order.

The Commission orders:

(A) Texas Eastern Transmission Corporation is directed to establish physical connection of its facilities with the facilities proposed to be constructed and operated by Applicant, as herein described, and to sell and deliver up to 284 Mcf of natural gas daily to Applicant under a service agreement to be executed by Applicant with Respondent in accordance with the Commission's Regulations, for distribution and resale as hereinbefore described and as more fully described in the application in the proceeding. Such service shall be rendered pursuant to Respondent's presently filed appropriate rate schedule.

(B) Respondent shall report to the Commission in writing the date of commencement of service to Applicant within 10 days thereof.

(C) Applicant shall be prepared to receive service as directed herein within one year from the date of issuance of this order.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

EDWARD O. BOSHELL, DOCKET NO. ID-1107

ORDER DISMISSING ORDER TO SHOW CAUSE

(Issued February 7, 1966)

By order issued October 18, 1965, 34 FPC 1166, Edward O. Boshell was ordered to show cause why the Commission should not find and determine that the continued authorization pursuant to Section 305(b) of the Federal Power Act to hold the positions of Director and Chairman of the Executive Committee of Duquesne Light Company and Director of Westinghouse Electric Corporation would be adverse to public or private interest.

The Commission has considered the answer and further showing made by the Respondent on November 5, 1965 and January 12, 1966, respectively. These pleadings indicate that, upon expiration of his term of office as a Director of Westinghouse Electric Corporation in April, 1968, Respondent will not be a candidate for re-election. In view of this fact, further proceedings in this docket are unnecessary and we conclude that the show cause order should be dismissed.

The Commission orders:

The order to show cause issued October 18, 1965 is hereby dismissed.

OPINION NO. 480-A

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP64-150; OKLAHOMA NATURAL GAS COMPANY, DOCKET NO. CP64-273; OKLAHOMA NATURAL GAS STORAGE COMPANY, DOCKET NO. CP64-273

OPINION AND ORDER ON REHEARING

(Issued February 7, 1966)

Syllabus

Upon rehearing, Commission *modifies* prior order to provide that gas storage transaction would not be jurisdictional if storage company depletes its Sayre storage balance to 6,000,000 Mcf within four years after initial five year period; in all other respects prior opinion and order is confirmed.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

Oklahoma Natural Gas Company (Oklahoma Natural) and Oklahoma Natural Gas Storage Company (Storage) on November 24, 1965, and Natural Gas Pipeline Company of America (Natural) on December 6, 1965, filed applications for rehearing in the above entitled proceeding. On December 23, 1965, we granted rehearing for purposes of further consideration.

In our Opinion No. 480 and order, 34 FPC 1258, we granted Natural a certificate to lease from Storage the Sayre underground storage field located in Beckham County, Oklahoma, for a period of 40 years. We also found that the mere sharing of a storage facility would subject neither of the parties to the jurisdiction of this Commission. However, the Commission noted that the instant transaction could involve a sale of gas for resale in interstate commerce within the intendment of the Natural Gas Act, to the extent that Storage delivered gas to Natural via the Sayre Field, albeit classified as cushion gas, and was paid therefore by Natural. Storage had indicated that it planned to inject and withdraw approximately 1,100,000 Mcf annually. The cushion gas attributable to this use of Sayre is 6,000,000 Mcf. Thus, we found that any gas, in addition to the 6,000,000 Mcf needed as cushion for Storage's use of the field, which Storage delivered to Natural and was paid therefor, was a sale of gas under our jurisdiction.

The application for rehearing filed by Storage contains an affidavit by Mr. C. C. Ingram, Vice President of Storage, which indicates that Storage intends to store up to 25,000,000 Mcf in Sayre, the maximum provided by the contract, for the entire term of the agreement. According to the affidavit, Oklahoma Natural intends to use this field capacity as a "bank" in order to conserve "distress" gasoline plant and casinghead gas which must be taken as produced regardless of market demand, or else vented or flared. In this respect, the affidavit further indicates that Oklahoma Natural must often contract to take larger volumes of gas or at faster rates than its markets require, and that the extra volumes are placed in storage to be withdrawn as needed. On that basis, both Storage and Natural contend that the agreement would not involve a transaction under our jurisdiction.

The parties have misinterpreted our opinion. In actuality, the affidavit for the first time makes clear that Storage would be transferring gas at Sayre to Natural which would "bank" the gas and redeliver it at some later time. In our opinion, such an operation would constitute an exchange of gas, which we have always construed as a sale (see Opinion No. 480, 34 FPC at 1263–1264). Under the rationale of *Lo-Vaca*,[1] this exchange, or sale, is one for resale in interstate commerce.

In other words, this is *not* merely an arrangement for joint use of storage facilities in which Natural is paying Storage, the present owner of the field, either a flat rental fee or a fee calculated on the basis of the amount of storage space made available to it. On the contrary, the more gas Storage transfers to Natural at Sayre, the more Natural will pay. Natural is obviously not paying additional amounts for the privilege of using storage space in the Sayre Field. Instead, it is paying the additional sums because of the use it makes of gas Storage is inserting into the field for Natural's purposes. As we said in our original opinion, this arrangement by which Storage would be compensated by Natural for amounts in excess of gas needed as cushion for Storage's intended use would constitute a sale of gas to Natural in interstate commerce within the meaning of Sections 1(b) and 7(c) of the Natural Gas Act.

---

[1] *California v. Lo-Vaca Gathering Co.*, 379 U.S. 366.

The parties emphasize that their proposed use of Sayre is economical and in all ways consistent with the public interest. This we do not doubt. The issue, however, is simply whether the transaction could be one governed by the Natural Gas Act, irrespective of the public benefits it offers.

Natural and Storage also argue that since their contract requires Storage to maintain 18,000,000 Mcf in the field during the first five years of operation, it would be impossible to reduce Storage's balance to 6,000,000 Mcf in the sixth year. In our opinion, this is a valid point. We shall therefore modify our order to provide that the transaction would not be jurisdictional provided that Storage depletes its storage balance in Sayre to 6,000,000 Mcf within four years after the initial five year period during which Storage is obliged to maintain a minimum of 18,000,000 Mcf.[3]

The Commission further finds:

The assignments of error and grounds for rehearing advanced by Natural and by Oklahoma Natural and Storage present no facts or legal principles which would warrant any change or modification in the Commission's Opinion No. 480 and accompanying order, except as supplemented by the discussion above, and included below.

The Commission orders:

The applications for rehearing filed by Natural, Oklahoma Natural, and Storage, although granted for purpose of further consideration, are now denied, and the Commission's Opinion No. 480 and accompanying order are confirmed as the opinion and order of the Commission in this proceeding as supplemented by this order; with the exception that the proviso section of paragraph (C) of said order is modified as follows: "* * * provided that petitioners, beginning in the sixth year of operations under the agreement, deplete the volume of gas stored in Sayre to their account by 3,000,000 Mcf per year so that, by the end of the ninth year of operation, they do not maintain in excess of 6,000,000 Mcf of gas in the Sayre Field for which additional amounts of gas, petitioners or either of them are directly or indirectly compensated by Natural.

---

[3] Under the agreement, Storage may withdraw 3,000,000 Mcf annually from Sayre, hence could withdraw 12,000,000 Mcf within the four year period.

OPINION NO. 486

THE MONTANA POWER COMPANY, DOCKET NOS. G-17370, G-17371

OPINION AND ORDER ADOPTING INITIAL DECISION OF PRESIDING EXAMINER

(Issued February 8, 1966)*

1. It is neither proper nor necessary to go beyond the Natural Gas Act in determining issues here. PP. 194; 204.
2. Intervenor's objections do not warrant denial of application; it is conceded that volume of imports is *de minimis* and "standing alone" imports afford little basis for expressions of alarm as to national security or health of domestic petroleum industry. P. 196.

---

*Initial decision appears on p. 197. Rehearing denied by order issued April 5, 1966, 35 FPC 473.

3. Assumption that denial of application will compel search for and discovery of new domestic gas and oil wells has not been established. PP. 196; 205.
4 Assertion that Commission is acting here without administrative standards or appropriate policy guidelines is without merit. P. 196.
5. Standards and guidelines expressed in prior decisions were applied to facts here and found affirmatively satisfied. P. 196.
6. Where existing Permit sufficiently provides for proposed additional imports no amendment or additional Permit is required. P. 206.
7. In a proceeding arising under Section 3 of the Natural Gas Act and Executive Order No. 10485, Commission *authorizes* importation of additional volumes of gas and *denies* motion for oral argument.

William H. Coldiron for The Montana Power Company

William I. Powell and *Frank X. Jordan* for Independent Petroleum Association of America

David S. Lichtenstein for the Staff of the Federal Power Commission.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

BAGGE, *Commissioner:*

This proceeding involves two applications filed on January 25, 1965, by The Montana Power Company (Montana Power) requesting first, in Docket No. G–17371, an order under Section 3 of the Natural Gas Act for authorization to import natural gas at an average daily rate of 20,000 Mcf (in addition to its presently authorized imports at an average daily rate of 30,000 Mcf) from Alberta, Canada, into the State of Montana; and second, in Docket No. G–17370, an amendment to its Presidential Permit under Executive Order No. 10485, making possible the importation of the increased quantities of gas.

The Independent Petroleum Association of America (IPAA or Intervener) participated in this proceeding pursuant to Commission order issued May 14, 1965. IPAA opposed the applications, alleging that the requested imports would have the effect of foreclosing substantial markets to domestic gas or oil supplies, and therefore would be in conflict with the purpose of the Mandatory Oil Import Program.[1]

By stipulation of the parties, the case was submitted on the basis of prepared written testimony and briefs without cross-examination of the witnesses for Montana Power. On October 18, 1965, *infra*, p. 197, Presiding Examiner Ewing G. Simpson issued an initial decision in which he ordered that authorization be granted to Montana Power to import from Canada the proposed additional volumes of natural gas. He found that Montana Power had established a need for this importation, and that such importation would not be inconsistent with the public interest. The examiner also found that the existing Presidential Permit sufficiently provided for the additional proposed imports and that no amendment or additional permit was required.

The proceeding is before the Commission on the examiner's decision, exceptions filed by IPAA, and answers to these exceptions. The basic issue presented is whether Montana Power's application for an order under Section 3 of the Natural Gas Act for the importation of gas from Canada should be denied.

---

[1] The Mandatory Oil Import Program was established by Presidential Proclamation No. 3279, dated March 10, 1959, after the Director of the Office of Civil and Defense Mobilization advised the President that imports of crude oil and its products and derivatives were threatening to impair the national security. The policy of the Mandatory Oil Import Program was to limit petroleum imports into the United States from foreign countries. In issuing the Proclamation, President Eisenhower stated: "The new program is designed to insure a stable, healthy industry in the United States capable of exploring for and developing new hemisphere reserves to replace those being depleted."

IPAA has filed a motion for oral argment and has asked that this argument be heard together with oral argument in the *Pacific Gas Transmission Company* proceedings, Docket No. CP65–213, *et al.*, asserting that these two proceedings involve similar issues. The issues in this proceeding have been adequately covered in the briefs and exceptions. Oral argument would contribute little which has not already been presented. The motion for oral argument will accordingly be denied.

Background

Montana Power, a corporation organized under State of Montana law, is engaged in the production, transmission and distribution of natural gas wholly within that state. Montana Power furnishes gas to the Cities of Butte, Anaconda, and Bozeman, as well as to areas in southwestern and south-central Montana. The system directly serves 74,300 retail users and furnishes gas to three other utilities which serve an additional 20,600 users.

Montana Power entered the gas business in 1931, at which time it secured its entire gas supply from fields in Montana. Late in the 1940's the applicant's searches for additional gas supplies in Montana and adjacent areas proved fruitless, and Montana Power then turned to Alberta, Canada, as the closest most economic source of supply. With Commission authorization,[2] Montana Power began to import Canadian gas in 1952. The Commission granted the applicant additional authorizations for such imports in 1955[3] and in 1960[4] upon the applicant's showing of the decline of its domestic reserves and its inability to discover new domestic supplies within feasible transmission distance.

In this proceeding Montana Power seeks to amend the Commission's 1960 order so as to increase the amount of gas to be imported by an average of 10,000 Mcf per day commencing November 1, 1966, and by an additional average of 10,000 Mcf commencing on or about November 1, 1967, but not to exceed, along with related imports presently authorized 60,000 Mcf in any one day.

The gas will be purchased in Canada from Alberta producers by Alberta and Southern Gas Company Ltd. (Alberta and Southern). It will be delivered by the latter to The Alberta Gas Trunk Line Company Ltd. (Trunk Line) for transportation to a point four miles north of the Montana-Alberta border. There the gas will be sold and delivered to Canadian-Montana Pipe Line Company (Canadian-Montana), a subsidiary of Montana Power engaged in the transportation of gas in Canada. The facilities now owned and used by Canadian-Montana and Montana Power in the importation of 30,000 Mcf per day will be used for the proposed imports, without additions. Montana Power has estimated that its cost for the proposed imports for the year 1968 will be 22.09 cents per Mcf (14.73 psia) delivered at the border.

In support of its application, Montana Power submitted estimates showing that its system total loads will increase from an actual 45,041,000 Mcf in

---

[2] *The Montana Power Company,* Docket No. G–1712, *et al.,* 1952, 11 FPC 1.

[3] *The Montana Power Company,* Docket No. G–2805, *et al.,* 1955, 14 FPC 227.

[4] *Pacific Gas Transmission Co., et al.,* Docket No. G–17350, *et al.,* 1960, 24 FPC 134. In this order the Commission authorized Montana Power to import an average quantity of 30,000 Mcf of gas per day, to a maximum of 36,000 Mcf per day and 10,950,000 Mcf per year, from western Alberta, and granted Montana Power a permit to construct, operate, maintain and connect facilities for this importation near Babb, Montana.

1964 to an estimated 55,518,000 Mcf in 1970. Montana Power calculated that its available supplies in the United States together with its contracted and proposed purchases from Alberta, including the gas which is the subject of this proceeding, will suffice to meet its needs only through 1968 and that by 1970 its requirements will exceed its supplies by an estimated 9,312,000 Mcf. The applicant further stated that it has not abandoned its exploration program for discovering domestic sources of natural gas, but that this program has not met with success, and that it must obtain gas from Canada in order to avoid the curtailment of deliveries and the denial of service to its prospective customers.

Montana Power's allegations as to its needed requirements of gas and its available resources were not disputed by the other parties. The ability of Alberta and Southern to obtain the volumes of gas contracted to Montana Power was stipulated. Official Canadian approval permitting the export of the gas has been obtained.[5]

IPAA's Objections

IPAA, a national trade organization representing more than 6,000 oil and natural gas producers, did not attack or attempt to refute Montana Power's presentation as to its need for the requested imports of gas. Intervener advocated, however, that the Commission should establish a policy whereby the approval of imports of natural gas would be correlated with the oil import restrictions of the Mandatory Oil Import Program. Intervener stated that it was not trying to keep Montana Power from getting something which it needed and could not get elsewhere, but was simply attempting to inform the Commission that growing imports of crude oil and natural gas liquids were having a "dampening" effect on the domestic oil industry. The essence of Intervener's case was summarized in its Initial Brief at page 19:

> Standing alone the additional volumes of foreign natural gas sought by applicant may not be sufficient to thwart or endanger this Nation's policy to limit imports in the interest of our national security. However, when added to that already being imported, other import applications now pending and still others certain to come, it can easily be seen that such increasing imports will pose a serious threat to the domestic petroleum producing industry and thus to our Nation's security.

Montana Power attacked Intervener's objections, stating that these were founded upon the fallacies of assuming that the problems of the oil and natural gas industries were identical and that the imported gas would supplant domestic production. Montana Power asserted that the policies of the Mandatory Oil Import Program are not applicable to the natural gas industry and pointed out that no domestic gas supplies would be supplanted by the imports, since its own discovery efforts in the areas near Montana had proved fruitless. Staff corroborated this statement as to the absence of an economic domestic source of gas and added that it might not be in the national security interest to foreclose needed imports of gas, forcing the consumption of domestic reserves at the fastest possible rate at the highest possible price.

---

[5] Alberta and Southern has secured a permit (No. AS64-3) from the Alberta Oil and Gas Conservation Board, approved by the Lieutenant Governor in Council (O.C. 1941/64), authorizing the removal of the gas involved during the term ending October 31, 1989. Montana Power has also filed a certified copy of the license issued to Canadian-Montana by the National Energy Board of Canada (No. GL-17), approved by order in Council (P.C. 1486), authorizing the exportation.

The Examiner's Initial Decision

The examiner proposed in his initial decision that authorization be granted to Montana Power to enable it to import its requested volumes of gas. The examiner found that these imports would not be inconsistent with the public interest, and he found no support of record fact for Intervener's contention that this authorization would be contrary to the national policy.

With respect to Intervener's argument that imports of gas serve to supplant domestic petroleum products, the examiner concluded that this argument was essentially the displacement-of-fuels objection raised by coal, oil and related interests in earlier proceedings before the Commission. He pointed out that it had been generally held that the interests of competing fuels would be considered along with those of all others,[6] but that the authorization for gas would be granted where it appeared that preponderant advantages would attend its use, or that an overbalancing public benefit would result.[7] The examiner found that, measured by these standards, Montana Power's proposal merited approval, particularly in view of the applicant's inability to solve in any other way its problem of dwindling reserves.

IPAA's Exceptions To The Examiner's Initial Decision

IPAA's exceptions to the examiner's decision recite seven alleged errors, all relating to the examiner's refusal to find that the denial of Montana Power's application was required by operation of the Mandatory Oil Import Program. Intervener contended that the examiner erred (1) in not going beyond the Natural Gas Act and in not taking cognizance of the Mandatory Oil Import Program; (2) in not taking judicial notice of such Import Program; (3) in failing to consider national security problems arising from U.S. consumer dependency on foreign supplies; (4) in finding that the proposed imports would not adversely affect the incentive to explore for and develop domestic reserves; (5) in finding that the proposed imports would not endanger the national policy of limiting oil imports; (6) in not considering the national security implications of this proceeding; and (7) in not considering the long-term interest of the applicant's customers.

We find that Intervener's exceptions are not persuasive and, indeed, are not factually accurate. As to exceptions (1) and (2), the examiner's decision shows that he took full cognizance and judicial notice of the Mandatory Import Program in arriving at his findings.[8] Furthermore, contrary to exceptions (3), (5), (6), and (7), he gave adequate consideration to the questions of national security and long-term consumer interest. And finally, with respect to exception 4, the examiner had ample basis for finding that the applicant's proposed imports would not adversely affect the incentive to explore for and develop domestic reserves.[9]

---

[6] *American Louisiana Pipe Line Co., et al.* (G–2306, *et al.*, 1958), 20 FPC 575, 608, 609.

[7] *Southern Natural Gas Co.* (G–14740, 1962), 28 FPC 283; *Coastal Transmission Corp., et al.* (G–18338, *et al.*, 1961), 26 FPC 318, 325.

[8] The examiner pointed out (*infra*, pp. 202, 203) that during the period when the oil import program was being formulated, natural gas received infrequent mention, and only in general terms, with no indication that natural gas had any association, potential or otherwise, with the matters under consideration.

[9] The examiner noted (*infra*, p. 204) that natural gas imported from Canada is currently averaging some 2.48 percent of domestic market production, and is transmitted to twelve states by pipe lines, after various approvals by the Commission based upon a demonstrated public need. He observed (*infra*, p. 203) that consideration of the matters mentioned in the FPC Annual Reports to Congress did not give any indication that imports of gas confronted domestic oil and gas exploration and development programs with an emergency.

Section 3 of the Natural Gas Act provides that the Commission shall, upon application, issue an order for importing natural gas from a foreign country, unless, after opportunity for hearing, it finds that the proposed importation will not be consistent with the public interest. In this proceeding Montana Power has made a convincing *prima facie* showing of its need for the requested imports, of its inability to discover new accessible domestic gas fields, and of the practicability of piping the Alberta gas into Montana. Intervener has not refuted Montana Power's showing of need, nor has it been able to demonstrate that domestic sources of gas are readily available to supplement Montana Power's dwindling reserves. The urgency of the applicant's position assumes particular significance in light of the fact that part of the gas to be imported will be used to replace gas which was formerly purchased from Montana-Dakota Utilities, but which is no longer available,[10] and also in light of the fact that Montana Power's industrial customers include mining and metal processing interests of importance to the national security.

Intervener's objections do not warrant the denial of Montana Power's application. Indeed, IPAA conceded that the volume of imports involved in this proceeding is *de minimis* and that Montana Power's proposed imports "standing alone" afford little basis for Intervener's expressions of alarm as to the national security or the health of the domestic petroleum industry. To the extent that Intervener's case is based upon its assumption that the denial of Montana Power's application will compel the search for and discovery of new domestic gas and oil wells, Intervener has not established its case.

Intervener asserted that the Commission is acting without administrative standards or appropriate policy guidelines in ruling upon applications for the importation of Canadian natural gas. We find that this argument is without merit. The Commission's standards and guidelines in proceedings of this type have been enunciated repeatedly in *Northwest Natural Gas Company, et al.*, G-966, *et al.*, 13 FPC 221, 235 (1954); in *American Louisiana Pipe Line Company, et al.*, G-2306, *et al.*, 20 FPC 575, 591 (1958); and in *Pacific Gas Transmission Company, et al.*, G-17350, *et al.*, 24 FPC 134, 135 (1960). The Commission's concern for the protection of the consuming public, the adequacy of the available supply of gas, and the effect of the importation of gas upon national security and national welfare has been plainly expressed in the above decisions. We have applied these standards and guidelines to the facts of this case, and we affirmatively find that they are here satisfied.

We accordingly approve and adopt the examiner's findings and conclusions with respect to Montana Power's application, to the extent not inconsistent with the foregoing discussion.

The Commission further finds:

(1) The Montana Power Company is a "person" within the meaning of Section 2(1) and Section 3 of the Natural Gas Act.

(2) The Montana Power Company owns and operates a natural gas production gathering, transmission and distribution system in the State of Montana for the sale of natural gas for ultimate public consumption within that State; its rates for natural gas service are regulated by the Public Service Commission of Montana; and the gas which it proposes to receive from Canadian-Montana Pipe Line Company at the international border will be used solely in Montana.

---

[10] The Commission authorized Montana-Dakota to abandon its sales to Montana Power effective January 1, 1965, by order issued November 4, 1964, in Docket No. CP65-36, 32 FPC 1271.

(3) The importation of natural gas herein proposed by The Montana Power Company should be authorized subject to the conditions stated in ordering paragraphs below.

(4) The Presidential Permit issued to The Montana Power Company on September 19, 1960, in Docket No. G–17370, which is presently used by The Montana Power Company to import 30,000 Mcf per day day of natural gas as authorized in Docket No. G–17371, from Canada into the United States, sufficiently provides for the additional imports proposed, and no amendment or additional Permit is required.

(5) The exceptions to the examiner's decision should be denied.

The Commission orders:

(A) The Montana Power Company is authorized, subject to the conditions specified herein, to import from Canada into the United States additional gas to an average of 10,000 Mcf per day commencing on or about November 1, 1966, and to an average of 20,000 Mcf per day commencing on or about November 1, 1967, at a point of interconnection on the International Boundary, all as more fully described in the application filed herein in Docket No. G–17371 and the evidence received in these proceedings.

(B) The authorization granted is subject to the applicable terms and conditions of the Commission's order issued to The Montana Power Company in Docket No. G–17371, August 5, 1960 (24 FPC 134).

(C) The examiner's decision, to the extent not inconsistent herewith, is adopted as part of this Opinion and Order.

(D) The exceptions to the examiner's decision are denied.

(E) The motion for opportunity to present oral argument before the Commission is denied.

INITIAL DECISION

OF THE PRESIDING EXAMINER UPON AN APPLICATION TO AMEND A PRESIDENTIAL PERMIT AND TO AMEND AN ORDER ISSUED UNDER SECTION 3 OF THE NATURAL GAS ACT AUTHORIZING THE IMPORTATION OF NATURAL GAS

(Issued October 18, 1965)

SIMPSON, *Presiding Examiner:* The proceeding arises upon applications filed by The Montana Power Company (Montana Power) under Section 3 of the Natural Gas Act (Act) and Executive Order 10485 dated September 3, 1953 (18 F.R. 5397; 3 CFR, 1949–53 Comp. 970); the former of which provides, in part, to the effect that the Commission shall issue an appropriate order authorizing the importation of natural gas from a foreign country "upon application, unless after opportunity for hearing, it finds that the proposed * * * importation will not be consistent with the public interest," and the latter of which provides in part, that upon a finding of consistency with the public interest, and after obtaining the favorable recommendations of the Secretary of State and Secretary of Defense, the Commission is authorized to issue a permit for the construction, operation, maintenance, or connection at the borders of the United States, of facilities for the importation of natural gas from a foreign country.

Previously, by opinion and order issued August 5, 1960, in *Pacific Gas Transmission Company, et al.*, Docket No. G–17350, *et al.*, 24 FPC 134, the Commission, finding that the importation of gas by Montana Power would not be inconsistent with the public interest (G–17371), and that the construction, operation, and maintenance of facilities for the importation of gas at the border as proposed would be consistent with the public interest (G–17370).

authorized Montana Power, as there provided, to import natural gas from Canada at an average daily rate of 30,000 Mcf (G–17371), and issued a Presidential Permit in relation to facilities which took effect upon favorable recommendations of the Secretary of State and the Secretary of Defense thereon (G–17370).[1]

In this case, on January 25, 1965, Montana Power filed in Docket No. G–17371 an application to amend the above order, issued August 5, 1960,[2] and on the same date filed in Docket No. G–17370 an application to amend the Presidential Permit,[3] requesting authorization to import natural gas at an ultimate average rate of 20,000 Mcf per day in addition to the average daily rate of 30,000 Mcf and permission to maintain and operate the facilities under the Permit for importation of the additional volumes, stating, however, that the construction of additional facilities would not be required.

On February 10, 1965, the Secretary issued Notice of Application; and, within the time therein provided, the Independent Petroleum Association of America (Intervener) filed its petition to intervene; and on April 6, 1965, Montana Power requested a prehearing conference to expedite the hearing.

On May 14, 1965, the Commission issued its order permitting intervention[4] and on May 24, 1965, its further order "Fixing Dates for Pre-hearing Conference and Formal Hearing" wherein it directed that the proposed evidence comprising the several cases in chief be filed and served on or before June 18, 1965; that a prehearing conference be held commencing on June 28, 1965, to determine further procedures and means by which the conduct of the hearing might be facilitated; and that a public hearing on the issues presented be held commencing on July 12, 1965, at the place and time specified.

Thereafter, Montana Power alone having served proposed evidence in chief, these matters came on for prehearing conference and for hearing commencing and concluding, respectively, on the dates directed. At the conference, participants stipulated as to several procedural and substantive matters, and, following the hearing, filed simultaneous main and reply briefs.

THE ISSUES

The basic "public interest" issue in this proceeding arises under the terms of Section 3 of the Act and Executive Order No. 10485, dated September 3, 1953. Section 3 requires that the Commission issue an order in the premises unless it find that the proposed importation will not be consistent with the public interest, and the Executive Order empowers the Commission to issue a permit for operation and maintenance of the related border facilities if it finds the issuance to be consistent with the public interest.[5]

Further, and to the extent the nature of the case requires, certain matters ordinarily considered in certificate proceedings under Section 7 of the Act are proper subjects for consideration in relation to authorizations sought under

---

[1] Formally issued September 19, 1960.

[2] Previously amended, November 20, 1961, to authorize Applicant to continue the importation following a corporate merger which included a change in domicile (*The Montana Power Company, et al.,* (Docket No. G–2805, *et al.*) 26 FPC 746).

[3] Previously amended, November 20, 1961, to substitute Applicant as holder of the Permit following a corporate merger, (*Ibid*).

[4] Limited to matters affecting asserted rights and interest set forth in the petition, and providing that the permission did not constitute a recognition that petitioner might be aggrieved by any order entered in the proceeding.

[5] A finding in regard to Section 3 should be effectively dispositive; see, *The Montana Power Company* (Docket No. G–2805, *et al.,* 1955), 14 FPC 227, 229–230.

Section 3.[6] The Intervener in this proceeding raises the sole question whether the Mandatory Oil Import Program, initiated by Presidential Proclamation No. 3279 dated March 10, 1959, does not require the Commission to adopt parallel restrictions with respect to the importation of natural gas or guidelines consistent with the policies of that Program.

THE CONTENTIONS

Montana Power contends that the importation proposed is consistent with the public interest in that it needs the additional supply both to meet the fuel requirements of customers and to maintain reasonable rates; and that failure to find gas in Montana requires that additional gas be secured from Canada.

The Intervener contends that the "public interest" language of Section 3 of the Act is so general as to require that the Commission establish interpretative guidelines with respect thereto; that imports of natural gas are increasing at a rate faster than the increase in domestic natural gas production; that the production of natural gas and liquid petroleum is inseparable and income denied domestic oil and gas producers by increasing imports of natural gas depresses the effort to find and develop new petroleum reserves; and, that it would be contrary to the public interest to approve Applicant's proposal before the establishment by the Commission of a policy governing imports of natural gas which would be consistent with the Mandatory Oil Import Program and the national security. However, Intervener concedes that, in fact and standing alone, the import of these immediate volumes may not endanger the alleged national policy of limiting imports in the interest of national security.

Staff, in general accord with Applicant's contentions, further contends that the record provides no basis, in fact or in law, for a finding that the importation in this case would conflict with the policy of the Mandatory Oil Import Program, and recommends as appropriate in the circumstances and consistent with the public interest, that an order be issued authorizing the importation on condition, however, that the Canadian National Energy Board issue the requisite export authorization.

THE EVIDENCE

Montana Power's Previously Authorized Imports

Montana Power entered the gas business in 1931, constructing a gas transmission line from the Cut Bank Field in northern Montana to the Cities of Butte and Anaconda and southwestern Montana, with provision for service to certain intermediate cities. Prior to 1950 it built a transmission line extending from the Dry Creek Field in south central Montana to the City of Bozeman, and in the latter year interconnected the two lines. The system serves, directly and indirectly, approximately 94,900 users,[7] all within the State, of which some 84,400 are in the residential category.

Montana Power commenced the importation of Canadian gas under an authorization and permit issued by the Commission in 1952, when confronted with a decline in the indicated remaining life of domestic reserves to some 11 years, and an immediate deficiency in deliverability from existing sources sufficiently severe to have imposed a discontinuance of service to Montana Power's largest single industrial user of natural gas, with accompanying disadvantages to the public and detrimental effects to the nation's defense effort of the period. Accordingly, and consistent with the terms of the Canadian authorizations, the Commission authorized the importation of a maximum of 40,000 Mcf per day to a total of 10,000,000 Mcf per year, for the specific use of the industrial customer, for a period ending April 7, 1956.[8]

---

[6] See, *The Montana Power Company* (Docket No. G-1712, *et al.*, 1952), 11 FPC 1, 7; *cf., The Montana Power Company,* Docket No. G-2805, *et al.*, 1955) 14 FPC at pp. 237-238.

[7] Directly at retail approximately 74,300 and indirectly through wholesale to three other utilities some 20,600 more.

Thereafter, in order to further and more permanently supplement domestic reserves, and having again been unsuccessful in its search for additional gas in domestic areas within feasible transmission distance of its system, Montana Power sought, by application filed September 17, 1954, to import natural gas from southeastern Alberta, Canada, in an amount equal to 100,000 Mcf per day and 20,000,000 Mcf over any consecutive 12-month period for a period of 20 years.[9] The importation, which was expected to increase life of reserves from some 9 years to an estimated 16 or more years, was authorized for a period ending in 1974.

However, deliveries under this last authorization proved to be less than expected, and on December 30, 1958, Montana Power again filed an application, seeking authorization to import from western Alberta, Canada, additional volumes of natural gas (G–17371), and permission to construct, operate, maintain, and connect facilities therefor at the international boundary (G–17370) near Babb, Montana. Pursuant to subsequent proceedings in these dockets Montana Power was duly authorized to import, as it had requested, an additional average quantity of 30,000 Mcf of gas per day, to a maximum of 36,000 Mcf per day and 10,950,000 Mcf per year, and was granted the permit sought.[10]

The Pending Application

In the immediate application Montana Power seeks to increase the amount of gas to be imported by an average of 10,000 Mcf per day commencing November 1, 1966, and an additional average of 10,000 Mcf commencing on or about November 1, 1967, but not to exceed, along with related imports presently authorized, 60,000 Mcf in any one day.

As in the prior proceedings (G–17370 and G–17371) the additional gas will be first purchased in Canada by Alberta and Southern Gas Company, Ltd. (Alberta & Southern), from producers in various Alberta fields, and will be delivered by the latter to The Alberta Gas Trunk Line Company, Ltd. (Trunk Line), for transportation to a point some 4 miles north of the Montana-Alberta border, where it will be sold and delivered to Canadian-Montana Pipe Line Company (Canadian-Montana),[11] a subsidiary of Montana Power engaged in the transportation of gas in Canada. Facilities presently owned and used by Canadian-Montana and Montana Power in the transportation and importation of the 30,000 Mcf per day, would be used for the proposed additional imports, without additions.

---

[8] *The Montana Power Company* (G–1712, *et al.*, 1951) 11 FPC 1.

[9] *The Montana Power Company* (G–2805, *et al.*, 1955) 14 FPC 227; also filing on the same date for a permit to operate and maintain existing facilities for the importation proposed in the new proceedings. Volumes stated on a pressure base of 14.4 psia.

[10] *Pacific Gas Transmission Co., et al.* (G–17350, *et al.*, 1960) 24 FPC 134, a consolidated proceeding including the applications of Montana Power in Docket Nos. G–17370 and G–17371.

[11] Pursuant to a contract and a letter agreement received in evidence herein as Items D and E, respectively. It is estimated that the cost to Montana Power of gas purchased from Alberta and Southern Gas Co., Ltd., for the year 1968, the first year the full quantities of the additional gas requested to be imported will be received, will be 22.09¢ per Mcf (14.73 psia) delivered at the border.

Requirements

Montana Power estimates increases in the requirements of its residential, commercial, and firm industrial customers for the years 1965–1970 at approximately 2½ percent per year; increases for its utility customers either on the basis of past experience or on the utility's estimate of its anticipated growth for the period; and increases for interruptible industrial loads on the basis of known plans of existing customers. Results of these procedures, including an unallocated 750,000 Mcf per year to become available in 1966, indicate system total loads ranging from the actual 45,041,000 Mcf of 1964 to an estimated 55,518,000 Mcf in 1970, as follows:[12]

	1964 (Actual)	1966 (Estimated)	1968 (Estimated)	1970 (Estimated)
	Mcf	*Mcf*	*Mcf*	*Mcf*
Residential	9,830,000	10,253,000	10,882,000	11,446,000
Commercial	6,598,000	6,790,000	7,204,000	7,577,000
Firm industrial	1,328,000	2,045,000	2,133,000	2,212,000
Other utilities	6,708,000	6,997,000	7,458,000	7,939,000
Sub total	24,464,000	26,085,000	27,677,000	29,174,000
Interruptible industrial	19,146,000	22,354,000	23,871,000	25,389,000
Storage—net	379,000	405,000	405,000	405,000
Exchange	606,000			
Sub total	44,595,000	48.844,000	51,953,000	54,968,000
Company use and loss	446,000	488,000	520,000	550,000
System total	45,041,000	49,332,000	52,473,000	55,518,000

Supply

Montana Power estimates its available supply by adding to the estimated production from properties owned by it in the United States and subsidiaries in Canada, the contract quantity to be purchased in Canada from Alberta & Southern, including the additional gas which is the subject of this proceeding. The former relating to fields having a production history and well-established production characteristics, is based upon pressure decline and other field data, as well as company records and deliverability studies of the type in general use in system planning. Estimated supplies, requirements, and deficits for the period 1965–1970 compare, therefore, as follows:[13]

Sources	1964 (Actual) Mcf	1966 (Estimated) Mcf	1968 (Estimated) Mcf	1969 (Estimated) Mcf	1970 (Estimated) Mcf
Canadian	27,878,000	31,452,000	38,142,000	36,920,000	34,676,000
Domestic	17,163,000	17,880,000	14,331,000	13,255,000	11,530,000
Total	45,041,000	49,332,000	52,473,000	50,175,000	46,206,000
Requirements	45,041,000	49,332,000	52,473,000	54,000,000	55,518,000
Deficit				(3,825,000)	(9,312,000)

While Montana Power has not abandoned its exploration program it has not met with success in past endeavors. To avert deficits otherwise anticipated, resulting curtailment of deliveries and denial of service to prospective customers, it is apparent that the foregoing gas requirements have to be met by the purchase of the proposed additional gas from Alberta & Southern.

---

[12] To shorten, setting forth estimates only for alternate years, with volumes stated on a base of 14.73 psia.

[13] To shorten, again setting forth estimates only for alternate years but including 1969 as the expected first year of deficit, with volumes stated on a base of 14.73 psia.

It is found, therefore, and is not disputed, that the additional volumes of gas here at issue are necessary to enable Montana Power to meet requirements which are reasonably to be expected within the next several years, and that approval of these proposed imports will serve to benefit both present customers and the economy of the State by providing additional gas for domestic, commercial, and industrial use. It also appears, and is not disputed, that failing to obtain this additional gas Montana Power would be unable adequately to discharge its public utility obligations to present customers or the general public, and that the former would suffer, therefore, either curtailed service or the necessity of costly conversions to more expensive fuels.

The ability of Alberta & Southern to obtain the volumes contracted to Montana Power is stipulated and receives corroborative support in the action of the Canadian authorities in granting the hereinafter referred to approvals permitting the export. The evidence of record also indicates that no difficulty is anticipated in the matter of securing permits for such construction of additional facilities as may be required by Alberta & Southern and Trunk Line.

Permits

Alberta & Southern has secured a permit (No. AS 64–3) from the Alberta Oil and Gas Conservation Board approved by the Lieutenant Governor in Council (O.C. 1941/64) which authorizes removal of the gas here involved during the term ending October 31, 1989, and by letter dated September 1, 1965, Montana Power filed with the Secretary a certified copy of the license issued to Canadian-Montana by the National Energy Board of Canada (No. GL–17), approved by order in Council (P.C. 1486), which authorizes the exploration from Canada.

Intervener's Objections

Intervener seeks to have established in this proceeding a policy applicable to the approval of imports of natural gas which would be correlated with the oil import program restricting imports of petroleum and petroleum products.

Intervener offered no evidence in support of this purpose but refers in its Brief to the White House press release of February 26, 1955, entitled "Report on Energy Supplies and Resources Policy", to "Recommendations to the President of the United States from the President's Special Committee to Investigate Crude Oil Imports" of July 29, 1957, which latter preceded the establishment of the initial voluntary oil import program,[14] and to a number of other items such as the resolution of the Petroleum Industry War Council dated October 24, 1945,[15] recommendations of the National Petroleum Council to the Secretary of Interior dated January 13, 1949,[16] and other government studies and reports which appear to contain certain conclusions as to the importance of petroleum to the national defense, the effect of excess imports upon domestic exploration and development programs, and the decline in domestic well drilling.[17]

---

[14] Montana Power and Staff in stipulating to Intervener's reference to the two items did not concede admissibility or weight. The voluntary oil import program was put into effect, apparently, July 1, 1957, and continued until March 10, 1959, when the President, by Proclamation No. 3279 of even date, established the mandatory oil import program, applicable to crude oil and the products and derivatives thereof, which is administered by the Oil Import Administration under the Secretary of Interior.

[15] Declaring it should be the national policy to limit oil imports to quantities required to augment domestic production.

[16] Advising that imports of oil in excess of economic needs above domestic production would retard domestic exploration and oil field development essential to the nation's economic welfare and security.

Intervener concedes that the oil import program was not developed upon the basis of a simple exclusion of imports and only after an exhaustive search by both legislative and executive branches of the Federal government over a period of 15 years for a method of determining a reasonable balance between imports and domestic production, with apparent due regard to the effect which restrictions would have upon relations with foreign countries, and the importance of the development of petroleum reserves in foreign areas by permitting participation of such sources in meeting the growth in domestic demand. No possible result of considering here such broad questions as the foregoing could alter the fact that Montana Power has had to turn to Canadian sources after failure of its own exploration program and that the additional imports for which authorization is here sought, are required for service to its customers as early as 1966.

Intervener's references also indicate that during the period of formulation of the oil import program natural gas received infrequent mention, and, as in the statement of the Secretary of Interior before the House Ways and Means Committee in May 1953, and in the directive of the President to the Advisory Committee on Energy Supplies and Resources Policy in 1954, only in general terms, with no indication that natural gas had any association, potential or otherwise, with the matters then under consideration.[18] Indeed, prior to 1962, imports of natural gas appear to have been relatively negligible in relation to the much larger domestic net production.[19]

Nor does consideration of such matters as are mentioned in the FPC Annual Reports to Congress give any indication that imports of gas confront domestic oil and gas exploration and development programs with an emergency. But rather, these Reports tell of continuing pipeline construction activity, the expansion of distribution facilities into new suburban areas, the general growth of markets,[20] the expansion of commercial and residental uses in parallel with a rapid growth in commercial construction and upward trend in the sales of gas heating equipment and other domestic gas using appliances, as well as an increasing use of gas in important segments of industry.[21]

The Reports do indicate that reserve additions are increasing at a slower rate than the increase in production, but add that there are reasons to believe search for new reserves may succeed in keeping pace with increasing demands and, more to the point, that increased imports may prove a long range supplement to domestic discovery rates and a cover for such deficiencies as may develop therein,[22] a matter given specific consideration by the Commission in decisions authorizing the importation of Canadian gas in *St. Lawrence Gas*

Company, Inc., et al., (G–17500, *et al.*, 1961) 26 FPC 265, 268,[23] and Montana Power's earlier proceedings in Docket Nos. G–2805 and G–2806.[24]

Natural gas imported from Canada, averaging some 2.48 percent of domestic market production, is transmitted to some twelve states[25] by pipe lines, including Midwestern Gas Transmission Company,[26] El Paso Natural Gas Company,[27] The Montana Power Company,[28] St. Lawrence Gas Company, Inc.,[29] and Tennessee Gas Transmission Company,[30] after various approvals by the Commission based upon a demonstrated public need. While the Annual reports[31] and Commission decisions[32] indicate the existence of geological conditions which appear to afford a basis for indicating a future finding of larger reserves in Canada, there is nothing in this record that requires rendering a decision upon the premise that this portends any immediate marked relative increase in Canadian imports.[33] In any event, neither the immediate record nor any other matter properly within the cognizance of the Presiding Examiner indicates the propriety or the necessity of going beyond the Natural Gas Act and the policies expressed therein[34] for the purpose of determining the issues of this proceeding.

Intervener also asserts that imports of natural gas serve to supplant domestic petroleum products and to provide natural gas liquids which compete in domestic markets to the disadvantage of the domestic petroleum industry. Intervener describes the impact of imports of Canadian natural gas for which authorizations have been approved in terms of energy equivalent barrels of crude oil;[35] although it has been said that petroleum fuels have such a broad utilization that oil itself is only in partial competition with natural gas.[36] Intervener's immediate approach, although bearing upon the broader import problem presented above, also relates to the displacement-of-fuels objection raised by coal, oil, and related interests in earlier proceedings before the Commission, in which it has been generally held that the interests of competing fuels are to be considered along with those of all others,[37] but that the authorization sought (certificate) would be granted where it appeared that preponderant advantages would attend the proposed use of the gas,[38] or an overbalancing public benefit would result.[39] As issues of this nature go to that of the public interest,[40] the Commission has also applied these principles in import cases, particularly in regard to Montana Power's earlier applications where Canadian imports were authorized[41] on a holding, generally expressed, that Section 3 of the Act does not require that unavoidable adverse consequences to competing fuels be given such paramount consideration as to control the ultimate determination as to public interest.

---

[23] Where it is stated, in part: "In view of the decline in the reserve life index of proved recoverable reserves in the United States, and the increasing use of gas, a matter which has come to our attention incessantly, we agree with the examiner that this is a factor which weighs in favor of the St. Lawrence projects" (268).

[24] *The Montana Power Company* (G–2805, *et al.*, 1955) 14 FPC 242; affirming the Presiding Examiner's decision at 14 FPC 227, wherein the latter stated: "Finally, it is common knowledge that natural gas is a highly valuable resource available in limited exhaustible quantities in the United States. It seems self-evident that any reasonable augmentation of our limited domestic supplies is desirable unless clearly outweighed by damage to the public interest" (240).

Canadian sources of supply are of particular moment to Montana Power, for the problem of dwindling reserves and unsuccessful efforts to find supplemental sources of supply in Montana and adjacent areas which first confronted Montana Power in the 1940s has not been solved. Despite continuing exploration no significant local discoveries have resulted,[42] and the grave doubts expressed by the Commission in a prior decision, as to the probability of discovery of gas in appreciable volume in Montana, or within range of economic transmission to Montana Power's gas system elsewhere than in Canada,[43] are confirmed by the evidence received in this case, and in all the circumstances it is not to be concluded that the importation proposed would have adverse effects upon the incentive to explore for and develop domestic reserves of either gas or oil.[44]

The Public Interest

It is found and concluded that Intervener's contention that granting an authorization or approval in the record herein would be to proceed contrary to a long-established national policy with respect to petroleum imports that is applicable to natural gas has no foundation of record fact; that the proposed additional importation will not be inconsistent with the public interest; and that the same should be authorized as hereinafter provided.

[42] The last large discovery of gas in Montana appears to have been that of the Cut Bank field in 1926.

[43] *The Montana Power Company* (G–2805, *et al.*, 1955) 14 FPC 227, 237.

[44] More broadly along this line, the Commission's 1964 *Annual Report* makes note of the absence of apparent major changes in the outlook for domestic leasing and exploration activities, even though annual imports from Canada totaled some 356,455,000 Mcf, *i.e.*, 2.42 percent of the corresponding 1963 domestic production of 14,746,663,000 Mcf, *Minerals Yearbook* (1964) U.S. Bureau of Mines, p. 346.

The Application for a Presidential Permit

Montana Power also applies for a Presidential Permit to continue to maintain and operate existing facilities at the border for the importation here proposed. The facilities were authorized by the Permit issued September 19, 1960, in Docket No. G–17370, and are presently used to import the 30,000 Mcf per day of natural gas authorized in Docket No. G–17371. The importation of the additional gas at the same point of interconnection and by the same facilities avoids the necessity of constructing any other facilities for the purpose, and no change or alteration in the existing facilities is required.

The existing Permit which grants permission to construct, operate, maintain, and connect the aforesaid natural gas border facilities provides that these are to be utilized for the transportation of natural gas from Canada to the United States in the amount, at the rate, and in the manner authorized by the Commission under Section 3 of the Act.[45]

Under these circumstances it is apparent that the terms of the existing Permit sufficiently provide for the additional imports proposed and no amendment or additional Permit is required.[46]

FURTHER FINDINGS AND CONCLUSIONS

Montana Power is a "person" within the meaning of Section 2(1) and Section 3 of the Act. It owns and operates a natural gas production gathering, transmission and distribution system in the State of Montana for the sale of natural gas for ultimate public consumption within that State; its rates for natural gas service are regulated by the Public Service Commission of Montana; and the gas which it proposes to receive from Canadian-Montana at the international border will be used solely in Montana.

The importation of natural gas herein proposed should be authorized subject to the conditions stated in the Order included as a part of this decision.

Proposed findings and conclusions inconsistent with the findings and conclusions of this decision are hereby denied.

ORDER

Upon consideration of the record herein, the contentions set forth in the briefs and proposed findings of respective counsel, and for the reasons and upon the findings and conclusions set forth in the foregoing portions of this decision, of which this Order is a part,

IT IS BY THESE PRESENTS ORDERED, subject to review by the Commission on appeal, or on its own motion, as provided by its Rules of Practice and Procedure, that:

(A) Authorization is hereby issued to The Montana Power Company to import from Canada additional gas to an average of 10,000 Mcf per day commencing on or about November 1, 1966, and to an average of 20,000 Mcf per day commencing on or about November 1, 1967, all as more fully described in the application filed herein in Docket No. G–17371 and the evidence received in these proceedings.

---

[45] The facilities covered by the existing Permit consist of that portion of the 16-inch pipeline, extending approximately 51 miles from near Cut Bank, Montana, to the border, which is located at the boundary where it connects with a 16-inch pipeline extending northerly into the Province of Alberta, Canada. The permit is not limited to a stated term.

[46] *Midwestern Gas Transmission Co., et al.* (CP64–308, *et al.*, 1965) Opinion No. 469, 34 FPC 457 at 460.

(B) The authorization hereby granted is subject to the applicable terms and conditions of the Commission's order issued to The Montana Power Company in Docket No. G–17371, August 5, 1960 (24 FPC 134).

EWING G. SIMPSON,
Presiding Examiner.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

ST. CROIX PAPER COMPANY, PROJECT NO. 2492

ORDER GRANTING REHEARING

(Issued February 8, 1966)

On January 14, 1966, Philip J. Hennessey, III, filed for himself and others, an application for rehearing on the Commission's order issued December 17, 1965, 34 FPC 1482, denying petition to intervene in the above-entitled license proceeding.

The Commission finds:

It is appropriate and in the public interest to grant rehearing on the aforesaid order, as hereinafter provided.

The Commission orders:

Rehearing on the aforesaid order issued December 17, 1965, is hereby granted for further consideration.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

SKELLY OIL COMPANY, ET AL., DOCKET NO. G–18638, ET AL.

ORDER PERMITTING FILING OF FACT STATEMENTS AND BRIEFS

(Issued February 8, 1966)

By our Order and Opinion No. 362, issued August 30, 1962, 28 FPC 401, we granted permanent certificates of public convenience and necessity under Section 7 of the Natural Gas Act to thirteen producers in fifteen dockets for sales of natural gas in Texas Railroad Commission District No. 4 at conditioned initial prices of 15 cents per Mcf.

Twelve of the producers, involved in fourteen of the fifteen dockets, had charged and collected rates in excess of the "in-line" price of 15 cents per Mcf while making sales under temporary certificates.[1] We did not order refunds of the excess collected because the temporary certificates contained no refund conditions.

On appeals by intervenors The United Gas Improvement Company, Long Island Lighting Company, and Public Service Commission of the State of New York, the Circuit Court of Appeals for the District of Columbia held that the power to order refunds did not depend upon explicit refund provision in the temporary authorizations. That power, the court declared, "resides in the Commission when it grants a permanent certificate. To hold that it may not then require refund of excessive prices previously permitted without notice or hearing or mature consideration, since the Commission acted on an emergency basis, would be inconsistent with the regulatory responsibility of the Commission to aid in the ascertainment and authorization of just and reasonable rates" (329 F. 2d 249). The court in part bases the foregoing conclusions on the general language inserted in all temporary certificates to the effect that:

---

[1] The case of one producer, Jake L. Hamon, CI61–930, has since been settled.

> This acceptance for filing shall not be construed as constituting approval of any rate * * * contained in the rate filing; * * * and such acceptance is without prejudice to any findings or orders which may be made in the final disposition of this proceeding * * * etc. * * * but authorization and acceptance of the rate schedule are without prejudice to such final disposition of the certificate application as the record may require. * * * (329 F. 2d 249).

The court remanded the case to the Commission for further consideration of the refund question in the light of the court's opinion, declaring "There must be, with the assistance of the parties, a broader and more penetrating analysis and consideration of the factors pro and con a refund, and its amount or extent, in arriving at an equitable conclusion."

Petitions for certiorari were denied by the Supreme Court. It is now established that the Commission had both the power and the duty to require refunds of amounts collected in excess of the established "in-line" price unless in our opinion the equities of the case demanded that all or part of the excessive amounts collected should not be refunded.[3]

In Amerada Petroleum Corporation, et al., Opinion No. 422 (March 23, 1964, 31 FPC 623), we summarized the standard set by the Circuit Court of Appeals in the *Skelly* case as follows:

> The court has also stated, however, that the existence of the power to order refunds at the time of permanent certification does not mean that its exercise is mandatory. The standard to be followed is the standard of equity, and the decision as to whether refunds should be ordered is to turn on equitable considerations. The existence of a refund requirement is one such consideration but is not controlling; the public interest factors must also be weighed and may be adequate to offset the absence of an explicit condition. (p. 639)

No statements of facts or briefs as to the equities have been filed by any participant herein. We think those producers who wish to do so should be given opportunity to file such statements and briefs, so we may determine whether facts exist which bear upon the equities and were not made known to the courts, as well as whether particular facts exist in individual cases which would affect their determination. Reiteration of general arguments which were presented to the courts will not be sufficient to avoid a refund requirement. Such arguments were weighed and rejected by the courts, and their determination is now the law of this case.

In Docket No. G-18639 a different question arises. On November 22, 1960, 24 FPC 979, the Commission ordered that a permanent certificate of public convenience and necessity be issued to *Glen A. Martin, et al.* at an initial price of

---

[3] After the Supreme Court granted certiorari in the *Callery Properties* case on March 8, 1965, we deferred further action in this proceeding until after the Supreme Court had decided the *Callery* case. On December 7, 1965 the Supreme Court reversed the decision of the Circuit Court of Appeals in the *Callery* case. *United Gas Improvement Co.* v. *Callery Properties, Inc.*, 382 U.S. 223.

16 cents per Mcf. On December 16, 1960 the producers mailed their acceptance of this certificate, but on December 22, 1960 the Public Service Commission of the State of New York applied for rehearing of the order of November 22. On January 19, 1961 the rehearing was granted. This matter was later consolidated in the instant proceeding, and by the order of August 30, 1962, 28 FPC 401, a permanent certificate was issued to *Glen A. Martin, et al.*, at an initial price of 15 cents per Mcf. Any deliveries by the producers during the pendancy of the rehearing were made with full notice that the Commission order might be modified. We think, however, that the producers should be given an opportunity to file any statement or brief they may wish with respect to the refund of any amounts collected in excess of 15 cents per Mcf.

The Commission orders:

(A) Each certificate holder listed in Appendix A hereto may file in triplicate within 30 days of the effective date of this order a brief and a statement with respect to any facts which the certificate holder contends would render unjust and inequitable the refund of any or all amounts collected in excess of 15 cents per Mcf.

(B) Copies of all filings made pursuant to ordering paragraph (A) hereof shall be served at the time of filing upon all participants.

(C) Any participant shall have 20 days to respond to any statement or brief filed pursuant to ordering paragraph (A) hereof.

ORDER ESTABLISHING NATIONAL POWER SURVEY ADVISORY COMMITTEE ON RELIABILITY OF ELECTRIC BULK POWER SUPPLY

(February 9, 1966)*

The Northeast power failure of November 9–10, 1965, has heightened public awareness of our national dependence upon the reliability of electric bulk power supply. Pursuant to the President's memorandum of November 9, 1965, the Commission has embarked upon a careful investigation of the events in the Northeast experience, and has called upon the top electric power experts in our nation to assist us in the conduct of the investigation. The Commission filed

---

*Published in the Federal Register on February 17, 1966 (31 F.R. 2875).

a Report to the President on December 6, 1965, and is continuing the investigation requested by the President with the assistance of the Advisory Panel for the Northeast Power Interruption, including experts from various segments of the electric industry, the scientific community, and the states.

It is appropriate, that the causes and effects of a number of recent major power failures be carefully studied and that general criteria and guidelines relating to the Reliability of Bulk Power Supply be reviewed. We believe that the results of this study would be useful to utilities and interconnected power systems in all regions of the nation. The Commission will seek advisory assistance from among the nation's most experienced and best qualified experts in the field. We further believe that such review should be conducted within the framework of the National Power Survey program in coordination with the Executive Advisory Committee and with the assistance of the Regional Advisory Committees. It is in the public interest that a National Power Survey Advisory Committee on Reliability of Electric Bulk Power Supply be established for the purpose specified below and, effective upon the issuance of this order, the Committee is established, in accordance with the Federal Power Act and Executive Order No. 11007 of February 26, 1962, 27 F.R. 1875.

1. *Purpose.* The Committee shall assist the Commission and the Executive Advisory Committee in its work with and for the Commission to review and investigate the problems involved in assuring the reliable supply of bulk power, and shall prepare one or more reports thereon. The Committee shall review power system planning and operating policies and practices, and shall recommend general criteria and guidelines for system planning and operation and maintenance of facilities to assure the reliability of bulk power supply on an area and regional basis. It will examine means for improving intersystem coordination and make recommendations for positive actions to be taken including effective pooling arrangements.

2. *Selection of Committee Members.* All Committee members and alternates shall be selected by the Chairman of the Commission with the approval of the Commission.

3. *Conduct of Meetings.* The Chairman of the Commission, or in his absence, any full-time employee of the Commission designated by the Chairman of the Commission, shall act as chairman of Committee meetings and shall be responsible for opening and conducting meetings and for adjourning meetings when, in his judgment, adjournment is in the public interest.

4. *Minutes.* The Chairman of the Commission having made a finding that maintenance of a verbatim transcript would be impracticable and not in the public interest, there shall be kept by the Secretary of the Committee, in lieu thereof, a record of persons present, a description of matters discussed and conclusions reached, and copies of all reports received, issued, or approved by the Committee.

5. *Secretary of the Committee.* The Chairman of the Commission shall appoint a Secretary of the Committee from the Commission staff who shall be responsible for preparing summary minutes of all Committee meetings, preparing agenda, notifying members of the meetings, and maintaining all records related to organization, membership, and operations of the Committee. The Secretary or his alternate shall be present during all meetings and shall certify the accuracy of all minutes.

6. *Location and Time of Meetings.* Meetings will convene at the call of the Chairman of the Commission at the Office of the Federal Power Commission, located at 441 G Street, N.W., Washington, D.C. 20426, unless otherwise directed. Ordinarily, meetings will be held during the regular working hours of the Federal Power Commission.

7. *Report of the Committee.* The reports and recommendations of the Committee will be presented to the Commission in written form through the Executive Advisory Committee. The content shall be limited to matters relating to those set forth in Item 1, *Purpose.*

8. *Duration of the Committee.* The Committee is intended to be *ad hoc* in nature and shall terminate upon the acceptance by the Commission of its report or reports, and in any event not later than two years subsequent to its date of establishment, unless the Commission determines in writing, not more than 60 days prior to the expiration of such two-year period, that continued existence of the Committee is in the public interest.

The Secretary of the Commission shall cause prompt publication of this order to be made in the Federal Register in accordance with the provisions of the Bureau of the Budget Circular No. A-63.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

AREA RATE PROCEEDING, ET AL. (PERMIAN BASIN AREA), DOCKET NO. AR61-1, ET AL.

ORDER EXTENDING PARTIAL STAY[1]

(Issued February 11, 1966)

By order issued herein on November 12, 1965, 34 FPC 1288, the Commission granted a stay until January 20, 1966, of the effectiveness of Opinion Nos. 468 and 468-A, 34 FPC 159, 1068, insofar as they required or prohibited changes in rates. The stay was essentially consistent with that granted by the Tenth Circuit on October 20, 1965, in *Skelly Oil Co.* v. *F.P.C.* (CA10, No. 8385, *et al.*). The Court there stayed through January 20, 1966, the effectiveness of Opinion Nos. 468 and 468-A as to certain producers and further provided that any member of the Court might grant a similar stay if other petitions for review were filed in or transferred to that Court. The Commission in its November 12 order, however, did not stay the filings required by ordering paragraphs (E), (F) and (I) of Opinion No. 468, as the Court had done.

The Court subsequently extended its previous stay, among other things, by an order issued on January 20, 1966, applicable to all petitioning natural gas companies until 30 days after the decision of that Court on the merits of the petitions for review or 30 days after the determination of any petition for rehearing which may be timely filed. That order did not further stay, however, the filing requirements of paragraphs (E), (F) and (I) of Opinion No. 468, and provided for the filings under those paragraphs within various specified periods.

In view of the Court's further stay, we conclude that it would be appropriate to extend the partial stay provided for in our November 12 order for the same period of time provided in the Court order. We shall also adopt the filing dates under paragraphs (E), (F), and (I) of Opinion No. 468 prescribed by the Court in its stay order. Any filings made because of the further stay herein of paragraph (H) relating to the moratorium on rate increases will be rejected, *ab initio*, if the Commission's moratorium is ultimately upheld upon judicial review.

---

[1] This order is not applicable to any producer which has obtained a court stay of our *Permian* decision.

Nothing in this order shall be construed to prevent voluntary compliance by respondents with the provisions of Opinion Nos. 468 and 468–A.

The Commission orders:

(A) The partial stay heretofore granted by order issued herein on November 12, 1965, is extended until 30 days after the decision of the Tenth Circuit on the merits of the petitions for review of Opinion Nos. 468 and 468–A or 30 days after the determination of any petition for rehearing which may be timely filed.

(B) The filing dates provided for in our November 12, 1965, order with respect to paragraphs (E), (F), and (I) of Opinion No. 468 are extended to February 19, 1966, March 21, 1966, and April 20, 1966, respectively.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

COLUMBIA RIVER BASIN, HEADWATER BENEFITS DETERMINATION, DOCKET NO. E–6384

ORDER APPROVING HEADWATER BENEFITS PAYMENTS

(Issued February 11, 1966)

This order, issued under Section 13.1 of the Regulations under the Federal Power Act, approves payments for headwater benefits provided by certain licensed hydroelectric developments to non-Federal downstream developments in the Columbia River Basin between September 1, 1964, and August 31, 1965. Section 13.1 provides that headwater benefits settlements between licensees and non-Federal parties may be filed for approval by the Commission in lieu of a headwater benefits determination under Section 10(f) of the Federal Power Act (16 U.S.C. 803(f)).

On October 29, 1964, The Washington Water Power Company, The Montana Power Company, Public Utility District No. 1 of Pend Oreille County, Public Utility District No. 1 of Chelan County, and Public Utility District No. 2 of Grant County filed the Pacific Northwest Coordination Agreement dated September 1, 1963, for approval of headwater benefits payments among the non-Federal parties pursuant to Section 13.1 of the Regulations. Exhibit No. 4 of the Agreement showed the payments to be made among the non-Federal parties for the year September 1, 1963, through August 31, 1964. By order of February 19, 1965, 33 FPC 300, the Commission approved the payments among the non-Federal parties shown on the exhibit for this year. On December 6, 1965, the same non-Federal parties filed a revised Exhibit No. 4 showing the following payments among themselves for the succeeding year, September 1, 1964, through August 31, 1965:

Payer	Payees			
	The Montana Power Co.	The Washington Water Power Co.	PUD No. 1 of Pend Oreille County	PUD No. 1 of Chelan County
The Washington Water Power Co.	$68,700			
Pend Oreille PUD	10,300	$4,300		
Chelan PUD	39,900	41,400	$2,400	
Grant PUD	39,700	40,400	2,800	$28,500
Totals	158,600	86,100	5,200	28,500

The payments shown by the revised exhibit are substantially the same as those approved for the preceding year.

The Commission finds:

The Pacific Northwest Coordination Agreement dated September 1, 1963, under which payments have been made as tabulated above, constitutes an effective and reasonable method of compensating licensees for headwater benefits provided in the Columbia River Basin to non-Federal parties from September 1, 1964, to August 31, 1965.

The Commission orders:

The payments made pursuant to the Pacific Northwest Coordination Agreement dated September 1, 1963, are approved under Section 13.1 of the Regulations under the Federal Power Act with respect to settlement for headwater benefits provided in the Columbia River Basin by licensees to non-Federal projects from September 1, 1964, through August 31, 1965.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

COLUMBIA RIVER BASIN, HEADWATER BENEFITS DETERMINATION, DOCKET NO. E-6384

ORDER TERMINATING PROCEEDING ON REHEARING

(Issued February 11, 1966)

On April 30, 1965, 33 FPC 907, the Commission issued an order under Section 10(f) of the Federal Power Act (16 U.S.C. 803(f)) determining payments to the United States in the amount of $777,300 for benefits provided by its headwater improvements to certain non-Federal projects in the Columbia River Basin between January 1, 1957, and August 31, 1961. The order, in addition, fixed a payment of $3,300 for costs incurred through April 30, 1965, in making the determination. The Secretary of the Interior, who is a party to the proceeding pursuant to subparagraph 11.25(b)(4) of the Regulations under the Federal Power Act, on May 28, 1965, filed an application for rehearing of the order and a request for a hearing. On June 22, 1965, the Commission granted the application for rehearing and fixed hearing. The payments were made, under protest, by the non-Federal parties on June 29, 1965. On November 2, 1965, 34 FPC 1217, with the consent of the Secretary of the Interior, the order of April 30, 1965, was made final as to Public Utility District No. 1 of Chelan County, one of the non-Federal parties, and Chelan thereupon was dismissed from the proceeding on rehearing. A prehearing conference was held on November 30, 1965, and the hearing was convened on December 21, 1965. On January 27, 1966, after the Commission staff had filed its direct testimony, but before the other parties had filed theirs, the Secretary of the Interior, with the concurrence of the remaining non-Federal parties, filed a motion to withdraw his application for rehearing and request for hearing. The motion states that settlements have been made by the Department of the Interior and the non-Federal parties concerning "certain power sales marketing arrangements and services" for the period of the determination. It requests that the payments to the United States as determined in the order of April 30, 1965, be made final.

The Commission finds:

It is appropriate and in the public interest in administering Part I of the Federal Power Act, particularly Section 10(f) thereof, that the aforesaid motion be granted.

The Commission orders:

(A) The aforesaid motion is hereby granted.

(B) The order of June 22, 1965, granting rehearing of the order of April 30, 1965, is hereby vacated.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP66-163

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued February 11, 1966)

On November 29, 1965, El Paso Natural Gas Company (Applicant) filed in Docket No. CP66-163 an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon certain natural gas facilities, as more fully set forth in the application.

Applicant constructed and placed into operation approximately .01 mile of 4½-inch O.D. and .01 mile of 2⅜-inch O.D. pipeline, a wellhead meter and a dehydrator to receive dry gas from Texaco Inc. (Texaco). The gas was received at the wellhead of Texaco's Texas-LaBarge No. 5-D well located in Sublette County, Wyoming.

The well is no longer productive, and, therefore, Applicant's facilities utilized for the purchase and receipt of gas from the well are no longer required. Applicant proposes to abandon the facilities by retiring the pipeline in place and salvaging the dehydrator and wellhead meter pending future need.

The gas purchase agreement between Texaco and Applicant will remain effective since gas will be purchased from other wells which are still producing from the dedicated acreage.

Due notice of the filing of the application was published in the Federal Register on December 14, 1965 (30 F.R. 15383). No protest, petition to intervene or notice of intervention has been filed.

At a hearing held on February 10, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued October 29, 1942, in Docket Nos. G-242 and G-257 (3 FPC 851).

(2) The facilities to be abandoned, as hereinbefore described, as more fully described in the application in this proceeding, are subject to the jurisdiction of the Commission and abandonment of such facilities is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The proposed abandonment of the aforesaid facilities is permitted by the public convenience and necessity and approval therefor should be granted as hereinafter ordered.

The Commission orders:

(A) Permission for and approval of the abandonment by Applicant of the facilities hereinbefore described, as more fully described in the application in this proceeding, are granted.

(B) Applicant shall advise the Commission of the date of abandonment of the facilities within 10 days thereafter.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

FLORIDA GAS TRANSMISSION COMPANY, DOCKET NO. CP66–159

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 11, 1966)

On November 22, 1965, Florida Gas Transmission Company (Applicant) filed an application in Docket No. CP66–159 as supplemented on December 29, 1965, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of approximately 3.79 miles of 4½-inch O.D. lateral pipeline for the transportation and delivery of natural gas to a direct interruptible customer, International Minerals & Chemical Corporation (International), near Bradley Junction, in Polk County, Florida, all as more fully set forth in the application.

Applicant proposes to construct and operate the said facilities to deliver to International 3,300 MMBtu (approximately 3,300 Mcf) of natural gas daily and 912,500 MMBtu (approximately 912,500 Mcf) annually on a so-called preferred interruptible basis under the terms of a contract between the Applicant and International dated September 1, 1965. The natural gas will be used as fuel in the processing of phosphate-bearing rock in the manufacture of fertilizer.

The estimated cost of the facilities necessary to the transportation and delivery of the proposed volumes of natural gas to International is $96,000, which will be defrayed from Applicant's current funds.

The natural gas requirements of International's plant will be subject to curtailment when necessary to meet the Applicant's firm service requirements. An appropriate condition to provide for such curtailment will be attached to the certificate issued in this proceeding.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on February 10, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization, and upon consideration of the record,

The Commission finds:

(1) Applicant, Florida Gas Transmission Company, a Delaware corporation having its principal place of business in Winter Park, Florida, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found

by the Commission in its order issued July 3, 1963, in Docket No. CP63-277 (30 FPC 27).

(2) The proposed construction and operation of facilities and transportation of natural gas, as hereinbefore described and as more fully described in the application and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed construction and operation of facilities and transportation of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(6) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the certificate be granted on the express condition that the interruptible service authorized herein should be curtailed or interrupted to the extent required to meet existing or future contract maximum delivery obligations of Applicant for firm service to its customers.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to the Applicant in this proceeding, authorizing the construction and operation of facilities and the transportation of natural gas as hereinbefore described and as more fully described in the application in this proceeding, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be constructed and placed in actual operation and the transportation of natural gas authorized in paragraph (A) above shall commence as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 6 months from the date on which this order issues.

(D) The certificate issued in paragraph (A) above is granted on the express condition that the interruptible service authorized herein shall be curtailed or interrupted to the extent required to meet existing or future contracted maximum delivery obligations of Applicant for firm service to its customers.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

LOUISIANA GAS SERVICE COMPANY AND TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NO. CP66-94

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued February 11, 1966)

On October 4, 1965, Louisiana Gas Service Company (Applicant) filed in Docket No. CP66-94 an application, as supplemented on January 3, 1966, pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Tennessee Gas Transmission Company (Respondent) to establish physical connection of its transportation facilities with the distribution facilities proposed to be constructed by Applicant and to sell and deliver to Applicant up to 100 Mcf of natural gas per day for resale and distribution in the unincorporated community of Transylvania, East Carroll Parish, Louisiana, as more fully described in the application.

Applicant states that residents in and adjacent to the community of Transylvania have requested natural gas service. The proposed distribution system, consisting of 3.6 miles of 3-inch and 2-inch mains is within Applicant's limits of its extension policy for unincorporated areas.

The estimated maximum daily requirements for the first three years of proposed operations is 100 Mcf of gas per day, and the annual requirements are estimated to be as follows:

	Mcf at 15.025 psia		
	First year	Second year	Third year
Residential	5, 568	5, 829	6, 177
School	1, 200	1, 200	1, 200
Cotton gin	2, 500	2, 500	2, 500
Total	9, 268	9, 569	9, 877

Gas will be purchased under Respondent's currently effective Rate Schedule GS-1, Small General Service (Southern Zone).

The estimated cost of the distribution system proposed by Applicant is $41,640, to be financed by a bank loan and company funds.

Respondent was notified of the filing of the application on October 8, 1965. On October 22, 1965, Respondent filed an answer stating that it does not oppose the proposal.

Due notice of the filing of the application and opportunity for hearing thereon was published in the Federal Register on October 11, 1965 (30 F.R. 13474). No protest, petition to intervene or notice of intervention has been filed.

The Commission finds:

(1) Tennessee Gas Transmission Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of July 15, 1947, in Docket No. G-910 (6 FPC 777).

(2) Applicant is a public utility company in the State of Louisiana and is authorized to construct and operate facilities to distribute and sell natural gas to inhabitants of the communities along its system.

(3) It is necessary and desirable in the public interest that Respondent be directed to establish a physical connection of its transportation facilities with the facilities proposed to be constructed by Applicant and to render natural gas service to Applicant, as hereinbefore described and as more fully set forth in the application, as hereinafter ordered and conditioned.

(4) The requirement that Respondent serve Applicant, as requested, will not place an undue burden upon Respondent nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) Respondent is directed to establish a physical connection of its natural gas transmission system with the facilities to be constructed by Applicant and to sell and deliver up to 100 Mcf of natural gas per day to Applicant for resale and distribution in the unincorporated community of Transylvania, East Carroll Parish, Louisiana, and environs, all as hereinbefore described and as more fully described in the application.

(B) Applicant shall be prepared to receive natural gas from Respondent at the proposed new connection within one year from the date of this order.

(C) Respondent shall notify the Commission of the commencement of service within 10 days thereof.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP66-185

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 11, 1966)

On December 6, 1965, Northern Natural Gas Company (Applicant) filed an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the transportation and delivery of 310 Mcf of natural gas per day to an existing utility customer, Metropolitan Utilities District (MUD), for resale to an industrial customer, Campbell Soup Company (Campbell), as more fully described in the application.

Campbell is a new industrial customer of MUD. Applicant states that firm natural gas service to Campbell's plant offers the most advantageous method of meeting its heating and processing requirements. In addition to space heating, the gas will be used for gas fired ovens and fryers.

MUD will make the firm gas available to Campbell from its presently authorized contract demand of 138,000 Mcf per day from Applicant. Therefore, no change in the contract demand is required.

No new facilities are required.

Due notice of the filing of the application was published in the Federal Register on December 24, 1965 (30 F.R. 16093). No protest, petition to intervene or notice of intervention has been filed in this proceeding.

At a hearing held on February 10, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorizations sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Northern Natural Gas Company, a Delaware corporation with its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued on April 6, 1943, in Docket No. G–280 (3 FPC 967).

(2) The proposed transportation of natural gas to MUD hereinbefore described, as more fully described in the application in this proceeding, will be transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission and is subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The transportation of natural gas, as proposed in the application, is required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3) and (e) of Section 157.20 of said Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, Northern Natural Gas Company, authorizing the transportation and delivery of 310 Mcf of natural gas per day to Metropolitan Utilities District, as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3) and (e) of Section 157.20 of said Regulations.

(C) The transportation and delivery of the volumes of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within six months from the date of this order.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

THE OHIO FUEL GAS COMPANY, DOCKET NO. CP66–165

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 11, 1966)

On November 29, 1965, The Ohio Fuel Gas Company (Applicant) filed in Docket No. CP66–165 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the establishment of an additional point of delivery and sale to Columbia Gas of Ohio, Inc. (Columbia) in Bay Township, Ottawa County, Ohio, as more fully described in the application.

Applicant will tap its Line D–74 in Ottawa County, Ohio, and construct a measuring station and 1,800 feet of 12¾-inch O.D. pipeline, together with the necessary valves, fittings and incidental facilities. Columbia is an existing affiliated wholesale customer of Applicant.

Columbia has requested the new delivery point to enable it to provide service to the U.S. Rubber Company plant and the area on and adjacent to the 1,200-acre site in Ottawa County formerly occupied by the Erie Army Depot. Applicant expects other new industry to move into the site.

The U.S. Rubber Company is the first of the potential industries to actually locate on the site. It will use an estimated Maximum Day requirement of 2,740 Mcf of natural gas during the third year of operations for both manufacture and processing of its finished plan product (coated fabrics for use in automobiles) and for space heating. The gas used in manufacture and processing will be used to fire high temperature hot water boilers and for hot air drying on print machines, embossers and dye lines.

Columbia will not require additional contract volumes of gas from Applicant to render this service.

Applicant will finance the estimated construction cost of $30,500 from funds on hand. The project is economically feasible.

Due notice of the filing of the application was published in the Federal Register on December 14, 1965 (30 F.R. 15384). No protest, petition to intervene, or notice of intervention has been filed in this proceeding.

At a hearing held on February 10, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, The Ohio Fuel Gas Company, an Ohio corporation with its principal place of business at Columbus, Ohio, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of August 21, 1945, issued in Docket No. G–371 (4 FPC 1033).

(2) The facilities hereinbefore described and as more fully described in the application in this proceeding are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of said Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, The Ohio Fuel Gas Company, authorizing the construction and operation of the facilities as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of the Section 157.20 of such Regulations.

(C) The facilities authorized shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 60 days from the date of this order.

LETTER-ORDER REJECTING AMENDMENT TO APPLICATION AND RELATED RATE SCHEDULE

DOCKET No. CI62–825, SOCONY MOBIL OIL COMPANY, INC. (OPERATOR), ET AL.

FEBRUARY 11, 1966*

SOCONY MOBIL OIL COMPANY, INC.
P.O. Box 2444
Houston, Texas 77001

Attention: H. H. Beeson, Attorney-in-Fact

GENTLEMEN: This is with reference to your submittal of January 11, 1966, of a document designated as an "Amendment to Application for Certificate of Public Convenience and Necessity" which had previously been filed in Docket No. CI62–825, together with a document you have designated as "Supplement No. 11 to Socony Mobil Oil Company, Inc., FPC Gas Rate Schedule No. 312." The so-called Supplement consists of an agreement between El Paso Natural Gas Company and Socony Mobil Oil Company, Inc., dated December 22, 1965, which purports to change the date of a contract between the same parties from December 28, 1960, to March 3, 1961.

The certificate application filed in Docket No. CI62–825, among others, together with Socony Mobil Oil Company, Inc., FPC Gas Rate Schedule No. 312 was the subject of a formal hearing in the consolidated proceedings El Paso Natural Gas Company, *et al.*, Docket No. CP64–211, *et al.* Insofar as the proceedings and the motion for severance filed on October 25, 1965, related to the certificate application in Docket No. CI62–825 and Socony Mobil Oil Company, Inc., FPC Gas Rate Schedule No. 312, the principal issue presented was the actual date of execution of the contract comprising FPC Gas Rate Schedule No. 312. The Commission by its Opinion No. 484 issued January 6, 1966, 35 FPC 40, after considering the record in the proceeding, the initial brief and the motion filed October 25, 1965, determined that it could not allow the employment of extrinsic evidence to change the date which appears on the face of the contract, *i.e.*, December 28, 1960. Socony Mobil Oil Company, Inc., contended in those proceedings, as its designated Supplement No. 11 to FPC Gas Rate Schedule No. 312 purports to show, that the actual date of the contract comprising FPC Gas Rate Schedule No. 312 should be March 3, 1961, rather than December 28, 1960.

Socony Mobil Oil Company's submittals of January 11, 1966, are nothing more than an attempt to have readjudicated the issues then just decided 5 days before by the Commission's Opinion No. 484. The submittals of January 11, 1966, merely reiterate, with some further details, the essential conclusion presented in the motion for severance to the effect that "Although the Gas Purchase Contract involved bears a date of December 28, 1960, the Contract was executed by Socony on March 2, 1961, and by El Paso on March 3, 1961" (See Page 3 of the motion filed October 25, 1965).

---

* Rehearing denied by order issued March 4, 1966, 35 FPC 333.

Furthermore, it appears that under the guise of a rate filing you are requesting the Commission to accept another recital of essentially the same facts. You also seek to amend your application to conform to the revised version of the evidence as set forth in the agreement of December 22, 1965. In effect, this amounts to an indirect attempt to introduce evidence into a case already adjudicated. The indirect admission of such evidence by way of a rate filing will open the door to unverifiable assertions as to the date when a contract was "executed" and is in conflict with the Commission's opinion which indicated that it did not intend to allow the employment of extrinsic evidence to change the date which appears on the face of the contract.

In view of the fact that the question as to the date of the contract, after hearing, has been decided adversely to the contention of Socony Mobil Oil Company, Inc. on substantially the same representations as are made in the submittals of January 11, 1966, we are of the opinion that we are not required to act on such submittals as an amendment to the certificate application filed in Docket No. CI62-825 and as Supplement No. 11 to Socony Mobil Oil Company, Inc., FPC Gas Rate Schedule No. 312. Accordingly, such submittals are rejected.

By direction of the Commission.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

SOUTHERN NATURAL GAS COMPANY, DOCKET NO. CP66-156

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT

(Issued February 11, 1966)

On November 16, 1965, Southern Natural Gas Company (Applicant), filed in Docket No. CP66-156, an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon certain natural-gas facilities by sale to Northwest Alabama Gas District (Gas District), all as more fully set forth in the application.

Applicant proposes the sale of one meter station in Marion County, Alabama, to its customer, Gas District, which acquired the local distribution system of the Town of Phil Campbell, effective November 1, 1965. The metering station was used to measure the volumes of natural gas sold by Applicant to the Town of Phil Campbell pursuant to a service agreement dated August 7, 1959. The said facilities were certificated in Docket No. G-8565 on February 20, 1956. The meter station will enable Gas District to measure the volumes of natural gas delivered for sale in the Town of Phil Campbell. The abandonment by sale of the above described facilities will not affect service to consumers in the Town of Phil Campbell.

After due notice, no petition to intervene, notice of intervention, or protest to the granting of the application has been filed.

At a hearing held on February 10, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, Southern Natural Gas Company, a Delaware corporation having its principal place of business in Birmingham, Alabama, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued October 6, 1942, in Docket No. G–296 (3 FPC 822).

(2) The facilities proposed to be abandoned, as hereinbefore described and as more fully described in the application herein, are used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission, and such abandonment is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The proposed abandonment of the aforesaid facilities by sale to Gas District is permitted by the public convenience and necessity and approval thereof should be granted as hereinafter ordered.

The Commission orders:

(A) Permission for and approval of the abandonment of the facilities hereinbefore described, as more fully described in the application in this proceeding, are granted to Applicant, Southern Natural Gas Company.

(B) Applicant shall advise the Commission of the date of abandonment of the facilities as authorized in paragraph (A) above within ten days of such abandonment.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

CITY OF STARK, KANSAS AND CITIES SERVICE GAS COMPANY, DOCKET NO. CP66–186

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued February 11, 1966)

On December 6, 1965, The City of Stark, Kansas (Applicant), filed in Docket No. CP66–186 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Cities Service Gas Company (Respondent) to establish physical connection of its transportation facilities with the facilities to be constructed by Applicant and to sell and deliver to Applicant volumes of natural gas for resale and distribution in the City of Stark, Kansas, and environs, as more fully described in the application.

Applicant will construct and operate a gas distribution system within its borders and 4.8 miles of 2-inch lateral pipeline extending south from the proposed point of interconnection with Respondent's 8-inch main transmission pipeline in Allen County, Kansas, to Applicant's city limits in Neosho County, Kansas. Applicant also will render service to customers situated along the proposed 2-inch lateral pipeline.

The total estimated volumes of natural gas necessary to meet Applicant's annual and peak day requirements for the initial three years of proposed operations are as follows:

	First year	*Second year*	*Third year*
Annual (Mcf)	9, 900	11, 540	13, 350
Peak day (Mcf)	142	167	195

The total estimated cost of Applicant's proposed lateral pipeline and its distribution facilities is $45,000, which will be financed by Gas Revenue Bonds and General Obligation Bonds to be issued by Applicant. The proposal is economically feasible.

Respondent filed a letter on December 15, 1965, in which it states that it has no objection to the granting of the application.

Due notice of the filing of the application and opportunity for hearing thereon was published in the Federal Register on December 28, 1965 (30 F.R. 16172). On January 3, 1966, the State Corporation Commission of Kansas filed a notice of intervention which notice was withdrawn on February 4, 1966. No other notices of intervention, protests or petitions to intervene have been filed in this proceeding.

The Commission finds:

(1) Cities Service Gas Company, a Delaware corporation with its principal place of business in Oklahoma City, Oklahoma, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of December 28, 1943, in Docket No. G–298 (4 FPC 471).

(2) Applicant is a municipality in the State of Kansas and is authorized to construct and operate facilities to distribute and sell natural gas to inhabitants of the area along its system.

(3) It is necessary and desirable in the public interest that Respondent be directed to establish a physical connection of its transportation facilities with the facilities proposed to be constructed by Applicant and to render natural gas service to Applicant, as hereinbefore described and as more fully set forth in the application, as hereinafter ordered and conditioned.

(4) The requirement that Respondent serve Applicant, as requested, will not place an undue burden upon Respondent nor impair its ability to render adequate service to existing customers.

The Commission orders:

(A) Respondent is directed to establish a physical connection of its natural gas transmission system with the facilities to be constructed by Applicant and to sell and deliver natural gas to Applicant for resale and distribution within the city limits of Applicant, and environs, all as hereinbefore described and as more fully described in the application.

(B) Applicant shall be prepared to receive natural gas from Respondent at the proposed new connection within one year from the date of this order.

(C) Respondent shall notify the Commission of the commencement of service within 10 days thereof.

(D) Permission for the withdrawal of the notice of intervention filed by the State Corporation Commission of Kansas on January 3, 1966, is granted.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

TRUNKLINE GAS COMPANY, DOCKET NO. CP66–131

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 11, 1966)

On October 27, 1965, Trunkline Gas Company (Applicant) filed in Docket No. CP66–131 an application, as supplemented on January 4, 1966, pursuant to

Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities and the sale in interstate commerce of increased volumes of natural gas for resale, as more fully set forth in the application.

Applicant will increase its transmission system capacity from 945,000 to 1,040,000 Mcf of natural gas per day by constructing and operating the following new facilities:

A. 16.4 miles of 24-inch O.D. pipeline to loop a portion of Applicant's existing main transmission line between Cypress, Texas, and Longville, Louisiana;

B. 200.7 miles of 36-inch O.D. pipeline to loop portions of Applicant's existing main transmission lines between Longville, Louisiana, and Tuscola, Illinois;

C. 4,200 horsepower at a new compressor station to be designated Station No. 313, Centerville, Louisiana;

D. 2,000 additional horsepower at existing Compressor Station No. 31, Cypress, Texas;

E. 3,000 additional horsepower at each of the following existing main line compressor stations: Station No. 57, Pollock, Louisiana, Station No. 75, Shaw, Mississippi, Station No. 93, Dyersburg, Tennessee, and Station No. 112 Johnsonville, Illinois;

F. 2,000 additional horsepower at existing main line Compressor Station No. 121, Tuscola, Illinois;

G. 6,000 horsepower at a new compressor station to be designated Station No. 134, North Judson, Indiana.

Sales of natural gas by Applicant to the following listed customers will be made pursuant to the customers' request that the service commence in November 1966. Sales to Consumers Power Company will be made under Applicant's P-2 Rate Schedule, and the sales to Central Illinois Public Service Company (CIPSCo) and the other indicated existing customers will be made under Applicant's G-1, G-2 and SG-1 Rate Schedules.

Customers	Mcf per day			Increase in annual vol. Mcf
	Present contract demand	Proposed contract demand	Increase	
Consumers Power Co.	275,000	350,000	75,000	21,660,000
CIPSCo-Effingham, Ill.	6,400	6,800	400	39,400
CIPSCo-Newton, Ill.	2,866	3,200	334	61,500
CIPSCo-Hoopeston, Ill.	4,000	4,200	200	57,000
Cisne, Ill.	580	650	70	19,400
Lake County Utility District	2,590	3,100	510	20,000
Totals	291,436	367,950	76,514	21,857,300

The increased volumes are required to meet the increases in consumer requirements, as evidenced by the customers' historical growth pattern.

The total estimated cost of the proposed construction is $44,745,000, which amount is to be financed initially by short-term bank loans, to be followed by permanent financing in the form of $40,000,000 First Mortgage Bonds at 4¾ percent.

Due notice of the filing of the application was published in the Federal Register on November 13, 1965 (30 F.R. 14288). No petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on February 10, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Trunkline Gas Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued April 29, 1949, in Docket No. G–882 (8 FPC 250).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation and sale of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is willing and able properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the transportation and sale of natural gas by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(2), (c)(3), (c)(4) and (e) of Section 157.20 of said Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Trunkline Gas Company authorizing the construction and operation of the facilities and the transportation and sale of natural gas, as hereinbefore described and as more fully set forth in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(2), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be completed and placed in actual operation and the transportation and sale of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within one year from the date of this order.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

UNITED STATES DEPARTMENT OF THE INTERIOR, BONNEVILLE POWER ADMINISTRATION, DOCKET NOS. E-6611, E-6905 AND E-7242

ORDER DENYING APPLICATIONS FOR RECONSIDERATION AND STAY

(Issued February 11, 1966)

On January 13, 1966, the Public Utility Commissioner of the State of Oregon filed a "Petition for Rehearing" and the National Rural Electric Cooperative Association filed a "Petition for Rehearing and Reconsideration", relating to our Opinion No. 482 and order issued December 14, 1965, 34 FPC 1462, in the above-entitled proceeding. In the Opinion and order we approved rates for the Bonneville Power Administration for the period December 20, 1965, to December 20, 1969.

The applicants for rehearing contend that the Commission has not followed the standards of the statutes involved and otherwise has improperly approved Bonneville's proposed rates. The Oregon Commissioner also contends that we have failed to afford him notice and hearing as provided in our rules and as required by the Constitution of the United States, and alternatively have failed to publish notice of the procedure to be followed as provided in Section 3 of the Administrative Procedure Act.[1] He also asks that the rates be stayed pending our ruling herein. On January 17, 1966, the Secretary of the Interior, through the Administrator of the Bonneville Power Administration, moved that the application for rehearing of the Public Utility Commissioner of Oregon be denied as "frivolous."

This proceeding is not subject to the Federal Power Act, which provides in Section 313 for applications for rehearing and review. Bonneville's proposed rates were submitted to this Commission pursuant to Sections 5 and 6 of the Bonneville Project Act[2] and Section 5 of the Flood Control Act of 1944,[3] neither of which provides for the filing of applications for rehearing or for court review. The Bonneville Act and the Flood Control Act provide for the preparation of rate schedules by the Administrator and the sale of power generated at the Federal hydroelectric projects involved upon confirmation and approval of the rate schedules by this Commission. Our function is not one of regulating rates as we do under the Natural Gas Act or the Federal Power Act, but one of assuring that the Secretary of the Interior complies with statutory criteria in carrying out a proprietary function. This proceeding thus concerns how the government shall manage its own internal affairs, namely the determination of the rate level for its own power. We note further that the Cooperative Association would not characterize the Secretary's criteria for payout as unreasonable or as an abuse of discretion. Judicial review and the preliminary steps of rehearing are not available to the complainants here, and we shall treat their filings as petitions for reconsideration.

Since we are concerned here with government operations and not regulation, the legal requirements relating to hearings, including the provisions of our Rules of Practice and Procedure governing the manner in carrying out our regulatory functions under the Federal Power and Natural Gas Acts do not apply. Moreover, without conceding its applicability we have, in effect, complied with Section 3 of the Administrative Procedure Act cited by the Oregon Commissioner by stating and publishing in advance the procedure to be followed in passing upon the rates in issue here. Notice of the filing of Bonneville's rate proposal was published in the Federal Register on October 9, 1965 (30 F.R. 12903). The notice described the rate proposal and invited the submission of comments or protests. Moreover our subsequent order of October 29, 1965, providing for the oral hearing that was subsequently held on November 18, 1965, likewise was published in the Federal Register on November 6, 1965 (30 F.R. 14056). In order to assist the Commission in carrying out its statutory responsibilities this order called for the submission of factual data and oral argument as to the scope of the Commission's review of the proposed rates. Both the notice and the order were also made public at the Commission's offices, the latter being accompanied by a separate Press Release (No. 14,083). In short, the Oregon Commissioner and all other interested parties were fully informed of the procedures we intended to follow.

---

[1] 5 U.S.C. § 1002.

[2] 50 Stat. 735, 16 U.S.C. 832d and 832e.

[3] 58 Stat. 890, 16 U.S.C. 825s.

The substantive questions raised by the two petitions were covered in Opinion No. 482 and require no further elaboration here except as follows. The Oregon Commissioner contends that the order makes no finding with respect to allocation of costs made by the Federal Power Commission as provided in the Bonneville Act, 16 USC § 832f. The Oregon Commissioner has not shown that consumers are in any way injured by the allocation of costs made by the Secretary of the Interior. On our part we are of the opinion that the result is reasonable. We may observe that the allocation provision in the Bonneville Act is applicable only to projects whose rates are established under that act. These comprise Bonneville, McNary, Ice Harbor, Little Goose, Lower Granite and Lower Monumental. We have made cost allocations of the first three projects, which have been fully constructed.[4] The justification for the proposed rates submitted by the Secretary of the Interior is consistent with these cost allocations. We have not yet made cost allocations with respect to the last three projects, which have not been completed. However, it appears that the presentation of the Secretary is consistent with methods of allocation previously followed. Further, the methods used are the same for all projects constructed by the Corps of Engineers, for which we are setting rates here, except for the early allocation made for the Bonneville project.

The Oregon Commissioner also argues that we did not find that the rates were low enough to "encourage the widest possible diversified use of electric energy" as provided in Section 6 of the Bonneville Act. As we explained in our Opinion No. 482 this part of the statutory standard cannot be read in isolation, and we are also under an obligation to insure that the rates were not set so low as to fail to meet the statutory repayment standards. The rates we approved were high enough to meet these repayment standards, but not unnecessarily high, and were in our opinion properly fixed so as to meet the statutory requirement quoted above with respect to the use of electric energy.

In view of the discussion above there would have been no justification for staying the effect of our approval of Bonneville's rate increase even if that were legally possible.

The Commission orders:

(A) The applications for reconsideration filed by the Public Utility Commissioner of Oregon and the National Rural Electric Cooperative Association are denied.

(B) The request of the Commissioner of Oregon for a stay is denied.

WASHINGTON GAS LIGHT COMPANY, DOCKET NO. CP62-205

FINDINGS AND ORDER AMENDING ORDER GRANTING DETERMINATION OF A SERVICE AREA PURSUANT TO SECTION 7(f) OF THE NATURAL GAS ACT

(Issued February 11, 1966)

On January 4, 1966, Washington Gas Light Company (Applicant) filed in Docket No. CP62-205 an application to amend the Commission's order issued October 31, 1962, 28 FPC 753, in said docket, pursuant to Section 7(f) of the Natural Gas Act, to include Charles County, Maryland, in the service area determination made and granted by said order, all as more fully set forth in the application to amend.

The service area determination heretofore requested by Applicant and authorized by the order of October 31, 1962, permitting Applicant, without further authorization to enlarge and extend its facilities for the purpose of supplying increased market demands, other than sales for resale, presently comprises: The District of Columbia; Montgomery and Prince Georges Counties in Maryland; Arlington, Fairfax, Loudoun, and Prince William Counties in Virginia; and all cities now or hereafter existing in Maryland or Virginia within the geographic area bounded by the outer boundaries of the combined area of said counties, exclusive, however, of the following areas:

Exclusion 1

The area in Prince Georges County, Maryland, described as Laurel Election District No. 10 of Prince Georges County.

Exclusion 2

The area in Prince William County, Virginia, described as Dumfries and vicinity, and Quantico Marine Base and territory adjacent thereto along the southern boundary of Prince William County.

Applicant proposes to initiate natural gas service in Charles County by extending a pipeline from its existing facilities located in southern Prince Georges County to St. Charles City, in Charles County. Applicant's proposed pipeline would approximately parallel U.S. Route 301, which bisects Charles County.

Applicant is and will be regulated by the Public Service Commission of Maryland and will render gas service in Charles County, at the same retail rates under the same conditions prevailing elsewhere in its determined service area. Applicant states that at the present time there is no natural gas service available in Charles County, and, further, only Applicant distributes natural gas in any Maryland county bordering on Charles County.

Applicant states that it has received the necessary authorizations from the Public Service Commission of Maryland and The County Commissioners for Charles County.

Due notice of the filing of the application to amend and opportunity for hearing thereon has been given by publication in the Federal Register on January 22, 1966 (31 F.R. 926). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that the Commission's order issued October 31, 1962, in Docket No. CP62-205 be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued October 31, 1962, in Docket No. CP62-205 is amended to include Charles County, Maryland, in the service area determination made and granted by said order, all as hereinbefore described and as set forth in the application to amend.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

DUKE POWER COMPANY, DOCKET NO. E-7266

ORDER GRANTING REQUEST FOR DECLARATORY ORDER

(Issued February 14, 1966)

Duke Power Company (Duke) a public utility within the meaning of Section 203 of the Federal Power Act, with its principal place of business in Charlotte, North Carolina, by letter dated November 1, 1965, requested the Commission to issue a declaratory order finding that it had no jurisdiction under Section 203 over the acquisition by Duke of the electric power distribution facilities of Clemson University.

In essence, the request calls for a reconsideration of the validity of Section 33.1(2) of the Commission's Regulations under the Federal Power Act, as amended on March 23, 1963 (28 F.R. 2900). The legality of the rule has never been considered in a contested proceeding and we believe that a declaratory order as to the application of Section 203 of the Act and Section 33.1(2) of the Regulations to the present situation would be in the public interest. Scrutiny of the correspondence in our files with regard to the transactions indicates that there is no controversy as to the facts and that letters from Duke of November 1, 1965 and December 16, 1965, can serve as the factual record in this proceeding requesting the issuance of a declaratory order. The Commission believes an exchange of briefs on the issue of law will be of assistance to it in resolving the legal questions presented.

The Commission orders:

The request by Duke for the issuance of a declaratory order as set forth in its letter of November 1, 1965, is granted. Both Duke and the Commission's staff shall file initial briefs on or before March 14, 1966, with any replies they may wish to submit to be filed on or before April 4, 1966.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

ALGONQUIN GAS TRANSMISSION COMPANY, DOCKET NO. CP65-340; TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NO. CP66-263

ORDER TO SHOW CAUSE, CONSOLIDATING AND SETTING DATE OF HEARING

(Issued February 16, 1966)

On September 29, 1965, we issued a Notice of "Petition To Amend" filed by Algonquin Gas Transmission Company (Algonquin) in Docket No. CP65-340.

In said filing Algonquin seeks amendment of the authorization granted by the Commission on August 24, 1965, in Docket No. CP65–340, 34 FPC 572, so as to now construct an additional 23.6 mile 16-inch lateral pipeline from its existing facilities in Connecticut to the vicinity of North Bloomfield, Connecticut, at an estimated cost of $2,887,000. These facilities are proposed to be used essentially to deliver to The Hartford Gas Company (Hartford), an existing customer of Algonquin, volumes of gas previously authorized to be delivered through other facilities authorized in our above-mentioned order of August 24, 1965. However, the capacity of the proposed new line appears to be considerably greatly in excess of Hartford's needs as projected over the next three-year period for the area involved.

The new area proposed to be served by Hartford, through use of the volumes to be delivered off of the proposed Algonquin lateral, is presently traversed by Tennessee Gas Transmission Company (Tennessee). Thus the proposed Algonquin lateral would, if constructed, parallel and duplicate the existing 16-inch pipeline of Tennessee. Although it appears that Tennessee could deliver to Hartford, at the very least, the requisite volumes of gas necessary for the immediate institution of service to the new area at a comparatively minor expenditure, no petition to intervene or a competitive proposal was submitted by Tennessee.

In view of (1) the necessity of accurately determining the market requirements of the new area and (2) the related impact on the economic feasibility of the proposed lateral when viewed, particularly, in juxtaposition to our previous authorization herein for the construction of other facilities requested by Algonquin so as to enable it to deliver to Hartford the very volumes it now seeks to utilize to prove up the economics of the proposed lateral construction, we conclude that the public convenience and necessity requires a formal hearing in these matters and shall so order. Additionally, in view of the possibility that Tennessee could provide any required additional service to Hartford in the North Bloomfield area, without detriment to the present or foreseeable demands of its existing customers, through use of its existing facilities traversing the area, we will now issue and consolidate in such hearing an order to show cause why Tennessee should not be required under Section 7(a) of the Natural Gas Act, to establish a physical connection of its facilities with those of Hartford and to sell to Hartford volumes of gas necessary for the rendition of service to the new area. This show cause proceeding will, of course, not be limited solely to the question of whether Tennessee could provide the service directly to Hartford consistent with the standards of Section 7(a), but should also include the comparative benefits, if any, if such service were to be rendered by Algonquin either by exchange agreement with Tennessee or by transportation by Tennessee for the account of Algonquin.

The Commission orders:

(A) An Order To Show Cause is hereby issued against Tennessee Gas Transmission Company why it should not be required, under Section 7(a) of the Natural Gas Act, to establish a physical connection of its facilities with those of Hartford Gas Company and to sell to said company volumes of gas necessary for the rendition of service to the above-mentioned new area.

(B) Tennessee Gas Transmission Company shall within 15 days of the issuance of this order respond to the "Order To Show Cause" and shall, further, be prepared, upon the hearing date set herein, to present witnesses to testify in regard to matters set forth in said response.

(C) Pursuant to the authority conferred on the Federal Power Commission by the Natural Gas Act and the Commission's Rules of Practice and Procedure, a consolidated hearing will be held on March 21, 1966, at 10:00 a.m. (EST) in a Hearing Room of the Federal Power Commission, 441 G Street, NW., Washington, D.C., respecting the matters set forth in the instant application filed by Algonquin Gas Transmission Company and the Order To Show Cause directed to Tennessee Gas Transmission Company.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

PUBLIC SERVICE COMPANY OF INDIANA, INC., DOCKET NO. E-7163

ORDER DENYING REHEARING

(Issued February 18, 1966)

Public Service Company of Indiana, Inc. (PSCI) on January 21, 1966, filed an application for rehearing of our Opinion No. 483 and order issued December 22, 1965, 34 FPC 1513, in the above-entitled proceeding. In Opinion No. 483 we found that PSCI's sales to a number of municipalities and rural membership cooperatives in the State of Indiana are sales at wholesale in interstate commerce and are subject to our jurisdiction under the Federal Power Act. We required PSCI to comply with the filing and posting requirement of the Act.

In its application for rehearing PSCI contends that the Commission failed to discuss several points at issue. Since these points were fully covered in *Indiana & Michigan Electric Company*, 33 FPC 739, Opinion No. 458, Docket No. E-7089, issued April 14, 1965, pp. 746–748, or in *Arkansas Power & Light Company*, 34 FPC 747, Opinion No. 473, Docket No. E-7090, issued September 7, 1965, pp. 751, 752, we thought it sufficient to make reference to the discussion in those opinions, and we have, in effect, incorporated such discussion by reference.

PSCI continues to argue that there are no circumstances which make it manifest that out-of-state energy is being delivered to its municipal and cooperative customers and that such delivery has not been established by engineering and scientific proof. The record is to the contrary. As shown in Opinion No. 483 all of the sales involved here are sales made from an interstate pool and so are sales in interstate commerce subject to our jurisdiction. Furthermore, the Commission staff witness testified that out-of-state energy permeates the entire PSCI system and so is delivered to every cooperative and municipal system served at wholesale. (Tr. 1038–42; Exhs. 48, 49, 50, 51).

The Commission further finds:

The assignments of error and grounds for rehearing set forth in the application for rehearing filed by PSCI in this proceeding present no facts or legal principles which warrant any change or modification of the Commission's Opinion No. 483 and accompanying order.

The Commission orders:

The application for rehearing filed by PSCI on January 21, 1966, is denied.

Commissioner O'Connor *dissenting in part.*

O'CONNOR, *Commissioner, dissenting in part:*

All issues raised in the application for rehearing in this proceeding have been thoroughly discussed; nevertheless, the majority's response today goes further to refer to the limited tracing study placed in evidence. Since it is my opinion that out-of-state energy does not constantly permeate PSCI's system, the majority's reliance upon that tracing study must be examined in detail.

It should be noted that, despite disclaimers to this effect in the majority's earlier opinion, they now determine the better course is to rely on the tracing study. It is not similar to the one utilized in *F.P.C.* v. *Southern California Edison Company*, 376 U.S. 205 (1964), for it does not consider intervening loads. This distinction is not fatal, as I stated before, since we need not resort to a case-by-case determination of each resale customer's jurisdictional status. We have, of course, pursued such a course in determining the jurisdictional status of a public utility's sales for resale. Since there is evidence in this proceeding to demonstrate that large blocks of power flows to major substations in the vicinity of numerous resale customers, federal jurisdiction is clearly required. As to others, however, I am not convinced power necessarily gets through. Unfortunately, there is no thorough consideration of this absence of permeation, so that, while out-of-state power may, at times, reach throughout the system, the preferable manner of resolution is only partial jurisdiction where, at best, insignificant amounts are involved.

Exhibit 48 shows power flows from the out-of-state generator at Paddy's Run up to the Edwardsport area. PSCI's argument as to the operation of the bus-bar at Gallagher raises the possibility that, at times, out-of-state power may not commingle there to flow throughout the system. While it did not present full and complete evidence on the matter, PSCI argued that power would normally flow onto the bus and would then flow immediately onto the transmission line to Edwardsport. The latter line is immediately adjacent to the Paddy's Run line, and it intervenes between all other lines supplied from the Gallagher bus. Furthermore, it raises the likelihood that other intervening connections on that bus-bar may at times carry the power flow from Paddy's Run to points other than to the Columbus substation on the 230-kv line to Wabash River. In any event I am not persuaded that this bus-bar is properly considered a point for tracing purposes.

Exhibit 49 is directed largely to showing flows along the 230-kv lines between Gallagher and Wabash River, the major generators on the PSCI system. This exhibit establishes that there are large flows between two intrastate generators to the exclusion at most times of our sources.

Exhibit 50 shows power flows from the Indiana & Michigan system, in the northernmost part of PSCI's system. At the outset it should be noted this influx is relatively small, with the probable exception of the Huntington substation at the northernmost point. While there is some evidence that out-of-state generators supply I&M in such a manner that they also supply PSCI, that amount is insignificant and only reaches small parts of PSCI's system. Exhibit 50 emphasized primarily that it was impossible for out-of-state power from I&M to reach most points in the northern sector, although it must be conceded that, if the Gallagher and Wabash River bus-bars are properly considered to be a single point, out-of-state power would reach the latter. Thus, during limited periods, it appears out-of-state power might permeate the PSCI system, although under most circumstances it would not.

Exhibit 51 shows the power flows from Cincinnati's Miami Fort station. This exhibit supports the conclusion that points of resale in the southeastern sector are clearly jurisdictional. The supply to the major substation at Batesville is of major proportions; however, the supply to the next substations, on four separate lines from Batesville, are considerably smaller. For the major substation at Columbus there is no supply from Miami Fort during most hours of the day, and it rises at most to a limited supply for short periods. The supply is decreased to less than twenty per cent of that at Batesville, and power flows would presumably reverse a short distance up the line. While Exhibit 49 shows a supply to Wabash River from Gallagher for limited periods, that supply is over the 230-kv lines, not the 138-kv lines from Miami Fort. In my opinion the small interchange between the two lines at Columbus will not suffice to warrant federal preemption.

There is one further feature of the PSCI system which deserves mention, to emphasize the lack of integrated operation. Mr. Leonard testified that the company network is designed to operate either as a loop or a network system; however, the company has opened a number of switches so that its 69-kv lines are operated as a radial system. The witness pointed out that loop operation is to be distinguished from radial operation for in the latter a single line radiates from the power source. Loads are supplied from only one direction. PSCI utilizes this manner of operation to afford less complicated operating conditions, although losing the benefits of increased line capacity. Such segregation into small sectors permits of separate regulation, particularly where it is preferable to restrict federal preemption to those sectors where out-of-state energy is clearly present.

The four exhibits demonstrate, at best, that only small amounts of out-of-state energy may occasionally reach all parts of the PSCI network and its resale customers. In such circumstances we should limit our assertion of authority in deference to the preferences for state regulation in the Power Act.

To summarize, Staff presented three basic theories to support its jurisdictional argument here: first, that PSCI is an integrated system operating in interstate commerce; but it does not exhibit the degree of integrated operation we have previously relied upon, particularly as to shared costs in facility planning. Second, that the pulse and counterflow arguments necessarily result in out-of-state power permeating the system, but there is no satisfactory evidence to support this approach. Third, that a limited tracing study will suffice to support an assertion of complete jurisdiction; however, if state regulation is present federal regulation is not required where, at best, only insignificant amounts of out-of-state energy reach the resale customers. While our discretion in these matters is clearly circumscribed, the showing here is far too limited to persuade me, without more, of the necessity for federal regulation.

I would assert jurisdiction over but a few of PSCI's resales where out-of state energy clearly meets most load requirements. In addition, I reemphasize the need for oral argument here to the end that the company be given a full hearing before the Commission. To the extent indicated in my prior opinion, as further developed above, I dissent to the denial of rehearing.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP61-265; TRANSWESTERN PIPELINE COMPANY, DOCKET NO. CP61-299

ORDER AMENDING ORDER ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY AND ACCEPTING TARIFF SHEETS FOR FILING

(Issued February 21, 1966)

On March 1, 1965, El Paso Natural Gas Company (El Paso), filed in Docket No. CP61-265 an application together with supplements thereto on March 31 and November 24, 1955, to amend the order of the Commission issued in said docket January 11, 1965, 33 FPC 36, which order authorized El Paso to construct and operate certain natural gas facilities and to deliver natural gas to Transwestern Pipeline Company (Transwestern) on an exchange basis, pursuant to an exchange agreement between the parties dated February 1, 1961.

El Paso seeks amendment of the above order by requesting: (1) authorization to deliver to Transwestern, on an exchange basis, natural gas to be produced from the Feldman A No. 2 well; and (2) vacation of the authorization granted in said order respecting the delivery of gas by El Paso from five other wells never connected to Transwestern's gathering system, all as more fully set forth in the application to amend.

The proposed amendment would reduce El Paso's estimated project cost by $183,600, from $404,081 to $220,481.

On April 23, 1965, Transwestern Pipeline Company (Transwestern), filed in Docket No. CP61–299 an application to amend the order of the Commission issued in said docket, combined with Docket No. CP61–265, on January 11, 1965, which order authorized Transwestern to construct and operate certain natural gas facilities and to deliver natural gas to El Paso Natural Gas Company (El Paso) on an exchange basis, pursuant to an agreement between the parties dated February 1, 1961.

By the instant filing, Transwestern seeks to amend the said order to authorize: (1) The construction and operation of a tap and valve to interconnect Transwestern's existing gathering system with facilities to be constructed by El Paso to connect Feldman A No. 2 well to Transwestern's system, (2) the receipts from El Paso, on an exchange basis, of gas produced from the Feldman A No. 2 well, and (3) the operation of the facilities proposed to be constructed by El Paso for connection of this well, pursuant to the terms of the exchange agreement. Transwestern also seeks the deletion of the authority for the operation of facilities pertaining to five wells and the receipt of gas therefrom, all as more fully set forth in the petition to amend.

The petition states that the estimated cost of the tap and valve to be constructed by Transwestern is $1,280.

The five wells to be deleted from the exchange program have not been connected to Transwestern's system.

Due notice of the filing of the applications to amend and opportunity for hearing have been given by publication in the Federal Register on March 18, 1965, in Docket No. CP61–265 (30 F.R. 3615), and on May 5, 1965, in Docket No. CP61–299 (30 F.R. 6297). No protests, petitions to intervene, notices of intervention or requests for hearing have been filed concerning these amendments.

The Commission finds:

(1) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act, and the public convenience and necessity require that the Commission's order issued January 11, 1965, in Docket Nos. CP61–265 and CP61–299 granting certificate authorizations to El Paso and Transwestern be amended as hereinafter ordered.

(2) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that El Paso's Second Revised Sheet Nos. 139 and 140 to its FPC Gas Tariff, Third Revised Volume No. 2, and Transwestern's Second Revised Sheet Nos. 8 and 9 to its FPC Gas Tariff, Original Volume No. 2, to modify the exchange agreement on file as El Paso's Rate Schedule X–12 and Transwestern's Rate Schedule X–1, be accepted for filing effective on the date of issuance of this order.

The Commission orders:

(A) The Commission's order issued January 11, 1965, in Docket Nos. CP61-265 and CP61-299 granting certificate authorizations to El Paso and Transwestern is amended so as to (1) authorize El Paso to construct facilities and deliver to Transwestern on an exchange basis natural gas to be produced from the Feldman A No. 2 well, and to vacate the authorization granted in said order respecting the delivery of gas by El Paso from five other wells never connected to Transwestern's gathering system; and (2) authorize Transwestern to construct and operate a tap and valve to interconnect Transwestern's existing system facilities with facilities to be constructed by El Paso to connect its Feldman A No. 2 well to Transwestern's system, receive natural gas from El Paso on an exchange basis gas to be produced from the Feldman A No. 2 well, and to operate facilities proposed to be constructed by El Paso for connections of said well, pursuant to the terms of the exchange agreement; and to delete from the order authorization for the construction and operation of facilities pertaining to five wells and the receipt of gas therefrom, which have not been connected to Transwestern's system.

(B) In all other respects said order shall remain in full force and effect.

(C) El Paso's Second Revised Sheet Nos. 139 and 140 to its FPC Gas Tariff, Third Revised Volume No. 2, and Transwestern's Second Revised Sheet Nos. 8 and 9 to its FPC Gas Tariff, Original Volume No. 2, to modify the exchange agreement on file as El Paso's Rate Schedule X-12 and Transwestern's Rate Schedule X-1, are accepted for filing effective on the date of issuance of this order.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP66-164

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND PERMITTING AND APPROVING ABANDONMENT

(Issued February 21, 1966)

On November 29, 1965, El Paso Natural Gas Company (Applicant), filed in Docket No. CP66-164 an application pursuant to Sections 7(b) and 7(c) of the Natural Gas Act for permission and approval to abandon certain facilities and for a certificate of public convenience and necessity authorizing Applicant to continue the operation of certain facilities, all as more fully set forth in the application.

Applicant states that pursuant to "budget-type" certificate authorization issued in Docket No. G-20051, 23 FPC 287 (1960), it has constructed and placed in operation facilities necessary to receive residue gas purchased from Graridge Corporation, *et al.* (Graridge) at the outlet of Graridge's gasoline plant located in San Juan County, New Mexico, under the terms of a residue gas purchase agreement dated August 25, 1960. These facilities consist of a purchase meter station and a dehydrator located at the outlet of Graridge's said gasoline plant and approximately 211 feet of 4½-inch O.D. pipeline extending from the purchase meter to a point of connection with Applicant's 16-inch O.D. Aneth-San Juan River Plant pipeline.

Graridge has discontinued operation of its gasoline plant. As a result thereof, Applicant proposes and seeks permission and approval to abandon all of such facilities except that terminal 11 feet of pipeline connecting with the Aneth-San Juan River Plant pipeline.

The direct sale and delivery of gas was initiated by Applicant to El Paso Natural Gas Products Company and continued to Shell Pipe Line Corporation, successor to El Paso Natural Gas Products Company, for use in a pumping station in San Juan County, New Mexico, by means of gas first obtained from the Graridge plant and later obtained from the Aneth-San Juan River Plant pipeline. This sale is made by means of a meter situated 11 feet from the Aneth-San Juan River Plant pipeline on the pipeline connecting the Graridge plant. Since gas in the Aneth-San Juan River Plant pipeline is of interstate character, Applicant seeks authorization to continue the operation of the facilities used for the direct sale.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on February 18, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 29, 1942, in Docket No. G–242 (3 FPC 85).

(2) The facilities proposed to be abandoned, as hereinbefore described and as more fully described in the application herein, are used in the transportation and delivery of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and such abandonment is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The proposed abandonment of the aforesaid facilities is permitted by the public convenience and necessity and approval thereof should be granted as hereinafter ordered.

(4) The proposed operation of facilities as hereinbefore described, and as more fully described in the application and exhibits in this proceeding is subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(5) The aforesaid proposed operation of facilities is required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(6) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(7) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon El Paso's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) Permission for and approval of the abandonment of the facilities hereinbefore described, as more fully described in the application in this proceeding, are granted to Applicant.

(B) Applicant shall advise the Commission of the date of abandonment of the facilities as authorized in paragraph (A) above within ten days of such abandonment.

(C) A certificate of public convenience and necessity is issued to the Applicant, El Paso Natural Gas Company, in this proceeding authorizing the operation of facilities as hereinbefore described and as more fully described in the application and exhibits herein, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(D) The certificate issued by paragraph (C) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b) and (e) of Section 157.20 of such Regulations.

(E) Applicant shall file with the Commission a conformed copy of the agreement reflecting the terms and conditions of this sale and the delivery of natural gas to Shell Pipe Line Corporation.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP64-255 (PHASE I)

FINDINGS AND ORDER FURTHER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 21, 1966)

On December 23, 1965, Northern Natural Gas Company (Northern) filed in Docket No. CP64-255 (Phase I) a petition to amend further the Commission's order issued December 21, 1964, 32 FPC 1491, in said docket, as amended June 15, June 18, 33 FPC 1264, 1271, and August 26, 1965, 34 FPC 594, to authorize the construction and operation of certain facilities in Kansas in lieu of certain authorized facilities to be constructed and operated in Nebraska and to authorize an extension of time to December 21, 1966, to construct and place in actual operation such facilities, all as more fully set forth in the petition to amend further.

The order of December 21, 1964, as amended, authorized Northern to construct, among other facilities, 10.6 miles of 30-inch loop pipeline north of its Beatrice, Nebraska, Compressor Station at an estimated cost of $1,189,500 for service to Hanna Mining Company's (Hanna) ore processing plant near Cooley, Minnesota. Northern now requests that it be authorized to construct and operate for service to Hanna 10.8 miles of 30-inch loop pipeline north of Tescott, Kansas, at an estimated cost of $1,194,800.

Northern states that in designing mainline facilities proposed in its pending application in Docket No. CP66-206 to serve the 1966-67 requirements of its present customers consideration was given to the requirements for Hanna and other projects scheduled for construction during 1966. By combining the total requirements of these projects, Northern was able to design larger increments of pipeline and horsepower which results in an overall savings on its system. As a result of such design the facilities required for service to Hanna have been revised so that the new mainline facilities attributable to Hanna are 10.8 miles of 30-inch loop north of Tescott. Therefore, Northern requests further amendment of the order of December 21, 1964, as amended, to reflect these changes in construction.

Further, since service to Hanna is not expected to commence until November 1, 1966, Northern requests that the time within which the main and branchline facilities must be constructed and placed in operation be extended to December 21, 1966. The order of December 21, 1964, provided for a time limit of one year, *i.e.*, to December 21, 1965.

Due notice of the filing of the petition to amend further and opportunity for hearing thereon has been given by publication in the Federal Register on January 8, 1966 (31 F.R. 279). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued December 21, 1964, as amended, in Docket No. CP64–255 (Phase I) be further amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued December 21, 1964, as amended, in Docket No. CP64–255 (Phase I) is further amended to authorize the construction and operation of 10.8 miles of 30-inch loop pipeline north of Tescott, Kansas, in lieu of the 10.6 miles of 30-inch loop pipeline north of Beatrice, Nebraska, heretofore authorized and to extend to December 21, 1966, the time within which to construct and place facilities in actual operation, all as hereinbefore described and as set forth in the petition to amend further.

(B) In all other respects said order, as amended, shall remain in full force and effect.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

SOUTHERN NATURAL GAS COMPANY, CP66–201; SUN OIL COMPANY, G–8592; GULF OIL CORPORATION, G–10827; MARATHON OIL COMPANY, G–11821

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND AMENDING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 21, 1966)

On December 20, 1965, Southern Natural Gas Company (Applicant) filed in Docket No. CP66–201 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale for resale in interstate commerce and the delivery of natural gas to United Gas Pipe Line Company (United), all as more fully set forth in the application.

Applicant proposes to sell gas attributable to additional interests in the acreage in the Maxie-Pistol Ridge field from which sales by Applicant to United are now being made. Applicant states that it has acquired the additional interests in this field through the following described assignments:

(1) from Gulf Oil Corporation, dated March 22, 1960;

(2) from Marathon Oil Company, dated August 2, 1965;

(3) from Sun Oil Company, dated August 27, 1965;

Applicant drilled and completed a gas well, the Citizens Bank of Hattiesburg Unit No. 1 No. 4 Well (No. 4 Well), in the Citizens Bank of Hattiesburg Unit No. 1 of the Maxie-Pistol Ridge field, and as a result of Applicant's completing that well as a gas well, Gulf Oil Corporation (Gulf), Marathon Oil Company (Marathon) and Sun Oil Company (Sun) assigned to Applicant the gas rights in the Citizens Bank of Hattiesburg Unit No. 1 hereinafter described.

The assignment from Gulf is limited to gas rights only from the top of the Lower Cretaceous Formation, or from a depth of 8,748 feet (whichever is the greater depth) to a depth of 11,793 feet underlying Lot Nos. 5 and 12 of Section 6, Township 1 South, Range 13 West. The assignment from Marathon was limited to gas rights only to all depths below 8,748 feet or below the base of the Lower Tuscaloosa Formation, whichever is the greater depth. The assignment from Sun was limited to gas rights only from the top of the Lower Cretaceous Formation to a depth of 11,250 feet.

The gas attributable to the overriding royalty interest reserved by Gulf will continue to be sold to United by Gulf under Gulf's FPC Gas Rate Schedule No. 92 and the gas attributable to the overriding royalty interest reserved by Marathon will continue to be sold to United by Marathon under Marathon's FPC Gas Rate Schedule No. 16. The gas attributable to the interest assigned by Sun to Applicant will be sold by Applicant to United under Applicant's existing FPC Gas Rate Schedule No. F–1.

The additional interests assigned to Applicant heretofore were subject to the gas sales contracts which the assignors have with United, as the interests related to acreage within the areas dedicated to United by those contracts.

The Commission has previously issued certificates of public convenience and necessity to Sun in Docket No. G–8592 on January 24, 1956, to Gulf in Docket No. G–10827 on April 22, 1957 and Marathon in Docket No. G–11821 on October 10, 1958, authorizing the sale and delivery of gas under each of the said contracts in the said dockets as follows:

1. *Docket No. G–10827.*—The contract between Gulf Refining Company, predecessor of Gulf Oil Corporation, and United Gas Pipe Line Company, dated July 13, 1956, covering gas produced from the Maxie-Pistol Ridge field, Forrest County, Mississippi, which has been designated as Gulf's FPC Gas Rate Schedule No. 92.

2. *Docket No. G–11821.*—The contract between Ohio Oil Company, the predecessor of Marathon Oil Company, and United Gas Pipe Line Company, dated November 24, 1954, covering gas produced from the Maxie-Pistol Ridge field, Forrest County, Mississippi, which has been designated as Marathon's FPC Gas Rate Schedule No. 16.

3. *Docket Nos. G–8592 and G–10984.*—The contract between Sun Oil Company and United Gas Pipe Line Company, dated March 4, 1955 and August 3, 1956, covering gas produced from the Maxie-Pistol Ridge field, Forrest County, Mississippi, which have been designated as Sun's FPC Gas Rate Schedule Nos. 66 and 77, respectively.

After due notice no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on February 18, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, Southern Natural Gas Company, a Delaware corporation, having its principal place of business in Birmingham, Alabama, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 6, 1942, in Docket No. G–296 (3 FPC 822).

(2) The sale of natural gas hereinbefore described, as more fully described in the application herein, will be made in interstate commerce, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, is subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The sale of natural gas by Applicant, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the certificates of public convenience and necessity issued to Sun in Docket No. G-8592 on January 24, 1956, to Gulf in Docket No. G-10827 on April 22, 1957, and to Marathon in Docket No. G-11821 on October 10, 1958, authorizing the sale and delivery of natural gas be amended so as to conform to the assignments to Applicant from Gulf, Marathon and Sun described hereinbefore.

The Commission orders:

(A) A certificate of public convenience and necessity is issued upon the terms and conditions of this order, authorizing the sale by Applicant of natural gas in interstate commerce for resale, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary for such sale, all as hereinbefore described and as more fully described in the application and exhibits in this proceeding.

(B) The certificate granted in paragraph (A) above is not transferable and shall be effective only so long as Applicant continues the acts or operations authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(C) The grant of the certificate issued in paragraph (A) above shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or of Part 154 or Part 157 of the Commission's Regulations thereunder, and is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceedings now pending or hereafter instituted by or against Applicant. Further, our action in this proceeding shall not foreclose nor prejudice any future proceedings or objections relating to the operation of any price or related provisions in the gas purchase contract herein involved. Nor shall the grant of the certificate aforesaid for service to the particular customer involved imply approval of all of the terms of the contract, particularly as to the cessation of service upon termination of said contract, as provided by Section 7(b) of the Natural Gas Act. Nor shall the grant of the certificate aforesaid be construed to preclude the imposition of any sanctions pursuant to the provisions of the Natural Gas Act for the unauthorized commencement of any sale of natural gas subject to said certificate.

(D) The grant of the certificate issued herein is upon the condition that no increase in rate shall be filed prior to January 1, 1968, at any price which would exceed the ceiling prescribed for the given area by paragraph (d) of the Commission's Statement of General Policy No. 61-1, as amended.

(E) The orders of the Commission issued in Docket No. G-8592 on January 24, 1956, in Docket No. G-10827 on April 22, 1957, and in Docket No. G-11821 on October 10, 1958, authorizing the sale and delivery of natural gas by Sun, Gulf and Marathon, respectively, are amended so as to conform to the assignments executed by said parties to Southern Natural Gas Company, referred to and described hereinbefore.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

TRANSWESTERN PIPELINE COMPANY, DOCKET NO. CP63-290; NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP63-291

ORDER AMENDING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 21, 1966)

On December 28, 1965, Northern Natural Gas Company (Northern) filed a petition, as supplemented on February 14, 1966, and on January 4, 1966, Transwestern Pipeline Company (Transwestern) filed a petition to amend the certificates of public convenience and necessity issued in Docket Nos. CP63-291 and CP63-290, respectively, on October 10, 1963, 30 FPC 997, and amended on September 28, 1964, 32 FPC 863, and August 6, 1965, by extending the time within which Northern and Transwestern may exchange natural gas and by authorizing the construction and operation of certain facilities required for the exchange, as more fully set forth in the petitions to amend, as supplemented.

On October 10, 1963, the Commission issued certificates of public convenience and necessity in Docket Nos. CP63-290 and CP63-291 authorizing the construction and operation of certain facilities and the exchange and delivery of natural gas for one year commencing August 1, 1963. On September 28, 1964, the certificates were amended to authorize the continued exchange until August 1, 1965. On August 6, 1965, the Commission issued a letter-order extending the time for the exchange to September 30, 1965. Pursuant to these orders, Transwestern has delivered 24,029 Mcf to Northern.

Northern and Transwestern have entered into a gas exchange agreement dated December 10, 1965 (superseding the original agreement, as amended, dated April 12, 1963) whereby both parties have agreed to extend the exchange deliveries by Transwestern to Northern through December 31, 1966. Transwestern will deliver and Northern will receive 40,000 Mcf of natural gas on each day, plus additional volumes which Northern may elect to receive, not to exceed 10,000 Mcf per day. Such deliveries will be made through two existing points of interconnection in Hutchinson County, Texas, and Beaver County, Oklahoma, and through two proposed new interconnections in Ochiltree County, Texas.

The agreement of December 10, 1965, further provides that upon the completion of the necessary facilities, Northern will begin redelivering to Transwestern not less than 20,000 Mcf nor more than 50,000 Mcf of gas per day, extending through December 31, 1969, or until such earlier date as the volumes of gas delivered to Northern by Transwestern between August 1, 1963, and December 31, 1966 (less volumes delivered by Northern to Transwestern during the period from December 1, 1965, to December 31, 1966) shall have been redelivered to Transwestern.

Concurrently with the filing of its petition to amend, Northern filed a revision to its Rate Schedule X-9 incorporating the agreement of December 10, 1965.

Northern will construct and operate two 6-inch side valves and check valves at the new interconnections in Ochiltree County, Texas. Transwestern will construct and operate a measuring station and related facilities at each of these new delivery points.

In order to effectuate the redelivery of gas to Transwestern, Northern will construct and operate 7.4 miles of 10-inch pipeline, extending from its Hobbs, New Mexico, Compressor Station to a point on Transwestern's 10-inch Monument Lateral, a measuring station and a gas treating plant, and will make certain gas piping modifications at Hobbs, all in Lea County, New Mexico.

The estimated costs of construction for Northern and Transwestern are $458,900 and $89,670, respectively. Each company will finance the construction from funds on hand.

The exchange of gas assists Transwestern in relieving an oversupply of gas. Northern benefits by receiving gas at points on its system closer to its markets than the point at which it will subsequently redeliver the gas to Transwestern.

Due notice of the filing of the petitions to amend by Northern and Transwestern were published in the Federal Register on January 13, 1966 (31 F.R. 465) and January 21, 1966 (31 F.R. 856), respectively. No protest, petition to intervene, notice of intervention, or request for hearing has been filed in these proceedings.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the certificates of public convenience and necessity issued to Northern and Transwestern in Docket Nos. CP63-291 and CP63-290, respectively, on October 10, 1963, and amended on September 28, 1964, and August 6, 1965, be further amended as hereinafter ordered.

The Commission orders:

(A) The certificate of public convenience and necessity, as amended, issued to Northern Natural Gas Company on October 10, 1963, in Docket No. CP63-291 is further amended by authorizing the continuation of the exchange of natural gas with Transwestern Pipeline Company and the construction and operation of valves at the new points of interconnection in Ochiltree County, Texas, and of redelivery facilities in Lea County, New Mexico, as hereinbefore described and as more fully described in the petition to amend.

(B) The certificate of public convenience and necessity, as amended, issued to Transwestern Pipeline Company on October 10, 1963, in Docket No. CP63-290 is further amended by authorizing the continuation of the exchange and delivery of natural gas with Northern Natural Gas Company and the construction and operation of two measuring stations and related facilities in Ochiltree County, Texas, and of a side tap and valve, together with related facilities, in Lea County, New Mexico, as hereinbefore described and as more fully described in the petition to amend.

(C) Northern's revision to its Rate Schedule X-9 incorporating the agreement dated December 10, 1965, is accepted for filing.

(D) In all other respects the certificates, as amended, shall remain in full force and effect.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

FRIO-TEX OIL & GAS COMPANY, DOCKET NO. RI62-195

ORDER CONDITIONALLY ACCEPTING OFFER OF SETTLEMENT, REQUIRING FILING OF NOTICE OF CHANGE AND CONTRACT AMENDMENT, AND TERMINATING PROCEEDINGS

(Issued February 23, 1966)

On December 6, 1965, Frio-Tex Oil & Gas Company (Frio-Tex) filed an offer of settlement in this proceeding pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure, involving the sale of natural gas to Transcontinental Gas Pipe Line Corporation (Transco) in Frio County, Texas (Texas Railroad Commission District No. 1) under its FPC Gas Rate Schedule No. 1. The settlement involves a proposed increased rate filed by Frio-Tex from 13.68225¢ to 14.69575¢ per Mcf of natural gas at 14.65 psia, inclusive of tax reimbursement, which was suspended by the Commission for the statutory period and made effective by Frio-Tex on May 1, 1962, subject to refund.

Under the terms of the settlement offer, Frio-Tex proposes to delete the present price escalation provisions from the subject rate schedule and to charge a settlement rate of 15¢ per Mcf of natural gas at 14.65 psia for the remaining term of the contract. Frio-Tex reserves the right to file for three-fourths reimbursement of any taxes levied after December 1, 1965.

Additionally, Frio-Tex reserves the right to file an increased rate up to the applicable area ceiling during the remaining term of the subject contract if such ceiling rate be fixed, after December 1, 1969, at a level above the proposed settlement rate as a result of an area proceeding, or otherwise, as if its contract with Transco had not been amended. Such a reservation is not consistent with the provisions of the Seventh Amendment to the Statement of General Policy No. 61-1, 18 CFR 2.56, insofar as deletion of certain contract provisions are required as a part of a rate settlement.[1] Therefore, we shall condition our approval of the Frio-Tex proposal to require it to delete the price escalation provisions from the subject rate schedule for the remaining term of the contract without reservation regarding possible future increases in the applicable area ceiling for the remaining term of the contract.

We desire to make it clear that the conditional acceptance of the Frio-Tex offer of settlement shall not be construed as approval of any future increased rate filed in accordance with its reservation of the right to file increases to cover future tax increases as provided in its offer of settlement, and is without prejudice to any findings or order of the Commission in any future proceedings, including area rate or other similar proceedings involving the rate and rate schedule of Frio-Tex.

The Commission finds:

The proposed settlement of the above-designated proceeding, on the basis described herein, as more fully set forth in the offer of settlement filed with the Commission by Frio-Tex on December 6, 1965, and as conditioned herein, is consistent with the Statement of General Policy No. 61-1, as amended, 18 CFR 2.56, and approval thereof as made effective and hereinafter ordered is in the public interest and is appropriate to carry out the provisions of the Natural Gas Act.

---

[1] *Cf., Warren Petroleum Corporation,* Docket No. RI61-63, 30 FPC 1040.

The Commission orders:

(A) The offer of settlement filed with the Commission by Frio-Tex on December 6, 1965, as herein conditioned, is approved in accordance with the provisions of this order.

(B) Frio-Tex shall file, over the signature of a responsible officer, within 30 days from the date of issuance of this order, an original and one copy of its acceptance or rejection of the terms and conditions of this order applicable to it; *provided, however,* that if Frio-Tex should file its acceptance such shall not be binding upon it, without its express agreement, if any other party to this proceeding shall file for reconsideration or rehearing within the statutory period.

(C) Frio-Tex shall file within 45 days from the date of issuance of this order, a notice of change in rate providing for the 15¢ per Mcf of natural gas at 14.65 psia settlement rate specified in its offer of settlement, and an executed contract amendment to its FPC Gas Rate Schedule No. 1 eliminating all price escalation provision therefrom without reservation, except for possible future changes in tax reimbursement. The notice of change and contract amendment shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(D) Upon notification by the Secretary of the Commission that Frio-Tex has complied with the terms and conditions of this order, the rate and charge of 15¢ per Mcf of natural gas at 14.65 psia sold under its FPC Gas Rate Schedule No. 1, specified in its settlement offer, as herein conditioned, shall be effective as of the date of this order, the proceedings in Docket No. RI62–195 shall be deemed terminated, and the agreement and undertaking filed herein be considered withdrawn, all without further order of the Commission.

(E) This order is without prejudice to any findings or orders which have been or may be made hereafter by the Commission, and is without prejudice to claims or contentions which may be made by Frio-Tex, the Commission staff, or any affected party hereto, in any proceedings now pending, or hereafter instituted, including area rate or similar proceedings, by or against Frio-Tex, or any other companies, person or parties affected by this order.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

PACIFIC GAS AND ELECTRIC COMPANY, PROJECT NO. 2310

ORDER APPROVING PROJECT EXHIBIT K DRAWINGS

(Issued February 23, 1966)

On May 4, 1965, Pacific Gas and Electric Company, licensee for Project No. 2310, filed for Commission approval Exhibit J and K drawings showing, among other project works, two unconstructed additional transmission lines to be included in the license (29 FPC 1265) for the project as a part of the project works.

The drawings show: (1) a 115 kv transmission tie line (0.1 of a mile long) between the licensee's Dutch Flat No. 1 power plant of Project No. 2310 and Nevada Irrigation District's Dutch Flat No. 2 power plant under license for Project No. 2266; and (2) a 115 kv transmission tie line (0.8 of a mile long) from Nevada Irrigation District's Chicago power plant of Project No. 2266 to the licensee's Dutch Flat-Halsey Junction 115 kv transmission line of Project

No. 2310. It appears, therefore, that the two lines will connect to licensed hydroelectric projects at either end, and will transmit power only from and to those licensed projects.

We are deferring approval of the Exhibit J drawings, which show the constructed project works, until staff processing of the licensee's pending application for further amendment of the license to include thereunder such constructed project facilities is completed.

Our approval of the Exhibit K drawings (FPC Nos. 2310–83 and –90) will necessitate modification of subparagraph (i) of paragraph (B) of the license to include therein these drawings, and modification of subparagraph (ii) of paragraph (B) to include therein a description of the lines approved by this order as a part of the project works under the license for the project.

The Commission finds:

(1) The two unconstructed, additional transmission lines described in paragraph (C) below are parts of the project within the meaning of Section 3(11) of the Federal Power Act and should be included in the license for the project.

(2) Exhibit K drawings (FPC Nos. 2310–83 and –90) filed on May 4, 1965, conform to the Commission's Rules and Regulations and should be approved as parts of the license for the project to the extent that they show the two additional unconstructed lines described in paragraph (C) below.

The Commission orders:

(A) The license issued to Pacific Gas and Electric Company for Project No. 2310 is hereby modified, effective as of February 1, 1966, to include the unconstructed transmission lines described in paragraph (C) below.

(B) Exhibit K drawings (FPC Nos. 2310–83 and –90) are hereby approved as part of the license for the project to the extent that they show the two additional proposed transmission lines described in paragraph (C) below.

(C) Subparagraph (i) of paragraph (B) of the license for the project is hereby modified to include therein Exhibit K drawings (FPC Nos. 2310–83 and –90), and subparagraph (ii) of paragraph (B) is hereby modified to include the following described unconstructed transmission lines:

Line	*Voltage kv*	*Miles*
Dutch Flat No. 1 power plant to Dutch Flat No. 2 power plant	115	0.1
Chicago Park power plant to Dutch Flat-Halsey Junction	115	.8

(D) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this order. In acknowledgment of the acceptance of this order, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

CONTINENTAL OIL COMPANY (OPERATOR), DOCKET NO. RI62–422

ORDER ACCEPTING DECREASED RATE FILING

(Issued February 24, 1966)

Continental Oil Company (Operator) (Continental) on January 24, 1966, tendered for filing a notice of change in rate reflecting a tax reduction in a previously filed rate increase which is now in effect subject to refund in Docket No. RI62–422. The decreased rate filing is set forth in Appendix "A" hereof.

Continental, a producer-respondent in the Permian Basin Opinion No. 468, 34 FPC 159, proposes a rate decrease from 17.2295¢ to 17.0¢ per Mcf, amounting to $3,213 annually, for a plant sale of residue gas derived from casinghead gas to El Paso Natural Gas Company (El Paso) in the Permian Basin Area of Texas. The proposed rate decrease reflects discontinued collection of 0.2295¢ per Mcf tax reimbursement, which Continental states has been collected in error. The increased rate of 17.2295¢ per Mcf, effective subject to refund in Docket No. RI62–422[1] reflects a 1.35% tax reimbursement of the value of all residue gas delivered to El Paso from Continental's Ramsey Plant attributable to casinghead purchased by Continental under percentage type contracts. By letter agreement from Continental dated December 9, 1965, and accepted by El Paso on December 15, 1965, it was mutually agreed that the producers selling to Continental are responsible for all taxes on production delivered to the Ramsey Plant. Continental, as full settlement for the tax reimbursement collected in error, has refunded to El Paso the amount collected.

Since Continental's reduced rate of 17.0¢ per Mcf exceeds the applicable area base rate of 14.5¢ per Mcf prescribed by the Permian Basin Opinion No. 468, we believe that it would be in the public interest to accept for filing the proposed tax decrease effective as of February 24, 1966, the date of expiration of the statutory notice, subject to refund in the existing suspension proceeding in Docket No. RI62–422.

Except for the stay of Opinion Nos. 468 and 468–A, 34 FPC 1068, granted to Continental, among others, by order issued January 20, 1966, in *Skelly Oil Co.* v *F.P.C.* (CA10, No. 8385, *et al.*), the decreased rate filing made here by Continental would be rejectable under the moratorium provisions in Opinion No. 468 because it exceeds the applicable area rate ceiling determined in Opinion Nos. 468 and 468–A. If the Commission's moratorium on rate increases is ultimately upheld upon judicial review, then the subject rate filing will be rejected *ab initio*.

The Commission finds:

It is necessary and proper in carrying out the provisions of the Natural Gas Act and the Regulations thereunder to accept for filing the proposed tax reimbursement rate decrease filing, designated as Supplement No. 3 to Continental's FPC Gas Rate Schedule No. 168, effective as of February 24, 1966, subject to the existing rate suspension proceeding in Docket No. RI62–422 and refund obligation related thereto.

The Commission orders:

The tax reimbursement decrease, designated as Supplement No. 3 to Continental's FPC Gas Rate Schedule No. 168, is accepted for filing, effective as of February 24, 1966, subject to the existing rate suspension proceeding in Docket No. RI62–422 and refund obligation related thereto.

---

[1] Docket No. RI62–422 is consolidated in the "Order to Show Cause" (34 FPC 424) issued concurrently with the Permian Basin Opinion No. 468.

KNOXVILLE UTILITIES BOARD, ET AL. v. EAST TENNESSEE NATURAL GAS COMPANY, RP65-4; MIDWESTERN GAS TRANSMISSION COMPANY, RP61-19, RP62-7 (REOPENED)

ORDER SETTING CONSOLIDATED ORAL ARGUMENT IN LIBERALIZED TAX DEPRECIATION ISSUE; DENYING MOTION AND CANCELLING ORAL ARGUMENT

(Issued February 24, 1966)

The Independent Natural Gas Association of America (INGAA) petitioned, on January 25, 1966, for intervention in East Tennessee Natural Gas Company (East Tennessee), Docket No. RP65-4, for the limited purpose of requesting the Commission to defer oral argument and decision on the issue of the proper rate treatment of liberalized tax depreciation benefits in that proceeding until after that issue is argued and decided in Midwestern Gas Transmission Company (Midwestern), Docket Nos. RP61-19 and RP62-7, or in the alternative, to permit its participation in the oral argument on that issue in the East Tennessee proceeding.

Oral argument on all issues in the East Tennessee case is presently scheduled to be held on February 25, 1966. Both East Tennessee and Midwestern present the issue of the proper treatment of liberalized tax depreciation deductions in fixing the rates of a pipeline which discontinues such rapid tax depreciation. As presently scheduled, the East Tennessee proceedings would be submitted for final decision before the similar issue in Midwestern can be argued. Accordingly, INGAA further requests that if the motion for such partial deferment is denied, it be permitted to participate with respect to this single issue in the oral argument to be held on February 25, 1966.

Knoxville Utilities Board, *et al.* (Knoxville) filed an answer opposing INGAA's request, on February 4, 1966. Knoxville asserts that the Commission has never made manifest any intention that the Midwestern proceeding should serve as a pilot case for decision on this issue and points out that INGAA has failed to excuse or justify the tardiness of its petition to intervene in the instant proceeding. Knoxville further argues that the jurisdictional customers will be irreparably injured by any delay in the issuance of a final order reducing East Tennessee's rates since any such action can only be made prospectively effective.

While INGAA has not timely petitioned for intervention in the East Tennessee proceeding, we believe that since the underlying fundamental questions of policy and law presented in these two cases on the liberalized depreciation issue are identical, the contemporaneous consideration of those questions, based on respective evidence presented in the two cases, will greatly aid the Commission's determination of this important issue. Accordingly, we are of the view that it is appropriate and necessary that there be a consolidated oral argument of the liberalized depreciation flow-through issue presented by these rate proceedings. It is our intention that each of the parties shall argue only the facts of the particular proceeding in which it is a party in interest or an intervener.

Our action in this regard will not postpone or delay final decision of the other issues in the East Tennessee proceeding. Upon reconsideration of the nature and scope of those issues, we believe that they have been fully briefed and that oral argument thereon is unnecessary. Accordingly, we are hereby cancelling the oral argument previously scheduled for February 25, 1966.[1]

The Commission orders:

(A) A consolidated oral argument shall be held in Docket No. RP65-4, and Docket Nos. RP61-19 and RP62-7 (reopened) before the Commission *en banc* commencing at 10:00 a.m., April 5, 1966, in a hearing room of the Federal Power Commission, 441 G Street, N.W., Washington, D.C., on the issue of the proper rate treatment of the liberalized tax depreciation deductions available to East Tennessee and Midwestern which have reverted to straight-line depreciation.

(B) All parties desiring to participate in such oral argument shall notify the Secretary on or before March 4, 1966 of the amount of time desired for presentation of their arguments.

(C) The oral argument previously scheduled to be held on February 25, 1966, in the East Tennessee proceeding, Docket No. RP65-4, is cancelled.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

THE MONTANA POWER COMPANY, PROJECT NO. 5

ORDER APPROVING AGREEMENT AND PRESCRIBING PRINCIPLES AND PROCEDURES FOR REGULATION OF FLATHEAD LAKE

(Issued February 24, 1966)

On May 31, 1962, The Montana Power Company, licensee for the Kerr hydroelectric development, Project No. 5, on the Flathead River in Montana, and the Corps of Engineers entered a memorandum of understanding which set forth principles and procedures for regulation of Flathead Lake, the storage reservoir of the Kerr development, in the interests of flood control. The agreement, as amended on October 15, 1965, was filed on October 19, 1965, for approval by the Commission under Article 21 of the Kerr license, providing:

> The operations of the Licensee in so far as they affect the use, storage, and discharge from storage of the water of Flathead Lake, shall at all times be controlled by such reasonable rules and regulations * * * as the Federal Power Commission may prescribe in the interests of flood control and the fullest practicable utilization of the waters of Flathead River and Clark Fork for power, irrigation, and other beneficial uses.

The amended agreement provides in general that: (1) The Licensee and the Corps of Engineers will cooperate in exchanging data and coordinating operations for flood control. (2) Conditions permitting, the lake will be drawn down to elevation 2883 feet, the minimum level under the license, by April 15th and will be raised to elevation 2890 feet by Memorial Day (May 30th) and to elevation 2893 feet, the maximum level under license, by June 15th. (3) When the lake reaches elevation 2886 feet, in a moderate or major flood year, the Licensee will gradually open its spill-gates to maintain free flow and will not close the gates until after the danger of exceeding elevation 2893 feet has passed.

---

[1] Notice Fixing Oral Argument issued November 18, 1965.

The amended agreement has been endorsed by both the Flathead Lakers, Inc., an association of lakeside residents who are interested in having the lake level brought up to the maximum under license as soon in the recreation season as possible, and the Upper Flathead Valley Flood Control Association, an organization of farm owners at the upper end of the lake who are interested in having the lake level kept down to prevent innundation of their lands by late floods. At a conference held in Missoula, Montana, on September 28, 1965, attended by representatives of these two landowners' groups, the licensee, the Corps of Engineers, and the Commission, various differences were settled, and the terms of the settlement were incorporated into the agreement by the amendment of October 15, 1965.

The Commission finds:

The memorandum of understanding of May 31, 1962, as amended October 15, 1965, between The Montana Power Company and the Corps of Engineers provides satisfactory principles and procedures for regulation of Flathead Lake in the interest of flood control, power, recreation, and other beneficial public uses.

The Commission orders:

Until further order of the Commission, the principles and procedures for regulation of Flathead Lake contained in the aforesaid memorandum of understanding are approved and are prescribed under Article 21 of the license for The Montana Power Company's Kerr development, Project No. 5.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

NATURAL GAS PIPELINE COMPANY OF AMERICA, ET AL., DOCKET NO. CP62–243, ET AL.; TRUNKLINE GAS COMPANY, DOCKET NO. CP66–171; MISSISSIPPI RIVER TRANSMISSION CORPORATION, DOCKET NO. G–863

NOTICE OF APPLICATIONS, SUPPLEMENTS AND AMENDMENTS TO APPLICATIONS, ORDER CONSOLIDATING AND ORDER DENYING STAFF'S MOTION

(Issued February 24, 1966)

On December 1, 1965, Mississippi River Transmission Corporation (Mississippi), 9900 Clayton Road, St. Louis, Missouri, filed a "Supplement to and Amendment of Applications and Motions to Amend Certificates of Public Convenience and Necessity". In essence, Mississippi seeks to amend its filing in Docket No. CP62–242 so as to receive authorization for the receipt, transportation and delivery to customers of natural gas in interstate commerce 100,000 Mcf per day instead of the heretofore requested 65,000 Mcf per day.

Mississippi proposes to purchase a total of approximately 65,000 Mcf per day from Natural Gas Pipeline Company of America (Natural). Deliveries to Mississippi by Natural will be effectuated through use of the emergency interconnection granted by the Commission order in Docket No. CP61–339. To this end both Applicants seek modification of the order issued in Docket No. CP61–339 so as to permit the use and operation of their respective, separately owned portion of the facilities, for delivery by Natural and receipt by Mississippi of natural gas on a firm basis. Delivery of the 65,000 Mcf per day is proposed to be commenced on November 1, 1966, and is inclusive of the 35,000 Mcf per day presently being delivered by Natural to Mississippi under temporary authorization.

Mississippi also proposes to purchase an additional 35,000 Mcf per day from Trunkline Gas Company (Trunkline) effective November 1, 1966, and to transport and sell said volume to its existing customers. Trunkline will deliver the gas at its existing interconnection with Mississippi in Clay County, Illinois.

Further, Mississippi seeks amendment of its certificate issued in Docket No. G–863 so as to be authorized to transport and sell firm gas to Mississippi Lime Company, an existing direct interruptible customer.

Mississippi does not propose to construct any facilities. The supplement and amendment recites that it has unused capacity in excess of that required to meet its present commitments, and that no new facilities are required for the purchase of the above volumes from Natural and Trunkline or for the transportation of said volumes for delivery and sale to Mississippi's existing customers.

On December 1, 1965, Natural, 122 South Michigan Avenue, Chicago, Illinois, filed an amendment to its applications in Docket Nos. CP62–243 and CP63–99 so as to reflect the revised facilities necessary for Natural to deliver and sell to Mississippi the heretofore referred 65,000 Mcf per day. Specifically, Natural proposes to construct approximately 52.71 miles of 36-inch loop pipeline and to install 20,400 horsepower of compression at various existing compressor stations along its Gulf Coast line. The estimated cost of $13,245,000 will be financed through interim and permanent financing more fully described in the amendment. Finally, in conjunction with its motion to amend the authorization granted to Natural in Docket No. CP61–339, Natural requests authorization for the cancellation of its Rate Schedule X–9.

On December 1, 1965, Trunkline, a Delaware corporation having its principal office in Houston, Texas, filed an application seeking authorization to construct and operate certain facilities so as to enable it to deliver and sell to Mississippi an additional volume of 35,000 Mcf per day commencing November 1, 1966. The sale will be made pursuant to Trunkline's P–1 Rate Schedule.

Specifically, Trunkline proposes to construct and operate (1) approximately 31.6 miles of 36-inch O.D. pipeline to loop portions of its existing main transmission lines between Longville, Louisiana and Tuscola, Illinois, (2) 3,000 additional horsepower at existing main line Compressor Station No. 48, Longville, Louisiana, and (3) 1050 additional horsepower at existing main line Compressor Station No. 84, Independence, Mississippi. The proposed facilities, which will increase the transmission capacity of Trunkline's pipeline system to 1,070,000 Mcf per day, are estimated to cost $6,500,000 and will be financed through short-term bank loans to be repaid by internally generated funds or from other sources. On December 2, 1965, Trunkline filed a motion seeking consolidation of its instant application with those in the proceeding in Docket No. CP62–243, *et al.*

On December 10, 1965, the Commission staff, relying in part on Opinion 474, 34 FPC 771, issued in the Docket No. CP62–243, *et al.*, proceeding, filed a motion opposing, in part, the instant Natural-Mississippi-Trunkline proposal and requesting denial of Trunkline's motion to consolidate. We believe this motion should be denied.

It is unfortunate that there is not now pending an application to deliver gas to Mississippi at St. Louis. However, contrary to the implication in the dissent, the Natural Gas Act does not give this Commission the authority to compel the enlargement of transportation facilities. In the light of this situation, we are not prepared to gamble with the interests of the gas consumers of St. Louis by exercising whatever leverage may be useful for the purpose of goading the parties to file the kind of application we might prefer. Even if the Commission were eventually successful in extracting such an application, there is no assurance that it could be granted timely, or even that it should be granted.

The grave risks involved in the gamble suggested by the dissent are disclosed in the answers to Staff's motion filed by several parties, including gas consumers in St. Louis who supported the application of Oklahoma-Illinois, all of who allege an imperative need for additional volumes of gas in St. Louis during the forthcoming winter season of the total magnitude proposed in the instant applications of Mississippi, Natural and Trunkline.[1]

Perhaps the basic misunderstanding inherent in the dissent is the notion that these applications constitute a settlement which the Commission, by its action here, is approving. This is not the case. We are not now making a final determination of the merits or demerits of these applications in advance of hearing. The time for making that decision is after, not before the evidence is in and the parties have been heard. Only then will the Commission grant or deny these applications, in whole or in part, with or without conditions as the public interest may require. This order simply permits the case to proceed. Properly understood, our decision does not preclude staff from fulfilling its responsibilities of considering alternative means of satisfying the needs of the St. Louis market which may be in the public interest. Thus, we think that our decision is consistent with *Scenic Hudson Preservation Conference* v. *F.P.C.*, 354 F. 2d 608 (CA2–1965) in contrast to the dissent which would not permit one of the applicants, *i.e.* Trunkline, an opportunity to demonstrate that its application is consistent with the public interest.

The dissent further infers that the effect of granting these applications will forever bar the provision of competitive service to St. Louis of the type contemplated in the previous opinion. We have no basis for such a determination at this preliminary stage of the proceeding. In this connection, we will require a showing, in this case, whether a grant of the subject applications would prejudice or preclude the provision of such service. Additionally, it is conceivable that one or more of the parties may see fit to file a new application at some future date seeking to change the delivery point of the volumes proposed in the instant applications to a point within St. Louis, as well as to provide whatever additional volumes of gas may be required beyond the immediate forthcoming winter heating season.

Without necessarily disagreeing with Commissioner Black's commentary on Panhandle's representations in these proceedings, it is apparent that Panhandle has declined to prosecute its application in Docket No. CP63–106 in favor of supporting that of Trunkline, its affiliate, in Docket No. CP66–171. Accordingly, Panhandle's aforementioned application will be dismissed and Trunkline's application will be consolidated. The case should proceed to hearing forthwith in accordance with this determination.

Lastly, in view of (1) the merger of Mississippi River Fuel Corporation with Mississippi Transmission subsequent to the commencement of the proceedings in Docket No. CP62–243, *et al.*, and (2) our instant action and that taken in Opinion No. 474, the matters presented by the following applications are moot and consequently are deemed closed:

> Mississippi River Transmission Corporation, Docket No. CP62–76. Mississippi River Fuel Corporation, Docket No. CP61–341. Panhandle Eastern Pipe Line Company, Docket No. CP63–106.

The Commission orders:

(A) The Commission staff's motion filed on December 10, 1965, in the proceedings in Docket No. CP62–243, *et al.*, is denied.

---

[1] It is significant that the volumes shown as required substantially exceed those more limited volumes accepted in the original opinion.

(B) The application of Trunkline in Docket No. CP66–171 and that of Mississippi for amendment of its authorization in Docket G–863 are hereby consolidated with the proceeding in Docket No. CP62–243, *et al.*

(C) The proceedings on the applications of Mississippi River, Docket No. CP61–341, and Mississippi Transmission, Docket No. CP62–76 are deemed closed without the grant of any of the authorizations sought therein. The application of Panhandle in Docket No. CP63–106 is hereby dismissed.

(D) Protests or petitions to intervene by any party, including those already a party to the proceeding in Docket No. CP62–243, *et al.*, should be filed with the Federal Power Commission, Washington, D.C. 20426, in accordance with the Rules of Practice and Procedure (18 CFR 1.8 or 1.10) and the Regulations under the Natural Gas Act (157.10) on or before March 7, 1966.

(E) Pursuant to the authority conferred on the Federal Power Commission by the Natural Gas Act and the Commission's Rules of Practice and Procedure, a hearing will be held on March 14, 1966, at 10:00 a.m. (EDST) in a Hearing Room of the Federal Power Commission, 441 G Street, NW., Washington, D.C., respecting the matters set forth in the instant order.

Commissioner Black *dissenting.*

BLACK, *Commissioner, dissenting:*

I would grant Staff's motion to dismiss the proposals of Natural, Mississippi and Trunkline and, as Staff has requested, permit Natural to submit a proposal in accordance with its offer to supply the full increased requirements of Mississippi for the St. Louis market. Such a proposal should include provision to deliver gas within the St. Louis area. By its action today the Commission is providing for an obviously inferior method of bringing additional gas to St. Louis, and at a substantially higher price than necessary.

The majority of the Commission, in its brief order, has treated this action as routine, and with no discussion of the issues lightly tosses aside our Opinion No. 474 and the whole purpose for which we ordered the remanded proceedings. Today's order is a total repudiation of our earlier action and the parties to this proceeding and the citizens of St. Louis are entitled to an explanation. But the majority apparently has none it can provide in good conscience.

This case was instituted by Natural in July 1962 by its application to supply Mississippi with increased volumes of gas for the growing needs of St. Louis. Oklahoma-Illinois and Panhandle thereafter entered the contest and this Commission consolidated the applications for comparative hearing. The proceedings consumed three months of hearings, 14,155 pages of testimony and 249 exhibits and was strongly contested by all parties. An Examiner's opinion was issued on September 10, 1964. After oral argument on December 15, 1964, the Commission took the case under deliberation and nine months later issued our Opinion No. 474. We determined that in the special circumstances of this case the public convenience and necessity required certification of a second pipeline supplier *directly into St. Louis, Missouri.* Our decision, after several years of effort by the parties, the Examiner, and ourselves, was not an impulsive one. It is discouraging to see it scuttled without so much as a murmur of regret.

A majority of the Commission disagreed with the Presiding Examiner's conclusion that the Oklahoma Illinois Gas Pipeline Company's project could best accomplish the objective of bringing pipeline competition to St. Louis. Instead, after agreeing with the Examiner that Panhandle and Natural had not sustained their burden of proof in regard to their respective applications, we found that either of those proposals would, in the event the evidentiary deficiencies were corrected, be a proper vehicle for the requisite introduction of potential pipeline competition in the St. Louis area, provided Panhandle or Natural proposed facilities for delivering gas directly into the St. Louis environs. We had this to say:

> We well might find that approval of Panhandle's project would provide the necessary additional gas supplies, but that Mississippi should continue to serve as the prime supplier in the St. Louis area subject to our jurisdiction. It seems clear that certification of such a project as Panhandle would have a potent competitive effect in the area. And should our regulatory efforts fail to preclude recurrence of past events, the presence of the second supplier would make available the possibility of an effective remedy. (Opinion No. 474, p. 786.)
>
> * * * Natural's proximity to the St. Louis market and the certification of its proposed sale to Mississippi might still deny the St. Louis area the benefits of competition, since Natural under its existing proposal would make deliveries only into Mississippi's facilities some 50 miles away from St. Louis, and could not compete directly with Mississippi for customers in the St. Louis area. * * * In the further proceedings, Natural should examine the feasibility of providing facilities for delivery of the gas at a point more convenient to the St. Louis market area. (Opinion No. 474, p. 785.)

Consistent with the foregoing observations we remanded the proceeding to the Examiner for further hearings to afford Panhandle, Mississippi, and Natural an "opportunity to substantiate their proposals for pipeline projects to serve natural gas to the St. Louis area, in conformity with this opinion and order." (Opinion No. 474, p. 786.) Further, in recognizing that since the close of the record Panhandle and Natural had been authorized to render service to areas other than those proposed to be served under the applications filed herein by means of some of the facilities covered by such applications, we required Panhandle and Natural to modify or amend their respective applications so as to prescribe such additional facilities as may be necessary to render service to the St. Louis area. (Opinion No. 474, pp. 786–787.) Lastly, after reciting that:

> (1) The present record overwhelmingly showed that Mississippi, in the past, failed to satisfy obligations to the gas-consuming public;
>
> (2) The present record clearly established that Mississippi's industrial market requirements were computed without consultation with the customers themselves; and
>
> (3) Mississippi's pricing practices with its industrial customers were characterized in part at least by considerations of what the market will bear;

we concluded as follows:

> * * * we consider it necessary that in the remanded proceedings Mississippi establish that in fact it is ready, willing, and able to fulfill its present and future obligations to render all needed service at just and reasonable rates to both its industrial and utility customers. (Opinion No. 474, p. 785.)

In Opinion No. 474, we made it abundantly clear that in the remanded proceeding effectuating the minimal requirement of bringing potential pipeline competition directly into St. Louis would be limited to the remaining applicants in this proceeding, namely, Mississippi, Natural, and Panhandle, provided amendatory filings were submitted. Mississippi and Natural are the only applicants who complied with the terms of our order on the day designated by the Examiner. Panhandle's "Statement of Position" filed in support of the application of its subsidiary, Trunkline, cannot be construed as a substitute for its deliberate failure to prosecute its application in this proceeding; it clearly is not in keeping with our previous Opinion in this proceeding to permit Panhandle to keep on file a defective application to provide direct service to St. Louis. Accordingly, I concur in today's action in dismissing Panhandle's application in Docket No. CP63–106. We should also deny Trunkline's motion to consolidate its application in Docket

No. CP66–171 with the applications in the instant proceeding. Pursuant to the provisions of Section 157.11(a) of the Regulations under the Natural Gas Act, Trunkline's application to deliver gas to Mississippi for service of the St. Louis market having been filed long after the original hearing on Mississippi's and Natural's applications, is not entitled to be heard until final decision is rendered on the earlier applications, unless the public interest otherwise requires. Since the Trunkline application (1) would provide gas to Mississippi at an appreciably higher price than that at which Mississippi would obtain gas from either Natural or Panhandle (under its original proposal here), (2) does not provide for any pipeline competition in or near St. Louis, and (3) will only take care of about one-third of Mississippi's presently estimated third-year requirements, I think it clear that no showing that the public interest requires its simultaneous consideration can be made.

In so concluding, I am, of course, aware that by giving favorable consideration to Trunkline's application it will, pursuant to its agreement with Mississippi and Natural, withdraw any opposition it might otherwise have to the grant of the latters' joint application to provide 65,000 Mcf per day of gas to the St. Louis area. I am confident, however, that, assuming the Mississippi-Natural proposal is otherwise in the public interest, action could be taken to authorize such service in more than adequate time to take care of the 1966–1967 winter period. And we certainly are remiss in our obligations where we permit service to be forced on the St. Louis area by a method which we have explicitly found to be inconsistent with its special needs, simply to avoid a hearing on another proposal, particularly since in the earlier stages of the proceeding Panhandle was utilized as a front for Trunkline's belated entry into the picture as an applicant.

It is urged that the 35,000 Mcf per day proposed to be provided by the Trunkline application is also needed for the 1966–1967 heating season in order to prevent curtailment of service to industrial users in the St. Louis area. In my view their needs can better be taken care of as part of a more comprehensive proposal to serve the growing needs of St. Louis for the next three-year period, an increment in gas supply which, if Mississippi's figures are reliable, should be more than sufficient to support new pipeline facilities providing a real degree of competition to the St. Louis area. In furtherance of this objective, I would take no action on the new trunkline application at this time, to permit it and all other interested parties to prepare and file applications consistent with these views. We should also defer, until we have a better picture of alternative proposals, questions of possible additional temporary authorizations to provide extra service to St. Louis for the 1966–1967 winter.

What I have said above also requires that no consideration be given in this remanded proceeding to that portion of Mississippi's supplement and amendment of December 1, 1965, to its applications previously filed herein, encompassing a proposal to acquire an additional 35,000 Mcf per day from Trunkline.

This brings me to Natural's amendment of December 1, 1965. This amendment, which is consistent with Natural's original proposal to sell 65,000 Mcf per day of gas to Mississippi at a junction some 50 miles east of St. Louis, is procedurally in compliance with Opinion No. 474. Although Natural has not seen fit to submit a proposal reflecting deliveries of gas directly into the St. Louis area, it has expressed a willingness to so do should the Commission so require. (Natural's answer of December 20, 1965, to staff's motion.) In view of the fact that a substantial portion of the 65,000 Mcf per day is required to meet the 1966–1967 requirements of Mississippi's jurisdictional customers, and the urgings of the St. Louis utilities that further prolonged competitive proceedings at this time might delay certification of the facilities required to meet these requirements, we should order further proceedings upon the Natural application, as amended (together with the associated Mississippi applications), and could expeditiously dispose of the pending request for 65,000 Mcf per day. We could yet accomplish the stated objective of Opinion No. 474 with respect to (1) the authorization of further facilities which is now admitted will be required to meet St. Louis' needs for the 1968–1969 season and (2) the introduction of potential pipeline competition into the St. Louis market.

The majority contends that I misunderstand today's action; that it constitutes neither a settlement nor a final determination on the merits. This is perhaps technically correct, but most naive. The practical effect of today's order is to preclude staff from fulfilling its responsibilities of developing, on a record, the alternative means of service suggested by the public interest and by Natural Gas Pipeline Company itself. The majority tacitly recognizes this, for it suggests that consideration of staff's motion would involve a gamble with the gas supply needs of the St. Louis market. It is unfortunate that today's majority has forgotten so soon the admonition of the U.S. Court of Appeals for the Second Circuit in *Scenic Hudson Preservation Conference* v. *F.P.C.*, 354 F. 2d 608 (CA2–1965):

> In this case, as in many others, the Commission has claimed to be the representative of the public interest. This rule does not permit it to act as an umpire blandly calling balls and strikes for adversaries appearing before it; the right of the public must receive active and affirmative protection at the hands of the Commission. * * * The Commission must see to it that the record is complete. The Commission has an affirmative duty to inquire into and consider all relevant facts.

Contrary to the view of the majority, the protection of the public interest involves no gamble. As this record establishes, there is no need for this Commission to sit idly by while Mississippi, Panhandle and Trunkline use the gas supply needs of the St. Louis consumer to guarantee each other's freedom from competition. Indeed, the question of our lack of authority to compel the enlargement of transportation facilities, which the majority argues justifies today's action, is not germane. On the present record, Natural has already agreed to construct whatever facilities the Commission finds necessary in the public interest. The practical effect of today's order, however, is to so fragment the gas supply of the St. Louis area as to insure that the construction of the facilities necessary for direct competition with Mississippi will not be economically feasible for the foreseeable future.

Whatever the consequences of the Commission's action may be in their effect on the parties to this case and the consumers of the St. Louis area, the more sobering implications concern the integrity of the administrative process itself. Today's action is this agency's demonstration to Panhandle Eastern Pipe Line Company and others with similar inclinations, that we will reward bad faith in a party's conduct and representations before the Federal Power Commission.

Panhandle very effectively misled the Commission into the belief that it offered a *bona fide* proposal to provide direct pipeline service into the St. Louis area. At four points in its oral argument to the Commission on December 15, 1964, counsel for Panhandle argued that on a comparative basis Panhandle's application should prevail over Natural's because it (Panhandle) proposed service directly into the St. Louis market in contrast to Natural's point of delivery fifty miles away. (Hearings, volume 97, pages 14014–14015, 14020, 14021, and 14023.)

For example, at page 14023 of the Hearings, counsel advised the Commission as follows:

> Mississippi's position has been ambivalent. They do not object to our providing them the gas if we only won't come into the market area to give it

> to them. They would rather buy 50 miles away and haul it through the line. They say they have idle capacity in the line. I can't possibly see any advantage in buying gas at a little higher price from Natural 50 miles away and use up their spare capacity when we are willing to put it right down there to them.

It is now apparent, of course, that Panhandle never intended to provide the service for which it sought a certificate. Instead, it used the administrative process as a device to protect the interest of its subsidiary in the St. Louis market, with arrogant disregard of the interest of the public to be served. Taking full advantage of the long period of time these difficult proceedings have consumed, Panhandle makes good use of the imminent need of St. Louis for increased gas supplies as leverage to force our approval of its "settlement" with the other parties. Mississippi, while paying more for Trunkline gas than for Natural's, gains freedom from any competitive threat to its monopoly in the St. Louis area. Natural, for its part, is bought off by Panhandle's promise to withdraw its opposition to the Natural-Mississippi application. Everyone benefits except the St. Louis consumer, who is being used as a pawn in this high-handed division of the market. I express the greatest regret that my colleagues should not act in a forthright fashion to protect the public interest.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. RP66-21

ORDER ACCEPTING REVISED TARIFF SHEETS FOR FILING AND APPROVING PROPOSAL TO FURTHER REDUCE RATES

(Issued February 24, 1966)

Panhandle Eastern Pipe Line Company (Panhandle), on January 6, 1966, tendered for filing an "Agreement as to the Rates of Panhandle Eastern Pipe Line Company" (Exhibit A attached hereto*) wherein it proposes to reduce its rates subject to the jurisdiction of the Commission, and concurrently tendered certain revised tariff sheets to its FPC Gas Tariff, Original Volume No. 1,[1] to reflect such reductions. Panhandle proposes to reduce its straight-line rates and the commodity component of its two part rates by 0.4¢ per Mcf, effective as of October 1, 1965. The total reduction approximates $2,100,000 per year based on estimated jurisdictional sales for the 1966 calendar year. That amount is the aggregate of a $750,000 reduction per year in Panhandle's costs plus the impact of the lower purchase gas cost from Trunkline resulting from a Commission order issued today in Docket No. RP66-20, Trunkline Gas Company, *infra*, p. 268.

The proposed rate reductions reflects estimated 1966 operations. The cost-of-service resulting therefrom is summarized in Exhibit B hereof.

The rate reduction proposal has resulted from conferences with the Staff as a consequence of the Commission's continuing supervision of natural gas companies and the periodic review of the reports filed with the Commission by such companies. Notice of the filing was issued on January 14, 1966. Only one comment thereon has been received. By letter dated January 24, 1966, the Public Service Commission of Missouri informed the Commission that the settlement of the proceeding on the basis proposed would be in the public interest.

---

*Omitted in printing.

[1] Second Revised Sheet No. 26-E; Third Revised Sheets Nos. 26-A and 26-B; Eight Revised Sheets Nos. 4, 7, 10, 13, 14, 16, 17, 19, 20, 22, 29 and 31; Ninth Revised Sheet No. 27; and Twelfth Revised Sheet No. 25.

In addition to making the reduced rates effective as of October 1, 1965, the aforementioned Agreement provides:

(1) Panhandle will refund to its jurisdictional customers, without interest, the difference between the amounts billed and collected under the currently effective rates and the amounts which would have been collected under the rates set out in the Agreement, for gas sold and delivered from and after October 1, 1965.

(2) Panhandle, in addition, will refund the jurisdictional portion of the refund received from Trunkline Gas Company as a result of an order issued concurrently herewith in Docket No. RP66–20. Panhandle's refund will be apportioned among its jurisdictional customers on the basis of volumes purchased by them during the period extending from October 1, 1965 through December 31, 1965 as detailed in Article 3 of the agreement.

(3) The reduced rates set out in the Agreement reflect an allocation of costs relating to the deliveries of shrinkage and fuel to National Helium Corporation. The Commission may examine that issue in the course of future rate proceedings. However, during the period that the rates contained in the Agreement remain in effect, no further adjustment will be made to Panhandle's rates or tariff on the basis of the effects of Panhandle's deliveries to that Corporation, whether as a result of certificate proceedings or otherwise. Nothing contained in this Agreement shall be deemed to resolve or moot any other issue presented in Docket No. CP63–159.

(4) Panhandle's existing obligations to flow through gas supplier refunds, as provided in Commission's orders issued July 20, 1962, in Docket No. G–14755, *et al.*, 28 FPC 200, and March 30, 1964, in Docket No. RP64–18, 31 FPC 736, are continued during the period of this Agreement, all as more fully prescribed in Sections 1 and 2 of Article V of the subject Agreement and Appendices B and C thereof. In addition, with respect to gas purchased on and after October 1, 1965, Panhandle will flow through the jurisdictional portion of all refunds received from its suppliers all of which is more fully detailed in Section 3 of Article V of said Agreement and Appendix D thereof. Said refunds will be made within 45 days of the time that the accumulated undistributed refundable amount totals $250,000.

(5) During the period in which the rates provided for in the subject Agreement remain in effect, Panhandle will reduce its rates to reflect the reduction in rates of its suppliers listed in Appendix E of the Agreement. The amount of the reductions shall equal the reduction in Panhandle's cost of purchase gas computed on a weighted average basis for the 12 months' periods preceding such suppliers' rate reductions and which result in cost reductions below the level of 15.00 cents per Mcf, but this base figure shall be reduced to give effect to any reduction in Panhandle's rates which has occurred in accordance with the provisions set out in Article VI of the Agreement.

(6) Panhandle reaffirms its rate obligation with respect to liberalized depreciation which it undertook in Article IV of the Agreement filed in Docket No. RP64–18 and approved by Commission order issued March 30, 1964, in that proceeding.

(7) Panhandle reserves the right to make appropriate rate filings to reflect prospectively the jurisdictional portion of any net increase or net decrease in federal income taxes attributable solely to changes in tax rates from the

presently effective 48 percent, or to the imposition of new federal taxes, if the enactment of such change in tax rate or new tax shall occur prior to January 1, 1967, and if the impact of such tax change results in an increase or decrease of one mill per Mcf.

(8) Trunkline's rates for the sale of gas to Panhandle as set out in its Rate Schedule P-1 in the proceeding in Docket No. RP66-20, shall have been made effective without suspension.

The Commission finds:

(1) Good cause exists for waiving the requirements of Section 154 of the Commission's Regulations under the Natural Gas Act in order that the revised tariff sheets specified herein may become effective as of October 1, 1965, as requested.

(2) The proposed revised tariff sheets, the rate reductions therein contained and Panhandle's agreement to further reduce its rates as provided in the proposal, are proper and in the public interest in carrying out the provisions of the Natural Gas Act, and should be accepted for filing and made effective as hereinafter provided and ordered.

The Commission orders:

(A) The provisions of Part 154 of the Commission's Regulations under the Natural Gas Act are hereby waived and the revised tariff sheets hereinbefore described are accepted for filing to be effective as of October 1, 1965, subject to the terms and conditions of this order.

(B) Panhandle shall comply with each of the provisions of the Agreement filed herein on January 6, 1966, relating to present and future rate reductions and refunds.

(C) Within twenty (20) days of making each of the refunds in accordance with paragraph (B) above, Panhandle shall report to the Commission, in writing and under oath, the amount of the refunds made to each customer, showing separately the amount of the principal and interest so paid together with a computation of the manner in which such refunds were determined, and shall serve a copy thereof upon each customer receiving a refund, and upon the interested state commissions.

(D) Upon compliance with the terms and conditions set out in this order and in the Agreement, the proceeding in Docket No. RP66-21 shall be terminated.

(E) This order is without prejudice to any findings or orders which have been made or may hereafter be made by the Commission, and is without prejudice to any claims or contentions which may be made by the Commission, its Staff, Panhandle, or any party or person affected by this order, in any proceeding now pending, or hereafter instituted by, or against, Panhandle, or any other party or person.

APPENDIX A

PANHANDLE EASTERN PIPE LINE CO.

STATEMENT OF RATES TO BE MADE EFFECTIVE AS OF OCTOBER 1, 1965

Rate schedules and zones	Charges per Mcf		
	Demand	Commodity	Straight line
General service:		*Cents*	*Cents*
G-1 Eastern zone	$2.19	23.7

APPENDIX F

EXCERPT FROM PANHANDLE'S AGREEMENT AS TO RATES

(February 25, 1964)

Article IV

Liberalized Depreciation

Section 1. On March 15, 1963, in *Panhandle Eastern Pipe Line Company* v. *F.P.C.*, 316 F. 2d 659, the United States Court of Appeals for the District of Columbia Circuit affirmed the Commission's utilization of 1.5% as the allowance for return on Panhandle's balance of deferred federal income taxes. On February 3, 1964, in *Alabama-Tennessee Natural Gas Company*, Opinion No. 417, a proceeding to which Panhandle was not a party, the Commission announced a change in the method of treatment to be applied to natural gas companies utilizing liberalized depreciation.

It is agreed that, until October 1, 1965, Panhandle's rates shall not be further modified to give effect to the principles prescribed by the Commission's Opinion No. 417, but if at the time Panhandle files its federal income tax return for 1964 or 1965, Panhandle elects to utilize liberalized depreciation in determining its deductions for tax purposes, it will reflect the principles specified in Opinion No. 417 by filing revised tariff sheets reducing the level of the rates provided for in this Agreement, to take effect on October 1, 1965, or 1966, whichever is applicable and to reflect such principles during the period the rates provided for herein remain in effect, and for so long as the Commission continues to apply the ratemaking principles of Opinion No. 417 and Panhandle continues to utilize liberalized depreciation. In no event shall more than one such filing be required.

For the purpose of such filing, the balance in Account 282 shall be that which is shown on Panhandle's books as of October 1, 1965, or 1966, whichever is applicable, and the amount attributable to current utilization of liberalized depreciation to be recognized herein shall be the amount by which the deduction for liberalized depreciation exceeds straight line depreciation based on the twelve-month period ending October 1, 1965, or 1966 whichever is applicable, the jurisdictional portion of which is to be reflected 50% in the demand components and 50% in the commodity components of the rates, uniformly applied. If Panhandle makes such a filing, or if Panhandle does not elect to take liberalized depreciation in its 1965 tax return, this rate reduction obligation shall terminate; provided, however, that the reduction in its rate base to give effect to amounts included in Account 282 shall not be contingent upon its current utilization of liberalized depreciation.

Notwithstanding the foregoing, Panhandle may defer any rate reduction with respect to liberalized depreciation until 20 days from and after the date upon which a final order of a court of review affirming Opinion No. 417 and accompanying order on its merits, becomes final and is no longer subject to judicial review. If Panhandle defers such rate reduction and subsequently becomes obligated to reduce its rates with respect to liberalized depreciation in accordance with the preceding sentence, it shall refund to its jurisdictional customers the portion of the amounts charged and collected from them between October 1, 1965, or 1966, whichever is applicable, and the date upon which such affirmance becomes nonappealable which is attributable to the Company's failure to give effect to the principles prescribed in Opinion No. 417 in accordance herewith, together with interest thereon at the rate of 7% per annum computed from the date of receipt to the date of such refund.

Section 2. If Trunkline reduces its rates to Panhandle and/or makes refunds to Panhandle pursuant to the provisions of Article III (Liberalized Depreciation) of its Agreement as to Rates referred to in Article I hereof, while the rates provided for in this Agreement are in effect, Panhandle shall reduce its rates or make refunds, as the case may be and based thereon, in accordance with the ratio of Panhandle's jurisdictional sales to its total sales for the twelve-month period preceding the month in which Trunkline's rate reduction became effective.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

TRUNKLINE GAS COMPANY, DOCKET NO. RP66-20

ORDER ACCEPTING REVISED TARIFF SHEETS FOR FILING AND APPROVING PROPOSAL TO FURTHER REDUCE RATES

(Issued February 24, 1966)

Trunkline Gas Company (Trunkline), on January 6, 1966, tendered for filing an "Agreement as to the Rates of Trunkline Gas Company" (Exhibit A attached hereto*) wherein it proposes to reduce its rates subject to the jurisdiction of the Commission, and concurrently tendered certain revised tariff sheets to its FPC Gas Tariff, Original Volume No. 1,[1] to reflect such reductions. Trunkline proposes to reduce its straight-line rates and the commodity component of its two-part rates by 0.9¢ per Mcf effective as of October 1, 1965. The total reduction approximates $3,000,000 per year based on estimated jurisdictional sales for the 1966 calendar year.

The proposed rate reduction reflects estimated 1966 operations and costs which are summarized in the cost-of-service shown in Exhibit B hereof. The rate reduction proposal has resulted from conferences with the Staff as a consequence of the Commission's continuing supervision of natural gas companies and the periodic review of the reports filed with the Commission by such companies. Notice of the filing of the proposed Agreement was issued on January 14, 1966. No comments have been received.

In addition to making the reduced rates effective as of October 1, 1965, the aforementioned Agreement provides as follows:

(1) Trunkline will refund to its jurisdictional customers, without interest, the difference between the amounts billed and collected under the currently effective rates and the amounts which would have been collected under the rates set out in the Agreement, for gas sold and delivered from and after October 1, 1965.

(2) Trunkline, in addition, will refund the sum of $450,000 to its jurisdictional customers which is to be apportioned amongst such customers on the basis of volumes purchased during the period extending from October 1, 1965 through December 31, 1965.

(3) Trunkline's costs associated with its exploration, development and production of natural gas, which represents 0.7 percent of its total gas supply and all of which is sold off-system, have been excluded from its cost-of-

---

[1] First Revised Sheet No. 9-AE; Third Revised Sheets Nos. 5-A and 9-F; Fourth Revised Sheets Nos. 9-D and 9-F. Fifth Revised Sheets Nos. 6-B and 9-G; Sixth Revised Sheets Nos. 6-A and 7; and Seventh Revised Sheet No. 4.

service, and the revenues derived from such off-system sales are not reflected in its transmission system rates.

(4) Trunkline's existing obligations to flow-through gas supplier refunds, as provided in Commission's orders issued May 10, 1962, in Docket No. G–12884, *et al.*, 27 FPC 930, and March 30, 1964, in Docket No. RP64–19, 31 FPC 743, are continued during the term of this Agreement, all as more fully prescribed in Sections 1 and 2 of Article V of the subject Agreement and Appendices B and C thereof. In addition with respect to gas purchased on and after October 1, 1965, Trunkline will flow-through the jurisdictional portion of all refunds received from its suppliers all of which is more fully detailed in Section 3 of Article V of said Agreement and Appendix D thereof. Said refunds will be made within 45 days of the time that the accumulated undistributed refundable amount total $250,000.

(5) During the period in which the rates provided for in the subject Agreement remain in effect, Trunkline will reduce its rates to reflect the reduction in rates of its gas suppliers resulting from any of the proceedings listed in Appendix E to the Agreement as more fully set forth in Section VI of that Agreement. The amount of the reductions shall equal the reduction in Trunkline's cost of purchase gas computed on a weighted average basis for the 12 months' periods preceding such suppliers' rate reductions and which result in cost reductions below the level of 18.3 cents per Mcf, but this base figure shall be reduced to give effect to any reduction in Trunkline's rates which has occurred in accordance with the provisions set out in Article VI of the Agreement.

(6) Trunkline reaffirms its rate obligation with respect to liberalized depreciation which it undertook in Article III of the Agreement filed in Docket No. RP64–19 approved by Commission order issued March 30, 1964, in that proceeding.

(7) Trunkline reserves the right to make appropriate rate filings to reflect prospectively the jurisdictional portion of any net increase or net decrease in federal income taxes attributable solely to changes in tax rates from the presently effective 48 percent level, or to the imposition of new federal taxes, if the enactment of such change in tax rate or new tax shall occur prior to January 1, 1967, and if the impact of such tax change results in an increase or decrease of one mill per Mcf.

The Commission finds:

(1) Good cause exists for waiving the requirements of Section 154 of the Commission's Regulations under the Natural Gas Act in order that the revised tariff sheets specified herein may become effective as of October 1, 1965, as requested.

(2) The proposed revised tariff sheets, the rate reductions therein contained and Trunkline's agreement to further reduce its rates as provided in the proposal, are proper and in the public interest in carrying out the provisions of the Natural Gas Act, and should be accepted for filing and made effective as hereinafter provided and ordered.

The Commission orders:

(A) The provisions of Part 154 of the Commission's Regulations under the Natural Gas Act are hereby waived and the revised tariff sheets hereinbefore described are accepted for filing to be effective as of October 1, 1965, subject to the terms and conditions of this order.

(B) Trunkline shall comply with each of the provisions of the Agreement filed herein on January 6, 1966, relating to present and future rate reductions and refunds.

(C) Within twenty (20) days of making each of the refunds in accordance with paragraph (B) above, Trunkline shall report to the Commission, in writing and under oath, the amount of the refund made to each customer, showing separately the amount of principal and interest so paid together with a computation of the manner in which such refunds were determined, and shall serve a copy thereof upon each customer receiving a refund and upon the interested State commissions.

(D) Upon compliance with the terms and conditions set out in this order and in the Agreement, the proceeding in Docket No. RP66-20 shall be terminated.

(E) This order is without prejudice to any findings or orders which have been made or may hereafter be made by the Commission, and is without prejudice to any claims or contentions which may be made by the Commission, its Staff, Trunkline, or any party or person affected by this order, in any proceeding now pending, or hereafter instituted by, or against, Trunkline, or any other party or person.

APPENDIX A

TRUNKLINE GAS CO.

RATES TO BECOME EFFECTIVE OCTOBER 1, 1965

Rate schedule	Proposed rate

APPENDIX F

EXCERPT FROM TRUNKLINE'S AGREEMENT AS TO RATES

(February 25, 1964)

Article III

Liberalized Depreciation

It is agreed that, until October 1, 1965, Trunkline's rates shall not be modified to give effect to the principles set forth in the Commission's Opinion No. 417 relating to liberalized depreciation, but if at the time Trunkline files its federal income tax return for 1964, or 1965, Trunkline elects to utilize liberalized depreciation in determining its deductions for tax purposes, it will reflect the principles specified in Opinion No. 417 by filing revised tariff sheets reducing the level of the rates provided for in this agreement, to take effect on October 1, 1965, or 1966, whichever is applicable, and to reflect such principles during the period the rates provided for herein remain in effect, and for so long as the Commission continues to apply the ratemaking principles of Opinion No. 417 and Trunkline continues to utilize liberalized depreciation. In no event shall more than one such filing be required.

For the purpose of such filing, the balance in Account 282 shall be that which is shown on Trunkline's books as of October 1, 1965, or 1966, whichever is applicable, and the amount attributable to current utilization of liberalized depreciation to be recognized herein shall be the amount by which the deduction for liberalized depreciation exceeds straight line depreciation based on the twelve-month period ending October 1, 1965, or 1966, whichever is applicable, the jurisdictional portion of which is to be reflected 50% in the demand components and 50% in the commodity components of the rates, uniformly applied. If Trunkline makes such a filing, or if Trunkline does not elect to take liberalized depreciation in its 1965 tax return, the rate reduction obligation shall terminate; provided, however, that the reduction in its rate base to give effect to amounts included in Account 282 shall not be contingent upon its current utilization of liberalized depreciation.

Notwithstanding the foregoing, Trunkline may defer any rate reduction with respect to liberalized depreciation until 20 days from and after the day upon which a final order of a court of review affirming Opinion No. 417 and accompanying order on its merits, becomes final and is no longer subject to judicial review. If Trunkline defers such rate reduction and subsequently becomes obligated to reduce its rates with respect to liberalized depreciation in accordance with the preceding sentence, it shall refund to its jurisdictional customers the portion of the amounts charged and collected between October 1, 1965, or 1966, whichever is applicable, and the date upon which such affirmance becomes nonappealable which is attributable to the Company's failure to give effect to the principles prescribed in Opinion No. 417 in accordance herewith, together with interest thereon at the rate of 7% per annum computed from the date of receipt to the date of such refund.

EXHIBIT B

TRUNKLINE GAS CO.

1966 COST OF SERVICE

	Adjusted costs (projected 1966)
Operation and maintenance expenses	$71, 888, 487
Depreciation, depletion and amortization	10, 126, 506
Other taxes	3, 332, 437
Other gas revenues—credit	(323, 569)
Return	13, 814, 288
Federal income tax	7, 689, 527
State income tax	160, 883
Total cost of service	106, 688, 559
Revenues at present rates	109, 688, 416
Revenue excess	2, 999, 857

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Carl E. Bagge.

HYDROELECTRIC LICENSED PROJECTS—INSPECTIONS TO INSURE SAFE OPERATION, DOCKET NO. R-268

ORDER DISMISSING NOTICE OF INTERVENTION AND APPLICATION FOR REHEARING AND DENYING PETITION TO ADOPT AMENDED RULE

(Issued February 25, 1966)

On October 20, 1964, the Commission issued the notice of proposed rulemaking in this proceeding; publication was made in the Federal Register (29 F.R. 14643) and copies of the notice were mailed to State commissions and to other persons. Comments were invited from interested persons to be submitted by December 9, 1964. At the request of several licensees, the time for filing data, views and comments was subsequently extended through January 8, 1965.[1] After consideration of comments received, the Commission issued on December 27, 1965, 34 FPC 1551, Order No. 315, Promulgating New Part 12 of Regulations under the Federal Power Act (18 CFR Part 12).[2] The new Part 12 of the Regulations which by its terms became effective on December 31, 1965, provides for inspection of project works with respect to safety of operation.

On January 26, 1966, the Public Service Commission of Wisconsin filed what it denominated as a Notice of Intervention and an Application for Rehearing with respect to Order No. 315 and, in the alternative, a Petition to Amend the Rule promulgated by Order No. 315. The Wisconsin Commission had not previously submitted any comments to the Commission's original rulemaking notice, although the rules as proposed do not differ from those adopted with respect to the issue the Wisconsin Commission now advances. Specifically it requests that this Commission grant rehearing for the purpose of considering whether it would be appropriate to modify the rule to provide that its requirements do not apply to dams or structures or to the owners or operators thereof which are subject to inspection for purposes of safety and repair by requirements imposed by a state regulatory agency under state statute and that as a part of the rehearing process this Commission conduct a hearing or take other steps it might deem necessary or appropriate for the purpose of obtaining facts to ascertain if such proposal should be adopted. In the alternative and on the same grounds, the Wisconsin Commission petitions for an amendment of the rule to provide the same exemption.

The inspection regulations adopted by Order No. 315 were authorized in full accordance with the provisions of our Rules of Practice and Procedure and the governing provisions of the Administrative Procedure Act after all parties including the Wisconsin Commission had had a full opportunity to express views on the proposal. The Wisconsin Commission has made no showing as to why it failed to participate in the rulemaking process[3] during its earlier stages, and accordingly, to the extent that the notice of intervention and application for rehearing may be intended either to toll the effectiveness of the rule or as a necessary preliminary to court review, they must be dismissed in the interest of orderly procedure. We shall consider, however, the views of the Wisconsin Commission in connection with its petition to amend Order No. 315.

---

[1] Publication of this notice of extension of time was also made in the Federal Register (29 F.R. 16997), and copies of the notice were also sent to State Commissions and other persons.

[2] 30 F.R. 16199.

[3] Our rulemaking procedures do not require interested parties to file intervention petitions. All timely filed comments are considered.

The Wisconsin Commission's request for exemption from the provisions of Order No. 315, on the basis of requirements respecting safety and repair imposed by State statute, does not raise a new matter but rather one that was fully considered during the rulemaking.

We recognized that throughout the almost fifty years in which the Commission has administered the licensing provisions of the Federal Power Act a number of states have supplemented the various safety programs instituted and carried out by this Commission pursuant to the mandate of the Act (see *e.g.*, Section 10(c)), by inspectoral and other safety programs of their own. This is as it should be; in a matter as important as the safety of hydroelectric projects, where a failure can result in catastrophic results, federal action by the responsible licensing agency does not purport to preempt the field and duplicative inspectoral activities are mutually beneficial rather than inconsistent with one another. We concluded, however, that while some of the existing state safety inspection programs are undoubtably of the highest calibre, it would not be conducive to the carrying out of our own responsibilities in this area to attempt to evaluate the relative effectiveness of particular state inspectoral systems, or to authorize them to be substituted for the requirements imposed upon the licensees and independent consultants by our new regulations. We did provide, however, in Section 12.2 of the Regulations (18 CFR 12.2), that both licensees and consultants were to give due consideration to any state inspection programs in carrying out their responsibilities, in the hope and expectation that where dual requirements exist they can be met with a minimum of burden in all parties and a maximum of additional protection to the public.

The Commission finds:

(1) It is appropriate in the administration of the Federal Power Act that the notice of intervention and application for rehearing filed by the Wisconsin Public Service Commission on January 26, 1966 be dismissed.

(2) The petition filed by the Wisconsin Public Service Commission on January 26, 1966 to adopt an amended rule, sets forth no facts or reasons which were not considered previously or which having been considered constitute adequate grounds for the requested amendment of the regulations prescribed by Order No. 315 issued December 27, 1965.

The Commission orders:

The aforesaid notice of intervention and application for rehearing are hereby dismissed, and the aforesaid petition to adopt an amended rule is hereby denied.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

PUBLIC SERVICE COMPANY OF COLORADO, PROJECT NO. 2351

ORDER APPROVING RECREATIONAL USE PLAN AS PART OF PROJECT LICENSE

(Issued February 25, 1966)

On February 1, 1965, Public Service Company of Colorado, licensee for Project No. 2351, filed for Commission approval a Recreational Use Plan for the project, known as the "Cabin Creek Pumped Storage Hydroelectric Project", now under construction on South Clear Creek and its tributary, Cabin Creek, in Clear Creek County, Colorado, and to be located on lands of the United States within the Arapaho National Forest. The February 1, 1965, filing, which was supplemented on April 9, 1965 by a statement and a map showing the recreational use plan, was pursuant to Article 46 of the license for the project. The project is located near Georgetown, Colorado, about 35 miles west of Denver.

The project includes the Upper Reservoir created by a dam across Cabin Creek and the Lower Reservoir created by a dam across South Clear Creek. The Upper and Lower reservoirs will impound water surface areas of 23 and 52 acres, respectively, at maximum operating pool levels. Under the proposed plan of operation, the reservoirs will be subject to daily filling cycles creating water surface elevation fluctuations up to 91 feet at Upper Reservoir and up to 42 feet at Lower Reservoir, and the rate of fluctuations will be comparatively rapid, and will depend upon whether or not one or two of the reversible pump-turbine units are in operation at the same time. For example, the maximum rate of refilling Upper Reservoir will average about 11 feet per hour, and the corresponding rate of withdrawal from Lower Reservoir will average about 5 feet per hour. During the generating period, Lower Reservoir will refill at a maximum average rate of about 8 feet per hour.

According to the Recreational Use Plan, which was prepared in cooperation with the U.S. Forest Service, the Bureau of Sport Fisheries and Wildlife of the Department of the Interior, and the Colorado Department of Game, Fish and Parks, in compliance with Article 44 of the license, the location and limited size of the project reservoirs and the nature of pumped storage operation are not conducive to the use of the project area for recreational purposes. Hence, the Recreational Use Plan submitted provides for: (1) replacement in the vicinity of the project, at the licensee's expense, of the U.S. Forest Service camp sites at the Lower Clear Creek Campground to be inundated by Lower Reservoir, as required by Article 40 of the license; and (2) acquisition, at the licensee's expense, of the Chicago Lakes and surrounding lands (totalling about 277 acres and located about 5 miles southeast of the project) in mitigation for the natural stream fishery destroyed by the project and as enhancement of opportunities for fishing and back country camping activities. Following its purchase of the Chicago Lakes area, now privately owned, the licensee's Recreational Use Plan provides for conveying the areas to the United States (U.S. Forest Service) for public recreational use.

The U.S. Forest Service has reported (letter dated July 30, 1965) that the action planned by the licensee in the Recreational Use Plan would not interfere or be inconsistent with the purposes for which the Arapaho National Forest was created or acquired.

The Department of the Interior has offered no objection to the Recreational Use Plan, insofar as it proposes replacement and establishment of campgrounds, but recommended that the Plan be modified to incorporate therein three conditions relating to public access to Lower Reservoir for fishing. In commenting on the Department's recommendations, the licensee opposed the Department's recommended public use of Lower Reservoir in view of the aforementioned expected rapid fluctuations therein due to project operation, as hazardous to the general public. The licensee expressed its hope that the

Department of the Interior would "withdraw its objection" to the Recreational Use Plan in view of the circumstances and enclosed letter from the Forest Service to the licensee, dated October 20, 1965, expressing the Service's opposition to public use of Lower Reservoir. It is our view that the problem involving possible use of either or both of the project reservoirs for fishing can be resolved in the light of actual project operating conditions, within the purview of Article 44 of the license which requires the licensee to participate with the Forest Service, the U.S. Fish and Wildlife Service, and the Colorado Department of Game, Fish and Parks in a study which the licensee will use to develop the fishery potential of the project area.

The Governor of the State of Colorado has advised that the State supports the Recreational Use Plan.

The Commission finds:

It is consistent with the public interest to approve the aforementioned Recreational Use Plan as part of the license for the project as hereinafter provided.

The Commission orders:

The following designated Recreational Use Plan is hereby approved as part of the license for Project No. 2351:

Exhibit R, including drawings FPC No. 2351–40, and FPC No. 2351–41 subject to the stipulation that the deed of conveyance by the licensee to the United States of "Chicago Lakes" as shown on drawing FPC No. 2351–40, shall contain a covenant that the land conveyed shall be forever available for public recreational use and the covenant shall expressly state that "it is agreed between the licensee and the United States that this said covenant is a covenant running with the land".

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

WEST PENN POWER COMPANY, DOCKET NO. E–7251

ORDER AUTHORIZING LEASE OF ELECTRIC FACILITIES

(Issued February 25, 1966)

West Penn Power Company (West Penn), filed an application with the Federal Power Commission on October 14, 1965, seeking an order pursuant to Section 203 of the Federal Power Act, authorizing it to lease the entire electrical facilities of the Borough of Tarentum (Tarentum), Allegheny County, Pennsylvania.

West Penn is incorporated under the laws of the State of Pennsylvania and authorized to do business in the States of Pennsylvania and West Virginia. It is an operating public utility engaged in the production, distribution and sale of electricity in the greater portion of the Counties of Armstrong, Butler, Fayette, Greene, Washington, and Westmoreland, and in parts of Allegheny, Cameron, Centre, Clarion, Clinton, Elk, Indiana, Lycoming, McKean, and Potter Counties, Pennsylvania. It interchanges power with the Monongahela Power Company in West Virginia and with the Potomac Edison Company in Maryland.

Tarentum is located in Allegheny County approximately 15 miles northeast of Pittsburgh and operates an isolated electric utility system within its corporate limits. Tarentum is completely surrounded by the service area of West Penn.

The assets to be leased consist of the entire electric facilities of Tarentum, including all the rights and property, real and personal, tangible and intangible, comprising Tarentum's electric utility system except: cash; bills, notes and accounts receivable; corporate records and accounts; office furniture, fixtures, equipment, and supplies; and transportation equipment.

The application states that the term of the lease is 30 years and that in consideration of the lease, Applicant will pay Tarentum a total rental of $4,200,000 in annual installments of $140,000. Tarentum does not maintain records in the form prescribed by the Uniform System of Accounts and the original cost of the facilities involved is not known. West Penn estimates that the depreciated original cost of the facilities to be leased is $156,696. The facilities are to be operated by West Penn for the same purposes for which they are presently being used by Tarentum. The application states that West Penn obligates itself to construct electric facilities connecting the leased facilities with its system and guarantees minimum salvage value of $75,000 for Tarentum's generating equipment. Under the terms of the lease agreement West Penn will make such improvements and extensions of Tarentum's system as may be necessary. At the end of the lease period Tarentum has the option to acquire the improvements made by West Penn during the term of the lease. The price to be paid by Tarentum for such improvements will be determined by an appraisal to be made in accordance with the terms of the lease.

West Penn proposes to record the entire annual rent of $140,000 in account 426, Other Income Deductions, of the Commission's Uniform System of Accounts.

According to the application the proposed transaction will result in improved and more reliable service to the electric customers of Tarentum. The application indicates that West Penn with its large generating capacity could more efficiently and more economically take care of the growing needs of Tarentum inhabitants and that by reason of its interconnections and its substantial and conveniently located resources of men, material and equipment, West Penn can restore service promptly in case of interruption.

According to the application Tarentum's present electric rates for many of its customers are about 25 percent higher than West Penn's filed rate tariffs and residential kwh usage in Tarentum is only a little more than 50 percent of the average usage of the company's residential customers. West Penn represents that the proposed transaction will have an immediate effect of reducing the rates of most of the customers of Tarentum. Applicant states that Tarentum serves 2,396 residential customers, 395 commercial customers, and 7 industrial customers making a total of 2,798. A total of 2,663 customers will receive reductions in rates which (except for four customers whose reduction will be 12%) will range from 20.7% to 31.4%. The remaining 135 customers will continue at their present rates as long as they receive energy at their present locations, and their bills are lower than Applicant's applicable rates.

Written notice of the application has been given to the Pennsylvania Public Utilities Commission and the Governor of that state. Notice was also published in the Federal Register on October 29, 1965 (30 F.R. 13799), stating that any person desiring to be heard or to make any protest with reference to said application should on or before November 29, 1965, file with the Federal Power

Commission, Washington, D.C. 20426, petitions or protests in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10). No protest or petition or request to be heard in opposition to the granting of the application has been received. By order dated December 6, 1965, the Pennsylvania Public Utilities Commission approved the above described transaction.

The Commission finds:

(1) West Penn, a corporation, owns and operates facilities for the transmission and sale at wholesale of electric energy which is generated in the State of Pennsylvania and consumed in the States of West Virginia and Maryland, all of which facilities are in addition to, and do not include, facilities used for the generation of electric energy or facilities used in local distribution or solely for the transmission of electric energy in intrastate commerce, or facilities for the transmission of electric energy consumed wholly by the transmitter. West Penn, therefore, is a public utility within the meaning of that term as used in Section 203 of the Federal Power Act.

(2) By the proposed transaction, West Penn will indirectly merge or consolidate its facilities subject to the jurisdiction of the Commission with those of Tarentum, another person, within the meaning and subject to the requirements of Section 203 of the Federal Power Act.

(3) The proposed lease of facilities by West Penn as described above, upon the terms and conditions set forth in the application, and subject to the provisions of this order will be consistent with the public interest as expressed in Section 203 of the Federal Power Act.

The Commission orders:

(A) The proposed lease by West Penn of the aforementioned electric facilities, all as described above, is authorized and approved upon the terms and conditions and for the purposes set forth in the application subject to the provisions of this order.

(B) West Penn shall record the proposed transaction herein authorized and the facilities and properties referred to above as provided in the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees and as proposed in the application.

(C) This authorization shall expire unless the transaction herein authorized and approved is consummated within 90 days from the date of issuance of this order.

(D) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determination of cost, or any matter whatsoever now pending or which may come before this Commission or any other regulatory body and nothing herein shall be construed as an acquiescence by this Commission in any estimate or determination of cost or any valuation of property claimed or asserted.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

WORK ORDER AND PROPERTY RECORD SYSTEM IN UNIFORM SYSTEM OF ACCOUNTS PRESCRIBED FOR CLASS C PUBLIC UTILITIES, LICENSEES AND NATURAL GAS COMPANIES, DOCKET NO. R-288

ORDER NO. 318

PRESCRIBING ELECTRIC AND GAS PLANT INSTRUCTIONS

(Issued February 28, 1966)*

The Commission, in this order, is amending the Uniform System of Accounts applicable to Class C public utilities, licensees and natural gas companies, to require that all construction and retirement of electric and gas plant, respectively, be recorded by work orders or job orders and other detail and be maintained in relation to plant additions or retirements.

On October 26, 1965, we issued a Notice of Proposed Rulemaking in this proceeding, published it in the Federal Register on November 2, 1965 (30 F.R. 13877) and, thereby, invited the submission of comments concerning the proposal. No responses have been received.

An instruction similar to the one here prescribed has always been included in the system of accounts applicable to Class A and B companies, but at the time the system was being drafted in cooperation with the National Association of Railroad and Utilities Commissioners it was felt that the requirement might be too much of a burden on the small Class C companies. Latterly, however, several of the state commissions have experienced difficulties because of the lack of a work order accounting system for the Class C companies and, as a result, the Committee on Accounts of the NARUC included the following recommendation in the minutes of a meeting held on April 20 and 21, 1965:

> The present System of Accounts for Class C Electric, Gas and Water Utilities does not specifically require a work order system in accounting for plant. The consensus of opinion was that this class of utilities is large enough that a work order system should be maintained, and that it was the only feasible way in which accurate records could be maintained of construction costs. Accordingly, it was recommended that paragraphs (a) and (b) of Utility Plant Instruction 11 of the Class A and B System of Accounts be adopted also for Class C Utilities.

The Commission therefore finds:

In view of the foregoing, it is necessary and appropriate for the administration of the Federal Power Act and Natural Gas Act that the amendments to the Uniform System of Accounts, as proposed in the notice of proposed rulemaking heretofore issued in this proceeding, now be prescribed.

The Commission, acting pursuant to the authority of the Federal Power Act, as amended, particularly sections 301 and 309 thereof (49 Stat. 854, 858; 16 U.S.C. 825, 825h) and the Natural Gas Act, as amended, particularly sections 8 and 16 thereof (52 Stat. 825, 830; 15 U.S.C. 717g, 717o), *orders:*

(A) The Uniform System of Accounts, prescribed for Class C public utilities, licensees and natural gas companies by Part 104, Subchapter C, and Part 204,

---

*Published in the Federal Register on March 4, 1966 (31 F.R. 3391).

Subchapter F, respectively, of Chapter I, Title 18 of the Code of Federal Regulations, are amended by adding to the Plant Instructions contained in each, the following new paragraph 13:

"Part 104 Uniform System of Accounts for Class C Public Utilities and Licensees. * * *

Electric Plant Instructions

* * * * * * *

13. *Work Order and Property Record System Required.*

A. Each utility shall record all construction and retirements of electric plant by means of work orders or job orders. Separate work orders may be opened for additions to and retirements of electric plant or the retirements may be included with the construction work order, provided, however, that all items relating to the retirements shall be kept separate from those relating to construction and provided, further, that any maintenance costs involved in the work shall likewise be segregated.

B. Each utility shall keep its work order system so as to show the nature of each addition to or retirement of electric plant, the total cost thereof, the source or sources of costs, and the electric plant account or accounts to which charged or credited. Work orders covering jobs of short duration may be cleared monthly.

* * * * * * *

Part 204 Uniform System of Accounts for Class C Natural Gas Companies. * * *

Gas Plant Instructions

13. *Work Order and Property Record System Required.*

A. Each utility shall record all construction and retirements of gas plant by means of work orders or job orders. Separate work orders may be opened for additions to and retirements of gas plant or the retirements may be included with the construction work order, provided, however, that all items relating to the retirements shall be kept separate from those relating to construction and provided, further, that any maintenance costs involved in the work shall likewise be segregated.

B. Each utility shall keep its work order system so as to show the nature of each addition to or retirement of gas plant, the total cost thereof, the source or sources of costs, and the gas plant account or accounts to which charged or credited. Work orders covering jobs of short duration may be cleared monthly."

[Secs. 301, 309, 49 Stat. 854, 858, 16 U.S.C. 825, 825h; secs. 8, 16, 52 Stat. 825, 830, 15 U.S.C. 717g, 717o.]

(B) The amendments here prescribed shall be effective March 30, 1966.

(C) The Secretary shall cause prompt publication of this order to be made in the Federal Register.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

TEXAS EASTERN TRANSMISSION CORPORATION, DOCKET NO. RP66-12

ORDER DENYING INTERVENTION AND PERMITTING PARTICIPATION AS AMICUS CURIAE

(Issued February 28, 1966)

The Commission on October 4, 1965, 34 FPC 1099, issued an order in the above-styled proceeding setting for hearing the question of whether Texas Eastern Transmission Corporation (Texas Eastern) is legally or equitably entitled to the refundable amounts now being retained by its suppliers. On October 29, Tennessee Gas Transmission Company (Tennessee), filed a petition to intervene.[1] In support thereof, Petitioner urges that a determination of Texas Eastern's obligations to flow-through refunds from its producer-suppliers in this proceeding could "have a pronounced effect on natural-gas companies" and is of vital interest to Tennessee. It alleges that it is now paying or will in the immediate future be paying increases in rates to its producer-suppliers totaling about $7.5 million annually "for which it has not filed rate increases to recoup", and that it may in the future be due a material portion of such increases as refunds. On the basis thereof, Tennessee claims that it has direct and substantial interests which might be adversely affected by the outcome of this proceeding, and that it may be bound by Commission action in this proceeding.

It is our view that Tennessee's petition does not allege any right or interest to intervene contemplated by the Natural Gas Act and our Rules of Practice and Procedure thereunder. Tennessee is neither a customer of Texas Eastern nor a customer of a customer, nor does it fall within the classes of petitioners enumerated in our rules. Admittedly a determination in this proceeding would have such precedential effect as is attributable to other Commission determinations, depending, of course, on the facts in the proceedings in which it is sought to be used as a precedent. Tennessee's general allegation that it "may be bound" by a determination herein if and when it is involved in a similar proceeding is not a present and direct interest warranting its intervention herein. Accordingly, we find that Tennessee's petition should be denied. However, we shall permit Tennessee to participate herein as *amicus curiae.*

The Commission orders:

(A) The Petition to Intervene filed by Tennessee Gas Transmission Company on October 29, 1965 is denied.

(B) Tennessee is permitted to participate in this proceeding as *amicus curiae.*

---

[1] Petitions to intervene were due on or before October 26, 1965; no objections to Tennessee's petition have been received.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

UNION GAS SYSTEM, INC. AND CITIES SERVICE GAS COMPANY.
DOCKET NO. CP66-177

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued February 28, 1966)

On December 2, 1965, Union Gas System, Inc. (Applicant) filed in Docket No. CP66-177 an application pursuant to Section 7(a) of the Natural Gas Act for an order directing Cities Service Gas Company (Respondent) to make a physical connection between its transmission facilities and Applicant's proposed facilities and to sell and deliver up to 150 Mcf of natural gas per day to Applicant, as more fully set forth in the application.

Applicant requests that Respondent be directed to make the physical connection between Respondent's 16-inch transmission line and Applicant's proposed 2-inch lateral pipeline. The 2-inch lateral will extend four miles northward from the point of connection to the community of Kickapoo in Leavenworth County, Kansas. Applicant will also construct and operate a distribution system to serve the community.

Applicant states that the area to be served has a population of approximately 262, with 75 residences in Kickapoo and along the lateral lines. The estimated requirements for natural gas for the area are as follows:

	First year	*Second year*	*Third year*
Peak day (Mcf)	99	123	150
Annual (Mcf)	7, 515	9, 352	11, 356

The estimated cost of construction of the proposed lateral and distribution system are estimated to be $32,464, which will be financed from treasury cash.

The service will be rendered pursuant to Respondent's F-2 Rate Schedule.

The Kansas State Corporation Commission certified the proposed service area to Applicant by its order issued October 20, 1965, in its Docket 76, 160-U.

Respondent has no objection to the granting of the application, provided the order is conditioned so that delivery pressure will not be required to exceed 125 psig.

Due notice of the filing of the application and opportunity for hearing thereon was published in the Federal Register on December 16, 1965 (30 F.R. 15507). On December 20, 1965, the Kansas State Corporation Commission filed a notice of intervention which was withdrawn on January 17, 1966. No other notice of intervention, protest or petition to intervene has been filed in this proceeding.

The Commission finds:

(1) Cities Service Gas Company, a Delaware corporation having its principal place of business in Oklahoma City, Oklahoma, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order issued December 28, 1943, in Docket No. G-298 (4 FPC 471).

(2) Applicant is a public utility company in the State of Kansas and is authorized to construct and operate facilities to distribute and sell natural gas to inhabitants of the communities along its system.

(3) It is necessary and desirable in the public interest that Respondent be directed to establish a physical connection of its transportation facilities with the facilities proposed to be constructed by Applicant and to render natural gas service to Applicant, as hereinbefore described and as more fully set forth in the application, as hereinafter ordered and conditioned.

(4) The requirement that Respondent serve Applicant, as requested, will not place an undue burden upon Respondent nor impair its ability to render adequate service to existing customers.

The Commission orders:

(A) Respondent is directed to establish a physical connection of its natural gas transmission system with the facilities to be constructed by Applicant and to sell and deliver up to 150 Mcf of natural gas per day to Applicant for resale and distribution in the community of Kickapoo and environs in Leavenworth County, Kansas, all as hereinbefore described and as more fully described in the application.

(B) Applicant shall be prepared to receive natural gas from Respondent at the proposed new connection within one year from the date of this order.

(C) Delivery pressure for volumes of natural gas to be delivered pursuant to this order will not be required to exceed 125 psig.

(D) Respondent shall notify the Commission of the commencement of service within 10 days thereof.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

AMERADA PETROLEUM CORPORATION, ET AL.[1], DOCKET NO. G-16117, ET AL.[1]

ORDER APPROVING RATE SETTLEMENT PROPOSAL, TERMINATING PROCEEDINGS AS TO CONTRACTUAL ISSUES AND PRESCRIBING REFUNDS

(Issued March 1, 1966)

There is before us for consideration a Petition for Approval of Settlement Proposal filed on December 16, 1965, by forty-three Respondents in these proceedings, encompassing 187 of Respondents' currently effective FPC Gas Rate Schedules for sales of natural gas to El Paso Natural Gas Company in the Permian Basin area (with the exception of one sale made in Texas Railroad Commission District No. 7-B).[2] The proposed increased rates involved herein, each of which were suspended by order of the Commission, and most of which were duly made effective by Respondents, subject to refund, were filed under favored-nation clauses that were then contained in Respondents' FPC Gas Rate Schedules, based directly or indirectly on spiral escalation increases filed by Phillips Petroleum Company (Phillips) for certain of its sales of natural gas to El Paso which had also been suspended by order of the Commission, and placed in effect subject to refund.

On December 4, 1963, 30 FPC 1400, the Commission by order approved a rate settlement proposal which had been filed by El Paso which required a reduction of the increased rates it was collecting subject to refund. Consequently, Phillips filed with the Commission proposed rate reductions in accordance with the spiral escalation clauses for certain of its sales of natural gas to El Paso where Phillips' increased rates had been based on El Paso's increased rates. On April 3, 1964, the Commission accepted Phillips' proposed rate reductions, subject to further Commission order, 31 FPC 774.

Subsequently, the Commission by letter-orders issued herein on February 26, and March 24, 1965, ordered the Respondents to reduce each of its favored-nation increased rates which had been based on Phillips' spiral escalation increases in the same manner utilized to compute the increased rates, and to make appropriate refunds to El Paso. Five of the Respondents filed applications for rehearing of the Commission's letter-orders setting forth matters which the Respondents alleged had not been fully considered by the Commission prior to issuance of its letter-orders. Consequently, the Commission, by a show-cause order issued on April 26, 1965, 33 FPC 885, set such contractual matters for hearing as to said five Respondents and stayed the effect of its letter-orders as to the remaining Respondents. Additionally, the order of April 26, 1965, directed the Presiding Examiner to hold a pre-trial conference on June 2, 1965. Prior to such pre-trial conference, settlement conferences were initiated, and attended by virtually all of the interested parties to these proceedings. The Presiding Examiner granted continuances from time to time to permit the settlement conferences to continue. The instant proposal is the outcome of such settlement conferences.

---

[1] The additional respondents and dockets involved herein are set forth in the appendix hereto.

[2] On December 28, 1965, Sun Oil Company filed its joinder in the proposal.

In summary the settlement proposal as filed by the Respondents provides:

(1) Each Respondent will refund to El Paso the amounts of monies set forth on Appendix C to the settlement proposal, with interest at six percent per annum, to January 1, 1966, with the last refundable monies charged and collected to be the first monies refunded;

(2) The refunds to be made under (1) above shall constitute settlement in full of any claim for refunds based on any contended lack of contractual support for the rates involved in these proceedings;

(3) Each Respondent shall file appropriate rate schedule supplements, within forty-five days after final order of the Commission approving the settlement proposal, to reflect the settlement rates set forth in Appendix B to the settlement proposal, plus applicable tax reimbursement, and such settlement rates shall not be subject to further downward adjustment because of further reduction in El Paso's rates or consequent reduction of Phillip's spiral rates based thereon;

(4) The settlement rates filed in accordance with (3) above shall be subject to ultimate determination as to their justness and reasonableness in any proceeding instituted for that purpose, including but not limited to the Permian Basin Area Rate Proceeding, Docket No. AR61-1, *et al.;*

(5) The show-cause order of April 26, 1965, be withdrawn, and the proceedings be terminated as to the contractual issues.

In support of the proposal, Respondents state that many substantial legal and factual issues would be involved in a formal hearing of these proceedings, regarding the contractual issues involved, because many of the Respondents were differently situated with regard to the manner of their application of the Phillips' spiral rate increases, and the timing of the filing of Respondents' proposed rate increases based directly or indirectly on Phillips' spirals. Additionally, there are involved many contractual issues involving the application of periodic escalation increases, and the application of favored-nations clauses contained in Respondents' contracts in regard to producer rate filings other than Phillips during the period involved herein. Hence, a hearing upon these matters would be unusually complicated, long and costly.

Approval of the settlement proposal will terminate the contractual issues involved in 127 suspension proceedings involving 264 rate increases proposed by Respondents, and will result in refunds to El Paso of $2,500,000, exclusive of interest. El Paso is required by prior order of this Commission to flow-through such monies to its purchasers under its jurisdictional sales of natural gas.

The instant settlement proposal is in the public interest and should be approved as hereinafter provided.

Our action herein shall not be construed as constituting approval of any past or future rate increases, if any, that may have been, or may be filed under the subject rate schedules, and is without prejudice to any findings or order of the Commission in any proceedings, including area rate or similar proceedings, involving the justness and reasonableness of each of the Respondents' rates and rate schedules.

The Commission finds:

The proposed settlement of the subject proceedings on the basis described herein, as more fully set forth in the settlement proposal, and the appendices thereto, filed by Respondents on December 16, 1965, is in the public interest and it is appropriate in carrying out the provisions of the Natural Gas Act, that it be approved and made effective as hereinafter ordered.

The Commission orders:

(A) The settlement of these proceedings on the basis of the settlement proposal filed by Respondents on December 16, 1965, is approved and made effective subject to the terms and conditions herein.

(B) The applicable settlement rates set out in the Appendix hereto are approved, and each Respondent, within 45 days from the date of issuance of this order, shall file for approval appropriate supplements to its FPC Gas Rate Schedules reflecting the contract settlement rates in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act. The effective date of each of such settlement rates shall be the date specified in the Notice issued by this Commission permitting each of the applicable proposed increased rates involved in these proceedings to become effective, subject to refund.

(C) Each of the Respondents shall within 30 days from the date of issuance of this order submit a report to the Commission, setting out the amount of refunds made in accordance with Appendix C to the settlement proposal related to each rate schedule, with applicable interest computed to January 1, 1966, and El Paso's concurrence therein, and shall within 15 days thereafter refund to El Paso such amount of monies.

(D) Upon notification by the Secretary of the Commission to each of the Respondents that it has complied with the terms and conditions of this order, the letter-orders of February 26, and March 24, 1965, and the show-cause order issued April 26, 1965, insofar as applicable to it shall be withdrawn, and said proceedings shall be deemed to be terminated as to the contractual issues involved herein, without further order of the Commission.

(E) This order is without prejudice to any finding or orders which have been made or may be made hereafter by the Commission, and is without prejudice to claims or contentions which may be made by each of the Respondents, the Commission staff, or any affected party hereto, in any proceedings now pending, including area rate or similar proceedings, or hereafter instituted by or against each of the Respondents, or any other companies, person or parties affected by this order, and is not in any manner determinative of the justness and reasonableness of the settlement rates involved herein.

THE DETROIT EDISON COMPANY AND CONSUMERS POWER COMPANY, DOCKET NO. E-7206; THE DETROIT EDISON COMPANY, DOCKET NO. E-7207

ORDER AUTHORIZING TRANSMISSION OF ELECTRIC ENERGY TO CANADA

(Issued March 1, 1966)

The Detroit Edison Company (Edison) is a corporation organized and existing under the laws of the State of New York and qualified to do business as a foreign corporation in the State of Michigan with its principal place of business in Detroit, Michigan. Consumers Power Company (Consumers) is a corporation organized and existing under the laws of the State of Maine and qualified to do business as a foreign corporation in the State of Michigan with its principal place of business in Jackson, Michigan. On January 26, 1966, Edison and Consumers filed an application for reinstatement of, and amendment to, an earlier joint application for an order authorizing the transmission of electric energy from the United States pursuant to Section 202(e) of the Federal Power Act[1] and for a presidential permit[2] pursuant to Executive Order No. 10485 for the construction, operation and maintenance and connection at the international boundary of facilities for transmission of electric energy. Edison previously has been authorized to transmit to The Hydro-Electric Power Commission of Ontario (Hydro) not to exceed 1,000,000,000 kwh of electric energy per year at a rate of not to exceed 600,000 kva. In the instant application, permission is requested to increase the rate of transmission to a maximum of 750,000 kva. Edison's transmission was pursuant to an existing Agreement between Edison and Hydro through which the facilities of Edison and Hydro were operated in coordination. Applicants propose to replace that coordination agreement with a new agreement coordinating the facilities of Consumers, Edison and Hydro.

Coordination under the earlier Agreement had been accomplished over two transmission ties, one over the Detroit River connecting Edison's Waterman Station located on the property of its Delray Power Plant in Detroit, Michigan with Hydro's J. Clark Keith generating station near Windsor, Ontario, and another over the St. Clair River between Edison's Marysville Station at its Marysville Power Plant near Marysville, Michigan and Hydro's Sarnia transformer station located in the vicinity of Sarnia, Ontario.[3] Edison proposes to add another transmission line tie over the St. Clair River to connect its St. Clair station located on the site of its St. Clair Power Plant in East China Township near St. Clair, Michigan and Hydro's Lambton generating station to be located near Courtright, Ontario and has requested a permit pursuant to the provisions of Executive Order No. 10485 to construct, operate, maintain and connect that tie for ultimate operation at 345 kv, but for initial operation at 120 kv.

Under the new agreement, the Michigan Pool (which consists of both Applicants) and Hydro will share reserves. Each will make available, during emergencies, generating capability in excess of its load requirements up to the limit of the capability of the interconnections. At other times, the interconnections will be used for exchanges of economy energy which is surplus to each system.

---

[1] Docket No. E-7206.

[2] Docket No. E-7207.

[3] Authorized by Presidential Permit signed by the Chairman of the Federal Power Commission on October 12, 1953 and accepted by Applicant on October 21, 1953 (12 FPC 1359).

The amendment revises an earlier application filed November 13, 1964, including a proposed contract between the Michigan Pool and The Hydro-Electric Power Commission of Ontario. In that application, Applicants included certain operating restrictions which were designated as Supplement C to the new contract pursuant to which the proposed transmission would take place. The Supplement C restrictions served no operating purpose, but were designed solely to avoid the comprehensive jurisdiction of this Commission under Title II of the Federal Power Act. Applicants' status as "public utilities" within the meaning of the Federal Power Act which is a prerequisite to that comprehensive jurisdiction, is presently being determined in Docket No. E-7234.

In the earlier application, Supplement C provided:

Supplement C to Interconnection Agreement

1. It is the intent of the parties to this interconnection agreement to assure continuation of the operation of their systems within the scope of Section 202(f) of the Federal Power Act which provides that, "The ownership or operation of facilities for the transmission or sale at wholesale of electric energy which is (a) generated within a State and transmitted from that State across an international boundary and not thereafter transmitted into any other State, or (b) generated in a foreign country and transmitted across an international boundary into a State and not thereafter transmitted into any other State, shall not make a person a public utility subject to regulation as such under other provisions of this part." Therefore, as in the past, any energy which Michigan may export to Hydro is to be used only within Canada, and any energy which Michigan may import from Hydro is to be generated wholly within Canada.

2. In order to assure that Michigan energy exports are always consumed wholly within Canada all of the following conditions must exist while Michigan is delivering energy to Hydro:

(a) The direction of energy flow as monitored at the Beck #2 terminals on each of the five 230 kv, 60-cycle lines and the 115 kv, 60-cycle Beck-Caledonia line shall be in a westerly direction. Michigan will be advised if a reversal of direction appears remotely possible which could only occur under very unusual conditions. Energy delivery from Michigan will then be reduced or discontinued to prevent such reversal of direction.

An exception to the above can be made if the direction of energy flow on all 60-cycle Hydro-New York interconnections at Niagara Falls is towards Hydro. Recording meter charts for the above six lines shall be mailed to Edison each week for retention.

(b) During periods of 25-cycle energy flow from Hydro to New York the direction of energy conversion through the frequency converters at Buchanan Transmission Station and Beck #1 Generating Station must be towards the 60-cycle Hydro system, or the existence of one or more null points within Hydro's 25-cycle system must be demonstrated, beyond which points Michigan energy cannot pass.

3. In order to assure that Hydro energy deliveries to Michigan are always wholly generated within Canada all of the following conditions must exist while Hydro is delivering energy to Michigan:

(a) Hydro will not schedule energy delivery to Michigan coincident with a purchase, including water transfers, of 60-cycle energy from New York unless a physical break is made in Hydro's 60-cycle system, or the existence of one or more null points in that system are demonstrated, beyond which points New York energy cannot pass.

(b) During periods of 25-cycle energy flow from New York to Hydro the direction of energy conversion through the aforesaid frequency converters must be towards the 25-cycle system, or the existence of one or more null points in Hydro's system must be demonstrated, beyond which points New York energy cannot pass.

4. Hydro shall inform Michigan of any changes of Hydro facilities which will alter paths for possible energy flows between New York and Michigan.

5. Fault conditions on either of the connected systems of the parties will be cleared up as rapidly as possible, usually within a few minutes, and normal conditions of transmission and generation will be restored. When this is not possible, continued emergency assistance is permissible within the limits outlined in 2 and 3 above.

On the basis of the applications with the contractual operating restrictions we could not determine without hearing whether the Applicant met the standards imposed by law.

On September 24, 1965, 34 FPC 964, we terminated the proceeding for want of prosecution, without prejudice to reinstatement of the applications at any time.

Applicants have now amended the proposed contract to provide for the addition to Supplement C, the following paragraph 6:

The foregoing operating instructions shall remain in effect subject to the proviso that they shall not interfere with any of the companies or entities, parties hereto, obtaining any significant economies of generation and transmission available through operating or planning coordination with any other electric utility. If any of the companies or entities, parties hereto, become satisfied that compliance with the operating instructions of Supplement C will prevent such coordination and the resulting economies or improved reliability of bulk power supply, then, after notice, these operating instructions may be disregarded to the extent that they interfere with such coordination.

The last sentence of paragraph 1 of Supplement C is revised to read:

> Therefore, as in the past *and except as may be provided herein,* any energy which Michigan may export to Hydro is to be used only in Canada, and any energy which Michigan may import from Hydro is to be generated wholly within Canada. [Italic indicates revision.]

The new paragraph 6 of Supplement C frees Ontario Hydro from the operating restriction of Supplement C if it is satisfied that significant economies or improved reliability of bulk power supply can be obtained by doing so. Further, the body of the proposed contract has been amended so that if Ontario Hydro takes advantage of the new paragraph 6 of Supplement C to coordinate with utilities operating in New York state, it does not do so at the risk of the immediate termination of its present pooling agreement with the respondents herein, which it relies upon to improve the reliability of its bulk power supply. We, of course, do not here determine the effect, if any, of the contractual provisions and the operating restrictions as modified upon the jurisdictional status of the two applicants. That determination will ultimately be made in Docket No. E-7234 presently pending before this Commission.

Notice of the filing of the application was published in the Federal Register on February 1, 1966 (31 F.R. 1256), stating that any person desiring to be heard or to make any protest with reference to the application should on or before February 16, 1966, file with the Federal Power Commission, Washington, D.C. 20426, a petition or protest in accordance with the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10). No petition or protest or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

The transmission of electric energy from the United States to Canada as limited herein and as hereinafter authorized will not impair the sufficiency of electric supply within the United States and will not impede or tend to impede the coordination in the public interest of facilities subject to the jurisdiction of the Commission.

The Commission orders:

(A) Applicants be and they hereby are authorized to transmit electric energy from the United States to Canada, in accordance with the terms and conditions set forth in the application and subject to the provisions of this order.

(B) The maximum amount of electric energy which Applicants hereby are authorized to transmit from the United States to Canada is 1,000,000,000 kilowatt-hours annually, at a maximum transmission rate of not to exceed 750,000 kilovolt-amperes; such energy to be transmitted over the facilities referred to above covered by the outstanding permit also referred to above, and the new St. Clair-Lambton tie covered by the Permit requested in Docket No. E-7207, pursuant to Executive Order No. 10485 signed by the Acting Chairman of the Federal Power Commission on March 1, 1966. The limitations provided herein shall apply to the net hourly rate of transmission over all interconnections between Detroit Edison and Hydro and the net hourly transmission of kwh of energy over those interconnections.

(C) Applicant shall file with the Commission any revisions or changes in the interconnection agreement with Hydro, referred to above.

(D) The authorization herein granted may be modified from time to time or terminated by further order of the Commission, but in no event shall such authorization extend beyond the date of termination or expiration of the Permit referred to in Paragraph (B) above.

(E) Applicants shall conduct all operations, pursuant to the authorization herein granted, in accordance with the provisions of the Federal Power Act and pertinent rules and regulations or orders issued by the Commission.

(F) Applicants shall install and maintain adequate metering equipment to measure the flow of all electric energy transmitted from the United States to Canada, pursuant to the authority herein granted; shall make, keep and preserve full and complete records with respect to the movement of such energy; and shall furnish in triplicate, reports annually, on or before February 15, showing for each month of the preceding calendar year, the kilowatt-hours of energy received and the kilowatt-hours of energy delivered over the three interconnections as a group, the maximum rate of transmission, and the consideration therefor. In addition, such reports shall show separately for each interconnection the gross monthly kilowatt-hours transmitted in each direction and the maximum rates of such transmissions.

(G) This authorization to transmit electric energy from the United States to Canada shall not be transferable or assignable, but in the event of the involuntary transfer of facilities used for such transmission by operation of law (including such transfers to receivers, trustees or purchasers under foreclosure or judicial sale), shall continue in effect temporarily for a reasonable time thereafter, pending the making of an application for permanent authorization and decision thereon, provided notice is promptly given in writing to the Commission, accompanied by a statement that the physical facts relating to sufficiency of supply, rates, and nature of use remain substantially the same as before the transfer.

(H) This authorization shall be without prejudice to the authority of any State or State regulatory commission for the exercise of any lawful authority vested in the State or State regulatory commission over Applicants.

(I) This authorization is without prejudice to the authority of this Commission, or any other regulatory body, with respect to rates, service accounts, valuation, estimates or determinations of cost, or any other matter whatsoever now pending or which may come before this Commission.

(J) Concurrently with the service of this order, the permit signed by the Acting Chairman of the Federal Power Commission, referred to above, shall be released and a copy transmitted by the Secretary to Applicant, Detroit Edison.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

EASTERN SHORE NATURAL GAS COMPANY, DOCKET NO. CP66-107

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND ACCEPTING TARIFF SHEETS FOR FILING

(Issued March 1, 1966)

On October 12, 1965, Eastern Shore Natural Gas Company (Applicant) filed in Docket No. CP66-107 an application and supplements thereto filed December 2 and 20, 1965 pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of natural gas facilities and the sale of additional volumes of natural gas, all as more fully set forth in the application.

Applicant seeks authorization to extend its present 6-inch transmission line from Hurlock, Maryland, approximately 17.05 miles to Easton, Maryland, and to construct appropriate metering and regulating installations. The proposed pipeline facilities will be used to provide a total firm supply of 650 Mcf of natural gas per day to the City of Easton. The gas will be used to provide an initial quantity of 400 Mcf per day for resale to the general public by the City of Easton and 250 Mcf per day for direct consumption by the City of Easton in its electric generating plant.

The gas to be supplied by Applicant through the proposed facilities will be purchased from Transcontinental Gas Pipe Line Corporation (Transco) and the sale for resale to the City of Easton will be made under Applicant's existing G-1 Rate Schedule. The application in which Transco seeks authority for delivery of the volumes to be sold to Applicant was filed on October 5, 1965, in Docket No. CP66-91 and a certificate was granted to Transco on November 19, 1965, 34 FPC 1351. Applicant proposes to increase its firm purchases from Transco by 650 Mcf of gas per day.

The total estimated cost of the proposed facilities is $335,400 and will be financed through the liquidation of short-term government securities.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on February 28, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, supplements and exhibits submitted in support of the authorization sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, Eastern Shore Natural Gas Company, a Delaware corporation having its principal place of business in Salisbury, Maryland, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 29, 1957, in Docket No. G-12059, *et al.* (18 FPC 710).

(2) The proposed construction and operation of facilities and sale and delivery of natural gas by Applicant as hereinbefore described, and as more fully described in the application and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid construction and operation of facilities and sale and delivery of natural gas is required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to the Applicant in this proceeding, authorizing the construction and operation of facilities and the sale and delivery of natural gas as hereinbefore described and as more fully described in the application, supplements and exhibits in this proceeding, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations within 6 months of the date on which this order issues.

(D) With reference to the direct firm sales to the City of Easton of 250 Mcf per day for use in the City's electric generating plant this certificate shall not entitle the customer to whom such firm deliveries are authorized herein to any priorities or rights to additional gas for meeting any future increases in its electric generating plant requirements at the expense of firm resale customers desiring to acquire additional gas to meet any future increases in their requirements.

(E) With reference to the direct interruptible sales to the City of Easton of gas for use in the City's electric generating plant, the certificate issued is granted on the express condition that the interruptible service authorized herein shall be curtailed or interrupted to the extent required to meet existing or future contracted maximum delivery obligations of Eastern Shore for firm service to its customers.

(F) Eastern Shore Natural Gas Company's tariff sheets filed October 15, 1965, and designated as Substitute Original Tariff Sheet No. 18C, Original Tariff Sheets Nos. 18D and 49G–49K to its FPC Gas Tariff Original Volume No. 1, are accepted for filing to become effective on the date this order issues.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

INDIANA & MICHIGAN ELECTRIC COMPANY AND OHIO POWER COMPANY, DOCKET NO. E-7273

ORDER PROVIDING FOR INVESTIGATION AND FOR HEARING

(Issued March 1, 1966)*

This order directs an investigation and hearing as to the lawfulness under the Federal Power Act of the rates, charges, rules, regulations, classifications, practices and contracts for electric services to 16 municipally-owned and one investor-owned resale customers of Indiana & Michigan Electric Company (Indiana & Michigan) and 14 municipally-owned customers of Ohio Power Company (Ohio Power),[1] all as more fully identified in annexed Appendices A and B, respectively.

As a part of this investigation Indiana & Michigan and Ohio Power are being directed to submit cost of service data to this Commission within a period of 60 days, and to serve copies of such data upon the state regulatory commissions of Indiana, Michigan and Ohio respectively, and the wholesale electric customers referred to hereafter. Following receipt and examination of such data the date for formal hearing will be fixed by further order of the Commission.

Examination and analysis of data currently available to the Commission indicate that Indiana & Michigan's wholesale rates, charges, rules, regulations, classifications, practices and contracts relating to the 17 customers listed in Appendix A may result in excessive rates or charges, may be unjust, unreasonable, unduly discriminatory or preferential or may be otherwise unlawful within the meaning of the Federal Power Act. Other information available to the Commission indicates that Ohio Power's rates, charges, rules, regulations, classifications, practices and contracts relating to the 14 wholesale customers listed in Appendix B may result in excessive rates or charges, may be unjust, unreasonable, unduly discriminatory or preferential or may be otherwise unlawful within the meaning of the Federal Power Act.

Indiana & Michigan from time to time[2] tendered wholesale rate schedules for filing with this Commission following the issuance of Commission Opinion No. 458, *Indiana & Michigan Electric Company*, 33 FPC 739, April 14, 1965, subject to an express reservation of the Company's right to challenge the Commission's determination of jurisdiction by timely petition for judicial review.[3] These Indiana & Michigan rate schedule submittals cover its wholesale sales of electricity to 16 municipally-owned electric systems and 8 cooperatively-owned systems. In addition, Indiana & Michigan recently filed a superseding rate schedule for one investor-owned system, Michigan Gas and Electric Company.[4] Rate schedule designations for these municipal and investor-owned customers are as set forth in annexed Appendix A. Rate schedule designations for Indiana & Michigan's cooperative wholesale customers are as set forth in annexed Appendix C.

---

*See order issued March 15, 1968 approving offer of settlement and accepting rate schedule filings, 39 FPC 272.

[1] The companies are operating affiliates and are controlled by the American Electric Power Company.

[2] Indiana & Michigan commenced filing rate schedules July 1, 1965, with its most recent filing tendered January 3, 1966.

[3] On August 6, 1965, Indiana & Michigan sought court review of Commission Opinion No. 458, *Indiana & Michigan Electric Company* v. *Federal Power Commission* (CA7, No. 15285).

[4] Indiana & Michigan also maintains rate schedules on file with this Commission covering its transactions with Northern Indiana Public Service Company, Commonwealth Edison Company, Indianapolis Power & Light Company, Public Service Company of Indiana, Ohio Power Company, Cincinnati Gas & Electric Company, Appalachian Power Company, Ohio Valley Electric Corporation and Illinois Power Company.

To date Ohio Power has not tendered rate schedules for filing with this Commission covering its wholesale electric service to 14 municipally-owned electric systems or 15 cooperatively-owned electric systems. Ohio Power serves the 14 municipalities included in Appendix B and serves Belmont Electric Cooperative, Inc., Buckeye Rural Electric Cooperative, Inc., Carroll Electric Cooperative, Inc., Guernsey-Muskingum Electric Cooperative, Inc., Hancock-Wood Electric Cooperative, Inc., Holmes-Wayne Electric Cooperative, Inc., Licking Rural Electrification, Inc., Midwest Electric, Inc., North Central Electric Cooperative, Inc., Northwestern Electric Cooperative, Inc., Paulding-Putnam Electric Cooperative, Inc., South-Central Rural Electric Cooperative, Inc., Tuscarawas-Coahocton Electric Cooperative, Inc., United Rural Electric Cooperative, Inc., and Washington Electric Cooperative, Inc.[5]

The Commission further finds:

(1) It is necessary and appropriate for purposes of carrying out the provisions of the Federal Power Act, particularly, but not in limitation of the foregoing, Sections 201, 205, 206, 208, 301, 304, 307, 308 and 309 that an investigation and hearing be instituted to determine: the lawfulness of Indiana & Michigan's rates, charges, rules, regulations, classifications, practices and contracts for service to the 17 wholesale electric customers listed in Appendix A; the lawfulness of Ohio Power's rates, charges, rules, regulations, classifications, practices and contracts for service to the 14 wholesale electric customers listed in Appendix B.

(2) It is necessary and appropriate for purposes of the Federal Power Act as referred to above and the Commission's regulations thereunder, and good cause has been shown, to accept for filing the respective rate schedules of Indiana & Michigan, to be designated and become effective as of the dates as shown in Appendices A and C.

The Commission orders:

(A) A public hearing shall be held concerning the issues as specified in finding (1) above in a hearing room of the Federal Power Commission, 441 G Street, N.W., Washington, D.C., at a time to be specified hereafter by further order of the Commission.

(B) Indiana & Michigan and Ohio Power shall within 60 days from the date hereof submit special reports setting out cost and revenue data, using 1965 as the test year, showing Indiana & Michigan's costs of rendering service to the 17 customers enumerated in Appendix A herein and Ohio Power's costs of rendering service to the 14 customers enumerated in Appendix B, calculated in accordance with applicable Commission precedents, submitted in the form as prescribed in Statements A through O, Section 35.13(b)(4)(iv) of the Commission's Regulations under the Federal Power Act and, which shall include in the case of Ohio Power a statement summarizing that Company's rates, charges, rules, regulations, classifications, practices and contracts for service to its municipal and cooperative electric customers as set forth in the recital above. An original and nine conformed copies of each report shall be submitted to this Commission with copies of Indiana & Michigan's report to be served by Indiana & Michigan upon the Public Service Commissions of the States of Indiana and Michigan and each of its wholesale customers set forth in Appendices A and C and copies of Ohio Power's report to be served by Ohio Power upon the Public Utilities Commission of Ohio and each of Ohio Power's wholesale customers set forth in Appendix B and the recital above.

---

[5] Ohio Power maintains rate schedules on file with the Commission covering its transactions with Kentucky Utilities Company, Commonwealth Edison Company, Ohio Edison Company, B. F. Goodrich Company, Ohio Valley Electric Corporation, Timken Roller Bearing Company, Beech Bottom Power Company, West Penn Power Company, Wheeling Electric Company, Appalachian Power Company, Central Operating Company, Cincinnati Gas & Electric Company, Indiana & Michigan Electric Company, Monongahela Power Company, Atomic Energy Commission, Cleveland Electric Illuminating Company, Columbus & Southern Ohio Electric Company, Duquesne Light Company, The Dayton Power & Light Company.

(C) In order that the issues involved herein may be properly determined, Indiana & Michigan and Ohio Power are hereby directed pursuant to the provisions of Sections 201, 307, 308 and 309 of the Federal Power Act to grant to authorized members of the staff of the Federal Power Commission, during regular business hours, free access to their property and access to and the right to inspect and examine all of their accounts, records and memoranda including, but not limited to, the following, books, papers, correspondence, contracts, agreements, maps, reports of engineers, meter readings, and log sheets; and upon staff request shall furnish copies of such material to the staff.

(D) The rate schedule submittals as designated in Appendices A and C are accepted for filing effective as of the respective dates specified therein.

(E) The issuance of this order shall constitute full notice of the filing and publication of the rate schedules referred to in paragraph (D) above insofar as their effective dates are concerned.

(F) Acceptance of the rate schedules as referred to in paragraph (D) above is without prejudice to any findings or orders which have been or may hereafter be made by this Commission in this or any proceeding by or against Indiana & Michigan; moreover, nothing in this order shall be construed as constituting approval by this Commission of any service, rate, charge, classification or any rule, regulation, contract or practice affecting such services or rates provided for in the rate schedules referred to in paragraph (D) above; nor shall this order be deemed as recognizing any claimed contractual right or obligation affecting or relating to such services or rates.

(G) Notices of intervention or petitions to intervene in this proceeding may be filed with the Federal Power Commission, Washington, D.C., 20426, on or before 80 days from the date of issuance of this order, in accordance with the Commission's Rules of Practice and Procedure (18 CFR 1.8 and 1.37).

PHILLIPS PETROLEUM COMPANY, DOCKET NOS. G–11217, G–13734, G–14115, G–15314, G–15315, G–18206, G–18207, G–18215, G–18417 AND G–18418

ORDER DENYING PETITION FOR CONSOLIDATION OF PROCEEDINGS, TERMINATION OF PROCEEDING AND TERMINATION OF PROCEEDINGS IN PART

(Issued March 1, 1966)*

On January 11, 1966, Phillips Petroleum Company (Phillips) filed a petition requesting that the above-docketed proceedings, insofar as they concern matters and issues regarding contractual rate levels, be consolidated with the consolidated proceedings in *Amerada Petroleum Corporation, et al.*, Docket No. G–16117, *et al.*, (Amerada) for hearing or for settlement of said contractual issue. Additionally, Phillips requests that if such issue is settled that the Commission terminate the proceeding in Docket No. G–11217, and terminate the remaining above-docketed proceedings except for the issue of the justness and reasonableness of the recomputed rates pending therein.[1]

These proceedings concern proposed increased rates for sales of natural gas made by Phillips to El Paso Natural Gas Company (El Paso) under certain of Phillips FPC Gas Rate Schedules in the Permian Basin, and Texas Railroad Commission District No. 10. The proposed increased rates were filed by Phillips under the spiral escalation and favored-nation clauses contained in the rate schedules. In an order issued herein, on April 3, 1964, 31 FPC 774, we indicated that Phillips might be required to make further rate reductions and refunds as a contractual matter in these proceedings.

On December 16, 1965, forty-three respondents in *Amerada Petroleum Corporation, et al.*, Docket No. G–16117, *et al.*, filed a rate settlement proposal in proceedings concerning proposed increased rates for sales of natural gas to

---

*Reconsideration denied by order issued April 28, 1966, 35 FPC 638.

[1] We indicated in Opinion No. 338, 24 FPC 537, at 577, 578 that the only matter left open in Docket No. G–11217 was the contractual issue, the remaining dockets herein are consolidated in Docket No. AR61–1, *et al.*

El Paso in the Permian Basin and Texas Railroad Commission District No. 7–B. Each of the proposed rate increases were filed by such respondents under favored-nation clauses that were then contained in the respondents respective FPC Gas Rate Schedules, based directly or indirectly on the spiral escalation increases filed by Phillips. We are this date issuing an order in *Amerada* approving said settlement proposal, *supra*, p. 285.

Phillips avers that the contractual issues in its proceedings are directly related to the matters involved in the proceedings in *Amerada*, and, therefore, requests consolidation, termination and termination in part of its proceedings with *Amerada* on the basis of the *Amerada* settlement proposal. However, the contractual arrangements contained in Phillips' rate schedules herein appear to present different factual and legal problems from those involved in *Amerada*. Moreover, throughout the period when settlement negotiations were being conducted, Phillips made no effort to participate in the negotiations and to seek the relief it now requests by its petition.

Our denial of Phillips' petition substantially grants the requests made in the answers filed in opposition to said petition by the People of the State of California and Public Utilities Commission of the State of California, on February 7, 1966, and by Southern California Gas Company, *et al.*, on February 9, 1966.

The Commission finds:

Denial of the Petition for Consolidation of Proceedings, Termination of Proceeding and Termination of Proceedings in Part filed by Phillips on January 11, 1966, is in the public interest, and is appropriate in carrying out the provisions of the Natural Gas Act.

The Commission orders:

The Petition for Consolidation of Proceedings, Termination of Proceeding and Termination of Proceedings in Part, filed by Phillips on January 11, 1966, is denied.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP65–181

ORDER GRANTING TEMPORARY CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 1, 1966)

On January 18, 1966, Transcontinental Gas Pipe Line Corporation (Transco) filed an application in Docket No. CP65–181 for a temporary certificate of public convenience and necessity, pursuant to Section 7(c) of the Natural Gas Act and Section 157.17 of the Commission's Regulations thereunder, requesting authority to deliver to Consolidated Edison Company of New York, Inc. (Con Ed) an additional 55,000 Mcf per day under Transco's CD–3 Rate Schedule in substitution for 55,000 Mcf per day of storage service presently being rendered under Transco's GSS Rate Schedule.

By letter-order issued June 25, 1965, the Commission denied an identical request made May 5, 1965, and that request now renewed by Transco. Transco's application in this docket has been consolidated with applications of three subsidiaries of the Columbia Gas System and a joint application of Transco, United Natural Gas Company and North Penn Gas Company in the proceedings in *Columbia Gulf Transmission Co., et al.*, Docket No. CP65–102, *et al.* Hearings in those proceedings were concluded on February 4, 1966, and that case is now in the briefing stage before the Presiding Examiner. In light of the fact that the proposed service to Con Ed is unrelated to the other issues in the consolidated proceedings, Transco contends that the issue of the proposed service to Con Ed is ripe for Commission determination. Transco asserts that it would be "highly inequitable to have any determination by the Commission in respect to the CD–3 service to Con-Edison delayed entirely until the final determination of all of the unrelated issues in Docket No. CP65–181."

Transco's instant application for temporary authorization was opposed in answers filed by the Commission staff and by Fuels Research Council, Inc., National Coal Association, and United Mine Workers of America and was supported by Con Ed and the City of New York. Several of the filings discuss the issue of whether the substitution of service should be permitted from the standpoint of the ultimate resolution of that issue. We believe, however, that final resolution should be made only after full briefing of that matter and with the benefit of a Presiding Examiner's initial decision and we will not rule on the merits of whether Transco's application, insofar as it relates to the proposed service to Con Ed, ultimately should be granted. Whether it will then be feasible and otherwise in the public interest to sever this portion of the consolidated proceeding for separate determination is a matter upon which we will pass in light of the situation prevailing at the time exceptions are filed.

Transco, at page 4 of its application for temporary certificate points out, however:

> Unless the temporary authorization requested herein is granted promptly, it will be necessary for Transco, at appreciable investment cost, to go forward in the immediate future with further development of the Wharton Storage Field, the ultimate development of which is involved in the presently pending Docket No. CP65–182, in order to continue the rendition of the present 55,000 Mcf per day of GSS service to Con-Edison and to render the further storage service for the 1966–67 heating season which is required by Transco's other customers. On the other hand, if the Con-Edison substitute service is authorized forthwith, sufficient existing storage capacity would be available so that Transco would not be required to develop any portion of its share of the Wharton Field in the 1966 construction year, thereby saving the attendant storage investment costs during this year.

It appears that failure to grant Transco temporary authorization may necessitate the installation of storage facilities which ultimately may be unnecessary if the proposed substitution of CD–3 service eventually were to be approved. Accordingly, we will grant Transco the temporary authorization requested to take effect on April 1, 1966 and to continue for 12 months. A final decision in the proceeding resolving the issue of service to Con Ed is expected prior to the termination of that period.

The issuance of this temporary certificate is without prejudice to the ultimate determination of any issue raised in the proceeding and the determination made to issue the temporary has in no way been influenced by the air pollution issue raised by the City of New York and Con Ed.

The Commission orders:

A temporary certificate of public convenience and necessity is issued to Transcontinental Gas Pipe Line Corporation authorizing the sale and delivery of

55,000 Mcf per day of natural gas to Consolidated Edison Company of New York, Inc. under Rate Schedule CD-3 in substitution for 55,000 Mcf per day of natural gas presently being rendered under Rate Schedule GSS, subject to the jurisdiction of the Commission, upon the terms and conditions of this order. The temporary certificate shall be effective for a period of one year commencing April 1, 1966.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP66-227

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT

(Issued March 1, 1966)

On January 17, 1966, United Gas Pipe Line Company (Applicant) filed in Docket No. CP66-227 an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon certain natural gas facilities, as more fully set forth in the application.

Applicant will abandon the following specific facilities:

(1) 12.6 feet of 2-inch pipeline, an alcohol injector and a positive meter station, originally constructed to serve the Longview Machine Works and presently located in Harrison County, Texas, and

(2) a positive meter station originally constructed to serve the Humble Pipe Line Company and presently located at Milepost 60.9 on Applicant's Jackson-Magnolia 6-inch pipeline in Lincoln County, Mississippi.

Service to the Longview Machine Works commenced on August 1, 1960, and the existing contract between the parties dated November 16, 1962, was cancelled effective December 4, 1965, by letter agreement between the parties dated December 9, 1965. The service to Humble Pipe Line Company commenced on July 16, 1948 (as Interstate Oil Pipe Line Company), and the existing contract between the parties dated October 11, 1963, was cancelled effective January 1, 1966, by letter agreement between the parties dated November 5, 1965.

Due notice of the filing of the application was published in the Federal Register on January 29, 1966 (31 F.R. 1220). No protest, petition to intervene or notice of intervention has been filed.

At a hearing held on February 24, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, United Gas Pipe Line Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 10, 1942, in Docket No. G-232 (3 FPC 863).

(2) The facilities to be abandoned, as hereinbefore described, as more fully described in the application in this proceeding, are subject to the jurisdiction of the Commission and abandonment of such facilities is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The proposed abandonment of the aforesaid facilities is permitted by the public convenience and necessity and approval therefor should be granted as hereinafter ordered.

The Commission orders:

(A) Permission for and approval of the abandonment by Applicant of the facilities hereinbefore described, as more fully described in the application in this proceeding, are granted.

(B) Applicant shall advise the Commission of the date of abandonment within ten days thereof.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

RESERVE OIL AND GAS COMPANY (SUCCESSOR TO PRODUCING PROPERTIES, INC.), DOCKET NO. G-18570, ET AL.[1]

ORDER ACCEPTING AMENDED OFFER OF SETTLEMENT, REQUIRING FILING OF NOTICES OF CHANGE, SEVERING AND TERMINATING PROCEEDINGS, AND REQUIRING REFUNDS

(Issued March 2, 1966)

On March 15, 1965, Reserve Oil and Gas Company (Reserve) filed an offer of settlement, which it amended on May 13, 1965, relating to sales of natural gas made under fourteen of Reserve's currently effective FPC Gas Rate Schedules in various fields in Texas Railroad Commission District Nos. 2, 3 and 4. In its proposal, Reserve stated that if the Commission should accept its proposal upon certain conditions it would be unwilling to accept such an order. Upon consideration of Reserve's proposal, we found such conditions to be proper, and, therefore, by order issued June 16, 1965, 33 FPC 1266, we rejected Reserve's offer. However, the rejection was without prejudice to the filing by Reserve of an offer in accordance with the conditions we indicated would be acceptable.

In that order we pointed out that the proposed 14.6¢ settlement rates under the Second Amendment to our Statement of General Policy No. 61-1, as amended, for sales by Reserve under its FPC Gas Rate Schedule Nos. 1 and 2 to Union Texas Petroleum, a Division of Allied Chemical Corporation (Union) were not acceptable because the area price levels announced in that Statement are applicable to the resale of the subject gas by Union to Texas Eastern Transmission Corporation after gathering and processing. We also noted that the proposed settlement rates of 15¢ per Mcf under the Second Amendment for sales under Reserve's FPC Gas Rate Schedule Nos. 21 and 29 were unacceptable because no deliveries are presently being made under those rate schedules.

On October 15, 1965, Reserve filed a motion requesting reconsideration of its original proposal in the light of Opinion No. 468, 34 FPC 159, where the Commission applied the appropriate area price to pipeline quality gas regardless of the point of delivery. Reserve claims that the gas sold under its FPC Gas Rate Schedule Nos. 1 and 2 is high pressure pipeline quality gas and therefore under Opinion No. 468 it is entitled to the applicable area ceiling.

In Opinion No. 468 we determined the just and reasonable rates for all producer-respondents in the Permian Basin Area, including the rates by producers selling to intermediary producers as well as the resale of intermediary producers to pipeline purchasers after gathering and processing. Since the intermediary producer here, Union, is not before us now, we are in no position at the present time to determine the appropriate rate level for the sales by Reserve to Union, as we were in Opinion No. 468. Moreover, Opinion No. 468 does not, contrary to Reserve's contention, have any effect on the price levels announced in the policy statement outside of the Permian Basin Area. We must therefore adhere to our previous ruling in the June 16 order and shall exclude Reserve's FPC Gas Rate Schedule Nos. 1 and 2 from the settlement.

---

[1] The additional dockets involved herein are set forth in the Appendix hereto.

Reserve in its motion for reconsideration indicated that if the Commission decided not to reconsider and approve its original settlement offer, it was agreeable to (1) deletion of its FPC Gas Rate Schedule Nos. 1 and 2 from the offer, (2) settlement rates of 14¢ per Mcf for sales under its FPC Gas Rate Schedule Nos. 21 and 29, and (3) inclusion of Docket No. RI66–89 (relating to a proposed increase under its FPC Gas Rate Schedule No. 24) in the offer. With these changes, we find Reserve's proposal to be consistent with our policy statement, and, therefore shall approve the same.

Under its settlement proposal, as amended, Reserve will refund monies charged and collected, subject to refund to two jurisdictional pipeline purchasers: Tennessee Gas Transmission Corporation (TGT) and Texas Eastern Transmission Corporation (TETCO). The amount of refunds is approximately $6,000, exclusive of interest. TGT acknowledges an express flow-through obligation of such monies to its jurisdictional customers. Consequently, we shall order Reserve to make such refunds to TGT. TETCO disclaims any obligation on its part to flow-through such refund monies to its jurisdictional customers, and for all of the reasons set forth in the order in *Humble Oil & Refining Company*, Docket Nos. G–9287 and G–9288, *et al.*, 32 FPC 49, we shall order Reserve to retain such refund monies pending further order of the Commission directing the nature of their disposition. In the order in *Humble* (*supra*) and in subsequent settlement orders, where we have directed certain refund monies to be retained pending further order, we have provided, in most instances, that the monies could be retained by the producer and commingled with its general assets and used for corporate purposes with a charge of 6 per cent interest thereon. However, in Opinion No. 468, *Area Rate Proceeding, et al.*, Docket No. AR61–1, *et al.*, 34 FPC 159 (issued August 5, 1965) we determined that the proper rate of interest to be paid on retained refund monies commingled with the general assets of producers authorized so to do be 4.5 per annum from the date of filing of the refund report to the date on which they are paid over to the person ultimately determined to be entitled thereto. At the time of issuance of Opinion No. 468, the prime rate of interest was 4.5 per cent per annum, and had been so since August 23, 1960. Subsequently, the Commission by order granted motions filed by producers and one pipeline company who had been ordered to retain refund monies, changing the rate of interest to 4.5 per cent per annum on such commingled funds.

On December 6, 1965, the prime rate of interest became 5 per cent per annum (Federal Reserve Bulletin, January, 1966, page 71, ftn.) and, therefore, we find the proper rate of interest to be at that rate for monies ordered to be retained after December 6, 1965, when the producer or pipeline elects to commingle such monies with its general assets pending final order of the Commission.

We believe that Reserve's settlement proposal, as amended, is in the public interest and shall approve the same. However, we desire to make it clear that acceptance of Reserve's offer of settlement, as amended, shall not be construed as approval of any future increased rate that may be filed by

Reserve under the subject rate schedules and is without prejudice to any findings or order of the Commission in any future proceeding involving Reserve's rates and rate schedules. Additionally, for all of the reasons set forth in *Humble Oil & Refining Company*, Docket No. G–9287, *et al.*, 32 FPC 49, we shall require Reserve to deposit the refund monies in a special escrow account or to commingle the retained refunds with its general assets pending future order of the Commission.

The Commission finds:

The proposed settlement of the above-designated proceedings, on the basis described herein, as more fully set forth in the offer of settlement, as amended, filed with the Commission by Reserve on October 15, 1965, is consistent with the Statement of General Policy No. 61–1, as amended, 18 CFR 2.56, and approval thereof as made effective and hereinafter ordered is in the public interest and is appropriate to carry out the provisions of the Natural Gas Act.

The Commission orders:

(A) The offer of settlement, as amended, filed with the Commission by Reserve on October 15, 1965, is approved in accordance with the provisions of this order.

(B) Reserve shall file, within 30 days from the date of issuance of this order, notices of change in rates under its FPC Gas Rate Schedules to reflect the settlement rates and executed contract amendments in accordance with the terms of its settlement proposal, as amended, and as approved herein. The notices of change and the contractual amendments shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(C) Reserve shall compute the difference between the rates collected subject to refund and the settlement rate for the sales for which it proposes to make refunds with applicable interest to the date of this order, and shall within 45 days from the date of issuance of this order submit a report to the Commission, with a copy to its jurisdictional pipe line purchasers, setting out the amount of refunds (showing separately the principal and applicable interest) the bases used for such determination, the period covered, and ten days thereafter shall submit to the Commission a copy of a letter from its jurisdictional pipeline purchasers agreeing to the correctness of such amounts.

(D) Reserve shall retain the amounts shown in the report required under paragraph (C) above, subject to further order of the Commission directing the disposition of those amounts, excepting the refunds due and owing to TGT to which Reserve shall refund such monies ten days after receiving the letter from TGT required by Paragraph (C) above, with applicable interest.

(E) Reserve may deposit the retained refunds in a special escrow account, and shall tender for filing within 60 days of the date of issuance of this order an executed Escrow Agreement, conditioned as set out below, accompanied by a certificate showing service of a copy thereof upon its jurisdictional pipeline customers. Unless notified to the contrary by the Secretary within 30 days from the date of filing thereof, the Escrow Agreement shall be deemed to be satisfactory and to have been accepted for filing. The Escrow Agreement shall be entered into between Reserve and any bank or trust company used as a depository of funds of the United States Government and the agreement shall be conditioned as follows:

(1) Reserve, the bank or trust company, and the successors and assigns of each, shall be held and formally bound unto the Federal Power Commission

for the use and benefit of those entitled thereto, with respect to all amounts and the interest thereon deposited in the special escrow account, subject to such agreement, and such bank or trust company shall be bound to pay over to such person or persons as may be identified and designated by final order of the Commission and in such manner as may be therein specified, all or any portion of such deposits and the interest thereon.

(2) The bank or trust company may invest and reinvest such deposits in any short-term indebtedness of the United States or any agency thereof or in any form of obligation guaranteed by the United States which is, respectively, payable within 120 days as the said bank or trust company in the exercise of its sound discretion may select.

(3) Such bank or trust company shall be liable only for such interest as the invested funds described in Paragraph (2) above will earn and no other interest may be collected from it.

(4) Such bank or trust company shall be entitled to such compensation as is fair, reasonable and customary for its services as such, which compensation shall be paid out of the escrow account to such bank or trust company. Said bank or trust company shall likewise be entitled to reimbursement for its reasonable expenses necessarily incurred in the administration of this escrow account, which reimbursement shall be paid out of the escrow account.

(5) Such bank or trust company shall report to the Secretary quarterly, certifying the amount deposited in the bank or trust comany for the quarterly period.

(F) If Reserve elects to commingle the retained refunds with its general assets and use them for business purposes, it shall notify the Secretary of the Commission of its intention so to do within sixty days of the issuance of this order, and shall pay interest on such monies at the rate of 5% per annum from the date of issuance of this order to the date on which they are paid over to the person or persons ultimately determined to be entitled thereto by final order or orders of the Commission.

(G) Upon notification by the Secretary of the Commission that Reserve has complied with the terms and conditions of this order, the proceedings in the Appendix hereto shall terminate, the proceedings in Docket Nos. G–19888, G–19902, RI60–347, RI60–348, RI61–79, RI63–343, RI63–344 and RI63–345 shall be severed from the proceedings in Docket No. AR64–2, *et al.*, and the proceedings in said dockets and Docket No. RI66–89 shall terminate, all without further order of the Commission.

(H) The acceptance by the Commission of Reserve's offer of settlement, as amended, is without prejudice to any findings or determinations that may be made in any proceeding now pending, or hereafter instituted by or against Reserve and is without prejudice to claims or contentions which may be made by Reserve, the Commission staff, or any affected party hereto, in any proceedings.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. G-9547, ET AL., RP61-18, RP63-1 AND RP65-1

ORDER AMENDING ORDER AS TO INTEREST ON REFUNDS

(Issued March 2, 1966)

On January 24, 1966, United Gas Pipe Line Company (United) filed a motion in the above-docketed proceedings requesting that the Commission amend paragraphs (H) and (I) of Opinion No. 428-A,[1] and the letter-order of November 24, 1965, in Docket No. RP61-18, *et al.*, so as to provide that the interest payable on refunds being retained by United at the direction of the Commission, and commingled with its assets be computed at the rate of four-and-one-half percent (4½%) rather than at six percent (6%) as prescribed by the Commission.

---

[1] Issued September 2, 1964, in Docket No. RP63-1 (32 FPC 687).

By aforementioned letter-order of November 24, 1965, the Commission ordered United to retain certain undistributed refund monies pending further order of the Commission, subject to aforementioned paragraphs (H) and (I) of Opinion No. 428–A. United therein, and thereby, was given the option of commingling such retained monies with its general assets, and to use such monies for corporate purposes with the obligation to pay interest thereon at the rate of 6 percent per annum.

By letter dated January 7, 1966, United informed the Commission that it had elected to commingle the retained funds and pay interest thereon.

United now requests that we amend said orders to conform with our determination in Opinion No. 468, *Area Rate Proceeding*, Docket No. AR61–1, *et al.*, 34 FPC 159, issued August 5, 1965, that the appropriate rate of interest for refund monies so retained and commingled, was 4.5 percent per annum, that being the prime rate of interest at the time of the issuance of that Opinion. It is appropriate, that we amend the letter-order of November 24, 1965, to provide for an interest rate of 4.5 percent per annum on the monies United has elected to retain.

The Commission orders:

(A) The motion for amendment of the orders issued on September 2, 1964, and November 24, 1965, filed by United on January 24, 1966, is hereby granted as hereinafter provided.

(B) United shall pay interest on the refund monies it has been required by our orders to retain and which it has elected to commingle with its general assets at the rate of 4.5 percent per annum, from November 24, 1965 to the date on which such refund monies are paid over to the person or persons ultimately determined to be entitled thereto in a final order of the Commission.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP66–76

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 3, 1966)

On September 16, 1965, El Paso Natural Gas Company (Applicant) filed in Docket No. CP66–76 an application and supplements thereto on October 25 and November 22, 1965 and March 2, 1966, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities and the sale and delivery of additional volumes of natural gas to the Washington Natural Gas Company (Washington Natural) for resale and distribution in the Seattle area, as more fully set forth in the application and supplements thereto.

Applicant seeks authorization to (1) construct and operate 6.55 miles of 10¾-inch pipeline as a loop on its existing 8.5 mile South Seattle lateral pipeline (also 10¾-inch) and (2) modify its South Seattle Gate Station located at the end of the 8.5 mile sales lateral in King County, Washington. The proposed facilities and modifications are required to enable it to increase sales to Washington Natural Gas Company (Washington Natural) for distribution in the Seattle area.

Present design capacity of the lateral is 86,900 Mcf per day, which will be inadequate to serve the 1966 estimated gas requirements of the Seattle area attributed to normal industrial and residential growth. After installation of the proposed loop, design capacity will be 127,680 Mcf per day, an increase of 40,780 Mcf per day or 47 percent of existing capacity.

The estimated cost of the proposed construction is $342,000, which will be defrayed from currently available working funds.

After due notice no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on March 3, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, supplements, and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 29, 1942, in Docket Nos. G–242 and G–257 (3 FPC 851).

(2) The proposed construction and operation of facilities and sale of additional volumes of natural gas, as hereinbefore described, and as more fully described in the application, supplements and exhibits in this proceeding are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed construction and operation of facilities and sale of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon El Paso's compliance with all applicable Commission Regulations under the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to the Applicant, El Paso Natural Gas Company, in this proceeding authorizing the construction and operation of facilities and sale of additional volumes of natural gas, to Washington Natural as hereinbefore described and as more fully described in the application and supplements and exhibits herein, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized to be constructed and operated by Applicant shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations within six months of the date on which this order issues.

(D) Applicant shall file pursuant to Part 154 of the Commission's Regulations an acceptable service agreement reflecting the terms and conditions of the sale and the delivery of additional volumes of natural gas to Washington Natural.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

UNION ELECTRIC COMPANY, PROJECT NO. 2277

ORDER MODIFYING LICENSE ORDER ON REHEARING

(Issued March 3, 1966)

On August 26, 1965, 34 FPC 598, the Commission issued a license order for the Taum Sauk pumped storage plant of the Union Electric Company, Project No. 2277. On application for rehearing filed September 27, 1965, the Union Electric Company requested that several relatively minor modifications be made in the license order. Since the points raised by the Company in its application for rehearing involved primarily technical engineering questions, we granted rehearing for further consideration on October 18, 1965, 34 FPC 1169, in order to allow the Commission staff to study the situation and to confer with representatives of the Company in an effort to achieve a resolution of these problems. Pursuant to our order granting rehearing, the Staff reexamined the license provisions in the light of actual project operating conditions, and invited the Company to meet and discuss its contentions with the Staff. Such a meeting was held on January 11, 1966 during the course of which agreement was reached between the Staff and Company representatives on all matters raised in the Company's application for rehearing. The matters raised and the proposed resolution of each is set forth below, in the same sequence as they appear in the original order issuing the license.

1. *Description of Project Works.*—The Company suggested that the project description contained in the license be changed by inserting the word "about" before the numerical quantities denoting the volumes and areas of the upper and lower pools, since these figures as they originally appeared in the license application were intended by the Company to be approximations rather than precise quantities. The staff agreed that it would be desirable to include the suggested words of approximation.

2. *Article 31.*—The Company requested that Article 31 be revised to eliminate the words in brackets, as follows:

> *Article 31.* The operations of the Licensee, so far as they affect the use, storage and discharge of water from the project reservoirs, shall at all times be controlled by such reasonable rules or regulations as the Commission may prescribe for the protection of life, health, and property, and in the interest of the fullest practicable conservation and utilization of such waters for power purposes and for other beneficial public uses, including recreational purposes; [and the Licensee shall release water from the lower reservoir of the project at such rate in cubic feet per second, or such volume in acre-feet per specified period of time, as the Commission may prescribe for the purposes hereinbefore mentioned and as the Commission herein prescribes in Article 32 herein.]

It was contended by the Company that the bracketed clause of Article 31 is inconsistent with the specific language of Article 32, which requires water to be released from the lower pool at a rate equal to the natural inflow into the lower pool. It was further contended that the bracketed clause is merely repetitive of the sense of the first clause of Article 31 and should therefore be stricken. However, the Staff pointed out that since this clause specifically mentions Article 32, and takes it into account, the two articles could not come into conflict with each other. Moreover, the Staff suggested that since the language of Article 31 is based on that of a standard condition (see Article 6 of Form L-6 as revised September 1, 1965, 34 FPC 1114), the deletion of this clause in this license might cast doubt on the interpretation of similar clauses in many other licenses. After this discussion the Company receded from its request.

3. *Article 32.*—The Company objected to the requirement of this article that natural inflow into the lower pool be measured, contending that such a requirement could only be met by the installation of numerous gaging stations. After examination of the Company's mode of operations, the Staff agreed with the Company that the purpose of Article 32—that of providing that natural outflow from the lower reservoir approximate natural inflow—could be fulfilled by maintaining the total volume of water in the upper and lower pools at a constant amount. This could be accomplished with the Company's present equipment. Thus, it was proposed that the article be changed by adding the italicized words and eliminating the bracketed word:

> *Article 32.* The Licensee shall *employ measuring means in order to* release water over and/or through the lower dam continuously at a rate wherein the total flow from the lower pool is approximately equal to the [measured] natural inflow into the lower pool, except as modified by the Commission pursuant to Article 31 above.

4. *Article 34.*—The Company contended that the requirement of Article 34 that seepage flows from the upper reservoir be measured daily is onerous and unnecessary. As an alternative, the Company suggested that it report maximum leakage on a monthly basis but only for those months in which the maximum rate of leakage exceeded 20 cfs. The Staff concluded that the requirement of daily measurement is unnecessary here since the upper reservoir dikes are of rock-fill construction which is not subject to sudden washouts. However, the Staff felt it prudent that seepage flow rates from the upper reservoir be determined weekly, or more often if deemed necessary. This would be done by plotting the decrease in water surface elevation which is measured during a period when the plant is not in operation. More precise means might be required if deemed necessary. The Staff also thought it advisable that a Company engineer should inspect the dikes once a month, since this is a remote-control station. To accomplish these ends, the Staff proposed and the Company agreed to change Article 34 by adding the italicized words and deleting the bracketed word as follows:

> *Article 34.* The Licensee shall submit a report on the methods employed for controlling seepage from the upper reservoir, and shall submit semiannually a supplemental report on the seepage flows as measured [daily] *by reservoir level variations, or other means if required, on a weekly basis, or more often if required, and the dikes shall be inspected once a month.* The Licensee shall cause such remedial work as found necessary from time to time by the Licensee or by the Commission, provided that any major remedial work shall first have been approved by the Commission.

The Commission finds:

It is consistent with the public interest to revise the Commission's order issuing license for Project No. 2277 (issued August 26, 1965) as hereinafter provided.

The Commission orders:

The Commission's August 26, 1965 "Order Issuing License (Major)" for Project No. 2277 is hereby revised as follows:

1. The description of project works found on page 600, Paragraph (B) (ii) is changed to read:

(ii) Project works consisting of a concrete gravity dam with a gated sluice and non-gated spillway section located on East Fork of Black River at the confluence of Taum Sauk Creek; a reservoir, known as the lower pool, with a maximum normal water surface elevation of 750 feet above mean sea level, usable storage of about 4,360 acre-feet and a surface area of about 370 acres; the upper pool created by a rock-fill concrete faced dike, surmounted by a parapet wall, with a water surface which varies between elevation 1505 and 1597 feet m.s.l., storage of about 4,360 acre-feet and an area of about 54.5 acres located on top of an adjoining mountain; a tunnel and penstock leading from the upper pool to a powerhouse located on an open channel connecting to the lower pool; a powerhouse containing two reversible pump-units, each having a rated generating capacity of 175,000 kilowatts; step-up transformers and switchyard; a double-circuit 138-kv transmission line extending from the switchyard to the Rivermines Substation, a distance of about 30 miles, and appurtenant electrical and mechanical facilities, the location, nature and character of which are more specifically shown and described by the exhibits hereinbefore cited and by certain other exhibits which also formed part of the application for license and which are designated and described as follows:

Exhibit L:

(FPC No. 2277-3) Lower Dam, Site Plan and General Design;
(FPC No. 2277-11) Upper Pool Plan and Sections;
(FPC No. 2277-5) Pressure Tunnel & Channel Profile & Cross Sections;
(FPC No. 2277-6) Pumping & Generating Station Site Plan; and
(FPC No. 2277-7) Pumping & Generating Station, Plans & Sections.

Exhibit M:

One typewritten page entitled, "General Description of Mechanical, Electrical and Transmission Equipment," filed in the Commission June 10, 1960.

2. Article 32, page 602, is changed to read:

Article 32. The Licensee shall employ measuring means in order to release water over and/or through the lower dam continuously at a rate wherein the total flow from the lower pool is approximately equal to the natural inflow into the lower pool, except as modified by the Commission pursuant to Article 31 above.

3. Article 34, page 602, is changed to read:

Article 34. The Licensee shall submit a report on the methods employed for controlling seepage from the upper reservoir, and shall submit semiannually a supplemental report on the seepage flows as measured by reservoir level variations or other means, if required, on a weekly basis or more often, if required, and the dikes shall be inspected once a month. The Licensee shall perform or cause to be performed such remedial work as found necessary from time to time by the Licensee or by the Commission, provided that any major remedial work shall first have been approved by the Commission.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

BROOKS PIPE LINE CO., DOCKET NO. CP64-121

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 4, 1966)

On January 12, 1966, Brooks Pipe Line Co. (Applicant) filed in Docket No. CP64-121 an application to amend the certificate of public convenience and necessity issued in said docket on August 10, 1964, 32 FPC 563, by increasing the authorized volumes to be transported by Applicant for Brooks Gas Corporation from 8,000 Mcf of natural gas per day to 20,000 Mcf per day, as more fully set forth in the application to amend.

By the order of August 10, 1964, Applicant was authorized to transport natural gas for Brooks Gas Corporation by means of an existing 6⅝-inch O.D. pipeline extending from a point in or near the Velrex Field Area, in Schleicher County, Texas, to the Mertzon Gas Processing Plant (Mertzon Plant) located in the Mertzon Field, Irion County, Texas. Pursuant to the agreement between Applicant and Brooks Gas Corporation, the volume was not to exceed 8,000 Mcf of gas per day unless such excess was agreed to by Applicant.

On April 15, 1964, in Docket No. CI65-700 Brooks Gas Corporation was authorized to gather gas produced by Delta Drilling Company, *et al.* (Delta Drilling) in the Velrex Field and purchased by Northern Natural Gas Company (Northern) from Delta Drilling, and to redeliver such gas to Northern after processing at the Mertzon Plant. The volume of gas to be gathered by Brooks Gas Corporation and transported by Applicant was 4,000 Mcf per day.

In Docket No. CI65-581 the Commission, by its order issued March 2, 1965, authorized Delta Drilling to sell its production from the Velrex Field to Northern pursuant to a contract dated March 13, 1964. On August 20, 1964, Delta Drilling filed an application to amend the certificate in Docket No. CI65-581 so as to authorize the sale by Delta Drilling to Northern of gas from additional acreage in the Velrex Field. This gas is also to be transported by Applicant, according to the application to amend.

Applicant states that no additional facilities will be required to render the additional transportation service.

Due notice of the subject application to amend has been given by publication in the Federal Register on January 26, 1966 (31 F.R. 1019). No protest, petition to intervene, or notice of intervention has been filed herein.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission order issued August 10, 1964, be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued August 10, 1964, in Docket No. CP64-121 is amended by authorizing Applicant to transport volumes of natural gas for Brooks Gas which Brooks Gas gathers in the Velrex Field Area in Schleicher County, Texas, for the account of others as well as for its own account.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

COLUMBIA GULF TRANSMISSION COMPANY, DOCKET NO. CP66-184

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 4, 1966)

On December 6, 1965, Columbia Gulf Transmission Company (Applicant) filed in Docket No. CP66-184 an application pursuant to Section 7(c) of the Natural Gas Act, as implemented by Section 157.7(b) of the Regulations under the Act, for a certificate of public convenience and necessity authorizing the construction during the calendar year 1966 and the operation of routine field facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased by United Fuel Gas Company (United) from producers thereof, all as more fully set forth in the application in this proceeding.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in connecting to its pipeline system new and existing supplies of natural gas which will be purchased by United Fuel in various producing areas generally co-extensive with Applicant's system. Applicant transports for United Fuel natural gas purchased by the latter and delivers such gas to points near the Kentucky-West Virginia border.

The total cost of the proposed facilities will not exceed a maximum of $500,000, and no single project will exceed a cost of $125,000. The proposed facilities will be financed from funds on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on March 3, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Columbia Gulf Transmission Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of November 5, 1958, in Docket No. G-15524 (20 FPC 681).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the

expiration of the authorization granted hereinafter, a statement in compliance with Section 157.7(b)(3) of the Commission's Regulations under the Natural Gas Act.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the calendar year 1966 and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $500,000, with no single project to exceed a cost of $125,000.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity is issued authorizing Applicant, Columbia Gulf Transmission Company, to construct during the calendar year 1966, the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to United Fuel Gas Company.

(B) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with Section 157.7(b)(3) of the Commission's Regulations under the Natural Gas Act.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(D) The authorization granted in paragraph (A) above is limited to construction during the calendar year 1966, and the total expenditures for facilities to be constructed thereunder are limited to a maximum of $500,000, with no single project to exceed a cost of $125,000.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

EL PASO NATURAL GAS COMPANY, ET AL.,
DOCKET NO. CP64-211, ET AL.

ORDER DENYING APPLICATIONS FOR REHEARING AND DENYING STAY

(Issued March 4, 1966)

On January 6, 1966, the Commission issued its Opinion No. 484, 35 FPC 40, and accompanying order granting certificates of public convenience and necessity to El Paso Natural Gas Company (El Paso) to construct and operate certain pipeline facilities. By the same order, permanent certificates of public convenience and necessity were issued to eleven producers of natural gas.

Ten of the eleven producers have filed applications for rehearing.[1] Their arguments are directed, in the main, to the refusal of the Commission to allow initial prices in excess of the applicable area rates established in the Permian Basin Area Rate Proceeding, Opinion Nos. 468 and 468-A, 34 FPC 159, 1068. Most of their contentions have been dealt with in Opinion No. 484 or are contrary to other established precedents and need not be further discussed here. The producers present three contentions, however, which should be briefly considered.

---

[1] Dalco Oil Company, February 2, 1966; Gulf Oil Corporation (Gulf), Union Oil Company of California (Union), and Phillips Petroleum Company, February 3, 1966; The Atlantic Refining Company, M. B. Rudman, *et al.*, Skelly Oil Company, and Socony Mobil Oil Company, Inc. (Socony), February 4, 1966; and W. Watson LaForce and George T. Abell on February 7, 1966.

Nine producers[2] urge that the stay granted by the Circuit Court of Appeals for the Tenth Circuit of the ordering provisions of Opinion No. 468 should prevent the Commission from applying the price levels established in Opinion No. 468 to determine the in-line initial prices in these certificate proceedings. We think that the applicable area rates established by this Commission after lengthy hearings and the opportunity for full presentations by all interested parties are the best present indication of the proper in-line prices in the area, even though these area rates are subject to court review. We do not think that the public convenience and necessity requires the issuance of certificates at prices in excess of the area rates.

Our original opinion in this proceeding stated that "the time for acceptance of the certificates will be extended until 30 days after the price, including adjustments for quality deviations, is finally determined." The same nine producers ask that a provision to this effect be embodied in an ordering clause. To remove any uncertainty which may exist, this request will be granted.

Socony complains that in Docket No. CI62–825 the gas moving under its contract dated December 28, 1960, should receive the new gas-well gas base rate of 16.5 cents per Mcf rather than the old gas base rate of 14.5 cents per Mcf. The only new matter brought forward by Socony is that it now alleges a mistake was made in dating the contract in question December 28, 1960, and it has sought to file an amendment to that contract purporting to be an agreement between the parties that an error had been made, that the correct date was March 3, 1961, and that the original contract be amended to reflect that date. This attempted filing was rejected by the Commission by letter-order of February 11, 1966, 35 FPC 221. As made clear in our Opinion No. 484 and our letter of February 11, 1966, which we here confirm, the parties will not be allowed to employ extrinsic evidence to change the date which appears on the face of the contract.

Socony also moves for stay of the order accompanying Opinion No. 484 insofar as that order would condition Socony's initial price at 14.5 cents and impose a moratorium on filing for increased rates. It urges that if it is not allowed to collect rates above 14.5 cents during the court proceedings to review our ruling, Socony will be irreparably damaged by reason of losing revenues which can never be recouped. On the other hand, if Socony is allowed to collect rates greater than that to which it is entitled, the refund of the excessive collections at some indeterminate future time is not a sufficient remedy to make whole the consumers who may suffer injury as a result of the excessive rates. Socony's motion for stay of the relevant ordering provisions will be denied.

The Commission finds:

The assignments of error and grounds for rehearing set forth in the applications for rehearing filed in this proceeding present no facts or legal principles which would warrant any change or modification in the Commission's Opinion No. 484 except as specified below.

---

[2] All applicants for rehearing except Socony.

The Commission orders:

(A) The applications for rehearing in this proceeding are hereby denied.

(B) The order accompanying Opinion No. 484 is hereby amended by the addition of the following Ordering Paragraph:

> (Q) Any producer-applicant other than Socony Mobil Oil Company, Inc. may accept any certificate of public convenience and necessity issued by this order at any time up to 30 days after the initial price conditioned in such certificate, including adjustments for quality deviations, is finally determined.

(C) The motion of Socony Mobil Oil Company, Inc., for stay of Ordering Paragraphs (E), (F), (G), (M), (N) and (O) of the order accompanying Opinion No. 484 is hereby denied.

Commissioner Bagge *concurring* in part and *dissenting* in part:

BAGGE, *Commissioner, concurring* in part and *dissenting* in part:

I agree with the decision of the Commission relating to all applications for rehearing other than that filed by Socony Mobil Oil Company, Inc. (Socony) with respect to its sales in Docket No. CI62-825 from the Rojo-Caballos Field.

In our original order in this proceeding we granted a permanent certificate to Socony at a price of 14.5 cents per Mcf. Socony contends that it is entitled to a price of 16.5 cents per Mcf.

The gas in question is residue gas of pipeline quality derived from gas-well gas and would command a price of 16.5 cents per Mcf if it qualified as "new gas". The dividing line between new gas and old gas is January 1, 1961. The contract under which Socony's gas moves was dated December 28, 1960. Socony contends and submitted affidavits to support its contention that the actual date of final execution of the contract was March 3, 1961, rather than December 28, 1960.

In our original order, we made a specific point of the fact that Socony did not allege that the date of December 28, 1960, constituted a mistake. Subsequently Socony attempted to file an amendment to its contract under which both Socony and its purchaser agreed that the actual date of execution was March 3, 1961, and that the contract should be amended by substituting that date for December 28, 1960. In its attempted filing and in its application for rehearing, Socony now contends a mistake was in fact made, and the contract date which should have been inserted in the contract is March 3, 1961.

It is common procedure for courts to entertain an action for reformation of the provisions of a contract on the ground of mutual mistake. Whether Socony can produce sufficient evidence to persuade the Commission that a mistake was made we need not here determine. The two questions with which we are faced are: (1) whether Socony should be given the opportunity to correct what it asserts was a factual mistake and (2) whether the date recited on the face of a contract or the date of execution shall determine how gas moving under it shall be classified. The prevailing opinion concludes that the date recited in the contract shall govern and not the date of execution of the contract, even if the evidence conclusively establishes that the execution of the contract occurred at a later date.

I believe that this is an unnecessarily rigid rule which, under the circumstances presented herein, will result in a manifest injustice to Socony—an injustice which cannot be excused upon grounds of administrative convenience or the necessity of certainty in classification.

It is, of course, true that any date dividing new gas from old gas will be somewhat arbitrary. This is inevitable in any arrangement of pricing gas according to date, whether the date be the date recited in the contract, the date of execution of the contract or any other date that might be chosen. The natural gas industry has long been accustomed, however, to classification of gas on the basis of the date of execution of contracts. While the date set forth in a contract has been taken as establishing the date of execution in the absence of any evidence to the contrary, the Commission in the past has permitted evidence to be introduced as to the date of execution and has in fact employed that date rather than the date recited in the contract when the date of execution has been independently established. This will be the first instance in which the Commission has refused to allow a producer to establish that the date of execution was different from the contract date, finding that the date recited in the contract shall govern, no matter when the contract was executed. This change in the Commission's position should not be made when, as here, the effect of such a change will be to deprive a producer of a price to which he may be entitled under the prior rulings of this Commission *infra.*

It is the prevailing opinion that our present decision is in accord with the policy determined in the *Permian Basin Area Rate Proceeding*, AR61-1, Opinion No. 468, as modified in Opinion No. 468-A, 34 FPC 159, 1068. I do not so read those opinions. In the body of Opinion No. 468, at page 189, it is stated that the new gas price is to be effective "for contracts entered into on or after January 1, 1961." In Ordering Paragraph (A) of the same opinion, the Commission referred to new gas-well gas as that "sold and to be sold pursuant to contracts executed after January 1, 1961," and to old gas-well gas as that "sold and to be sold pursuant to contracts executed on or before January 1, 1961." Taken by itself this language would leave no reasonable doubt but that the date of execution, rather than the date set forth in the contract, would be decisive and would control. In Opinion No. 468-A, denying application for rehearing, the Commission was faced with a contention by the producers that the date of division between old gas and new gas should be the date of commitment to interstate commerce. In rejecting that contention, the Commission said:

> It has also been contended that contracts should not be classified as contracts for new or old gas by reason of the date of the contract, but rather on the basis of the date the gas was first committed to interstate commerce, assuming commitment occurred at a later date. We have chosen the date *set forth in the contract* because that date is precise, definite and certain, whereas the date of commitment of gas to interstate commerce is less easy of ascertainment. *We therefore do not believe any change in our decision on this issue is warranted.* (Page 1075; Emphasis supplied.)

It nowhere appears that the Commission had in mind the distinction between the date set forth in a contract and the date of execution of a contract. It does appear in Opinion No. 468-A that the Commission intended to make no substantive change in its prior decision in Opinion No. 468. This is confirmed by the fact that Ordering Paragraph (A) of Opinion No. 468 was not amended in this respect at the time of issuance of Opinion No. 468-A.

As I pointed out *supra*, prior decisions of the Commission in "in-line" price determinations would certainly justify the industry in concluding that the date of execution of the contract is the controlling date. In *Continental Oil Company*, Opinion No. 351, 27 FPC 96, the Commission selected the year 1956 as the time when "in-lineness" should be determined, saying, "It was then that the parties agreed on a price" (page 100). The Commission then spoke of the price "at the time the contract was made" as the test for "in-lineness." In *Skelly Oil Company*, Opinion No. 362, 28 FPC 401, the Commission conditioned one price for contracts "entered into prior to September 28, 1960," and another price for contracts "entered into after September 28, 1960," (page 412). In *Hassie Hunt Trust*, Opinion No. 412, 30 FPC 1438, the Commission said:

> The Commission's decision in CATCO holds that 'in-lineness' is to be decided as of the time the contracts were made since it was then the parties agreed on a price. In the four sales here under discussion it appears that on February 15, 1961, new parties agreed to sell gas from a new field under terms of an earlier contract with a different party. It would seem clear that the meeting of the minds for the sale of this particular gas took place in February 1961, and the fact that the parties chose to make the sale by ratifying an earlier contract date of another party cannot make the agreement retroactive to the earlier contract date or erase events which occurred between May 15, 1959, and February 15, 1961, and which may have led to the decision to use the earlier, higher priced contract. For this reason we believe these dockets also should be severed from this proceeding and consolidated for further hearing with the other dockets involving applications for certificates under contracts *executed* after the Policy Statement was issued. [Pages 1443, 1444, emphasis supplied.]

In *Turnbull & Zoch Drilling Company*, Opinion No. 478, 34 FPC 1001, the Commission said:

> *Bright & Schiff* sale—The Examiner concluded that the necessary meeting of the minds for the effectuation of this sale occurred in February 1961. The fact that the parties chose at that time to make the contract effective "as of" September 15, 1960, he would dismiss as immaterial. Staff, which accepting February 1961 as the time of physical signing, argues that the earlier date should control in this case and that the producer is entitled to only a 15-cent per Mcf initial price. While the matter is not entirely free from doubt we are inclined to accept the examiner's determination of February 10, 1961, as the date of execution of the contract in this case for the purpose of issuing the certificate. We may caution all parties to Commission proceedings that when, as here, the existence of a mistake in a filing comes to their attention they inform us of that fact immediately so that we may not be led into mistaken action on the basis of erroneous information (page 1007).

We turn now to the particular circumstances of the Socony sale. First, it is an extremely large sale. It involves 17,000 dedicated acres with only four wells drilled at this time. Over the period of 20 years during which production may be expected, a substantial sum of money will be involved.

Second, there is a great deal of development work still to be done on the acreage which has been dedicated by Socony. This additional development, including exploration at different depths, may bring this situation within the scope of the language set forth at pages 1071 and 1072 of Opinion No. 468-A where the Commission stated that gas from newly-discovered horizons in dedicated acreage may be permitted, prospectively, the new gas price if the evidence in the Hugoton-Anadarko proceeding indicates that the classification of such gas is needed to encourage development of additional gas supplies. The Commission noted (at page 1072) that the classification should not depend solely "on whether there has been prior dedication but rather on whether such classification will encourage the directional search for gas." Socony may thus eventually become entitled to the new gas-well gas price for some of its production under this contract despite the fact the prevailing opinion of the Commission now prevents this.

It may be contended that administrative convenience requires that a precise and definite date be fixed upon each gas contract so that the Commission will not be compelled to determine in a large number of cases whether contracts were in fact executed at a later date than the date appearing on the face of such contracts. However, administrative convenience cannot be employed to rebut the facts. I believe that the date of execution of the contract should govern and that Socony should be permitted to introduce the facts to establish, if it can, that the date of execution was subsequent to January 1, 1961. I would remand this matter to the examiner for a hearing upon the evidence to be presented.

I further dissent from the denial by the majority of Socony's motion for stay of certain ordering provisions which would condition Socony's initial price at 14.5 cents per Mcf and oppose a moratorium on filing for increased rates. Socony will be irreparably damaged if it prevails on this matter in the courts, as it will have lost the increased revenues during the period required for court review. Socony should be allowed to collect the new gas-well gas rate of 16.5 cents subject to the obligation to refund any excess collected above the rate ultimately determined to be proper. Its request for stay of the relevant ordering provisions should be granted conditioned upon no increased rate in excess of 16.5 cents per Mcf filed prior to the expiration of the moratorium and further conditioned upon the refund of any amounts collected in excess of the rate ultimately determined to be proper.

Before Commissioners: Carl E. Bagge, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP66-123

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 4, 1966)

On October 22, 1965, El Paso Natural Gas Company (Applicant) filed an application in Docket No. CP66-123 pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain measuring and regulating facilities and the acquisition from Southern Union Gas Company (Southern Union) and operation of certain segments of transmission pipelines to be constructed by Southern Union. By the same filing, Applicant seeks authorization to sell and deliver to Southern Union natural gas for resale and distribution to consumers in the community of Lake Havasu City, Arizona, and natural gas for resale to Bagdad Copper Corporation (Bagdad Copper) for use in Bagdad Copper's mining and refining operations in Bagdad, Arizona. Those proposals are more fully described in the application.

Applicant and Southern Union have undertaken two projects designed to introduce natural gas into Lake Havasu City and Bagdad, Arizona. Applicant proposes to construct meter stations at a point adjacent to its San Juan mainline system in Mohave County, Arizona, and at a point adjacent to its Havasu crossover line in Mohave County, Arizona, at an estimated cost of $5,700 each.

Southern Union proposes to construct a 4½-inch O.D. transmission pipeline, at an estimated cost of $179,793, extending from the aforementioned San Juan mainline measuring and regulating station in a southerly direction for approximately 16.3 miles to the Lake Havasu City area. Southern Union would also construct a 3½-inch O.D. transmission pipeline, at an estimated cost of $567,269, extending from the aforementioned Havasu crossover line measuring and regulating station in an easterly direction for approximately 46.8 miles.

Applicant proposes to acquire and operate that portion of Southern Union's Lake Havasu City pipeline, estimated at 9.83 miles, representing $125,000 (less the cost of Applicant's measuring station and any title curative costs incurred by Applicant) of the total installed cost of such pipeline which is estimated to be $179,793.

Applicant also proposes to acquire and operate the initial portion of Southern Union's Bagdad pipeline, estimated at 7.17 miles, representing $100,000 (less the cost of Applicant's measuring and regulating station and any title curative costs incurred by Applicant) of the total installed cost of such pipeline which is estimated to be $567,269.

The maximum daily and annual natural gas requirements of Southern Union during the third full year of the proposed service are estimated to be, respectively, 2,388 Mcf and 476,532 Mcf for the Lake Havasu City area and 1,157 Mcf and 255,400 Mcf for the Bagdad area.

Southern Union proposes to construct distribution facilities costing an estimated $353,800, to provide service in the Lake Havasu City area.

The sales and deliveries of natural gas to Southern Union as set forth above are proposed to be made in accordance with and at rates contained in Applicant's Rate Schedules A-1 and B-1, FPC Gas Tariff, Original Volume No. 1, and Applicant states that no changes will be required in its tariff.

The cost of the facilities to be constructed and acquired by Applicant will be paid for from working funds.

After due notice no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on March 4, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 29, 1942, in Docket Nos. G-242 and G-257 (3 FPC 851).

(2) The proposed acquisition of facilities from Southern Union, construction and operation of facilities, and sale of natural gas in interstate commerce, as hereinbefore described, and as more fully described in the application and exhibits in this proceeding are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed acquisition of facilities, construction and operation of facilities, and sale of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas

Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon El Paso's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), (d)(2), (d)(3) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to the Applicant, El Paso Natural Gas Company, in this proceeding authorizing the construction and operation of facilities, the acquisition and operation of facilities and sale and delivery of natural gas to Southern Union Gas Company, as described herein and more fully described in the application and exhibits herein, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), (d)(2), (d)(3) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized to be constructed and operated by Applicant shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations within six months of the date on which this order issues.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

THE MANUFACTURERS LIGHT AND HEAT COMPANY, DOCKET NO. G-20510

ORDER DENYING REHEARING

(Issued March 4, 1966)

The Manufacturers Light and Heat Company (Manufacturers) on February 4, 1966, filed an application for rehearing and reconsideration of the Commission's letter-order dated January 5, 1966, 35 FPC 37, disapproving and rejecting Manufacturer's Refund Report No. 7, filed January 25, 1965. The subject report covered the flow-through to wholesale customers of refunds received from two natural gas suppliers, United Fuel Gas Company (United Fuel) and Atlantic Seaboard Corporation (Seaboard) for the period April 5, 1960 through November, 1964. On the basis of a reconciliation furnished by Manufacturers after a request therefor by the Staff and a number of conferences thereon, it became apparent that Manufacturers was proposing to retain $1,477,470 of the $12,357,720 refunded to it by the aforementioned suppliers.

The proceedings in this docket involve proposed increased rates filed by Manufacturers on December 2, 1959. Subsequently, by order issued on March 30, 1961, 25 FPC 595, the Commission approved a settlement agreement reached by the parties. The settlement agreement was based upon a stipulated cost of service reflecting costs, as adjusted, for a test period for the twelve months ended March 31, 1960.

Article III of the agreement states that certain of the gas purchase costs included in the stipulated cost of service were being collected by Manufacturers' suppliers on a contingent basis, subject to refund proceedings before the Commission. Among such contingent charges were those of United Fuel and Seaboard in Docket Nos. G–20270 and G–20272, respectively.

The issue raised by Manufacturers' application for rehearing involves the interpretation of the language of the settlement agreement with respect to Manufacturers' obligation to flow-through gas supplier refunds to its customers. The pertinent language in Article III, Section 1 is as follows:

> If, as a result of final determination in any of the foregoing supplier's proceedings, Manufacturers receives refunds applicable to the period commencing April 5, 1960 and continuing so long as rates made in compliance with this Agreement remain in effect, the ***appropriately allocable share of such refunds***, together with the interest received, shall be passed on to wholesale customers on a demand or volumetric basis or combination thereof, in the same manner as the suppliers' refunds are made. * * * [Emphasis added.]
>
> Furthermore, if as a result of final determination in any of the foregoing suppliers' proceedings said suppliers file reduced rates, Manufacturers shall ***adjust the stipulated cost of service*** included in Appendix A and will file revised tariff sheets to reflect appropriate reductions in the rates agreed to herein in the same manner as such suppliers' rate reductions are made. * * * [Emphasis added.]

Despite the obvious differences in method prescribed by the agreement for computation of refund flow-through and for computation of reduction in rates, Manufacturers would read the above underscored language as being identical and seeks to determine its refund flow-through obligation by adjustment to the stipulated cost of service.

The Commission rejected the refund proposal on the grounds that Manufacturers had employed an improper method for computing refunds (*i.e.*, a recomputation of cost-of-service and resulting rates as opposed to a straight volumetric flow-through of the refunds received). The method used conformed with that prescribed in a previous docket, Docket No. G–12197, but is improper for use in Docket No. G–20510, since the refund provision in Docket No. G–20510 does not prescribe that particular method for distributing refunds, as it does for computing rate reductions. The prior docket (G–12197) prescribed the cost of service method for both refunds and rate reductions. The cost of service method fails to allocate $1.5 million among Manufacturers' customers.

In its application for rehearing Manufacturers does not address itself to the difference in language in the refund and rate reduction sections of the agreement but rather seeks to support its flow-through calculations on the following principal arguments:

1. It has used the same method of calculating refund flow-through in six prior refund reports in this docket.
2. Those prior refunds have been accepted by the customers and the Commission and therefore the method of calculation has been established.
3. Circumstances surrounding the instant refund required the consistent application of the cost of service method for computing refunds.
4. Cost changes have taken place in the refund period which are not reflected in the stipulated cost of service or the rates agreed to in the settlement and therefore the customers are not equitably entitled to share in any of the refund dollars applicable to such changed costs.

We are of the view that Manufacturers' arguments are entirely without merit.

Manufacturers' claim that its method has become established by prior acceptance by the customers and the Commission and in the interests of consistency that method is now required, are not persuasive for a number of reasons.

Manufacturers in its six prior reports to the jurisdictional customers and the Commission did not allege or disclose that it was retaining a portion of the refunds received from any of its suppliers. It does not now state in its application for rehearing that use of the cost of service method in the prior reports resulted in its retention of any part of the refunds received from suppliers. Thus, the issues here involved have not heretofore been presented either to the customers or the Commission. Clearly, our determination that the method of calculation proposed to be used by Manufacturers is improper under the terms of the settlement, requires that such method be rejected regardless of its prior use. Since Manufacturers seems to be implying that it retained some amounts under the prior reports we are directing our staff to reanalyze those reports together with any reconciliations studies they may require from the company to determine whether acceptance of those prior reports was in error.

Manufacturers' contention that cost changes occurring after the test period should be netted against refunds received from suppliers is no more than a claim that it is entitled to an automatic rate increase at any time that it has an amount of refund dollars to be flowed through to its customers. Absent a specific and unequivocal provision to that effect in the settlement agreement, it is clearly improper to permit Manufacturers to use a calculation which provides it with automatic rate increases. If Manufacturers' costs have increased, the Natural Gas Act provides the steps to be taken to change existing rates and charges.

Manufacturers' application includes a request for oral argument which it bases upon the assertion that this matter involves important administrative policies, principle and procedures. We disagree with this assertion, since, as we have stated above, the main question here is one of interpretation of the settlement agreement. We, therefore, find oral argument unnecessary and not in the public interest.

The Commission finds:

The assignments of error and grounds for rehearing set forth in Manufacturers' application present no new facts or principles of law which were not considered by the Commission in its letter-order issued on January 5, 1966, or which having now been considered, warrant any change or modification of that letter-order.

The Commission orders:

(A) The application for rehearing and reconsideration filed herein by Manufacturers on February 5, 1966, is hereby denied.

(B) Manufacturers' request for oral argument accompanying its application for rehearing is hereby denied.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

LUCY G. MOSES, CS66-6; HENRY AND LUCY MOSES FOUNDATION TRUST, CS66-7; BANKERS TRUST COMPANY AS TRUSTEE OF WILLIAM L. HERNSTADT 1950 TRUSTS, CS66-8; ESTATE OF WILLIAM L. HERNSTADT, DECEASED, CS66-9

ORDER DENYING INTERVENTION

(Issued March 4, 1966) *

On January 13, 1966, the Commission issued its "Notice of Application For Small Producer Certificates" notifying interested parties that certain producers had filed for small producer status. Hunt Oil Company (Hunt) now petitions for leave to intervene to protest the four small producer certificate applications listed in the caption. These four producers sell gas to the Wilshire plant, co-owned by Hunt and El Paso Natural Gas Company (El Paso). Hunt states the four producer applicants as small producers will be permitted to sell casinghead gas at 14.5 cents per Mcf without quality deductions, while Hunt and El Paso, after incurring the cost of remedying quality deficiencies can collect only 14.5 cents—the area rate. Hunt makes no contention that the four producer applicants do not qualify as small producers. Hunt has no standing to intervene in this proceeding unless it wishes to show that for some reason one or more of the applicants would not qualify for small producer status. If the circumstances were as stated by Hunt, Hunt's remedy would not be to oppose the granting of small producer certificates, but to apply for relief on the grounds of special circumstances as provided in the *Permian Basin Area Rate Proceeding*, Opinion No. 468, 34 FPC 159 at p. 225, *et seq.*

Examination of the contracts in question makes clear that the facts differ from those stated in Hunt's motion. The four producer applicants involved sell casinghead gas to the Wilshire plant under so-called Spraberry contracts—that is, while the contracts provide for the sale of casinghead gas to be processed at the Wilshire plant, payment for this gas is computed on the basis of a flat price for the residue gas (measured at the tailgate of the plant) plus a percentage of the liquids extracted at the plant. Each contract states that the buyers' liquid percentage covers all cost of processing.

In the case of sales under Spraberry contracts, quality is measured at the tailgate, with no price reduction for prior compression (the only quality deficiency claimed by Hunt). If the processing costs are not covered by liquids retained by the purchaser, the purchaser's remedy is to apply to the Commission for a reduction in the price of the gas purchased. This will be granted upon a showing that the amount paid for the residue gas, plus the excess of processing costs over revenues derived from liquids by the purchaser, exceeds the applicable area rate for the volume of residue gas derived. Opinion No. 468, p. 209. Such relief will be granted whether the seller is a small producer or not. Accordingly, it does not appear that Hunt will suffer damage from the grant of small producer status to these applicants.

For the foregoing reasons, the petition for leave to intervene is denied.

The Commission orders:

The petition of Hunt Oil Company for leave to intervene and protest the small producer applications listed in the caption of this order is hereby denied.

---

* Rehearing denied by order issued April 26, 1966, 35 FPC 636.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP66-158

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND ACCEPTING SUPERSEDING SERVICE AGREEMENT FOR FILING

(Issued March 4, 1966)

On November 19, 1965, Northern Natural Gas Company (Applicant) filed in Docket No. CP66-158 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the delivery of additional natural gas to two of its existing utility customers and the revision and initiation of firm natural gas service for three existing industrial customers, all as set forth in the application .

L. V. Crum, Jr., an existing distributor, has requested an increase in contract demand from 100 Mcf of gas to 225 Mcf of gas per day in order to serve new consumers who have or will soon be added due to the expansion of the Racine, Minnesota, distribution system.

The Peoples Division (Peoples) of Applicant has requested additional contract demand service in the amount of 700 Mcf of gas per day, of which 550 Mcf will be sold to W. S. Dickey Clay Manufacturing Company (Dickey) for use in its processing plant near Lehigh, Iowa. Under an order issued in Docket No. CP64-17 on October 29, 1963, 30 FPC 1129, firm service to Dickey is limited to 300 Mcf of gas per day. Annual firm and interruptible sales of natural gas to Dickey are estimated to be 512,250 Mcf. Peoples proposes to use the remaining 150 Mcf of gas per day to initiate firm service to Farm Best, Inc. for use in its meat packing plant located in Denison, Iowa. Total annual sales of natural gas to Farm Best, Inc. are estimated to be 172,250 Mcf.

Peoples further proposes to initiate firm service in the amount of 150 Mcf of gas per day to Glenwood Packing Company (Glenwood) for use in its meat packing plant located in Glenwood, Iowa. Peoples will supply the firm gas from existing contract demand by utilizing peak shaving facilities. Total annual sales of natural gas to Glenwood are estimated to be 82,925 Mcf.

No new facilities are required to effectuate Applicant's proposals.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on March 3, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization, and upon consideration of the record,

The Commission finds:

(1) Applicant, Northern Natural Gas Company, a Delaware corporation having its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G-280 (3 FPC 967).

(2) The proposed sale and delivery of natural gas by Applicant to Crum and Peoples, as hereinbefore described, and as more fully described in the application and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed sale and delivery of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(6) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act, and the public convenience and necessity require that Applicant's superseding service agreement with Crum dated October 25, 1965 and filed November 26, 1965, be accepted for filing effective on the date of issuance of this order, and that with respect thereto the notice requirements of Section 154.22 of the Commission's Regulations be waived.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to the Applicant in this proceeding, authorizing the sale and delivery of natural gas hereinbefore described, as more fully described in the application and exhibits in this proceeding, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(C) The service authorized shall be commenced as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations within sixty days of the date on which this order issues.

(D) The service agreement between Applicant and Crum dated October 25, 1965 and filed November 26, 1965, is accepted for filing effective on the date of issuance of this order.

(E) The notice requirements of Section 154.22 of the Commission's Regulations with respect to the service agreement filing are waived.

(F) The certificate issued shall not entitle the industrial customers to whom firm deliveries are authorized herein to any priorities or rights to additional gas for meeting any future increases in their requirements at the expense of firm resale customers desiring to acquire additional gas to meet any future increases in their requirements.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

SOCONY MOBIL OIL COMPANY, INC., DOCKET NO. CI62-825

ORDER DENYING APPLICATION FOR REHEARING

(Issued March 4, 1966)

On January 23, 1962, Socony Mobil Oil Company, Inc. (Socony) filed its application for a certificate of public convenience and necessity covering a sale of natural gas in the Rojo-Caballo field in Pecos County, Texas. The contract for this sale is now on file in Socony's FPC Gas Rate Schedule No. 312. On May 25, 1962, temporary authorization was granted and initial deliveries commenced December 21, 1962. On January 11, 1966, Socony tendered for filing, as a supplement to its Gas Rate Schedule No. 312, an amendment to the original gas purchase contract, purporting to amend that contract to reflect an execution date of March 3, 1961. The tendered amendment was executed by Socony and its purchaser on December 22, 1965.

At the same time Socony tendered the proposed contract amendment for filing, Socony also tendered for filing an amendment to its pending application in this docket for a certificate of public convenience and necessity. Socony sought to amend all recitals in its original certificate application which would be affected by the proposed contract amendment.

The purpose of the tendered amendments to the contract and the application was to re-date the contract from December 28, 1960 to March 3, 1961 and thereby obtain the new gas-well gas price of 16.5 cents for gas sold under this contract, instead of the 14.5 cents price which would be applicable to any gas sold under contracts dated before January 1, 1961.

The Commission finds:

The assignments of error and grounds for rehearing set forth in the application for rehearing filed February 25, 1966 by Socony Mobil Oil Company, Inc. present no facts or legal principles which would warrant any change or modification in the Commission's letter-order of February 11, 1966 in this proceeding, 35 FPC 221.

The Commission orders:

The application for rehearing filed by Socony Mobil Oil Company, Inc., on February 25, 1966, is hereby denied.

Commissioner Bagge *dissenting* for the reasons stated in his separate statement accompanying the order issued March 4, 1966 in El Paso Natural Gas Company, *et al.*, in Docket No. CP64–211, *et al.*, *supra*, p. 321.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

TRANSWESTERN PIPELINE COMPANY, CP63–204; GULF PACIFIC PIPELINE COMPANY, CP63–223; EL PASO NATURAL GAS COMPANY, CP64–76; TRANSWESTERN PIPELINE COMPANY, CP64–91

ORDER DENYING INTERVENTION AND PERMITTING PARTICIPATION AS AMICUS CURIAE

(Issued March 4, 1966)

On February 11, 1966, the United States Department of Health, Education, and Welfare filed a motion for leave to intervene out of time and a petition for intervention in the above-entitled proceedings along with a proposed brief in answer to exceptions filed by other parties. Answers to the filings of the Department were filed by Western Oil and Gas Association, by Fuels Research Council, Inc., National Coal Association and United Mine Workers of America, by Standard Oil Company of California, and by the staff of this Commission. The staff filed a brief in reply to the brief of the Department.

The Department states that its interests and the public would be served by intervention to assure that its views are fully and accurately presented to the Commission. It is not requested that the record be re-opened, and the participation sought is limited to the filing of replies to the exceptions to the examiner's decision, participation in oral argument and in such further proceedings as may be had before the Commission. Alternatively the Department requests that it be allowed to participate as *amicus curiae.*

Section 1.8(d) of the Commission's Rules provides that petitions to intervene must be filed no later than the date fixed for the filings of petitions to intervene in an order or notice unless in extraordinary circumstances for good cause shown. On October 21, 1963, the Commission issued an order consolidating these proceedings for hearing with a provision that petitions to intervene be filed by November 5, 1963. The hearings were held and the record was closed March 17, 1965. The parties have filed their briefs before the examiner, who issued his decision on December 16, 1965. By February 9, 1966, exceptions to the examiner's decision and answers thereto were filed by various parties. The Department does not suggest that it has not been on notice of these proceedings from their inception. It has been clear from an early state that the air pollution issue upon which it now wishes to state its position, and on which a high Department official has submitted testimony at the behest of the staff, would be an important area of controversy.

In view of these facts we do not believe it would be in the public interest to permit the Department to intervene in this long drawn out proceeding at this late date. We think, however, that participation as *amicus curiae* would serve the purposes of the Department in carrying out its responsibilities and would contribute to our consideration of the issues in this case. Therefore, while we shall deny the Department's request for intervention we shall permit it to file its brief and to participate in oral argument if it desires to do so. It is appropriate also that other parties have the opportunity to answer the contentions of HEW in its brief.

The Commission orders:

(A) The motion and petition of the Department for leave to intervene filed February 11, 1966, are denied, but the Department is granted permission to file its brief and to participate in the oral argument in these proceedings, if it chooses to do so, as *amicus curiae.*

(B) Other parties, if they choose to do so, shall file briefs answering the brief of the Department on or before March 15, 1966.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

TRUNKLINE GAS COMPANY v. THE SUPERIOR OIL COMPANY, DOCKET NO. RI64-273; THE SUPERIOR OIL COMPANY, DOCKET NOS. G-18168, G-20435 AND G-20577

ORDER ON REHEARING REAFFIRMING ORDER AND REQUIRING PAYMENT OF INTEREST

(Issued March 4, 1966)

By our order issued January 3, 1966, 35 FPC 14, we granted a partial rehearing in this case to permit The Superior Oil Company (Superior) and the Commission's Staff to file Briefs respecting the issue whether Trunkline

Gas Company (Trunkline) should be required to pay interest on the amount of $33,212.67 which we held, by order issued November 10, 1965, 34 FPC 1284, that Trunkline owed to Superior.

The background of this issue follows: On October 25, 1963, Trunkline filed a petition for a declaratory order requesting the Commission to determine that the favored-nation provisions of its contract with Superior did not provide sufficient justification for Superior's rates. Concurrently with the filing, Trunkline tendered Superior amounts lower than the filed rates, computed without giving effect to the favored-nation provisions. On March 9, 1964, 31 FPC 506, the Commission denied Trunkline's petition and required payment of the filed rates, the differences being $981,612.82. Trunkline paid this deficiency to Superior on March 30, 1964. The question of interest was not considered in the March order, but was the principal issue in three subsequent orders. The first was issued April 15, 1964, 31 FPC 934, in which the Commission required the payment of interest (in the amount of $17,330.80) on the principal amounts not tendered by Trunkline. Superior than raised the question whether interest in the amount of $33,212.67, computed on the amounts tendered by Trunkline, was owing. In an order issued June 9, 1964, 31 FPC 1511, the Commission held that Trunkline need not pay said interest because Trunkline's tenders were considered to have been lawful.

Superior then filed a petition for court review of this Commission action. Thereafter the Commission requested and was granted a remand to permit it to reevaluate its decision on this issue in the light of the filed rate doctrine. Following the submission of briefs on this issue, the Commission held that the tenders by Trunkline were unlawful when proper consideration was given to the filed rate doctrine. It therefore determined that Trunkline should pay the $33,212.67 interest on said "tendered" amounts, plus interest on said sum until payment is made. This determination was made in our order of November 10, 1965. In its application for rehearing of that order, Trunkline generally reargued its position that it should not be obliged to pay said interest of $33,212.67; and further argued that, in any event, it should not be obliged to pay interest on said sum from March 30, 1964. This application for rehearing was denied by our order of January 3, 1966, except for the new issue, *i.e.*, whether Trunkline should pay interest on said sum of $33,212.67. On this issue, rehearing was granted for the purpose of giving further consideration, and Staff and Superior were permitted to file supplemental briefs on that issue.

To summarize briefly, the remaining issue is whether Trunkline should pay interest on said $33,212.67 from March 30, 1964, the date Trunkline paid the deficiency in principal, to the time payment thereof is made. Trunkline argues that such a requirement would be unfair since we had never, prior to our November 10, 1965, order, required Trunkline to pay the $33,212.67, but on the contrary, by order issued June 9, 1964, had completely absolved Trunkline of any responsibility to make such payment. Superior denies that any question of compound interest is involved. It argues that Trunkline's earlier partial payments of the amounts owing Superior are first applied to the payment of interest under normal debtor-creditor accounting, so that the unpaid balance of $33,212.67 constitutes a balance of principal improperly withheld by Trunkline.

Staff contends that in appropriate cases the Commission and the courts have required the payment of interest on interest, and further contends that imposing such a requirement is justified in this case to prevent the unjust enrichment of Trunkline, which has, contrary to Superior's right, had the use of the uncontested $33,212.67 since March 30, 1964.

We affirm our determination of November 10, 1965, that Trunkline should pay interest on the $33,212.67 which it has owed Superior since March 30, 1964. Irrespective whether the $33,212.67 be considered as principal or interest, the fact remains that Trunkline has enjoyed the use of this sum since March 30, 1964, and Superior has been deprived of its use, notwithstanding its efforts to recover it. To permit Trunkline the use of this money for the interval to date without any interest obligation would be unfair to Superior and would unjustly enrich Trunkline. Trunkline incorrectly contends that the Commission's uniform practice is not to require the payment of compound interest. While the Commission's usual practice in Section 4(e) rate cases is to require only simple interest on refunds, this is not the Commission's practice when there is some delay in the payment of interest. For example, in the *Permian* case[1] the Commission has required natural gas companies to place refundable amounts, including interest, in escrow accounts which will earn interest thereon, or has allowed them the use of such sums providing, however, for the payment of interest. This course of action consistently has been taken by the Commission pending determination of the flow-through obligations of pipelines with respect to refunds from suppliers. See also *L.&N.R.R.* v. *SlOss-Sheffield Co.*, 269 U.S. 217; *North Drive-In Theatre Corp.* v. *Park-In Theatres*, 248 F. 2d 233.

While Trunkline's position is entitled to substantial weight by virtue of our prior order of June 9, 1964, we nevertheless believe that the factors and precedents discussed herein require a judgment in favor of Superior.

The Commission orders:

(A) Trunkline shall, within 60 days of the date of issuance of this order, pay Superior the amount of $33,212.67 plus interest thereon at the rate of 7 percent per annum from March 30, 1964 until the date the payment is made. Trunkline shall, simultaneously with the making of such payment, transmit to the Commission a statement showing the amount so paid and the computations underlying such payment.

(B) Paragraphs (B) and (C) of our order issued herein on November 10, 1965 are hereby reaffirmed.

---

W. C. MCBRIDE, INC., ET AL., DOCKET NOS. G-16890, RI61-90, RI63-215, RI63-309 AND RI64-163

ORDER CONDITIONALLY ACCEPTING OFFERS OF SETTLEMENT, REQUIRING FILING OF NOTICES OF CHANGE, REQUIRING REFUNDS AND SEVERING AND TERMINATING PROCEEDINGS

(Issued March 4, 1966)

On November 26, 1965, W. C. McBride, Inc., *et al.* (McBride) filed five offers of settlement in these proceedings pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure, involving five sales of natural gas to natural gas pipeline companies in fields located in the States of Colorado, Oklahoma and Texas (Texas Railroad Commission District Nos. 2 and 6).[1] The settlement involves proposed rate increases which when filed by McBride, were suspended by order of the Commission, and after the statutory suspension period were made effective, subject to refund, by McBride by appropriate motion.

---

[1] The natural gas pipeline purchasers and the rates involved herein are set forth in the appendix hereto.

Under the terms of the settlement offers, McBride proposes settlement rates equal to the applicable increased area rate ceiling, or the last firm rate, and to a three year filing moratorium, commencing November 1, 1965, upon any proposed increased rates for the sales involved. However, McBride reserves the right to file up to the applicable area ceiling, if such ceiling be increased, at any time during the moratorium period if contractually authorized. It also proposes to refund all monies collected subject to refund under three of the sales (FPC Gas Rate Schedule Nos. 6, 8 and 9) and refunds in accordance with the *Grigsby* formula[2] under the other two sales (FPC Gas Rate Schedule Nos. 1 and 7). The amount of refunds to be made is approximately $17,400, exclusive of applicable interest, and McBride's annual revenues will be reduced approximately $6,500 below that now charged and collected at the currently effective rates.

In the *Grisgby* order (*supra*) we provided that as a condition to utilizing *Grigsby* the small producers agree to a 36 month moratorium on proposed rate increases above the applicable ceiling for each of their filed rate schedules as is generally agreed to by large producers in their company-wide settlements. As noted above, McBride proposes to make the moratorium applicable only to the sales involved herein. Therefore, we shall condition our approval of its proposal to require the moratorium period to apply to all of McBride's FPC Gas Rate Schedules now on file with the Commission.

Additionally, one of McBride's jurisdictional pipeline customers, Texas Eastern Transmission Corporation (TETCO) does not now acknowledge a flowthrough obligation on its part of the refund monies it would receive from McBride. Consequently, for all of the reasons set forth in our order in *Humble Oil & Refining Company*, Docket Nos. G-9287 and G-9288, *et al.*, 32 FPC 49, we shall require McBride to retain the refund monies it would otherwise pay over to TETCO pending further order of the Commission regarding their disposition.

We believe that McBride's settlement proposals, as conditioned, are in the public interest and shall approve the same. However, we desire to make it clear that acceptance of McBride's offers of settlement, as amended, shall not be construed as approval of any future increased rate that may be filed by McBride under the subject rate schedules and is without prejudice to any findings or order of the Commission in any future proceeding involving McBride's rates and rate schedules.

The Commission finds:

The proposed settlement of the above-designated proceedings, on the basis described herein, as more fully set forth in the offers of settlement, as conditioned, filed with the Commission by McBride on November 26, 1965, is consistent with the Statement of General Policy No. 61-1, as amended, 18 CFR 2.56, and approval thereof as made effective and hereinafter ordered is in the public interest and is appropriate to carry out the provisions of the Natural Gas Act.

The Commission orders:

(A) The offers of settlement, as conditioned, filed with the Commission by McBride on November 26, 1965, is approved in accordance with the provisions of this order.

---

[2] *Jack W. Grigsby (Operator), et al.*, Docket Nos. RI61-96 and RI62-536, 32 FPC 529.

(B) McBride shall file, within 45 days from the date of issuance of this order, notices of changes in rates under its FPC Gas Rate Schedules to reflect the settlement rates in accordance with the terms of its settlement proposals, as amended, and as conditioned herein. The notices of change and the contractual amendments shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(C) McBride shall compute the difference between the rates collected subject to refund and the settlement rate for the sales for which it proposes to make refunds under its FPC Gas Rate Schedule Nos. 6, 8 and 9, and under its Rate Schedule Nos. 1 and 7 in accordance with the percentages set forth in the appendix hereto, with applicable interest to the date of this order, and shall within 45 days from the date of issuance of this order submit a report to the Commission, with a copy to its jurisdictional pipeline purchasers, setting out the amount of refunds (showing separately the principal and applicable interest) the bases used for such determination, the period covered, and ten days thereafter shall submit to the Commission a copy of a letter from its jurisdictional pipeline purchasers agreeing to the correctness of such amounts.

(D) McBride shall refund to its jurisdictional pipeline purchasers the refund monies due and owing each in accordance with Paragraph (C) above ten days after receiving the letter from each required by Paragraph (C) above, with applicable interest, except it shall retain the amounts shown in the report required under paragraph (C) above due to be paid to TETCO, subject to further order of the Commission directing the disposition of those amounts.

(E) McBride may deposit the retained refunds in a special escrow account, and shall tender for filing within 60 days of the date of issuance of this order an executed Escrow Agreement, conditioned as set out below, accompanied by a certificate showing service of a copy thereof upon TETCO. Unless notified to the contrary by the Secretary within 30 days from the date of filing thereof, the Escrow Agreement shall be deemed to be satisfactory and to have been accepted for filing. The Escrow Agreement shall be entered into between McBride and any bank or trust company used as a depository of funds of the United States Government and the agreement shall be conditioned as follows:

(1) McBride, the bank or trust company, and the successors and assigns of each, shall be held and formally bound unto the Federal Power Commission for the use and benefit of those entitled thereto, with respect to all amounts and the interest thereon deposited in the special escrow account, subject to such agreement, and such bank or trust company shall be bound to pay over to such person or persons as may be identified and designated by final order of the Commission and in such manner as may be therein specified, all or any portion of such deposits and the interest thereon.

(2) The bank or trust company may invest and reinvest such deposits in any short-term indebtedness of the United States or any agency thereof or in any form of obligation guaranteed by the United States which is, respectively, payable within 120 days as the said bank or trust company in the exercise of its sound discretion may select.

(3) Such bank or trust company shall be liable only for such interest as the invested funds described in Paragraph (2) above will earn and no other interest may be collected from it.

(4) Such bank or trust company shall be entitled to such compensation as is fair, reasonable and customary for its services as such, which compensation shall be paid out of the escrow account to such bank or trust company. Said bank or trust company shall likewise be entitled to reimbursement for its rea-

sonable expenses necessarily incurred in the administration of this escrow account, which reimbursement shall be paid out of the escrow account.

(5) Such bank or trust company shall report to the Secretary quarterly, certifying the amount deposited in the bank or trust company for the quarterly period.

(F) If McBride elects to commingle the retained refunds with its general assets and use them for business purposes, it shall notify the Secretary of the Commission of its intention so to do within sixty days of the issuance of this order, and shall pay interest on such monies at the rate of 5% per annum from the date of issuance of this order to the date on which they are paid over to the person or persons ultimately determined to be entitled thereto by final order or orders of the Commission.

(G) Upon notification by the Secretary of the Commission that McBride has complied with the terms and conditions of this order, the proceedings in the Appendix hereto shall terminate, the proceedings in Docket Nos. G–16890 and RI63–309 shall be severed from the proceedings in Docket No. AR64–2, *et al.*, and the proceedings in said dockets shall terminate, all without further order of the Commission.

(H) McBride shall file, over the signature of a responsible officer of the corporation, within 30 days from the issuance of this order, an original and one copy in writing of its acceptance or rejection of the terms and conditions of this order.

(I) The acceptance by the Commission of McBride's offers of settlement, conditioned to provide that the moratorium period shall apply to all McBride's FPC Gas Rate Schedules now on file with the Commission, is without prejudice to any findings or determinations that may be made in any proceeding now pending, or hereafter instituted by or against McBride and is without prejudice to claims or contentions which may be made by McBride, the Commission staff, or any affected party hereto, in any proceedings.

Commissioner O'Connor *not participating.*

ARKANSAS POWER & LIGHT COMPANY, DOCKET NO. E-7263

ORDER DISMISSING APPLICATION FOR AUTHORITY TO ACQUIRE, MERGE OR CONSOLIDATE FACILITIES

(Issued March 7, 1966)

Arkansas Power & Light Company (Arkansas) is a wholly owned subsidiary of Middle South Utilities Inc. (Middle South), a registered holding company under the Public Utility Holding Company Act of 1935. Arkansas is also a corporation organized under the laws of the State of Arkansas with its principal business office at Little Rock, Arkansas and engaged in the generation, transmission and distribution of electric energy in the State of Arkansas.

On December 22, 1965, Arkansas and Middle South filed a joint application with the Securities and Exchange Commission pursuant to the Public Utility Holding Company Act seeking authority for Middle South to acquire all of the outstanding common stock of Crossett Electric Company (Crossett), an electric utility company organized under the laws of Arkansas and doing business in Crossett, Arkansas, and authority for Arkansas to lease all of the electric distribution facilities of Crossett from Middle South. Crossett has never been classified as a public utility by this agency nor does the Commission have any information indicating that it is a public utility within the meaning of Section 201 of the Federal Power Act. On December 22, 1965, Arkansas also filed an application with the Federal Power Commission seeking authority pursuant to Section 203 of the Federal Power Act to lease the above-mentioned facilities.

On February 10, 1966, *In the Matter of Middle South Utilities, Inc., Arkansas Power & Light Company, New York, New York, Crossett Electric Co., Crossett, Arkansas, File No. 70-4339*, the Securities and Exchange Commission issued an order pursuant to the provisions of the Public Utility Holding Company Act of 1935 authorizing Middle South to acquire Crossett Electric Company and the leasing of the electric facilities of Crossett by Middle South to Arkansas. Since Middle South is not a public utility its purchase of Crossett's common stock is not subject to the Commission's jurisdiction. Arkansas being a wholly-owned subsidiary of Middle South its action in leasing the facilities of Crossett, which will on receipt of approval by the SEC be another wholly-owned subsidiary of the Middle South system, is also a transaction subject to the requirements of the Holding Company Act, and, hence pursuant to the provisions of Section 318 of the Federal Power Act, Arkansas need not secure approval from this Commission therefore. Finally Crossett not being a public utility pursuant to the provisions of the Federal Power Act does not need authority from this Commission for its actions.

Upon consideration of the application herein and the above-described order issued by the Securities and Exchange Commission, the Commission *finds*:

The application filed herein pursuant to Section 203 of the Federal Power Act is not within the purview of that Section by reason of Section 318 thereof.

The Commission orders:

The application herein to lease aforementioned electric distribution facilities from Crossett is hereby dismissed for lack of jurisdiction.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

WIND GAP DIVISION OF BANGOR GAS COMPANY AND TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP66-95

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued March 7, 1966)

On October 6, 1965, the Wind Gap Division of Bangor Gas Company (Applicant) filed in Docket No. CP66-95 an application, as supplemented and amended on November 23, 1965, and as further supplemented on December 9, 1965, pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Transcontinental Gas Pipe Line Corporation (Respondent) to make a physical connection of its natural gas transmission facilities with the facilities to be constructed by Applicant and to sell and deliver up to 583 Mcf of natural gas per day to Applicant for resale, as more fully set forth in the application.

Applicant will construct and operate 4,200 feet of 4-inch gas pipeline, along with the necessary regulating and metering appurtenances, extending from a tap on Respondent's Leidy Line at a point where the latter crosses State Route 512 in Northampton County, Pennsylvania. Applicant will also construct and operate a distribution system in the Borough of Wind Gap, Pennsylvania for the sale of natural gas to residential and commercial customers therein.

Applicant's proposed facilities will include an eastward extension which will connect with the existing facilities of Bangor Gas Company (Bangor). Bangor, a subsidiary of Penn Fuel Gas, Inc., purchases natural gas from The Manufacturers Light and Heat Company.

The estimated natural gas requirements for Applicant during the first three years of proposed operations are as follows:

	First year	Second year	Third year
Annual (Mcf)	118,805	131,715	165,055
Peak day (Mcf)	253.9	358.5	582.5

Applicant has received letters of intention from three industrial customers, Argyl Manufacturing Company, Blue Ridge-Winkler Textiles and Anthony Dally & Sons, Inc., indicating a willingness to purchase volumes of natural gas.

The estimated cost of the facilities to be constructed by Applicant is $129,535, which will be financed from advances to be made by Penn Fuel Gas, Inc.

On October 21, 1965, the Pennsylvania Public Utility Commission affirmed its certificate of public convenience issued June 5, 1961, which authorized Applicant's incorporation and merger into Bangor Gas Company.

On June 7, 1965, the Wind Gap Borough Council extended for two years the authorization for Penn Fuel Gas, Inc., to enter upon the streets of the Borough with natural gas pipelines.

On October 28, 1965, Respondent filed an answer to the application and indicated that it has no objection to the proposal.

Due notice of the filing of the application was published in the Federal Register on October 21, 1965 (30 F.R. 13414). No protest, petition to intervene or notice of intervention has been filed in this proceeding.

The Commission finds:

(1) Transcontinental Gas Pipe Line Corporation, a Delaware corporation with its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order issued April 28, 1950, in Docket No. G–1277 (9 FPC 32).

(2) Applicant is a public utility company in the Commonwealth of Pennsylvania and is authorized to construct and operate facilities to distribute and sell natural gas to inhabitants of the communities along its system.

(3) It is necessary and desirable in the public interest that Respondent be directed to establish physical connection of its transportation facilities with the facilities proposed to be constructed by Applicant and to sell and deliver up to 583 Mcf of natural gas per day to Applicant, as hereinbefore described and as more fully set forth in the application, as hereinafter ordered and conditioned.

(4) The requirement that Respondent serve Applicant, as requested, will not place an undue burden upon Respondent nor impair its ability to render adequate service to existing customers.

The Commission orders:

(A) Respondent is directed to establish physical connection to its natural gas transmission system with the facilities to be constructed by Applicant and to sell and deliver up to 583 Mcf of natural gas per day to Applicant, all as hereinbefore described and as more fully described in the application.

(B) Applicant shall be prepared to receive natural gas from Respondent within one year from the date of this order.

(C) Respondent shall notify the Commission of the commencement of service within 10 days thereof.

(D) Respondent shall execute and file with the Commission a service agreement with Applicant in accordance with the Commission's Regulations.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

CITIES SERVICE GAS COMPANY, DOCKET NO. CP66–188

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT OF FACILITIES AND ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 7, 1966)

On December 8, 1965, Cities Service Gas Company (Applicant) filed in Docket No. CP66–188 an application pursuant to Sections 7(b) and 7(c) of the Natural Gas Act for permission and approval to abandon certain natural gas compressor facilities and for a certificate of public convenience and necessity authorizing the construction and operation of other natural gas facilities, as more fully set forth in the application.

Applicant will construct and operate the following described facilities:

(1) 2,000 additional compressor horsepower at Applicant's Hugoton Compressor Station in Grant County, Kansas,

(2) 34 miles of 26-inch pipeline partially looping its Blackwell to Grabham 26-inch main pipeline in Kay and Osage Counties, Oklahoma, and

(3) five miles of 12-inch pipeline partially looping its Fort Scott 8-inch pipeline in Allen County, Kansas.

The following compressor facilities will be abandoned by reclamation:

(1) The Cambridge Compressor Station in Cowley County, Kansas, consisting of 2,925 horsepower of compressor units and appurtenant facilities and

(2) two 170 horsepower units located at its Lyons Compressor Station in Rice County, Kansas.

The increased horsepower at the Hugoton Station is required to reduce the peak day overload of the station from about 110 percent to 102 percent and to reduce the overload on the units during the 60 to 70 days required for annual maintenance and repairs. The operating flexibility of the station will be improved by reducing the impact of an emergency outage of any particular unit.

The increased capacity to be provided by the 34 miles of 26-inch pipeline looping in Oklahoma will be utilized to transport net additional volumes of approximately 50,000 Mcf per day, which will become available at Blackwell prior to the 1966–67 winter heating season.

Applicant proposes to handle increased customer requirements with no increase in pipeline pressure on the Fort Scott 8-inch pipeline by constructing five miles of 12-inch looping. The existing Fort Scott pipeline was constructed in 1929 and a portion was lap welded. Therefore, Applicant considers the upper working pressure level to be 500 psig.

The Cambridge Compressor Station has not been used since 1958, after the Blackwell to Grabham and the Grabham to Welda pipelines were completed, and no further use of these obsolete compressor units is indicated.

The Lyons Compressor Station was used to compress gas from the Kansas City-Hugoton main pipeline north into the Lyons-Superior system until the Alden Storage Field was developed after its certification in 1961 in Docket No. CP60–32. The Lyons Compressor Station is used during the summer, but since the summer day sales demand is low, the full installed horsepower is not required. Applicant will therefore reclaim two obsolete 170 horsepower units.

The total estimated cost of the facilities to be constructed is $4,275,000, which will be financed from treasury cash.

Due notice of the filing of the application was published in the Federal Register on December 28, 1965 (30 F.R. 16176). No protest, petition to intervene, notice of intervention or request for hearing has been filed in this proceeding.

At a hearing held on March 3, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Cities Service Gas Company, a Delaware corporation with its principal place of business in Oklahoma City, Oklahoma, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order issued December 28, 1943, in Docket No. G–298 (4 FPC 471).

(2) The facilities to be abandoned, as hereinbefore described and as more fully described in the application in this proceeding, are subject to the jurisdiction of the Commission and abandonment of such facilities by Applicant is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The abandonment hereinbefore described, as more fully described in the application in this proceeding, is permitted by the public convenience and necessity and an order approving same should be issued as hereinafter ordered.

(4) The facilities hereinbefore described and as more fully described in the

application in this proceeding are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(5) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(6) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(7) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(2), (c)(3), (c)(4) and (e) of Section 157.20 of said Regulations.

The Commission orders:

(A) Permission for and approval of the abandonment by Applicant of the facilities hereinbefore described, as more fully described in the application in this proceeding are granted.

(B) Applicant shall advise the Commission of the date of said abandonment within ten days thereof.

(C) A certificate of public convenience and necessity is issued to Applicant, Cities Service Gas Company, authorizing the construction and operation of the facilities as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(D) The certificate issued by paragraph (C) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(2), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(E) The facilities authorized shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within one year from the date of this order.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

MONTANA-DAKOTA UTILITIES CO., DOCKET NO. CP66-231

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 7, 1966)

On January 19, 1966, Montana-Dakota Utilities Co. (Applicant) filed in Docket No. CP66-231 an application pursuant to Section 7(c) of the Natural Gas Act, as implemented by Section 157.7(c) of the Regulations under the Act, for a certificate of public convenience and necessity authorizing the construction during the calendar year 1966 and the operation of natural gas facilities for the sale of natural gas to direct consumers and existing distributors for resale and for miscellaneous rearrangements, all as more fully set forth in the application in this proceeding.

Applicant proposes to construct a maximum of 8 lateral or loop lines of up to 6-inch diameter pipe with the maximum length being 25 miles and a maximum of 11 taps and meters in order to transport and sell natural gas previously authorized under certificates for transportation or sale to existing distributors at rates on file with the Commission, for resale in existing market areas, and in order to deliver natural gas to direct consumers located in areas outside the franchise area of any local distributor. Applicant also proposes to construct a maximum of 2 lateral or loop lines of up to 6-inch diameter pipe with the maximum length being 5 miles and a maximum of 2 taps and meters in order to accomplish miscellaneous rearrangements.

The deliveries to any one distributor or consumer by means of the proposed facilities will not exceed 100,000 Mcf per year and none of the gas delivered will be used by any distributor or consumer for boiler fuel purposes as defined by the Commission in Section 157.7(c) of its Regulations under the Act.

The total estimated cost of the proposed facilities will not exceed a maximum of $300,000, which cost will be financed with internally generated funds.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on March 3, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Montana-Dakota Utilities Co., a Delaware corporation having its principal place of business in Minneapolis, Minnesota, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of March 22, 1946, in Docket Nos. G-220 and G-402 (5 FPC 64).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation and/or sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(6) The authorization hereinafter granted should be limited to construction during the calendar year 1966 and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $300,000, with the total deliveries to any one distributor or consumer not to exceed a maximum of 100,000 Mcf of natural gas per year.

(7) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter a statement in compliance with Section 157.7 (c)(8) of the Commission's Regulations under the Natural Gas Act.

(8) The certificate issued hereinafter should be conditioned upon Applicant's compliance with the provisions of Section 157.7(c)(7) of the aforesaid Regulations.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity is issued authorizing Applicant, Montana-Dakota Utilities Co., to construct during the calendar year 1966 the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities to sell natural gas to direct consumers and to distributors for resale and for miscellaneous rearrangements as hereinafter provided.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(C) The authorization granted in paragraph (A) above is limited to construction during the calendar year 1966 and the total expenditures for facilities to be constructed thereunder are limited to a maximum of $300,000, with the total deliveries to any one distributor or consumer limited to a maximum of $100,000 Mcf of natural gas per year.

(D) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with Section 157.7(c)(8) of the Commission's Regulations under the Natural Gas Act.

(E) The certificate issued by paragraph (A) above is expressly conditioned upon Applicant's compliance with the provisions of Section 157.7(c)(7) of the aforesaid Regulations, and, further, shall not entitle any industrial customer to whom firm deliveries may be authorized herein to any priorities or rights to additional gas for meeting any future increases in their requirements at the expense of firm resale customers desiring to acquire additional gas to meet any future increases in their requirements.

(F) The certificate issued is granted on the express condition that any interruptible service authorized herein shall be curtailed or interrupted to the extent required to meet existing or future contracted maximum delivery obligations of Applicant for firm service to its customers.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

MONTANA-DAKOTA UTILITIES CO., DOCKET NO. CP66-232

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 7, 1966)

On January 19, 1966, Montana-Dakota Utilities Co. (Applicant) filed in Docket No. CP66-232 an application pursuant to Section 7(c) of the Natural

Gas Act, as implemented by Section 157.7(b) of the Regulations under the Act, for a certificate of public convenience and necessity authorizing the construction during the calendar year 1966 and the operation of natural gas facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers thereof, all as more fully set forth in the application in this proceeding.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system new and existing supplies of natural gas in various producing areas generally coextensive with said system.

The total cost of the facilities covered by this application will not exceed a maximum of $1,370,000, with no single project to exceed a cost of $342,500, which costs are proposed to be financed from internally generated funds.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on March 3, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Montana-Dakota Utilities Co., a Delaware corporation having its principal place of business in Minneapolis, Minnesota, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of March 22, 1946, in Docket Nos. G-220 and G-402 (5 FPC 64).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, a statement in compliance with Section 157.7(b)(3) of the Commission's Regulations under the Natural Gas Act.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(7) The authorization hereinbefore granted should be limited to construction during the calendar year 1966 and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $1,370,000, with no single project to exceed a cost of $342,500.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity is issued authorizing Applicant, Montana-Dakota Utilities Co., to construct during the calendar year 1966, the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to said Applicant.

(B) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with Section 157.7(b)(3) of the Commission's Regulations under the Natural Gas Act.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(D) The authorization granted in paragraph (A) above is limited to construction during the calendar year 1966, and the total expenditures for facilities to be constructed thereunder are limited to a maximum of $1,370,000, with no single project to exceed a cost of $342,500.

(E) The authority granted herein shall not be construed as authorization to attach new customers or to increase the volume of sales to existing jurisdictional customers.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP66-217

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 7, 1966)

On January 3, 1966, Transcontinental Gas Pipe Line Corporation (Applicant), filed in Docket No. CP66-217 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities and the rendition of additional service to an existing customer, all as more fully set forth in the application.

Applicant seeks authority to sell and deliver an additional volume of 500 Mcf of natural gas per day to the Town of Blacksburg, South Carolina (Blacksburg), an existing customer under Applicant's Rate Schedule G-2, and for the construction, installation and operation of a sales meter station and appurtenant equipment to be located at mile post 1241.37 on Applicant's 36-inch main transmission line "C" near Blacksburg in Cherokee County, South Carolina, to be utilized as an additional point of delivery to Blacksburg. Blacksburg has requested the new delivery point and the delivery at that point of the additional volumes proposed in order that natural gas service can be provided to the new plant of Broad River Brick Company and for additional residential service in the area.

The total estimated cost of the proposed facilities is $20,300, which cost will be defrayed by Applicant from its general funds.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on March 3, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, Transcontinental Gas Pipe Line Corporation, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of May 29, 1948, in Docket No. G-704 (7 FPC 24).

(2) The proposed construction and operation of facilities and the sale and delivery of natural gas by Applicant to the Town of Blacksburg as hereinbefore described, and as more fully described in the application, in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed construction and operation of facilities and the sale and delivery of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the Acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, Transcontinental Gas Pipe Line Corporation, authorizing the construction and operation of facilities and the sale and delivery of natural gas to the Town of Blacksburg, as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) Applicant and the Town of Blacksburg shall execute a superseding service agreement in accordance with the Commission's Regulations reflecting the new delivery point and increased volumes and the same shall be filed with the Commission by Applicant pursuant to Section 154.22 of the Commission's Regulations.

(D) The facilities authorized to be constructed and operated by Applicant shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations within six months of the date on which this order issues.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

UNION GAS SYSTEM, INC. AND CITIES SERVICE GAS COMPANY, DOCKET NO. CP66–176

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued March 7, 1966)

On December 2, 1965, Union Gas System, Inc. (Applicant) filed in Docket No. CP66–176 an application pursuant to Section 7(a) of the Natural Gas Act for an order directing Cities Service Gas Company (Respondent) to make a physical connection of its transmission facilities with Applicant's proposed lateral pipeline and to sell and deliver up to 528 Mcf of natural gas per day to Applicant for resale and distribution in the City of Easton and the community of Lowemont, Leavenworth County, Kansas, as more fully set forth in the application.

Applicant requests that Respondent be directed to make a physical connection between Respondent's 16-inch transmission pipeline and Applicant's proposed 3-inch I.D. lateral pipeline, which will extend from the interconnection for a distance of 7.5 miles to the City of Easton; Kansas. Applicant will construct 2.36 miles of 1¼-inch lateral pipeline from a point on the 3-inch lateral to the community of Lowemont, Kansas. Applicant will also construct and operate distribution systems in Lowemont and Easton.

Easton has a population of approximately 500 with 140 residences, and Lowemont has a population of 35 with 10 residences. Forty-eight additional residences are located along the proposed lateral pipeline.

Applicant estimates that the annual and peak day requirements for natural gas for these customers during the first three years of proposed operations will be as follows:

	First year	Second year	Third year
Peak day (Mcf)	375	454	528
Annual (Mcf)	29,813	35,683	41,171

Service will be rendered to Applicant under Respondent's Rate Schedule F–2.

The estimated cost of constructing the proposed lateral pipelines and distribution systems is $83,486, which will be financed from treasury cash.

The Kansas State Corporation Commission has certified the proposed service area to Applicant in its order issued in Docket No. 76,160–U on October 20, 1965.

Respondent, by its letter filed December 17, 1965, states that it has no objection to the granting of the application provided that the delivery pressure will not be required to exceed 125 psig.

Due notice of the filing of the application was published in the Federal Register on December 16, 1965 (30 F.R. 15506). A notice of intervention was filed by the Kansas State Corporation Commission on December 20, 1965, and withdrawn on January 17, 1966. No other notices of intervention, protests or petitions to intervene have been filed in this proceeding.

The Commission finds:

(1) Cities Service Gas Company, a Delaware corporation having its principal place of business in Oklahoma City, Oklahoma, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of December 28, 1943, in Docket No. G–298 (4 FPC 471).

(2) Applicant is a public utility company in the State of Kansas and is authorized to construct and operate facilities to distribute and sell natural gas to inhabitants of the communities along its system.

(3) It is necessary and desirable in the public interest that Respondent be directed to establish a physical connection of its transportation facilities with the facilities proposed to be constructed by Applicant and to sell and deliver up to 528 Mcf of natural gas per day to Applicant, as hereinbefore described and as more fully set forth in the application, as hereinafter ordered and conditioned.

(4) The requirement that Respondent serve Applicant, as requested, will not place an undue burden upon Respondent nor impair its ability to render adequate service to existing customers.

The Commission orders:

(A) Respondent is directed to establish a physical connection of its natural gas transmission system with the facilities to be constructed by Applicant and to sell and deliver up to 528 Mcf of natural gas per day to Applicant, all as hereinbefore described and as more fully described in the application.

(B) Applicant shall be prepared to receive natural gas from Respondent at the proposed new connection within one year from the date of this order.

(C) Respondent shall not be required to deliver the gas at a pressure in excess of 125 psig.

(D) Respondent shall notify the Commission of the commencement of service within 10 days thereof.

(E) Respondent shall execute and file with the Commission a service agreement with Applicant in accordance with the Commission's Regulations under the Natural Gas Act.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

UNION GAS SYSTEM, INC. AND CITIES SERVICE GAS COMPANY, DOCKET NO. CP66–193

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued March 7, 1966)

On December 16, 1965, Union Gas System, Inc. (Applicant), filed in Docket No. CP66–193 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Cities Service Gas Company (Respondent) to establish physical connection of its transportation facilities with the facilities proposed to be constructed by Applicant and to sell and deliver to Applicant volumes of natural gas for resale and distribution in the Smith-North Area, Leavenworth County, Kansas, all as more fully set forth in the application.

Applicant seeks the resale and delivery by Respondent to Applicant of up to 64 Mcf of natural gas per day at an interconnection of Applicant's proposed lateral pipeline with Respondent's 26-inch transmission line in eastern Leavenworth County, Kansas. Specifically, Applicant proposes to construct, own and operate a natural gas distribution system in the community known as the Smith-North Area in Leavenworth County, Kansas. Applicant also proposes to construct, own and operate pipeline facilities consisting of 1.66 miles of 2-inch I.D. pipeline and 0.40 mile of 1¼-inch I.D. pipeline extending south and east from the proposed point of interconnection. The community proposed to be served has an estimated population of approximately 65 with 20 residences and one public school.

The total estimated volumes of natural gas necessary to meet Applicant's annual and peak day requirements for the initial three-year period of proposed operations are stated to be:

	First year	Second year	Third year
Annual (Mcf)	4, 538	5, 206	5, 540
Peak day (Mcf)	51	60	64

The total estimated cost of Applicant's proposed construction, including the described lateral, is estimated to be $14,460, which will be defrayed from funds on hand.

By order issued October 20, 1965, the Kansas State Corporation Commission authorized Applicant to transact the business of a gas public utility in the Smith-North area of Leavenworth County, Kansas.

On January 20, 1966, as supplemented on February 7, 1966, Respondent filed comments stating that it has no objections to rendering the proposed service and is able to do so with existing line capacity.

Due notice of the filing of the subject application and opportunity for hearing thereon have been given by publication in the Federal Register on December 30, 1965 (30 F.R. 16285). Notice of intervention was filed by the Kansas State Corporation Commission on January 10, 1966 and was withdrawn on January 17, 1966.

No other protest, petition to intervene, or notice of intervention or request for hearing has been filed in this proceeding.

The Commission finds:

(1) Respondent, Cities Service Gas Company, a Delaware corporation having its principal place of business in Oklahoma City, Oklahoma, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of December 28, 1943, in Docket No. G–298 (4 FPC 471).

(2) Applicant is legally authorized to engage in the local distribution of natural gas to the public within the meaning of Section 7(a) of the Natural Gas Act.

(3) It is necessary and desirable in the public interest to direct Respondent to establish physical connection of its transmission facilities with the facilities proposed to be constructed and operated by Applicant, and to sell and deliver to Applicant under a service agreement to be executed by Applicant with Respondent in accordance with the Commission's Regulations, up to 64 Mcf per day of natural gas for distribution and resale as hereinbefore described in the application and supplements in this proceeding.

(4) Applicant should be prepared to receive natural gas from Respondent for distribution in the Smith-North Area, Leavenworth County, Kansas and environs, within one year from the date of the issuance of this order.

(5) The requirement that Respondent serve Applicant, will not place an undue burden upon it nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) Respondent is directed to establish physical connection of its facilities with the facilities proposed to be constructed and operated by Applicant, as herein described, and to sell and deliver up to 64 Mcf of natural gas daily to Applicant under a service agreement to be executed by Applicant with Respondent in accordance with the Commission's Regulations for distribution and resale as hereinbefore described and as more fully described in the application in this proceeding. Such service shall be rendered pursuant to Respondent's presently filed appropriate rate schedule.

(B) Respondent shall report to the Commission in writing the date of commencement of service to Applicant within 10 days thereof.

(C) Applicant shall be prepared to receive natural gas as directed herein within one year from the date of issuance of this order.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

UNION GAS SYSTEM, INC. AND CITIES SERVICE GAS COMPANY, DOCKET NO. CP66-194

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued March 7, 1966)

On December 16, 1965, Union Gas System, Inc. (Applicant) filed in Docket No. CP66-194 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Cities Service Gas Company (Respondent) to establish a physical connection of its transportation facilities with the facilities proposed to be constructed by Applicant and to sell and deliver up to 35 Mcf of natural gas per day to Applicant for resale and distribution in the community known as the Conner Area in Leavenworth County, Kansas, as more fully set forth in the application.

Applicant requests that Respondent be required to establish an interconnection of its 26-inch transmission pipeline with the lateral pipeline to be constructed by Applicant to serve the Conner Area. Applicant will construct and operate 1.12 miles of 2-inch I.D. and 0.37 mile of 1-inch I.D. lateral pipeline facilities extending eastward from the proposed interconnection to the service area. Applicant will also construct and operate a distribution system in the Conner Area.

The Conner Area has an estimated population of 56 with 16 residences. The estimated annual and peak day natural gas requirements for the community during the first three years of proposed operations is as follows:

	First year	Second year	Third year
Annual (Mcf)	2,004	2,338	2,672
Peak day (Mcf)	26	31	35

The service will be rendered pursuant to Respondent's Rate Schedule F-2.

The estimated cost of the facilities to be constructed by Applicant is $11,436, which will be financed from treasury cash.

The Kansas State Corporation Commission certified the proposed service area to Applicant in its order issued in Docket No. 76,160-U, dated October 20, 1965.

In its response filed on January 20, 1966, Respondent objected to the construction of separate delivery points pursuant to the instant proposal and the proposal submitted by Applicant in Docket No. CP66-193 for service for resale and distribution in the Smith-North Area, Leavenworth County, Kansas. On February 7, 1966, Respondent filed a second letter withdrawing this objection and stating that it has no objection to the granting of the application.

Due notice of the filing of the application was published in the Federal Register on January 5, 1966 (31 F.R. 108). On January 10, 1966, the Kansas State Corporation Commission filed a notice of intervention which was withdrawn on January 20, 1966. No other notices of intervention, protests, or petitions to intervene have been filed in this proceeding.

The Commission finds:

(1) Cities Service Gas Company, a Delaware corporation with its principal place of business in Oklahoma City, Oklahoma, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order issued December 28, 1943, in Docket No. G-298 (4 FPC 471).

(2) Applicant is a public utility company in the state of Kansas and is authorized to construct and operate facilities to distribute and sell natural gas to inhabitants of the communities along its system.

(3) It is necessary and desirable in the public interest that Respondent be directed to establish a physical connection of its transportation facilities with the facilities proposed to be constructed by Applicant and to sell and deliver up to 35 Mcf of natural gas per day to Applicant, as hereinbefore described and as more fully set forth in the application, as hereinafter ordered and conditioned.

(4) The requirement that Respondent serve Applicant, as requested, will not place an undue burden upon Respondent nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) Respondent is directed to establish a physical connection of its natural gas transmission system with the facilities to be constructed by Applicant and to sell and deliver up to 35 Mcf of natural gas per day to Applicant, as hereinbefore described and as more fully described in the application.

(B) Applicant shall be prepared to receive natural gas from Respondent at the proposed new connection within one year from the date of this order.

(C) Respondent shall notify the Commission of the commencement of service within 10 days thereof.

(D) Respondent shall execute and file with the Commission a superseding service agreement with Applicant in accordance with the Commission's Regulations under the Natural Gas Act.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

HARVEY E. YATES, ET AL., CI65-659; SOUTHERN PETROLEUM EXPLORATION, INC., CI65-692; THE SUPERIOR OIL COMPANY, CI65-995

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY, SEVERING PROCEEDINGS, ACCEPTING OFFERS OF SETTLEMENT, AND ACCEPTING FPC GAS RATE SCHEDULES AND SUPPLEMENTS FOR FILING

(Issued March 7, 1966)

Applicants herein have filed applications pursuant to Section 7(c) of the Natural Gas Act for certificates of public convenience and necessity authorizing the sale for resale and delivery of natural gas in interstate commerce from the Indian Basin Area, Eddy County, New Mexico, to Natural Gas Pipeline Company of America, all as more fully set forth in the applications.

The contract executed by Applicant in Docket No. CI65-995 provides for an initial rate of 16.0 cents per Mcf at 14.65 psia plus upward and downward Btu adjustment from a base of 1,000 Btu's per cubic foot. The contracts executed by Applicants in Docket Nos. CI65-659 and CI65-692 provide for an initial rate of 16.608 cents per Mcf less a downward Btu adjustment from a base of 1,038 Btu's per cubic foot. The estimated Btu content of the gas is 1,038 per cubic foot, and on this basis all of the contracts provide for a rate of 16.608 cents per Mcf. All of the contracts contain quality standards which meet or exceed those standards for pipeline quality gas prescribed in Opinion Nos. 468 and 468-A, 34 FPC 159, 1068.

By order issued August 5, 1965, in Docket No. AR61-1, *et al.*, 34 FPC 424, Applicants were ordered to show cause why they should not receive permanent certificate authorization at the rates prescribed in Opinion No. 468. Said opinion, as modified by Opinion No. 468-A, prescribes an initial rate for gas sold from the New Mexico portion of the Permian Basin of 15.5 cents per Mcf plus applicable state and local taxes in effect on September 1, 1965, a moratorium until January 1, 1968, on rate increases, and upward Btu adjustment from a maximum standard of 1,050 Btu's per cubic foot and downward Btu adjustment from a minimum standard of 1,000 Btu's per cubic foot.

Applicants in Docket Nos. CI65-659 and CI65-692 have submitted settlement proposals and have offered to accept permanent certificates at the rates and with the conditions prescribed in Opinion Nos. 468 and 468-A. Applicant in Docket No. CI65-995 has advised the Commission by letter that it is willing to accept a permanent certificate at the rates and with the conditions prescribed in Opinion Nos. 468 and 468-A. Applicants adopt the rate schedule quality statement filed in Docket No. CI65-603 by Marathon Oil Company, operator of the jointly-owned processing plant, which statement shows that the quality of the gas, based upon plant design specifications, is within the quality standards prescribed in Opinion Nos. 468 and 468-A. Marathon Oil Company and other producers have received permanent certificates pursuant to settlement proposals to sell gas under contracts similar to those involved herein.[1]

---

[1] Order issued November 3, 1965, in *The Atlantic Refining Company, et al.*, Docket No. CI65-513, *et al.*

Applicant's proposals have been filed within the spirit of the Commission's opinion determining just and reasonable rates for producers in the Permian Basin on an area basis and afford an appropriate opportunity for the issuance of certificates under conditions which will provide a complete and effective plan of regulation. The rates to which Applicants have agreed and the moratorium by which they have agreed to abide correlate to those required by Opinion Nos. 468 and 468-A. Accordingly, the applications will be severed from the proceeding on the Order to Show Cause in Docket No. AR61-1, *et al.*, and certificates of public convenience and necessity will be issued under the conditions prescribed in the area rate opinion.

After due notice no petition to intervene, notice of intervention or protest to the granting of the applications has been filed.

At a hearing held on March 3, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the applications and exhibits thereto, submitted in support of the authorizations sought herein, and upon consideration of the record,

The Commission finds:

(1) Each Applicant herein is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission.

(2) The sales of natural gas hereinbefore described, all as more fully described in the applications, will be made in interstate commerce subject to the jurisdiction of the Commission, and such sales by Applicants, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicants are able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that the offers of settlement submitted by Applicants in Docket Nos. CI65-659 and CI65-692 should be accepted and that the applications in Docket Nos. CI65-659, CI65-692 and CI65-995 should be severed from the proceeding on the Order to Show Cause issued August 5, 1965, in Docket No. AR61-1, *et al.*

(5) The sales of natural gas by Applicants, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are required by the public convenience and necessity, and certificates therefor should be issued as hereinafter ordered and conditioned.

(6) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that the FPC gas rate schedules submitted by Applicants should be accepted for filing.

The Commission orders:

(A) Certificates of public convenience and necessity are issued upon the terms and conditions of this order authorizing the sales of natural gas by Applicants in interstate commerce for resale, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, all as hereinbefore described and as more fully described in the Appendix hereto and in the respective applications and offers of settlement in this proceeding.

(B) The certificates granted in paragraph (A) above are not transferable and shall be effective only so long as Applicants continue the acts or operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission thereunder.

(C) The grant of the certificates issued by paragraph (A) above shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or of Part 154 or Part 157 of the Commission's Regulations thereunder and is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against the respective Applicants. Further, our action in this proceeding shall not foreclose nor prejudice any future proceedings or objections relating to the operation of any price or related provisions in the gas purchase contracts herein involved. Nor shall the grant of the certificates aforesaid for service to the particular customer involved imply approval of all of the terms of the respective contracts, particularly as to the cessation of service upón termination of said contracts, as provided by Section 7(b) of the Natural Gas Act. Nor shall the grant of the certificates aforesaid be construed to preclude the imposition of any sanctions pursuant to the provisions of the Natural Gas Act for the unauthorized commencement of any sales of natural gas subject to said certificates.

(D) The offers of settlement submitted by Applicants in Docket Nos. CI65–659 and CI65–692 are accepted and the applications in Docket Nos. CI65–659, CI65–692 and CI65–995 are severed from the proceeding on the Order to Show Cause issued August 5, 1965, in Docket No. AR61–1, *et al.*

(E) Applicants shall comply with the requirements of Opinion Nos. 468 and 468–A, and particularly

(a) The initial rate shall be the applicable area rate prescribed in Opinion No. 468, as modified by Opinion No. 468–A, or the contract rate, whichever is lower, and

(b) No increase in rate in excess of that provided in (a) above shall be filed before January 1, 1968.

(F) Within 90 days of initial delivery each Applicant shall file three copies of a rate schedule quality statement in the form provided by Opinion No. 468–A.

(G) Each Applicant shall file three copies of a revised billing statement specifying a rate of 15.5 cents per Mcf at 14.65 psia plus the computed amount of applicable tax. Such statement shall show the method of computation used in computing the applicable tax.

(H) The FPC gas rate schedules submitted by Applicants are accepted for filing to be effective on the date of initial delivery and are designated as follows:

Docket No. and Filing Date	Applicant	Description and Date of Instrument	Rate Schedule	Supplement
CI65-659, 1-8-65	Harvey E. Yates, *et al*	Contract, 9-10-64	1	----------
		Amendment,[1] 8-25-65	1	1
CI65-692, 1-11-65	Southern Petroleum Exploration, Inc.	Contract, 9-10-64	17	----------
		Amendment,[1] 8-25-65	17	1
CI65-995, 4-8-65	The Superior Oil Company	Contract, 9-10-64	115	----------

[1] Amends pricing provisions of contract.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

APPALACHIAN POWER COMPANY, PROJECT NO. 2317

ORDER PERMITTING INTERVENTION, GRANTING IN PART, AND DENYING IN PART, MOTIONS TO DISMISS, AND FIXING HEARING

(Issued March 8, 1966) *

From the junction of the North and South Forks of the New River in North Carolina, the New-Kanawha river flows a distance of 352 river miles to its confluence with the Ohio River, following a route, generally northward, through the States of North Carolina, Virginia and West Virginia. At its confluence with the Gauley River, about 97 miles from its mouth, the New changes its name to the Kanawha.

On February 26, 1965, the Appalachian Power Company filed an application for license seeking authorization to construct (1) a hydroelectric development (including pumped storage) consisting of upper and lower reservoirs in the New River in North Carolina and Virginia and appurtenant power-generating and other facilities; and (2) the installation of power facilities at the United States Bluestone Reservoir project dam. Bluestone Dam is in West Virginia, about 140 river miles downstream from the proposed lower pumped storage reservoir. Bluestone Reservoir impounds water in West Virginia and Virginia.

The North Carolina Electric Membership Corporation and the Old Dominion Electric Cooperative, each representing, respectively, a number of REA cooperatives located in North Carolina and Virginia, filed, on May 18, 1965, petitions to intervene. A member of North Carolina Electric, the Blue Ridge Electric Membership Corporation, and Mecklenburg Electric Cooperative, a member of Old Dominion, filed similar petitions, as did the Harrison Rural Electrification Association, Inc., of West Virginia.

North Carolina Electric Membership Corporation and Old Dominion state they are interested in the application for license because each of them, and their members, are cooperatives and are therefore entitled, under Section 5 of the Flood Control Act of 1944 (58 Stat. 887, 890), to preference in the sale by the Secretary of the Interior of power generated by the United States at reservoir projects. They also state that they, and some of their members, are within the feasible marketing area of all sites included in the license application. Similar statements are also made by Blue Ridge, Mecklenburg and Harrison. The cooperatives assert a need for low-cost power to serve both their present and future requirements.

In its answer Appalachian contends that the cooperatives' interest derives from those of the Secretary of the Interior and therefore their petitions to intervene should be dismissed because the Secretary has not intervened. In support of this contention the Applicant cites *United States ex rel. Chapman* v. *F.P.C.*, 345 U.S. 153. In the Chapman case the Court held that congressional approval of a general comprehensive plan for river development does not, standing alone, withdraw the projects named in the plan from the licensing jurisdiction of the Commission. The Court recognized, however, that the Secretary of the Interior and an association of REA cooperatives had, under the particular circumstances of the case, an interest sufficient to include standing to obtain court review of a Commission order issuing a license.

---

*See order issued May 3, 1966 re rehearing and reconsideration, etc., 35 FPC 669.

The Court did not intimate in the *Chapman* case that the interest of the cooperative was derived in any way from the fact that the Secretary had also asserted an interest. While the interveners had interests which were held to be of such nature as to confer standing to obtain court review, the Court pointed out that the underlying basis of the Secretary's standing differed from that of the cooperative. The Court gave as a reason for not specifying this difference in detail the fact that its members held divergent views such as to "preclude a single opinion of the Court as to both petitioners." 345 U.S. 153, 156. The Federal Power Act provides for congressional authorization of a hydroelectric project as a federal undertaking upon the recommendation of the Federal Power Commission under Section 7(b) of the Federal Power Act. Upon construction of such a project the duty of the Secretary of the Interior to sell the power, under Section 5 of the Flood Control Act of 1944, and the preferred right of a cooperative to purchase it, would arise by operation of law. We do not feel that disposition of a cooperative's petition to intervene in a licensing proceeding depends on whether the Secretary of the Interior has filed a petition to intervene.

With their petitions to intervene the cooperatives filed motions to dismiss, one common ground being that installation of power-generating facilities had been authorized by Congress as part of the Federal Bluestone Reservoir project. The Secretary of the Interior, in his report on the application received November 3, 1965, and the Chief of Engineers, in his report filed on November 10, 1965, expressed the view that Federal installation of power-generating facilities at Bluestone Reservoir project had been specifically authorized, the Chief of Engineers stating that construction of the power facilities was deferred in 1944.

The Bluestone Reservoir project was recommended to the Congress by the Chief of Engineers for federal construction as a multipurpose project for power development, flood control and navigation on February 1, 1935. The recommendation was contained in the comprehensive "308" report on the Kanawha River Basin. H.R. Doc. No. 91, 74th Cong., 1st Sess. (1935). The project dam, including six penstocks, was completed in 1952.

On September 12, 1935 the President, pursuant to authority conferred by Sections 202[1] and 203 of the N.I.R.A. (48 Stat. 195, 201–2), and by the Emergency Relief Appropriation Act of 1935 (49 Stat. 115, 119), issued Executive Order No. 7183A, directing the Secretary of War, through the Chief of Engineers, to construct the Bluestone Reservoir project. The Bluestone reservoir project was expressly ratified by Congress in the Flood Control Act of 1936 (49 Stat. 1570, 1572, 1586), which approved the project and noted that it was "then under way." The Flood Control Act of 1938 (52 Stat. 1215–17) also specifically authorized the project and incorporated Executive Order 7183A by reference. See *United States* v. *West Virginia Power Co.*, 91 F. 2d 611 (CA4–1937), *pet. for cert. dismissed*, 302 U.S. 770 and *U.S.* v. *W. Va. Power Co.*, 122 F. 2d 733 (CA4–1941) (Parker, J.), cert. denied, 314 U.S. 683.

The Flood Control Act of 1938 was an omnibus act. In reporting this legislation the House Committee on Flood Control made clear that the Bluestone Reservoir project was for the dual purpose of flood control and the development of power, pointing out that Bluestone was one of but two reservoirs in the bill at which the development of power was authorized. The Committee also noted that the Flood Control Act of 1936 had also provided for the construction of Bluestone and two other dual-purpose reservoirs at the expense of the United States. H.R. Rep. No. 2353, 75th Cong., 3d Sess., 5-6 (1938).

---

[1] Section 202 of the National Industrial Recovery Act (48 Stat. 195, 201 (1933)) directed the inclusion of river improvements in programs of public works where, as concerned here, the project had been "recommended to Congress by the Chief of Engineers under the established practice", that is, that the recommendation was based "on examinations, surveys and reports made in pursuance of the [River and Harbor] Acts and submitted to Congress for its consideration when determining whether the project should be undertaken." *United States* v. *Arizona*, 295 U.S. 174, 191–2.

Applicant, in answer to the Secretary of the Interior and the Chief of Engineers, concludes that installation of power facilities at Bluestone Reservoir is not Congressionally authorized. The argument runs that in the project document (H.R. Doc. 91, *supra*) the Chief of Engineers conditioned his recommendation upon the execution of an agreement for the sale of power and that this condition constituted a condition precedent which was never carried out. The answer to this contention[2] is that it was specifically held in *United States* v. *West Virginia Power Co., supra* (122 F. 2d 733, 736-737), that Congress, in authorizing construction of the project in 1936 and 1938, did not adopt the condition.

The Applicant's second argument is that Executive Order 7183A and the authorizing statutes conferred discretionary authority on the Chief of Engineers to change or modify the project plans and specifications. This delegation, properly construed, includes authority, according to the Applicant, to eliminate one of the two major purposes of the project as Congressionally authorized. The Chief of Engineers, the Applicant contends, exercised this authority and, having reported to Congress elimination of installation of power facilities at Bluestone, the Congressional authorization is now "exhausted."

We need not examine the extent of the discretion conferred by the Congress on the Chief of Engineers because the legislative history indicates a mere deferral of installation of power-generating facilities. In support of the contention that installation of power facilities was not deferred, the Applicant draws attention to the fact that in 1945 the Engineer Corps, seeking an allocation of lump sum appropriations to various projects in the Ohio River Basin, did not list Bluestone in tabulations submitted to show flood control reservoirs which included power-generating facilities. In this connection the Applicant cites hearings before the Subcommittee of the House Committee on Appropriations on H.R. 4805.[3] From this the Applicant concludes that installation of power facilities was eliminated, not deferred.

The status of Bluestone and the tabulations submitted to the House were specifically considered by the Subcommittee of the Senate Committee on Appropriations, holding hearings on the same legislation in December, 1945. The Senate hearings were attended by the Chief of Engineers, accompanied by General Crawford. A witness raised the question why Bluestone and Detroit Reservoir (on the N. Santiam River) had not been listed in the tabulations submitted by the Corps at the House hearings to show power reservoirs which included power-generating facilities. General Crawford distinguished between the Bluestone and Detroit projects, stating that installation of power-generating facilities was authorized at Bluestone but not at

---

[2] In further support of this argument Applicant states that efforts to obtain an agreement for the sale of power have long since been discontinued. It is pertinent here that since 1944 surplus power at flood control reservoirs has been disposed of by the Secretary of Interior in accordance with Section 5 of the Flood Control Act of 1944 (58 Stat. 887, 890).

[3] Hearings before Subcommittee of House Committee on Appropriations, *First Deficiency Appropriation Bill for [Fiscal] 1946, H.R. 4805,* 79th Cong., 1st Sess., at 77-78 (1945).

Detroit. He stated that at Bluestone "the power generating facilities are being deferred at present" because the "entire storage capacity is needed for flood control."[4]

Bluestone Reservoir, at New-Kanawha river mile 162, controls the Upper New River Sub-basin; this is an area of 4,565 square miles, about 37% of the entire Kanawha River Basin. The comprehensive report on the Kanawha River Basin in 1935 (H.R. Doc. 91 *supra*) contemplated that additional flood control storage could be obtained by construction of other projects in the sub-basin. Therefore when the Chief of Engineers informed the Congress of a deferral of installation of power-generating facilities at Bluestone it was in aid of his responsibility to make continuous studies of the need for flood control. In such a situation weight is given, in determining jurisdiction, to information supplied by the Engineer Corps to a committee of Congress responsible for water resources legislation. See the *Chapman* case, *supra* (345 U.S. 153, 166).

The Applicant also refers to the construction and financial history of the project as reflected in the annual reports of the Chief of Engineers. By June 30, 1939 total expenditures of $543,960 had been made from emergency relief funds allotted under Executive Order 7183A, at which time the Chief of Engineers reported that the work remaining to be done would be completed under the authorizations contained in the Flood Control Acts of 1936 and 1938. 1939 Ch. of Engineers Rep., Vol. 2, p. 1453. The project, described as including "the construction of a powerhouse providing for the initial installation of two 30,000-kilowatt units, and the ultimate installation of six 30,000-kilowatt units", was carried in the annual reports of the Chief of Engineers (Vol. 2) for *1941* (p. 434); *1942* (p. 1260); *1943* (p. 1184); *1944* (p. 1191) and *1945* (p. 1585).

In January, 1942, construction of the dam was initiated.[5] In 1944 this work was suspended as soon as a safe stopping point was reached. This was because of the wartime policy to conserve materials and manpower.[6] It appears from the annual reports of the Chief of Engineers that sums were appropriated for the project in accordance with estimates which included the cost of installing power-generating facilities. By June 30, 1945, about six million dollars, of a larger sum appropriated, had actually been expended and the dam was about 38 percent constructed. At this stage plans and specifications for construction of the dam, powerhouse and switchyard were complete. Also completed were plans and specifications for "turbine governing equipment, generators, transformers and circuit breakers", etc.[7]

On January 3, 1946, work on the dam was resumed, under supplemental plans, approved by the Chief of Engineers in fiscal 1946, which contemplated elimination of generating units at the project. In 1946 the Chief of Engineers reported a new cost estimate, revised downward to reflect the elimination of power-generating facilities. This estimate covered construction, among other things, of a dam in which was to be installed six penstocks,[8] which were built as part of the project as ultimately completed in 1952.[9]

[7] '45 Rep., Vol. 2, pp. 1586–7.

[8] Compare '46 Rep., Vol. 2, p. 1740 *with* '61 Rep., Vol. 2, p. 1156.

[9] '53 Rep., Vol. 2, p. 1331.

The Applicant refers to the fact that the annual reports of the Chief of Engineers, from 1946 on, give the percentage of completion of the project and finally state that "all project work is physically and financially complete." Progress reports on flood control projects follow a standard pattern and are not intended as primary source material on jurisdiction. Read from the beginning in this case, they indicate that the Corps, in accordance with the direction of Congress, treated the Bluestone Reservoir project authorization as including the installation of power-generating facilities. See *United States ex rel. Chapman* v. *F.P.C.*, 345 U.S. 153, 165. These reports could not, in any event, support a conclusion contrary to the direct statement of the Corps to the Congress in 1945 that installation of power facilities had been deferred because of the flood control situation.

Where a multiple-purpose project, authorized for construction as a Federal undertaking, is deauthorized to permit application for a license under the Federal Power Act, such deauthorization is expressly provided for and limited by statute. For example, Congress by the Flood Control Act of 1941 (55 Stat. 638, 645) authorized, as a Federal undertaking, a coordinated project consisting of three flood control and power developments, one of which was at the Markham Ferry site on the Grand River. Congress later modified this authorization to permit construction of the Markham Ferry project by the Grand River Dam Authority, subject to the provisions of the Act of July 6, 1954[10] and the Federal Power Act. Similarly, the provisions of the Flood Control Act of 1950 (64 Stat. 170, 179) were modified to permit development of the Priest Rapids site on the Columbia River, for purposes including flood control, navigation and power, under a Commission license and in accordance with the Federal Power Act and the Act of July 27, 1954.[11] Another instance is the authorization of the development, as a Federal undertaking, of the Alabama-Coosa River for navigation, flood control, power development and other purposes contained in the 1945 River and Harbor Act (59 Stat. 10, 11, 17). In Section 2 of the Act of June 28, 1954,[12] Congress suspended the authorization, insofar as it applied to the Coosa River, to permit power development under a Commission license.

It appears from the foregoing that the Bluestone Reservoir project was authorized as a Federal undertaking for multiple purposes including flood control and power generation, and that, while construction of power-generating facilities has been deferred, authorization for their installation by the Corps of Engineers has not been modified by the Congress.

The cooperatives also moved to dismiss that part of the application for license pertaining to the proposed upstream development on the ground that it pre-empts the Moores Ferry site claimed to be authorized as a Federal undertaking. In our order issuing a preliminary permit[13] we had occasion to note that the North Carolina Electric Membership Corporation questioned the jurisdiction of the Commission to issue a preliminary permit on the ground that, by virtue of the Flood Control Act of 1938 (52 Stat. 1215, 1217), the Moores Ferry site had been authorized for Federal development and that

---

[10] 68 Stat. 450. See *United States* v. *Grand River Dam Authority*, 363 U.S. 229; *Grand River Dam Authority*, 8 FPC 635, Project No. 1954; Jan. 18, 1949 (Markham Ferry: dismissing preliminary permit application); 14 FPC 815, Project No. 2183, June 22, 1955 (Markham Ferry issuing license).

[11] 68 Stat. 573. See *PUD No. 2 of Grant County, Washington*, 13 FPC 1462, Project No. 2114, Oct. 21, 1954 (order issuing preliminary permit).

[12] 68 Stat. 302. See *Alabama Power Co.*, 18 FPC 257, Opinion No. 305, Project No. 2146, Sept. 4, 1957 (issuing license).

[13] *Appalachian Power Co.*, 29 FPC 445, Project No. 2317, March 11, 1963 (order issuing preliminary permit).

Applicant's proposed pumped storage development would pre-empt the site. We held, among other things, that under the Flood Control Act of 1938 a reservoir-only project which is a unit of the comprehensive plan, is authorized when it is "selected and approved" for construction by the Chief of Engineers after preliminary surveys and plans have been completed. As the Moores Ferry project has never been selected and approved for construction by the Chief of Engineers in accordance with the Flood Control Act of 1938, it has not been authorized as a Federal undertaking under the Act so as to remove it from the Commission's licensing jurisdiction. See *United States ex rel. Chapman* v. *F.P.C.*, 345 U.S. 153.

Besides petitions to intervene and motions to dismiss the application, the cooperatives have filed answers alleging, among other things, that the Commission should refuse to issue the license and should recommend to the Congress, under Section 7(b) of the Federal Power Act, that a multiple-purpose project at the Moores Ferry site should be undertaken by the United States itself. In this connection the cooperatives state that the reach of the river sought to be developed by the Applicant upstream from Fries, Virginia, is important from the standpoint of flood control, power generation, low flow augmentation and recreation, and that the Applicant's proposed project inadequately provides for these public uses. In view of the importance of the issues raised by Appalachian Power Company's application and the petitions to intervene, a public hearing would be desirable.

The Commission finds:

(1) Intervention by the North Carolina Electric Membership Corporation, the Old Dominion Electric Cooperative, the Blue Ridge Electric Membership Corporation, Mecklenburg Electric Cooperative and the Harrison Rural Electrification Association, Inc., may be in the public interest.

(2) The Bluestone Reservoir project, including power-generating facilities, has been authorized for construction under the direction of the Secretary of the Army and the supervision of the Chief of Engineers.

(3) Federal construction of the Moores Ferry Reservoir project has not been authorized.

(4) It is appropriate and in the public interest to hold a public hearing, as hereinafter provided, on Appalachian's application insofar as it seeks authorization for project works other than at the Bluestone Reservoir project, and respecting the matters involved and issues presented, including the issue whether pursuant to the provisions of Section 7(b) of the Act the Commission should recommend construction of the project works by the United States.

The Commission orders:

(A) The above-named petitioners are hereby permitted to intervene in this proceeding subject to the rules and regulations of the Commission: *Provided, however,* That the participation shall be limited to matters affecting asserted rights and interests as specifically set forth in the petitions for leave to intervene; and *Provided, further* That the admission of the aforesaid petitioners shall not be construed as recognition by the Commission that the petitioners might be aggrieved because of any order or orders of the Commission in this proceeding.

(B) Pursuant to the authority contained in and subject to the jurisdiction conferred upon the Federal Power Commission by the Federal Power Act, particularly Sections 4(e), 7(b), 10(a) and 308 thereof, and the Commission's Rules of Practice and Procedure, a public hearing shall be held on September 13, 1966, at 10:00 a.m. in a hearing room of the Federal Power Commission, 441 G Street, N.W., Washington, D.C., respecting the matters involved and the issues presented in this proceeding.

(C) The following procedure is prescribed for this proceeding:

1. The Applicant shall file by June 7, 1966, with the Secretary of the Commission an original and ten copies of all testimony, including qualifications of the witnesses, and exhibits to be presented in Applicant's direct case.

2. All other participants, including the Commission staff, shall file by August 2, 1966, with the Secretary, an original and ten copies of all direct testimony and exhibits including qualifications of witnesses.

3. All motions to strike shall be filed with the Presiding Examiner by August 23, 1966, with replies to such motions to be filed by September 1, 1966.

4. All of the testimony, except exhibits, shall be in question and answer form.

5. No exhibits, except those of which official notice may properly be taken, shall contain narrative material other than brief explanatory notes.

6. Any party submitting more than one exhibit shall enclose a cover sheet listing the title of each exhibit in the sequence in which it is to be marked for identification.

7. The Presiding Examiner will specify the order of cross-examination and time to be permitted for preparation of rebuttal evidence.

(D) The Commission's Rules of Practice and Procedure shall apply in this proceeding except to the extent that they are modified or supplemented herein.

(E) The motions to dismiss the application for license, insofar as they refer to the installation of power-generating facilities at the Bluestone Reservoir project, are hereby granted.

(F) The motions to dismiss the application for license, insofar as they refer to the developments upstream from Fries, Virginia, are hereby denied.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

THE CINCINNATI GAS & ELECTRIC COMPANY, DOCKET NO. E-7125; THE UNION LIGHT, HEAT AND POWER COMPANY, DOCKET NO. E-7203

ORDER DENYING APPLICATION FOR REHEARING AND MODIFYING OPINION AND ORDER

(Issued March 8, 1966)

On February 17, 1966, a joint application for rehearing of our Opinion No. 485 and accompanying order issued January 19, 1966, 35 FPC 99, in this case, was filed by The Cincinnati Gas & Electric Company (CG&E) and The Union Light, Heat and Power Company (Union). In that opinion, we concluded that certain sales by CG&E and Union are subject to Commission jurisdiction under Section 201 of the Federal Power Act (Act).

We have considered the arguments advanced by CG&E and Union in their application and reject all but the one relating to the status of West Harrison Gas & Electric Company (West Harrison) as a public utility. Except for the latter argument, the petitioners' application raised no new arguments and hence justifies no change in our decision.

The Commission erred in affirming the Examiner's finding that CG&E's wholly-owned subsidiary, West Harrison, is a "public utility" under Section

201(e) of the Act. West Harrison was not a party or intervenor in this proceeding; nor was its status an issue of the Show Cause order instituting this action.

In this connection, on February 17, 1966, West Harrison tendered for filing an application for rehearing, which was conditionally accepted pending Commission action. In its application, West Harrison requests that it be made a party to this proceeding and that we vacate our finding that it is a "public utility" without further hearing, or alternatively, that it be granted an evidentiary hearing on this issue. Inasmuch as the matter was not in issue in the proceeding and is irrelevant to the determination therein, we shall modify Opinion No. 485 to eliminate our finding that West Harrison is a public utility.

We reaffirm our previous holding, however, that CG&E's sale to West Harrison is a sale of electric energy at wholesale in interstate commerce subject to Commission jurisdiction under Sections 205 and 206 of the Act. This finding does not depend upon West Harrison's status as a public utility since it is clearly a "person" within the meaning of Section 201(d) of the Act.

In the light of the foregoing, West Harrison's application for rehearing described above should be rejected for filing.

The Commission further finds:

The assignment of error and grounds for rehearing advanced by CG&E and Union present no facts or legal principles which warrant any change or modification in the Commission's Opinion No. 485 and accompanying order, except to the extent described herein.

The Commission orders:

(A) The application for rehearing filed by CG&E and Union on February 17, 1966, is denied.

(B) Opinion No. 485 and accompanying order is modified to eliminate the finding that West Harrison is a public utility.

(C) West Harrison's application for rehearing, dated February 15, 1966, is rejected for filing.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

LONE STAR GAS COMPANY, DOCKET NO. CP66-203

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT AND TERMINATING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 8, 1966)

On December 20, 1965, Lone Star Gas Company (Applicant) filed in Docket No. CP66-203 an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon the operation of certain natural gas facilities for the transportation of natural gas in interstate commerce, all as more fully set forth in the application.

The facilities proposed for abandonment are various lateral supply pipelines and related facilities extending from Applicant's existing pipeline system to a single well or to a single point in the area of production. Such lines and facilities, located on portions of Applicant's system and operated for the transportation of natural gas in interstate commerce, are no longer needed or required to transport gas into Applicant's system due to the depletion of reserves or rerouting of the gas production through other facilities for injection into Applicant's system.

Specifically, Applicant seeks permission and approval to abandon the operation of the following pipelines and appurtenant facilities which would be removed and salvaged: (1) 194 feet of 3-inch pipeline, 109 feet of 4-inch pipeline with 4-inch metering facilities and 66 feet of 2-inch pipeline with 2-inch metering facilities, all located in Robberson Field, Garvin County, Oklahoma, (2) 188 feet of 4-inch pipeline located in the Northeast Tucker Field, Stephens County, Oklahoma, (3) 1,460 feet of 4-inch pipeline located in the Northeast Healdton Field, Jefferson County, Oklahoma, (4) 203 feet of 2-inch pipeline located in the Sho-Vel-Tum Field, Stephens County, Oklahoma, (5) 8 feet of 4-inch pipeline and 4 feet of 3-inch pipeline located in the Cruce Field, Stephens County, Oklahoma, (6) 27 feet of 3-inch pipeline with 3-inch metering facilities located in the Banner Church Field, Stephens County, Oklahoma, (7) 1,162 feet of 2-inch pipeline located in the Sherman Field, Grayson County, Texas, (8) 164 feet of 4-inch pipeline with metering facilities located in the Northeast Greenville Oil Field, Love County, Oklahoma, (9) 35,003 feet of 6-inch pipeline with 6-inch metering facilities located in the Good Omen Field, Smith County, Texas.

Applicant states that the proposed abandonment will not result in the abandonment or any diminution of natural gas service to any city, town, community or customer or lessen the service presently being rendered by Applicant.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on March 3, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorizations sought and upon consideration of the record,

The Commission finds:

(1) Applicant, Lone Star Gas Company, a Texas corporation having its principal place of business in Dallas, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 11, 1944, in Docket No. G–442 (4 FPC 565).

(2) The facilities proposed to be abandoned, as hereinbefore described and as more fully described in the application herein, are used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and such abandonment is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The proposed abandonment of the aforesaid facilities is permitted by the public convenience and necessity and approval thereof should be granted as hereinafter ordered.

(4) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that the certificates of public convenience and necessity heretofore issued to Robberson Investment Company on May 31, 1960, in Docket No. G–18759 (consolidated with Docket No. G–4457), Home Stake-Production Company on August 10, 1960, in Docket No. G–17387 (consolidated with Docket No. G–13673), Sinclair Oil & Gas Company, on March 18, 1960, in Docket No. G–18286 (consolidated with Docket No. G–10559), M. W. Crockett, *et al.*, on June 6, 1961, in Docket No. CI60–538 (consolidated with G–7453), L. L. Gage and Minnie Gage on February 17, 1964, in Docket No. CI64–727, and Keith F. Walker on February 21, 1962, in Docket No. CI61–1239 (consolidated with Docket No. CI60–193), be terminated, effective on the date of issuance of this order.

The Commission orders:

(A) Permission for and approval of the abandonment of the facilities hereinbefore described, as more fully described in the application in this proceeding, are granted to Applicant.

(B) Applicant shall advise the Commission of the date of abandonment of the facilities as authorized in paragraph (A) above within 10 days of such abandonment.

(C) The certificates of public convenience and necessity heretofore issued to Robberson Investment Company on May 31, 1960, in Docket No. G-18759 (consolidated with Docket No. G-4457), Home Stake-Production Company on August 10, 1960, in Docket No. G-17387 (consolidated with Docket No. G-13673), Sinclair Oil & Gas Company, on March 18, 1960, in Docket No. G-18286 (consolidated with Docket No. G-10559), M. W. Crockett, *et al.*, on June 6, 1961, in Docket No. CI60-538 (consolidated with G-7453), L. L. Gage and Minnie Gage on February 17, 1964, in Docket No. CI64-727, and Keith F. Walker on February 21, 1962, in Docket No. CI61-1239 (consolidated with Docket No. CI60-193), are terminated, effective on the date of issuance of this order.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

SOUTHERN NATURAL GAS COMPANY, DOCKET NO. CP66-161

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 8, 1966)

On November 23, 1965, Southern Natural Gas Company (Applicant) filed in Docket No. CP66-161 an application and supplement thereto on January 3, 1966, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the continued operation of approximately 10 miles of 6-inch pipeline, certain line taps and metering facilities for the delivery in interstate commerce of natural gas transported to serve purchasers who use the gas in the operation of oil and gas leases, all as more fully set forth in the application and supplement thereto. Applicant states that it inadvertently failed to file an application when certain of its facilities were converted from intrastate to interstate operation.

Applicant states that the natural gas requirements of the aforementioned purchasers during the 12 month period which ended August 31, 1965, was 312,585 Mcf.

The transmission line, line taps and metering facilities involved are located in Yazoo, Madison, and Franklin Counties, all in the State of Mississippi. The line taps and metering facilities Applicant proposes to continue to operate are used to serve the following named purchasers at the stated locations: Billy Bridewell, Tinsley Field; Edwards Murray Oil Company, Inc., Tinsley Field; W. L. Ethridge, Sr., Tinsley Field; Humble Oil & Refining Company, Madison Co., Miss.; Hassie Hunt Trust, Tinsley Field; Jones-O'Brien, Inc., Tinsley Field; Kingwood Oil Company, Tinsley Field; Mobil Oil Company, Tinsley Field; John W. McGowan, Madison Co., Miss.; John W. McGowan, Franklin Co., Miss.; Sinclair Oil & Gas Company, Tinsley Field; Sohio Petroleum Company, Tinsley Field; Tinsley Well Service, Inc., Tinsley Field. The aggregate cost of such facilities when constructed between 1942 and 1962 was $8,739.03. No new construction is proposed by the instant application.

After due notice no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on March 3, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorizations sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, Southern Natural Gas Company, a Delaware corporation, having its principal place of business in Birmingham, Alabama, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 6, 1942, in Docket No. G–296 (3 FPC 822).

(2) The proposed continued operation of facilities and the transportation of natural gas in interstate commerce, as hereinbefore described and as more fully described in the application and exhibits filed in this proceeding are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed continued operation of facilities and the transportation of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, Southern Natural Gas Company, in this proceeding authorizing the continued operation of facilities, and the transportation of natural gas in interstate commerce, as hereinbefore described, all as more fully described in the application and exhibits filed in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

UNION OIL COMPANY OF CALIFORNIA (OPERATOR), ET AL., DOCKET NO. CI62–1120; THE PURE OIL COMPANY, DOCKET NO. CI65–331

ORDER DENYING SETTLEMENT AND DISMISSING APPLICATION

(Issued March 10, 1966)

On November 24, 1965, Union Oil Company of California (Union) filed a motion for approval of settlement, for issuance of conditioned permanent certificate, and request for expeditious determination. On January 5, 1966, the

Public Service Commission for the State of New York (New York) filed an objection to the motion for settlement.

In the consolidated proceeding, Union Texas Petroleum, *et al.*, Docket No. G–13221, *et al.*, the Commission considered the question of issuance of certificates to virtually all of the then pending certificate applications in Southern Louisiana. During the pendency of that proceeding a number of applications were severed from the main proceeding and certificates of public convenience and necessity were issued upon proposed settlements. Among the settlements which were approved was that of Union in Docket No. CI62–1120, 29 FPC 1283. The Pure Oil Company (Pure), at that time independent of Union, but since then merged into Union, effective July 16, 1965, objected to the settlement of its 50% interest in acreage in Block 49 field, South Marsh Island area. 29 FPC at 1285.[1] The Commission stated in that order: "Insofar as the * * * Pure interests are concerned, the application remains consolidated for hearing in the Union Texas Petroleum, *et al.*, Docket No. G–13221, *et al.*, proceeding and Union's temporary authorization remains in effect as to * * * Pure's interests." On July 23, 1964 the Commission issued its Opinion and order in Union Texas Petroleum, *et al.*, 32 FPC 254. While noting that the Union Docket No. CI62–1120 had been severed for settlement (*Ibid.* at 276), the Commission inadvertently failed to state that the Pure interest, theretofore represented by Union in Docket No. CI62–1120 remained consolidated with the remaining applications in the Union Texas Petroleum proceeding. On September 30, 1964 Pure filed with the Commission in Docket No. CI65–331 an application for a certificate and a related rate schedule covering the *same* 50% interest in Block 49, proposing therein an initial price of 19.5¢. The application was accepted erroneously in view of the fact that it was filed with regard to a matter which had already been determined by the Commission in the *Union Texas Petroleum* order.

Union and Transcontinental Gas Pipe Line Corporation (Transco) on November 11, 1965, entered an agreement purporting to settle the terms of the theretofore unsettled (but certificated, as noted above) Pure interest in Block 49, by which the same terms applicable to Union's settlement would be made applicable to this interest. New York objects on the ground that the Commission has already issued a certificate for the acreage here involved at 18.5¢ per Mcf and further because, in any event, the "settlement" price is too high. We agree that it was the intent of the Commission that Pure's interests were encompassed within the decision of the Commission embodied in *Union Texas Petroleum*, Opinion No. 436, *supra*. Through inadvertance it was not listed among those dockets for which certificates were issued. Nonetheless, the language in the Union settlement order makes it abundantly clear that the Commission considered that the Pure interests in that Docket, CI62–1120, were to remain consolidated with the Union Texas Petroleum proceeding. When the decision was issued in that proceeding it was intended that it be effective against all of the pending applications. The subsequent application by Pure in Docket No. CI65–331 was erroneous and should have been rejected; it will now be dismissed. Since we consider that the certificate to Pure was issued in Docket No. CI62–1120 as a result of our order in Union Texas Petroleum, *et al.*, Opinion No. 436, 32 FPC 254, any further settlement proceedings would be inappropriate.[2] Accordingly, we shall deny the settlement.

---

[1] Pan American Petroleum Corporation also objected to the settlement of its interest at the time. It subsequently settled its interest in Docket No. CI62–1120, prior to the issuance of the Commission's decision in the consolidated proceeding. 30 FPC 1324.

[2] In view of the objection entered by New York, we would not now grant the settlement in any event.

The Commission orders:

(A) The Motion for Approval of Settlement for Issuance of Conditioned Permanent Certificate filed by Union Oil Company of California in Docket No. CI62-1120 is denied.

(B) The Application submitted by The Pure Oil Company[3] in Docket No. CI65-331 is dismissed.

(C) Union Oil Company of California shall make all filings required by our rules and our order in Union Texas Petroleum, *et al.*, Docket No. G-13221, *et al.*, Opinion Nos. 436 and 436-A, 32 FPC 254, 952, including the filing of a supplement to its Rate Schedule No. 63 to reflect an 18.5¢ rate for deliveries from Pure's former interest.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.,
PROJECT NO. 2338

ORDER DENYING MOTION FOR THE PRODUCTION OF MEMBERSHIP LISTS AND FOR EXTENSION OF TIME TO ANSWER PETITIONS TO INTERVENE

(Issued March 11, 1966)

On March 1, 1966 Consolidated Edison Company of New York, Inc., the Applicant for a license for a proposed pumped storage hydroelectric project along the Hudson River at Cornwall, New York (Project No. 2338), filed a motion for a list of the names of the officers and members of the several additional membership corporations, unincorporated associations, and organizations seeking to intervene in this proceeding, and for an extension of time for the parties to the proceeding to object to all such petitions to intervene.

The principal points made by the applicant in support of his motion are: (1) that there are presently 17 parties to the proceeding exclusive of the Applicant and the Commission staff; (2) as of February 28, 1966, the Applicant had received 27 additional petitions to intervene and that several more are anticipated by March 15, 1966 when the time to file additional petitions terminates; (3) that many of the new petitions are substantially the same as those of present interveners to the proceeding; (4) that few of the petitioners now seeking intervention have offered any specific evidence of any nature but simply state a position for or against the proposed project; (5) the issues in this proceeding are important and complex requiring expert analysis and consideration by highly qualified technical and scientific consultants; and (6) that the proceedings are threatened with obscurity by extraneous rhetoric and that some practical limits must be placed upon additional intervention.

In answer to the motion, Scenic Hudson Preservation Conference, Intervener, recognizes that there is a common concern among many interveners and those seeking intervention. Scenic Hudson points out that, if it should prove desirable, in the interest of expedition of the proceedings the Trial Examiner may take appropriate action to limit the number of attorneys entitled to argue objections and cross-examine witnesses.

The Applicant and other parties will have opportunity during the hearing to object to unduly repetitious and to incompetent testimony in the event such testimony is presented. Thus, the proceedings need not be unduly prolonged and the issues need not be obscured by permitting additional interventions even though some of them may have common interests in supporting or opposing the project. We believe, however, the public interest does not require that Petitioners produce the names of their individual members and that such action would only add a further unnecessary complication to the proceeding. Nor is there any need for enlarging the period for answering petitions to intervene.

---

[3] Union Oil Company of California, by merger having acquired Pure, is the responsible party in that application.

The Commission finds:

Good cause has not been shown for the production of membership lists or for granting additional time to answer petitions to intervene.

The Commission orders:

The aforesaid motion for production of membership lists and for extension of time to answer petitions to intervene, is denied.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

ST. CROIX PAPER COMPANY, PROJECT NO. 2492

ORDER DENYING APPLICATION FOR REHEARING

(Issued March 11, 1966)

On January 14, 1966 a "Petition for Reconsideration and Rehearing" was filed by Phillip J. Hennessey III (Petitioner), pursuant to Section 1.34 of the Commission's Rules of Practice and Procedure, for himself and 137 other individuals similarly situated, with respect to an order of the Commission, issued December 17, 1965, 34 FPC 1482, denying their petition to intervene which was filed on February 24, 1965 in the above-entitled proceeding upon an application for license by the St. Croix Paper Company (Applicant) for Project No. 2492. Applicant filed a reply to Petitioner's application for rehearing on January 24, 1966. The Commission granted rehearing for further consideration in an order issued February 8, 1966, 35 FPC 207.

Petitioner contending that intervention in the instant proceeding is essential to the full preservation of the rights and interests of landowners and residents in the area and that he and those whom he represents are entitled to be represented at a hearing upon Applicant's application, reiterates the allegations made in his petition of intervention that the maximum and minimum water levels of Spednik Lake proposed by the Applicant have not been shown to be reasonable. Petitioner avers that the Commission in its order of December 17, 1965 did not make reference to a minimum water level for Spednik Lake. It should be noted that the Commission merely referred to the maximum elevation of Spednik Lake as being among things which were prescribed in the International Joint Commission (IJC) order of October 15, 1965. The IJC order itself, however, does prescribe minimum levels for Spednik Lake.

Petitioner objects to the disparity between the minimum discharge of 200 cfs from Spednik Lake and 75 cfs from East Grand Lake provided in the order of the International Joint Commission, issued October 15, 1965, and offers to submit evidence on the affect of the Applicant's past operation of the dams at Vanceboro (Project No. 2492) and Forest City upon navigation on Spednik and East Grand Lakes.

In addition, Petitioner states that a hearing should be ordered to assess the impact of Applicant's expansion of its pulp and paper plant at Woodland, Maine as well as its construction of new fishways at Woodland and Grand Falls upon its application for license herein.

Petitioner contends that the action of the IJC in this case prescribing maximum and minimum water levels and minimum discharges at Spednik and East Grand Lakes does not constitute an adjudication of his rights before the Federal Power Commission and in effect seeks review of the terms of the IJC order before this Commission. Although we indicated, in our order of December 17, 1965 denying petitioner's intervention, that the operating levels of Lake Spednik are subject to the jurisdiction of the International Joint Commission, it is necessary to elaborate upon our reasoning since it has been again questioned by the petitioner.

The Boundary Waters Treaty of 1909 created the International Joint Commission, with representatives of the United States and Canada, having authority to "pass upon" all "uses or obstructions or diversions * * * of boundary waters." (Articles III, VIII of the Treaty.)

The protection of all interests affected and control of water levels in international boundary waters is expressly committed to the International Joint Commission by the Treaty. Article VIII of the Treaty provides in part as follows:

> The Commission in its discretion may make its approval in any case conditional upon the construction of remedial or protective works to compensate so far as possible for the particular use or diversion proposed, and in such cases may require that suitable and adequate provision, approved by the Commission, be made for the protection and indemnity against injury of any interests on either side of the boundary.
>
> *In cases involving the elevation of the natural level of waters on either side of the line as a result of the construction or maintenance on the other side of remedial or protective works or dams or other obstructions in boundary waters* or in waters flowing therefrom or in waters below the boundary in rivers flowing across the boundary, *the Commission shall require, as a condition of its approval thereof, that suitable and adequate provision, approved by it, be made for the protection and indemnity of all interests on the other side of the line which may be injured thereby.* [Emphasis added.]

The Federal Power Commission, though having jurisdiction under Section 4(e) of the Federal Power Act (49 Stat. 839, 16 USCA 797(e)) to issue a license for power facilities on the U.S. side of the International Boundary Line, is not empowered by that Act or any other legislation, to pass upon questions pertaining to the natural levels or flow of boundary waters. By the terms of the Boundary Waters Treaty of 1909, jurisdiction over such matters is placed exclusively in the International Joint Commission. The determination of such water levels is peculiarly appropriate for consideration by an international agency.

The provisions of the Federal Power Act affect in no degree the jurisdiction of the International Joint Commission, but under the Federal Power Act the Power Commission becomes the agency of the United States with authority to grant permits or licenses in accordance with which applicants may construct, maintain, and operate on the American side of the International Boundary such projects as may have received the prior approval of the International Joint Commission. (See First Annual Report of the Federal Power Commission at page 50.)

The International Joint Commission has undertaken to perform the functions committed to it by the Treaty. In its Order of Approval dated October 15, 1965, it has established the levels for Lake Spednik and East Grand Lake after a hearing in which all interested persons were afforded an opportunity to present evidence and to be heard on matters relating to the water levels and flow of boundary waters. While Petitioner states that he was not present at the IJC hearing, it appears that several of the persons he represents were present and Petitioner does not allege that he was denied an opportunity to appear in that proceeding. The IJC has not only provided for the regulation of water levels in its order, it has also reserved jurisdiction to supervise the matter through its Board of Control and to change requirements if the circumstances indicate the necessity. This Commission, accordingly, would not prescribe minimum or maximum levels and a minimum discharge for Spednik Lake which are inconsistent with those provided in the order of the IJC.

The additional matters raised by the Petitioner for the first time in his application for rehearing, relate to Applicant's expansion of its Woodland pulp and paper plant and construction of new fishways at its Woodland and Grand Falls Dams which are not involved in this proceeding on the license application for the upstream Vanceboro Dam.

We conclude that intervention by Petitioner and those whom he represents has not been shown to be necessary or appropriate in carrying out the provisions of the Federal Power Act.

The Commission finds:

Upon further consideration pursuant to the order issued February 8, 1966, it is appropriate and in the public interest in administering Part I of the Federal Power Act (16 U.S.C. 791a–825r), that Petitioner's application, filed January 14, 1966, for rehearing on the order issued December 17, 1965 denying intervention in the proceeding upon the license application for Project No. 2492, be denied.

The Commission orders:

The aforesaid application for rehearing of the Commission's order denying intervention, issued December 17, 1965, is denied.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

AREA RATE PROCEEDING, ET AL. (TEXAS GULF COAST AREA), DOCKET NO. AR64-2, ET AL.

ORDER DENYING MOTION FOR RECONSIDERATION

(Issued March 14, 1966)

On February 18, 1966, Hunt Oil Company, *et al.*,[1] filed a document designated a "Petition for Rehearing" of the Commission's order of January 24, 1966, 35 FPC 128, rejecting Hunt's appeal from a ruling of the presiding examiner which had refused to require the filing of certain data in these proceedings. The appeal was rejected because it set forth no facts which constituted extraordinary circumstances justifying consideration of the appeal.

---

[1] Hassie Hunt Trust, Lamar Hunt, N. B. Hunt, William Herbert Hunt Trust Estate, Lamar Hunt Trust Estate, H. L. Hunt, Caroline Hunt Sands, Caroline Hunt Trust Estate, A. G. Hill, N. B. Hunt Trust Estate, W. H. Hunt, Hidalgo Gas Production Corporation and Placid Oil Company.

An interlocutory order of this nature is not subject to an application for rehearing and we shall treat it as a motion for reconsideration under Section 1.12 of the Commission's Rules of Practice and Procedure. So considered, it sets forth no facts which would justify further consideration of the appeal.

The Commission orders:

The motion for reconsideration filed by Hunt on February 18, 1966, is denied.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

GULF OIL CORPORATION, DOCKET NOS. RI63-265, RI64-83 AND RI64-176

ORDER DENYING PETITIONS TO WITHDRAW INCREASED RATE FILINGS

(Issued March 14, 1966)

On January 6, 1966, Gulf Oil Corporation (Gulf) filed petitions in the above-entitled proceedings seeking to withdraw its increased rate filings[1] in excess of the 16 cents per Mcf permanently certificated rates under its FPC Gas Rate Schedule Nos. 138, 193, 194, 197, 213 and 215 for its jurisdictional sales of natural gas in the Permian Basin Area of Texas and New Mexico. All of the sales involved are to Transwestern Pipeline Company, except Gulf's sale under its FPC Gas Rate Schedule No. 138 to West Texas Gathering Company.

In its petitions, Gulf proposes, upon being permitted to withdraw said filings, to refund with interest all of the amount of increase collected thereunder; and requests that the aforementioned docketed proceedings be severed from the "Show Cause" proceedings in Docket No. AR61-1, *et al.*, instituted by order issued therein on August 5, 1965, 34 FPC 424, and that Docket Nos. RI63-265, RI64-83 and RI64-176 be terminated insofar as they relate to the withdrawn filings. Gulf states that the intent and purpose of the petitions is to place Gulf and its purchasers in the same position they would have been in had the increased rates involved never have been filed and placed into effect.

An answer in opposition to Gulf's petition to withdraw its increased rate filing in Docket No. RI64-176 was filed by telegram on February 6, 1966 by The People of the State of California and the Public Utilities Commission of the State of California (California Commission). In its answer, the California Commission states:

> * * * Petitioner Gulf seeks to re-establish an unjust and unreasonable rate. It is obvious that by this petition, as well as by its similar petition in Docket No. RI64-83, Gulf is attempting to avoid the effect of Opinions 468 and 468-A, and thereby retain the benefits of higher rates than those

---

[1] Gulf proposes to withdraw its increase in rates from 16 cents to 17 cents per Mcf under its Rate Schedule No. 138, which is involved in Docket No. RI63-265, and under its Rate Schedule Nos. 193, 194 and 197, which are involved in Docket No. RI64-173; and also to withdraw its increase in rates from 16 cents to 16.077 cents under its Rate Schedule Nos. 213 and 215 which are involved in Docket No. RI64-83. The former increased rate group represent 1.0 cent per Mcf periodic increases, and the latter reflect reimbursement for the 0.55 cents per Mcf New Mexico Emergency School Tax increase of April 1, 1963. All of the increased rates involved are being collected subject to refund in the respective docketed proceedings.

> prescribed for all dockets in the Permian Basin area rate proceeding, Docket No. AR61-1. Granting these petitions would thwar(t) the purpose of area rate making. * * *

The subject Section 4(e) proceedings under the Natural Gas Act were not consolidated in the Permian Basin Area Proceeding, Docket No. AR61-1, *et al.*, but were therefore included in the aforementioned "Show Cause" proceeding to afford Gulf, and the other respondents, the hearing to which they are entitled for the purpose, among other things of determining the refund obligations under their formerly non-consolidated Section 4(e) proceedings. The California Commission's objection appears to be directed to the question of whether or not the Commission has authority to require refunds in a Section 4(e) proceeding below the last unsuspended rate. It is apparently the California Commission's position that during the refund period, Gulf should make refunds to a rate level of 14.5 cents per Mcf, or other quality adjusted rate, for the Texas sales and 13.5 cents per Mcf, plus applicable state and local production taxes, for the New Mexico sales, even though Gulf's last clean rate for these sales is 16 cents per Mcf.

While certain parties briefed this issue in the Permian Basin Area rate proceeding, it was not decided in Opinion No. 468-A, (34 FPC 1068 at 1075) since it was not clear that the issue was raised as a result of that order, and we indicated that a decision thereon would be reached "* * * when and if it is established that any refunds below the last clean rate are required". We do not deem it appropriate to rule on this question in the context of petitions to withdraw increased rate filings and we shall deny the petitions as filed. However, if Gulf so desires, we shall permit withdrawal of the increased rate filing and refund of the amount of the increase but will not terminate the proceeding so that the question of further refunds may be determined upon consideration of the problem in the Permian Basin area generally.

The Commission orders:

For the foregoing reasons, Gulf's petitions filed January 6, 1966 in Docket Nos. RI63-265, RI64-83 and RI64-176 are denied.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

MICHIGAN WISCONSIN PIPE LINE COMPANY, DOCKET NO. CP65-190

ORDER AMENDING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND ACCEPTING SUPERSEDING SERVICE AGREEMENT FOR FILING

(Issued March 14, 1966)

On January 12, 1966, Michigan Wisconsin Pipe Line Company (Applicant) filed in Docket No. CP65-190 an application to amend the certificate of public convenience and necessity issued in said docket on March 30, 1965, 33 FPC 655, by authorizing an increase in the Maximum Daily Quantity (MDQ) of natural gas to be delivered by Applicant to Ohio Valley Gas Corporation (Ohio Valley) from 6,000 Mcf per day to 6,750 Mcf per day, as more fully set forth in the application to amend.

Applicant states that Ohio Valley was a customer of American Louisiana Pipe Line Company (American Louisiana) prior to the merger of American Louisiana into Applicant on January 1, 1966, and had contracted to purchase the maximum contract demand available to it under the American Louisiana tariff, which was 6,000 Mcf per day.

Applicant further states that following approval of the merger on December 23, 1965, and the availability of increased contract demand service under Applicant's Rate Schedule ACQ-1, Ohio Valley reviewed its market requirements and concluded that it requires an additional 750 Mcf per day in order to provide for additional requirements resulting from the attachment of more residential and commercial heating customers than anticipated, as well as an increased firm industrial use.

Applicant has concurrently submitted for filing the new service agreement between it and Ohio Valley, with a request that the said agreement become effective January 1, 1966, and a waiver of the Commission's Rules and Regulations as to notice so as to permit the service agreement to become effective as proposed.

Due notice of the filing of the petition to amend was published in the Federal Register on January 22, 1966 (31 F.R. 922). No protest, petition to intervene, or notice of intervention has been filed in this proceeding.

The Commission finds:

(1) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the certificate of public convenience and necessity issued in Docket No. CP65-190 on March 30, 1965, be amended as hereinafter ordered.

(2) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that the superseding service agreement between Applicant and Ohio Valley Gas Corporation dated January 1, 1966, be accepted for filing and made effective as of the date of this order.

The Commission orders:

(A) The certificate of public convenience and necessity issued to Michigan Wisconsin Pipe Line Company in Docket No. CP65-190 on March 30, 1965, is amended by authorizing the sale and delivery by Applicant to Ohio Valley Gas Corporation of an additional MDQ of natural gas of 750 Mcf, as hereinbefore described and as more fully described in the application to amend.

(B) The superseding service agreement between Applicant and Ohio Valley Gas Corporation dated January 1, 1966, is accepted for filing and made effective as of the date of this order.

(C) In all other respects the certificate of public convenience and necessity shall remain in full force and effect.

(D) Applicant's request for waiver of notice requirements of Section 154.22 of the Commission's Regulations is denied.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. CP66-50

ORDER DENYING REHEARING

(Issued March 14, 1966)

On February 25, 1966, Panhandle Eastern Pipe Line Company filed an Application for rehearing of the Commission's order of January 28, 1966, 35 FPC 164, granting City of Fulton, Missouri intervention in Docket No. CP66-50, a proposed direct sale by Panhandle to H. K. Porter Co. brick plant.

Of all nine grounds set out by Panhandle, only Nos. 7 and 8 differ from prior assertions of Panhandle or are material and they jointly present a single question: Has the City of Fulton complied with part 156 of the Regulations by filing a "7(a) application".

In the Panhandle-City of Fulton case, the City is competing with Panhandle for the right to make an industrial sale to H. K. Porter Co. While Fulton's application, technically does not comply with the Commission's Regulations, all data called for in part 156 of the Regulations are being supplied by Fulton in the formal hearing. In this case, City of Fulton has the burden of proof and no undue burden is being shifted to Panhandle. If at the conclusion of the hearing, Fulton has not met its burden, Panhandle may move to dismiss the application. Substantive arguments can be prosecuted in the hearing now in progress.

The Commission orders:

The petition for rehearing of the Commission's order of January 28, 1966, granting City of Fulton's intervention is denied.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

POTOMAC LIGHT AND POWER COMPANY, PROJECT NO. 2515

ORDER ISSUING LICENSE (MINOR)

(Issued March 14, 1966)

Application was filed on April 14, 1965 by Potomac Light and Power Company (Applicant) of Martinsburg, West Virginia, for a minor license under Section 4(e) of the Federal Power Act (Act) for constructed Project No. 2515, known as Harpers Ferry Hydro Station, located on the Potomac River at river mile 173, in Jefferson County, West Virginia, and Washington County, Maryland. No lands of the United States are affected by the project.

According to the application, the project has been completed and in service since 1912, and it appears that no substantial alterations have been made to the project. Applicant owns the dam and other project works located on the Potomac River between the States of West Virginia and Maryland.

From its mouth in the Chesapeake Bay, to its forks opposite Haines Point, at Washington, the Potomac River has an available channel depth of 24 feet throughout, although in many places much greater depths occur ranging up to 100 feet. At Haines Point the channel depth changes to 20 feet and continues to this depth to Key Bridge, at Georgetown, D.C. Near its mouth the Potomac averages about 6.5 miles in width, decreasing to about 1,200 feet at Key Bridge.

According to available historical documents, the use of artificial works to improve navigation on the upper Potomac dates back to the earliest attempts to promote trade between the City of Washington and the rapidly growing frontier towns lying to the west of the mountains. The first scheme of improvement was carried out by the Potowmack Co., organized in 1785, under the leadership of George Washington, its first president. The project adopted provided for the use of the main stream for the most part and lateral lock canals at Little and Great Falls. Work under the project progressed slowly and the waterway was not opened to through navigation until 1802. By means of the work constructed, continuous navigation was made possible between Washington and Cumberland, Maryland, at mile 307 on the North Branch of the Potomac River. The commerce carried to 1817 is given as 106,834 tons, employing 9,944 boats. The value of this tonnage is given as more than seven million dollars. The present canal, known as the Chesapeake and Ohio Canal, a lateral lock canal following the Maryland shore of the Potomac River from Washington, D.C., to Cumberland, was completed in 1850 at a cost of over eleven million dollars. Six dams at various points on the Potomac once served to supply different levels of the canal with water. Until the end of the last century, the canal was of considerable commercial importance, the principal commodity carried being coal. The best year was 1875 when nearly one million tons were carried and some 700 boats were in use.

The Secretary of the Army and the Chief of Engineers have reported that a study of the Potomac River and its tributaries was authorized by a Resolution of the Senate Public Works Committee, dated January 26, 1956, which requested a review of a previous report on the Potomac River and Tributaries[1]; a subsequent Resolution by the same Committee, dated July 6, 1959, and other resolutions expanded the scope of the study and while the report on the result of such study has been completed by the District and Division Engineers, the report has not been submitted to Congress. The report, dated February 1963, recommends a comprehensive plan for development of the water resources of the Potomac River Basin for the purposes of flood control, water supply, water quality control, and recreation. The report on the application for license also advised that the plans of the project structures affecting navigation are satisfactory, and no objection to the issuance of a license for the project was offered.

The Department of the Interior, in reporting on the application, advised that the project as presently operated does not adversely affect fish and wildlife and no fishway is needed at this time, but it did recommend for inclusion in any license for the project, two conditions in the interests of fish and wildlife resources as set forth in Article 7 of attached Form L-9 and Article 15.

The Department of Health, Education, and Welfare has recommended that the Potomac River's downstream flow be maintained equal to the river's incoming flow during naturally low stream flow periods to prevent adverse effects on water quality in the river, as provided for in Article 14.

By Article 13 we are requiring Applicant to file Exhibit R in conformance with § 4.41 R of the Commission's Regulations under the Federal Power Act.

In our order on rehearing issued February 17, 1965, in *Wisconsin Power & Light Company, Project No. 2347, et al.* (33 FPC 275) we stated that we would have no objection to the issuance of licenses for minor projects without waiving Sections 14 and 15 of the Federal Power Act and the other provisions of the Act necessary to the effectuation of those sections, provided the minor project applications are timely supplemented pursuant to Section 4.50 of our Regulations under the Act (18 CFR § 4.50), which relates to applications for major projects. In the event the applicant herein wishes a license in which those provisions of the Act are not waived it should so advise us within 30 days from the date of issuance of this order and file its supplemental application within 30 days thereafter.

For the reasons set forth in our April 25, 1962 Opinion No. 357 (27 FPC 830), the license herein granted shall have an effective date of April 1, 1962 and a termination date of December 31, 1993.

---

[1] Published as House Document No. 622, 79th Cong. 2d Session (1946).

The Commission finds:

(1) The Potomac River, from its mouth in the Chesapeake Bay, at least upstream therefrom to Cumberland, Maryland, at mile 307 on its North Branch, is a navigable waterway of the United States.

(2) Harpers Ferry Hydro Station Project No. 2515 is located along navigable waters of the United States.

(3) Applicant is a corporation organized under the laws of the State of West Virginia, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(4) Public notice of the filing of the application has been given. No protests or petitions to intervene have been received. No conflicting application is before the Commission.

(5) The project does not affect a Government dam, nor will the issuance of a license therefor, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

(6) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving or developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes.

(7) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is 1,120 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the project, for the costs of administration of Part I of the Act is reasonable as hereinafter fixed and specified.

(8) It shall be in the public interest to waive pursuant to Section 10(i) of the Act, the terms and conditions contained in the following sections of Part I of the Federal Power Act: Sections 4(b), except the second sentence thereof; 4(e) insofar as it relates to approval of plans by the Chief of Engineers and the Secretary of the Army and to public notice; 6, insofar as it relates to public notice and to the acceptance and expression in the license of terms and conditions of the Act which are hereinafter waived; 10(c), insofar as it relates to depreciation reserves; 10(d), 10(f); 14, except insofar as the power of condemnation is reserved, 15, 19; 20; 22; and 23(a), insofar as it relates to the determination of fair value.

The Commission orders:

(A) This license is hereby issued to Potomac Light and Power Company (Licensee) of Martinsburg, West Virginia, under Sections 4(e) and 10(i) of the Act, for a period effective April 1, 1962, and terminating December 31, 1993, for the continued operation and maintenance of Project No. 2515 located on the Potomac River, a navigable water of the United States, in Jefferson County, West Virginia, and Washington County, Maryland, subject to the terms and conditions of the Federal Power Act insofar as not expressly waived herein, which Act is incorporated by reference as a part of this license and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Harpers Ferry Hydro Station Project No. 2515 consists of:

(i) all lands constituting the project area and enclosed by the project boundary or limits of which are otherwise defined;

(ii) a 1,700-foot concrete capped log-and-stone dam which has an 18-foot maximum height and a 278-foot crest elevation; a 4,500-foot long head race (50–100 feet wide and 15–20 feet deep) formed by the south bank of the Potomac River and a parallel masonry wall which extends downstream from the dam; and a reinforced concrete and brick powerhouse (72 feet x 42 feet in plan) which houses two vertical shaft generators, rated at 240 kw and 600 kw, connected to two vertical shaft water wheels, rated at 330 hp and 900 hp, respectively; and

(iii) all other structures, fixtures, equipment, or facilities used or useful in the maintenance and operation of the project and which are located in the project area, and all rights and interests the possession of which is necessary or appropriate in the maintenance or operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L–9 (July 1, 1964) entitled, "Terms and Conditions of License for Constructed Minor Project Affecting Navigable Waters of the United States", (32 FPC 577), which terms and conditions, designated as Articles 1 through 11, are attached hereto and made a part hereof, and subject to the following special conditions which are set forth as additional articles:

Article 12. The Licensee shall pay to the United States the following annual charge, effective April 1, 1962: For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, $56.00 per annum.

Article 13. The Licensee shall, within one year from the date of issuance of this license, submit for Commission approval an Exhibit R for this project which conforms to § 4.41 R of the Commission's Regulations under the Federal Power Act.

Article 14. In the interest of water quality controls the Licensee shall, during periods of low flow in the Potomac River, utilize through its plant turbines all water which is made available to it, thus maintaining an outflow equal to the incoming flow at the project.

Article 15. The Licensee shall, for the conservation and development of fish, wildlife, and recreation resources, construct, maintain, and operate, or arrange for the construction, maintenance, and operation of such facilities and comply with such reasonable modifications of the project structures and operation as may be ordered by the Commission upon its own motion or upon the recommendation of the Secretary of the Interior, the Maryland Department of Game and Inland Fish or West Virginia Department of Natural Resources, after notice and opportunity for hearing and upon a finding based on substantial evidence that such facilities and modifications are necessary and desirable, reasonably consistent with the primary purpose of the project, and consistent with the provisions of the Act.

(D) The terms and conditions of the Act, which it has been found to be in the public interest to waive, are hereby excluded from this license.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

SOUTH GEORGIA NATURAL GAS COMPANY, DOCKET NO. CP65-392

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 14, 1966)

On December 22, 1965, South Georgia Natural Gas Company (Applicant) filed in Docket No. CP65-392 an application to amend the order of the Commission issued in said docket July 27, 1965, 34 FPC 122, by requesting authorization to construct and operate 30.52 miles of 6-inch pipeline from South Georgia's 10-inch line, to the Occidental Corporation of Florida (Occidental) in lieu of the 13.0 miles of 4-inch and 13.6 miles of 6-inch pipeline presently authorized for construction and operation between the same points and to provide two delivery points for Occidental in lieu of the one presently authorized. Applicant also requests that the time within which the facilities are to be constructed and placed in actual operation as set forth in the aforementioned order of the Commission issued on July 27, 1965, be extended from eight months to twelve months from the date of said order. The proposals involved are more fully set forth in the application.

Occidental is expanding its chemical plant for the production of phosphates, phosphoric acid and sulphuric acid. To meet the fuel needs of the expanded plant, it has contracted with Applicant for *all available gas up to 4,125 Mcf per day*. Deliveries will be on *an interruptible basis*. Term of the contract is 10 years. South Georgia estimates that the deliveries will be approximately 1,095,760 Mcf annually.

Applicant states that Occidental's beneficiation plant proposed to be served by the aforementioned certificated 6-inch and 4-inch pipeline has been constructed and is now in operation and that Occidental is now in the process of constructing additional units approximately 3,000 feet west of the existing plant. Because of the location of the additional units, the proposed location of Applicant's 6-inch transmission line, and the mining operations in the area, the most practical method of making gas deliveries to the additional units is by a second delivery point, approximately 3,000 feet upstream from the originally authorized delivery point, on Applicant's proposed 6-inch pipeline.

Applicant now estimates the total cost of its proposed facilities to be $625,000, an increase of $79,000 over the $546,000 originally estimated for the facilities presently authorized.

Due notice of the subject application to amend has been given by publication in the Federal Register on January 8, 1966 (31 F.R. 279). No protest, petition to intervene, or notice of intervention has been filed herein.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued July 27, 1965, be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued July 27, 1965, in Docket No. CP65-392 is amended so as to authorize Applicant to construct and operate 30.52 miles of 6-inch pipeline from South Georgia's 10-inch pipeline to the Occidental Corporation of Florida (Occidental) in lieu of the 13.0 miles of 4-inch and 13.6 miles of 6-inch pipeline presently authorized for construction and operation between the same points, and to provide for two delivery points for Occidental in lieu of the one presently authorized; said order is further amended so as to extend the time for completion and commencement of operation of said facilities to August 1, 1966.

(B) Applicant shall not deliver to Occidental more than 4,125 Mcf of natural gas per day on an interruptible basis.

(C) In all other respects said order shall remain in full force and effect.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

SOUTHERN NATURAL GAS COMPANY, DOCKET NO. G-14587

ORDER FURTHER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 14, 1966)

On December 22, 1965, Southern Natural Gas Company (Applicant) filed in Docket No. G-14587 a petition to amend the order of the Commission issued in said docket August 7, 1959, 22 FPC 211, as amended by orders issued January 25, 1962, 27 FPC 176 and July 1, 1964, 32 FPC 4, in said docket by requesting authorization for the transportation and delivery of up to 2,900 Mcf of natural gas per day to Hunt Oil Company (Hunt) at Hunt's refinery in Tuscaloosa, Alabama, in lieu of the 1,800 Mcf presently authorized, all as more fully set forth in the application to amend.

The application states that Hunt has advised Applicant that due to the expanded capacity of its refinery, Hunt's natural gas requirements have increased from a maximum of approximately 1,800 Mcf of gas per day to a maximum of approximately 2,900 Mcf per day. The application further states that Applicant and Hunt have entered into an amendatory agreement, dated November 10, 1965, providing, subject to appropriate authorization by the Commission, for delivery of the increased quantities of interruptible gas specified above.

Due notice of the subject application to amend and opportunity for hearing has been given by publication in the Federal Register on January 8, 1966 (31 F.R. 279). No protest or petition to intervene has been filed concerning this amendment.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued August 7, 1959, in Docket No. G-14587 be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued August 7, 1959, is further amended so as to authorize Applicant to transport and deliver up to 2,900 Mcf of natural gas daily on a preferred interruptible basis to Hunt Oil Company's refinery in Tuscaloosa, Alabama, in lieu of the 1,800 Mcf of proferred interruptible natural gas presently authorized.

(B) The certificate issued is granted on the express condition that the interruptible service authorized herein shall be curtailed or interrupted to the extent required to meet existing or future contract maximum obligations of Applicant for firm service to its customers.

(C) In all other respects said order shall remain in full force and effect.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

SOUTHERN NATURAL GAS COMPANY, DOCKET NO. CP66–155

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued March 14, 1966)

On November 16, 1965, Southern Natural Gas Company (Applicant) filed in Docket No. CP66–155 an application, as supplemented on December 13, 1965, pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon 4.7 miles of 4½-inch natural gas pipeline and related metering and regulating facilities which comprise its Spaulding Branch Line, as more fully set forth in the application.

The Spaulding Branch Line was certificated in the Commission's order issued on September 15, 1944, in Docket No. G–552, 4 FPC 717, to serve the Sintering Plant of Republic Steel Corporation (Republic) near Birmingham in Jefferson County, Alabama.

Republic has discontinued its sintering operation and the last gas purchase from Applicant was made on May 8, 1964. Republic has informed Applicant that it has no present intention of resuming purchases of gas. Applicant cancelled the gas purchase contract effective July 31, 1965. Republic was the only customer served from the facilities to be abandoned.

Applicant proposes to abandon the pipeline in place and to salvage the metering and regulating facilities.

Due notice of the filing of the application was published in the Federal Register on December 3, 1965 (30 F.R. 15002). No protest, petition to intervene or notice of intervention has been filed in this proceeding.

At a hearing held on March 10, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Southern Natural Gas Company, a Delaware corporation with its principal place of business in Birmingham, Alabama, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued October 6, 1942, in Docket No. G–296 (3 FPC 822).

(2) The facilities to be abandoned, as hereinbefore described and as more fully described in the application in this proceeding, are subject to the jurisdiction of the Commission and abandonment of such facilities by Applicant is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The abandonment hereinbefore described, as more fully described in the application in this proceeding, is permitted by the public convenience and necessity and an order approving same should be issued as hereinafter ordered.

The Commission orders:

(A) Permission for and approval of the abandonment by Southern Natural Gas Company of the facilities hereinbefore described, and more fully described in the application in this proceeding, are granted.

(B) Applicant shall advise the Commission of the date of abandonment of the facilities within 10 days thereafter.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

T. L. JAMES & COMPANY, INC., ET AL., DOCKET NO. G-16492, ET AL.; AUSTRAL OIL COMPANY INCORPORATED, DOCKET NO. G-20289; NICKLOS OIL & GAS COMPANY (OPERATOR), ET AL., DOCKET NO. G-20290

ORDER APPROVING OFFER OF SETTLEMENT, SEVERING AND TERMINATING PROCEEDINGS AND PRESCRIBING REFUNDS

(Issued March 14, 1966)

Austral Oil Company Incorporated (Austral) and Nicklos Oil & Gas Company (Operator), *et al.* (Nicklos) in Docket Nos. G-20289 and G-20290, respectively,[1] on February 7, 1966, jointly filed an offer of settlement to resolve the conflicting interpretations of the tax reimbursement provisions in their rate schedules for jurisdictional sales of natural gas to Trunkline Gas Company (Trunkline) in Louisiana. In summary respondents propose (Austral under its FPC Gas Rate Schedule No. 13 and Nicklos under its FPC Gas Rate Schedule No. 2):

(1) A settlement tax reimbursement rate of 1.80 cents per Mcf, in lieu of 2.05 cents per Mcf, as the applicable Louisiana gas severance reimbursement for the subject sales;

(2) Agree to refund to Trunkline, with interest at six percent per annum, 0.15 cents per Mcf tax reimbursement for all gas previously delivered under said rate schedules for which Trunkline has paid tax reimbursement at the rate of 2.05 cents per Mcf. As a part of their settlement proposal, respondent Austral further agrees to move to dismiss its pending suit for declaratory judgment in the State of Louisiana; and

(3) Further agree to pay over to Trunkline, as soon as such amount can be determined, an additional amount equal to the difference between tax reimbursement at 1.80¢ per Mcf on gas delivered after approval of this settlement proposal and such lower tax reimbursement, if any, as is provided by any general rate settlement into which Austral or Nicklos enters or as is allowed by the Commission's final order in South Louisiana Area Rate Proceedings, Docket No. AR61-2, *et al.*, whichever shall first occur.

Respondents' offer of settlement is similar to Pan American Petroleum Corporation's offer of settlement with Trunkline which we accepted by order issued

---

[1] Referred to jointly as respondents.

December 30, 1965 in Docket No. G–16492, *et al.*, 34 FPC 1612. No objection has been filed by interveners or other interested parties, and Trunkline has concurred in the settlement proposal.

We believe these proposals are consistent with the public interest and the provisions of the Natural Gas Act, and consequently shall approve the same. For the reasons set forth in the *Humble* order issued July 8, 1964, in Docket No. G–9287, *et al.*, 32 FPC 49, we will require Respondents to retain the refunds involved here.

Our action herein should not be construed as constituting approval of any future rate increases, if any, that may be filed under the subject rate schedules, and is without prejudice to any findings or order of the Commission in future proceedings, including area rate or similar proceedings, involving Respondents' rates and rate schedules, their successors or assignees.

The Commission finds:

The proposed settlements of the subject proceedings on the bases described herein, as more fully set forth in the settlement proposal filed by Respondents as set forth above, are in the public interest and it is appropriate in carrying out the provisions of the Natural Gas Act that they be approved and made effective as hereinafter ordered, and good cause exists for approving these settlements, for severing proceedings, for terminating Docket Nos. G–20289 and G–20290, and for providing for refunds.

The Commission orders:

(A) The offer of settlement filed with the Commission on February 7, 1966, by Respondents in Docket Nos. G–20289 and G–20290 is approved in accordance with provisions of this order.

(B) Respondents shall file, within 90 days from the date of issuance of this order, notices of change in rates under their applicable FPC Gas Rate Schedules to reflect the settlement rates applicable to severance tax reimbursement. The notices of change shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(C) Respondents shall compute the amount of refund payable, together with interest at 6% per annum to the date of issuance of this order, for a 0.15¢ per Mcf tax reimbursement for all gas previously delivered to Trunkline under Austral's FPC Gas Rate Schedule No. 13 and Nicklos' FPC Gas Rate Schedule No. 2 for which Trunkline has paid tax reimbursement at the rate of 2.05¢ per Mcf; and shall within 45 days from the date of issuance of this order submit a report to the Commission, with a copy to Trunkline, setting out the amount of refund (showing separately the principal and applicable interest), the basis used for such determination, the period covered, and ten days thereafter shall submit to the Commission a copy of a letter from Trunkline agreeing to the correctness of such amounts.

(D) Respondents shall retain these amounts of monies shown in the report required under Ordering Paragraph (C) above, subject to further order of the Commission.

(E) Respondents may deposit the retained refunds in a special escrow account, and shall tender for filing within 60 days of the date of issuance of this order an executed Escrow Agreement, conditioned as set out below, accompanied by a certificate showing service of a copy thereof upon its jurisdictional pipeline customer. Unless notified to the contrary by the Secretary within 30 days from the date of filing thereof, the Escrow Agreement shall be deemed to be satisfactory and to have been accepted for filing. The Escrow Agreement shall be entered into between Respondents and any bank or trust company used as a depositor for funds of the United States Government and the agreement shall be conditioned as follows:

(1) Respondents, the bank or trust company, and the successors and assigns of each, shall be held and formally bound unto the Federal Power Commission for the use and benefit of those entitled thereto, with respect to all amounts and the interest thereon deposited in the special escrow account, subject to such agreement, and such bank or trust company shall be bound to pay over to such person or persons as may be identified and designated by final order of the Commission and in such manner as may be therein specified, all or any portion of such deposits and the interest thereon.

(2) The bank or trust company may invest or reinvest such deposits in any short-term indebtedness of the United States or any agency thereof, or in any form of obligation guaranteed by the United States which is, respectively, payable within 120 days as the said bank or trust company in the exercise of its sound discretion may select.

(3) Such bank or trust company shall be liable for such interest as the invested funds described in Paragraph (2) above will earn and no other interest may be collected from it.

(4) Such bank or trust company shall be entitled to such compensation as is fair, reasonable and customary for its services as such, which compensation shall be paid out of the escrow account to such bank or trust company. Said bank or trust company will likewise be entitled to reimbursement for its reasonable expenses necessarily incurred in the administration of this escrow account, which reimbursement shall be made out of the escrow account.

(5) Such bank or trust company shall report to the Secretary quarterly, certifying the amount deposited in the bank or trust company for the quarterly period.

(F) If Respondent elects to commingle the retained refunds with its general assets and use them for business purposes, it shall notify the Secretary of the Commission of its intention to do so within sixty days of the issuance of this order, and shall pay interest on such monies at the rate of 5% per annum from the date of issuance of this order to the date on which they are paid over to the person or persons ultimately determined to be entitled thereto by final order or orders of the Commission.

(G) Upon notification by the Secretary of the Commission that each of Respondents has complied with the terms and conditions of this order, the Section 4(e) proceeding in Docket Nos. G–20289 and G–20290 shall terminate, and said proceedings shall be severed from consolidated proceedings in Docket No. G–16492, *et al.*

(H) The Secretary of the Commission shall, by separate letter, direct Trunkline to report its plans for distribution of the refunds provided for herein. In the event that Trunkline states that it will flow-through the entire amount of refunds received, the Secretary of the Commission is authorized to release by his letter the refunds plus interest.

(I) The acceptance by the Commission of Respondents offers of settlement is without prejudice to any findings or determinations that may be made in any proceeding now pending, or hereafter instituted by or against Respondents and is without prejudice to claims or contentions which may be made by Respondents, the Commission staff, or any affected party hereto, in any proceeding.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

TRUNKLINE GAS COMPANY, DOCKET NO. CP66-192

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 14, 1966)

On December 15, 1965, Trunkline Gas Company (Applicant) filed in Docket No. CP66-192 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during the calendar year 1966 and the operation of miscellaneous field facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers or other similar sellers thereof, as more fully set forth in the application.

The purpose of this "budget-type" application is to enable Applicant to act with reasonable dispatch in contracting for and connecting to its pipeline system supplies of natural gas in various producing areas generally co-extensive with said system.

The total aggregate cost of such construction, to be financed from funds on hand, will not exceed $2,500,000 and the cost of any single project is to be limited to $500,000.

Due notice of the filing of the application was published in the Federal Register on December 30, 1965 (30 F.R. 16285). No petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on March 10, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Trunkline Gas Company, a Delaware corporation with its principal place of business in Houston, Texas, is a "natural-gas Company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order issued May 4, 1950, in Docket No. G-882 (9 FPC 721).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter a statement in compliance with Section 157.7(b) of the Commission's Regulations under the Natural Gas Act.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the calendar year 1966 and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $2,500,000, with no single project to exceed a cost of $500,000.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity is issued authorizing Applicant, Trunkline Gas Company, to construct during the calendar year 1966 and operate the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, only to take natural gas supplies from producers or other similar sellers thereof who have received authorization from the Commission to sell natural gas to said Applicant.

(B) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with Section 157.7(b) of the Commission's Regulations under the Natural Gas Act.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(D) The authorization granted in paragraph (A) above is limited to construction during the calendar year 1966, and the total expenditures for facilities to be constructed thereunder are limited to a maximum of $2,500,000, with no single project to exceed a cost of $500,000.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP66-147

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 14, 1966)

On November 10, 1965, United Gas Pipe Line Company (Applicant) filed in Docket No. CP66-147 an application, as supplemented on December 13, 1965, and January 27, 1966, pursuant to Section 7(c) of the Natural Gas Act, as implemented by Section 157.7(b) of the Regulations under the Act, for a certificate of public convenience and necessity authorizing the construction during the calendar year 1966 and the operation of certain natural gas facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers thereof, all as more fully set forth in the application.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system new supplies of natural gas in various producing areas generally coextensive with said system.

The total cost of the facilities covered by this application will not exceed a maximum of $4,000,000, with no single project to exceed a cost of $500,000, which costs are proposed to be financed from current working funds.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application, as supplemented, has been filed.

At a hearing held on March 10, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, supplements and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, United Gas Pipe Line Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of January 20, 1942, in Docket No. G-216 (3 FPC 3).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, a statement in compliance with Section 157.7(b)(3) of the Commission's Regulations under the Natural Gas Act.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the calendar year 1966 and the total expenditure for facilities to be constructed thereunder should be limited to a maximum of $4,000,000, with no single project to exceed a cost of $500,000.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity is issued authorizing Applicant, United Gas Pipe Line Company, to construct during the calendar year 1966 the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to said Applicant.

(B) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with Section 157.7(b)(3) of the Commission's Regulations under the Natural Gas Act.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(D) The authorization granted in paragraph (A) above is limited to construction during the calendar year 1966, and the total expenditures for facilities to be constructed thereunder are limited to a maximum of $4,000,000, with no single project to exceed a cost of $500,000.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

ALABAMA POWER COMPANY, PROJECT NO. 82

ORDER DISMISSING APPLICATION FOR REHEARING

(Issued March 15, 1966)

On February 21, 1966, Alabama Power Company (Alabama) filed its application for rehearing and reconsideration of the Commission order of January 20, 1966, 35 FPC 124, which deferred proceedings to determine the amount to be placed in an amortization reserve pursuant to Section 10(d) of the Federal Power Act (Act) until after a rulemaking proceeding with respect to computation of the net investment in the project (as defined in Section 3(13) of the Act) has been completed.

Alabama says this order deprives it of its right to a speedy determination, and casts uncertainty on its accounts and its financial statements, since $399,502.72 may have to be transferred to the amortization fund. Alabama adds that it has spent substantial sums on this proceeding and that it will lose these sums.

It was the Commission's review of matters brought out in the instant proceeding that led to the conclusion that further proceedings under Section 10(d) should be by-passed and that we should proceed directly to a rulemaking proceeding concerned with Section 3(13). The time and energy expended in this proceeding has led to clarification of the procedures to be followed in the future.

As to the death of the two accounting witnesses, Alabama will not be prejudiced if a determination in the present proceeding is postponed until after the rulemaking is concluded, as the testimony will still be available at that time. If some new and different proceeding should be instituted in which this testimony would be relevant, provision may be made for the use of the testimony in the new proceeding.

The Commission finds:

The assignments of error and grounds for rehearing set forth in the application for reconsideration or rehearing filed by Alabama Power Company present no facts or legal principles which would warrant any change or modification in the Commission's order of January 20, 1966.

The Commission orders:

The application of Alabama Power Company for reconsideration or rehearing of the order of January 20, 1966, is hereby dismissed.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

ESTABLISHMENT OF FEES TO BE PAID BY APPLICANTS FOR NATURAL GAS PIPELINE COMPANY CERTIFICATES AND OTHER AUTHORIZATIONS, DOCKET NO. R-282

ORDER NO. 317-A

CLARIFYING PART 159 OF THE REGULATIONS UNDER THE NATURAL GAS ACT

(Issued March 16, 1966) *

On January 5, 1966, the Commission issued Order No. 317, herein, establishing fees to be paid in connection with certain applications filed under the Natural Gas Act (35 FPC 30, 31 F.R. 430). Since that date it has been brought to our attention that several minor revisions would be desirable in the interest of clarity. First, the heading to § 159.1 is changed to make clear our original intention that all applications listed in the section, must be accompanied by the $50 filing fee, irrespective of whether or not they involve the construction, operation or acquisition of facilities and paragraph (d) is clarified. Second, we correct erroneous references to subsection 7(d) of the Act in § 159.1(f) and the first sentence of § 159.2. Third, § 159.2(c) is amended to fix the time for the payment of a fee, if one is required, in connection with an application to amend a pending application involving the construction, operation or acquisition of facilities and paragraph (e) is added to exempt applications involving facilities estimated to cost under $7,000. Fourth, § 159.3(c) is amended to exempt applications for extensions of the time limit in outstanding certificates for completing construction, making reports, etc., from the payment of any fee. Finally, a paragraph (d) is added to § 159.3 making it clear that fees are required in connection with applications for or to amend temporary certificates. Accordingly,

The Commission finds:

(1) In view of the minor clarifying nature of these amendments, compliance with the notice and effective date provisions of section 4 of the Administrative Procedure Act is unnecessary.

(2) The amendments here prescribed are necessary and appropriate for the administration of the Natural Gas Act.

The Commission, acting pursuant to the authority set forth in Order No. 317, previously issued in this proceeding, *orders*:

(A) Effective February 6, 1966, the effective date of Order No. 317, Part 159, Subchapter E, Regulations Under the Natural Gas Act, Chapter I, Title 18 of the Code of Federal Regulations, is amended by amending the heading of § 159.1, both in the list of sections at the head of the part and in the section itself; by amending paragraphs (d) and (f) of § 159.1; by amending the first sentence and paragraph (c) of, and adding a paragraph (e) to, § 159.2; by amending paragraph (c) of, and adding a paragraph (d) to, § 159.3, all to read as follows:

Part 159 * * *

§ 159.1 Filing fee to accompany application.

* * * * * * *

---

* Published in the Federal Register on March 24, 1966 (31 F.R. 4890).

§ 159.1 Filing fee to accompany application.

* * * * * * *

(d) Applications and petitions to intervene in which applicant or petitioner is requesting an order under section 7(a) of the Act.

* * * * * * *

(f) Applications for certificates of public convenience and necessity under sections 7 (c) and (e) of the Act.

* * * * * * *

§ 159.2 Applications involving construction or acquisition of facilities.

In addition to the fees prescribed by § 159.1, and except as provided in paragraph (e) of this section, applicants for a certificate of public convenience and necessity under sections 7(c) and (e) of the Act to construct and operate or acquire and operate facilities shall pay the following fees:

* * * * * * *

(c) If an amendment to a pending application increases the total estimated cost of construction of new facilities or of facilities to be acquired, an additional amount, computed with respect to the increase as provided in paragraph (a) of this section, shall accompany the filing of the amendment.

* * * * * * *

(e) No fee shall be required under this section where the estimated cost of the facilities to be constructed or acquired is less than $7,000.

§ 159.3 Miscellaneous.

* * * * * * *

(c) *Amendments to outstanding certificates.*—Excepting applications for extensions of time for which no fee will be required, applications to amend outstanding certificates, authorizations or orders, which have become final, will be treated as initial applications and the fees prescribed by this part will be charged.

(d) *Temporary certificates.*—Applications for temporary certificates, filed pursuant to § 157.17 of this subchapter, and not a part of an initial certificate application, or to amend outstanding temporary certificates will be treated as amendments to applications for the purposes of this part and a filing fee of $50 will be charged unless the request for temporary authority amends the original application to increase the estimated costs, in which case the provisions of § 159.2(c) will apply.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

THE ATLANTIC REFINING COMPANY, G-11034; CITIES SERVICE OIL COMPANY, G-11046; TIDEWATER OIL COMPANY, G-11049

ORDER AMENDING ORDER ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY AND ACCEPTING SUPPLEMENTS TO FPC GAS RATE SCHEDULES FOR FILING

(Issued March 17, 1966)

Each of the companies (Applicants) listed in the above-captioned proceedings has filed a petition to amend a certificate of public convenience and necessity authorizing the sale of natural gas to Tennessee Gas Transmission Company from acreage located in the East Cameron Block 88 Field, offshore

Louisiana. The Applicants seek to have the certificates amended so as to have included thereunder sales of natural gas from additional productive acreage in the area. The proposed sales price is 19.0 cents per Mcf at 15.025 psia.

Applicants are presently making sales from the originally dedicated acreage at 19.0 cents per Mcf which rate is being collected subject to refund in Docket Nos. (Cities) RI64–788, (Atlantic) RI64–809 and (Tidewater) RI65–15. The prior rate collected was 18.5 cents per Mcf.

The certificates issued to the Applicants were the subjects of the so-called *CATCO* proceedings which led to the Supreme Court's decision in *Atlantic Refining Co.* v. *P.S.C. of New York*, 360 U.S. 378 (1959). Subsequent to the Court's decision in the case the Commission issued an order, 28 FPC 1090, approving a settlement proposal and granting certificates to Applicants authorizing sales of natural gas to be made at 18.5 cents per Mcf, the price the Commission had previously found was the "in-line" price.

Under the terms of the settlement agreement Applicants, with respect to sales from the Cameron and West Delta acreage, were permitted to file for a 0.5 cent per Mcf increase to be effective on November 1, 1964. Filings for the increase have been made and the increase is being collected subject to refund.

While the added acreage here is being submitted for certification at a price one-half cent higher than the "in-line" price for the area we fixed in the *Union Texas* case, no evidence has been submitted to indicate that a higher "in-line" price is now applicable. We are of the opinion that, under the special circumstances of this case, permanent certification should be issued under the conditions now prevailing with respect to sales being made under the order issued December 21, 1962, 28 FPC 1090, approving settlement and issuing certificates. We will, therefore, issue permanent certificate authorizations to Applicants authorizing them to commence sales of natural gas from additional acreage at the rate of 19.0 cents per Mcf. The collection of such rate shall be made subject to the outcome of the suspension proceedings in Docket Nos. RI64–788, RI64–809 and RI65–15.

The basic contracts which would be supplemented to include additional acreage from which the sales would be made under the petitions to amend are the same contracts executed in 1956 which were the subject of the Supreme Court's opinion in the *CATCO* case. As has been indicated hereinbefore, upon remand of the *CATCO* proceedings, settlement of those proceedings was approved and an 18.5-cent per Mcf rate was permitted. In every decided "in-line" proceeding relating to initial sales from the offshore Louisiana since *CATCO* we have found the initial price required by the public convenience and necessity to be 18.5 cents per Mcf, *e.g.*, *Union Texas Petroleum, et al.*, Docket No. G–13221, *et al.*, 32 FPC 254 (1964). In the absence of a record justifying an initial price higher than 18.5 cents per Mcf we are not inclined to grant permanent certificate authorizations in excess of that amount where no unusual conditions have been shown to exist.[1] Here we are dealing with a situation where in 1962 all parties agreed to a settlement which permitted Applicants to collect 18.5 cents per Mcf with the right to file for an increase to 19.0 cents per Mcf, which they have done. Thus, by amending the original certificates, while preserving the *status quo* we do not violate the in-line price for the area since the 19.0 cents price will be subject to refund in the same manner as is the price applicable to the basic acreage.

---

[1] See *Hassie Hunt Trust, et al.*, Docket No. CI65–596, *et al.*, issued April 23, 1965, 33 FPC 866; *The California Company*, Docket No. CI65–560, issued November 19, 1965, 34 FPC 1335.

After due notice no petition to intervene, notice of intervention or protest to the granting of the petitions has been received.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the order issuing certificates of public convenience and necessity in Docket Nos. G–11034, G–11046 and G–11049 should be amended as hereinafter ordered and the supplements to the related rate schedules should be accepted for filing.

The Commission orders:

(A) The order issuing certificates of public convenience and necessity to Applicants in Docket Nos. G–11034, G–11046 and G–11049 is amended by authorizing the sale of natural gas from additional acreage as hereinbefore described and as more fully described in the petitions herein, and in all other respects said order shall remain in full force and effect.

(B) The sales of natural gas authorized in paragraph (A) above shall be made at a total initial rate of 19.0 cents per Mcf at 15.025 psia subject to refund in Docket Nos. RI64–788, RI64–809 and RI65–15. The agreements and undertakings heretofore filed in said proceedings by Applicants shall be construed to assure the refunds of any amounts collected in excess of the amounts determined to be just and reasonable in said proceedings for sales of natural gas from the additional acreage.

(C) The supplements to the related rate schedules submitted by Applicants are accepted for filing effective on the date of initial delivery and are designated as Supplement No. 16 to The Atlantic Refining Company FPC Gas Rate Schedule No. 185, Supplement No. 17 to Cities Service Oil Company FPC Gas Rate Schedule No. 180 and Supplement No. 18 to Tidewater Oil Company FPC Gas Rate Schedule No. 72.

Commissioner O'Connor *concurs in the result* solely for the reason that the additional acreage being added by Applicants should, by virtue of the special circumstances presently prevailing in the South Louisiana pricing area, be subject to the same terms and conditions as are presently prescribed for the original certificates.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr. and Carl E. Bagge.

COLORADO INTERSTATE GAS COMPANY, DOCKET NO. CP66–266

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 18, 1966)

On February 14, 1966, Colorado Interstate Gas Company (Applicant) filed in Docket No. CP66–266 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of facilities and the delivery of natural gas in interstate commerce on a short-term interruptible basis to Phillips Petroleum Company (Phillips), all as more fully set forth in the application.

Applicant proposes to construct and operate a meter station on its Fourway to Kit Carson 20-inch pipeline in Moore County, Texas, at a point of intersection with Phillips' 24-inch pipeline. The estimated cost of the proposed facilities is $24,300 which will be financed from current working funds.

Phillips has agreed to purchase from Applicant a minimum volume of 7,300,000 Mcf of gas at 14.65 psia during a period of one year beginning with the date of first delivery. Said minimum volume is to be delivered by Applicant and purchased by Phillips at a rate of not less than 15,000 Mcf per day. The maximum volume Applicant is obligated to deliver is 25,000 Mcf per day. All deliveries are interruptible at Applicant's discretion.

The gas purchased by Phillips will be used to help balance the gas supply and requirements for Phillips' West Panhandle system and thus, by displacement, will allow Phillips to discontinue curtailment of production of butadiene at its Plains Plant near Borger, Texas. Applicant presently has a gas supply in excess of its firm market requirements and states that the proposed sale will enable it to achieve a better balance between supply and requirements.

After due notice no petition to intervene, notice of intervention or protest to the granting of the application has been received.

At a hearing held on March 17, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits thereto, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Colorado Interstate Gas Company, a Delaware corporation having its principal place of business in Colorado Springs, Colorado, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of June 4, 1945, in Docket No. G-294 (4 FPC 936).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, will be used in the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant and the transportation of natural gas are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter should be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), (e) and (f) of Section 157.20 of said Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued authorizing Applicant, Colorado Interstate Gas Company, to construct and operate facilities and transport natural gas as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

(C) The facilities authorized herein shall be completed and placed in actual operation and the transportation of natural gas shall commence, as provided by paragraph (b) of Section 157.20 of the Regulations under the Natural Gas Act, within one month from the date on which this order issues.

(D) The certificate issued hereby is granted on the express condition that the interruptible service authorized herein shall be curtailed or interrupted to the extent required to meet existing or future contracted maximum delivery obligations of Applicant for firm service to its customers.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr. and Carl E. Bagge.

TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NO. CP65-356; RED SNAPPER PIPE LINE COMPANY, DOCKET NO. CP66-168

ORDER DENYING PETITION FOR RECONSIDERATION AND MOTIONS TO DISMISS APPLICATION AND DISALLOW INTERVENTION

(Issued March 18, 1966)

Tennessee Gas Transmission Company (TGT) filed in the above-entitled proceeding a petition for reconsideration of the Commission's order issued January 14, 1966, 35 FPC 72, which granted a motion of Red Snapper Pipe Line Company (Red Snapper) requesting that its application in Docket No. CP66-168 be consolidated with TGT's application in Docket No. CP65-356. TGT on the same date also filed (1) a motion requesting dismissal of Red Snapper's application for failure to comply with Section 157.14 of the Commission's Regulations under the Natural Gas Act and (2) a motion to terminate Red Snapper's intervention in the consolidated proceedings in the event the motion to dismiss is granted.

Answers to TGT's motion were filed by Red Snapper and Consolidated Gas Supply Corporation, *et al.* on February 24 and March 1, 1966, respectively.

The gist of the various pleadings filed by TGT is set forth in its Motion to Dismiss wherein it alleges that Red Snapper has failed to comply with Section 157.14 of the Commission's Regulations under the Natural Gas Act requiring an applicant to show an adequate gas supply and a market which can reasonably be expected to absorb the gas to be transported or sold. TGT alleges further that failure to show a gas supply or markets leads to the conclusions that Red Snapper cannot meet the additional requirements of Section 157.14 of the Regulations pertaining to economic feasibility and financing.

If Red Snapper's application were a conventional type of certificate application whereby the natural-gas company proposes to produce or purchase natural gas for transportation or sale we might be constrained to agree with TGT and dismiss Red Snapper's application.

Here, however, we are dealing with a unique situation in which Red Snapper proposes to build an extensive offshore gathering and transmission system and transport gas for anyone seeking its service. This is the first of what is in the nature of a common-carrier application to come before us. The application, therefore, presents a case of first impression.

We have no intention of disregarding our Regulations insofar as they pertain to the conventional type of applications. It may be, however, that the Regulations as now written are not adequate or sufficiently broad to comprehend applications such as that filed by Red Snapper. We are of the opinion, however, that an application which encompasses the rendition of a type of service not heretofore proposed or considered should not be dismissed for failure technically to comply with our Regulations. It may be that the experience gained from the consolidated proceedings may aid us in the consideration of amendments to our Regulations to cover applications of the Red Snapper type.

We are not expressing an opinion that either or both the TGT and Red Snapper applications should upon completion of the consolidated proceedings or further proceedings, be granted. It may be that the record will indicate that they are not mutually exclusive and do not require comparative consideration. At this juncture, however, we are not prepared to say that one application must be considered as an alternative to the other or that the grant of one would necessarily preclude the grant of the other. In the light of these circumstances, the petition and motions of TGT will be denied.

The Commission orders:

The Petition for Reconsideration of Order Granting Motion to Consolidate, Motion to Dismiss Intervention and Motion to Dismiss filed in the above-styled proceedings by Tennessee Gas Transmission Company on February 10, 1966, are hereby dismissed.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr. and Carl E. Bagge.

TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NO. CP66-180

ORDER ISSUING TEMPORARY CERTIFICATE PRESCRIBING PROCEDURE AND SETTING DATE OF HEARING

(Issued March 18, 1966)

Tennessee Gas Transmission Company (Applicant) on December 3, 1965, filed, pursuant to subsections (b) and (c) of Section 7 of the Natural Gas Act an application for permission and approval to abandon certain facilities and for a certificate of public convenience and necessity authorizing the construction and operation of other facilities as described in the application.

The facilities for which Applicant seeks a certificate to construct and operate may be summarily described as follows:

262.37 miles of 36-inch loop line in Mississippi, Alabama, Tennessee, Kentucky, Ohio and Pennsylvania,

36.67 miles of 36-inch pipe between stations 527 and 524 in South Louisiana,

8.48 miles of 42-inch loop line in Kentucky,

60.16 miles of 30-inch loop line in Ohio, Pennsylvania and New York,

10.68 miles of 26-inch loop line in West Virginia,

22.61 miles of 20-inch pipeline lateral to the Grand Isle Block 43 Field,

4.07 miles of 8-inch and 2.57 miles of 6-inch pipeline replacing equivalent lengths of 4-inch and 3-inch lateral line in New England, and

21,500 additional compressor horsepower in seven existing compressor stations.

The facilities for which applicant seeks permission and approval to abandon may be summarily described as follows:

Scofield Bay Compressor Station No. 526A in Louisiana consisting of five 1,000 horsepower compressor units.

The application indicates that construction and operation of the proposed facilities will increase Applicant's average day system capacity from 3,027,000 Mcf to 3,203,000 Mcf or 176,000 Mcf per day. 111,891 Mcf of the added capacity would be utilized to increase deliveries to contract demand, general service and storage service customers. The remainder of the added capacity would substantially increase Applicant's so-called "unallocated capacity".

With respect to the facilities proposed to be abandoned the application states that Scofield Bay Compressor Station No. 526A is no longer needed to meet demands on this segment of Applicant's system.

The estimated cost of the facilities Applicant proposes is $82,465,000. Applicant proposes to finance such construction through the sale of First Mortgage Pipe Line Bonds, Debentures and Second Preferred Stock.

Notice of the filing of the application was issued on December 13, 1965. Such notice was published in the Federal Register on December 18, 1965 (30 F.R. 15684).

Petitions to intervene in the proceeding upon the application were filed by Consolidated Edison Company of New York, Inc., Consolidated Natural Gas Company System (Consolidated Gas Supply Corporation, The East Ohio Gas Company, Lake Shore Pipe Line Co. and The Peoples Natural Gas Company), Long Island Lighting Company, Orange and Rockland Utilities, Inc., Public Service Electric and Gas Company, The Columbia Gas System, Inc. (United Fuel Gas Company, The Manufacturers Light and Heat Company and The Ohio Fuel Gas Company) and Western Kentucky Gas Company. These parties desire to be heard only in the event a formal hearing is held in the proceeding. Petitions to intervene in opposition to the grant of the certificate in whole or in part have been filed by Louisville Gas and Electric Company (Louisville), Southern Natural Gas Company (Southern) and Chattanooga Gas Company (Chattanooga).

Southern and Chattanooga oppose the application because of its possible impact upon a comparative proceedings involving the two companies, among others, in which hearings have been held and concluded, an examiner's decision issued, exceptions filed and now pending before the Commission. Southern and Chattanooga contend that Applicant's application includes a request for authorization to construct and operate facilities which would be utilized to render the service which was at issue in the comparative proceedings. Louisville objects to the grant of the application because of its possible impact upon another proceeding wherein is involved the question of whether Louisville should in the future be served by a natural gas company other than Applicant, its present supplier.

On February 15, 1966, Applicant filed an application for a temporary certificate of public convenience to authorize it to construct and operate the facilities covered by the application filed in Docket No. CP66–180. As bases for its request for a temporary certificate Applicant alleges that during the latter part of the winter heating season it encountered a critical delivery situation requiring it to take emergency service from other pipeline companies to enable it to meet customer requirements and that it depleted its storage inventory to the extent that it had to take cushion gas from the storage field. Applicant alleges that lack of underground storage inventories has been the largest contributing factor to the emergency which it is currently experiencing. Applicant alleges that if it is to replenish its storage and have sufficient natural gas to meet its requirements during the winter heating season 1966–67 it must begin the construction of the facilities covered by the application, Docket No. CP66–180, not later than April 1, 1966. The application for temporary certificate was served by Applicant upon all parties who had filed petitions to intervene in the proceeding.

By notice of the Secretary issued February 23, 1966, all petitioners for leave to intervene were given until March 7, 1966, to file answers or protests to Applicant's request for a temporary certificate.

Answers were filed by Southern, Chattanooga, Louisville and Consolidated Natural Gas System companies. Southern and Chattanooga do not oppose the grant of a temporary certificate authorizing Applicant to *construct* the facilities. They do, however, oppose the grant of authorization to Applicant to *operate* any facilities which would have an effect upon the comparative proceedings hereinbefore mentioned. Consolidated Natural Gas System companies request that the Commission "promptly grant temporary certificate authorizing construction and operation of facilities required to service additional requirements of TGT's customers proposed herein". Louisville opposes the grant of the temporary certificate "until an adequate showing has been made to establish that all of the proposed facilities are needed" for the purpose of alleviating a genuine emergency.

We have considered the request for a temporary certificate and the answers made thereto. We are of the opinion that the public interest would be served by granting a temporary certificate authorizing it to *construct* the facilities covered by the application, Docket No. CP66-180. We will however, withhold the application insofar as it requests temporary authority to operate the facilities. We want to make it clearly evident, however, that the action we take in granting the temporary certificate shall not be construed as prejudicing the interest of any party to any proceeding now pending before the Commission in which hearings have been held or which may be the subject of a future hearing before the Commission. Further, the grant of the temporary certificate authorizing *construction* shall not be construed as determining that the application filed in Docket No. CP66-180 should be considered in connection with or as being related to any application which has been heard in the comparative hearing relating to service to Chattanooga. We are of the opinion the hearing to be held prior to final action on Applicant's application will afford Louisville the opportunity to demonstrate the validity of its contentions with respect to possible excess capacity in Applicant's system as a result of constructing the facilities proposed in the application filed in Docket No. CP66-180. If in fact unreasonable excess capacity is proved the cost of the excess facilities can be eliminated from Applicant's rate base until such time as the facilities usefulness can be shown.

Such reasonable conditions as may be required by the public convenience and necessity for the protection of the public interest can and will be considered when we take action with respect to temporary or permanent authorization to operate the facilities.

The Commission orders:

(A) A temporary certificate of public convenience and necessity is issued to Tennessee Gas Transmission Company authorizing it to construct the facilities covered by its application filed in Docket No. CP66-180.

(B) The grant of such temporary certificate is without prejudice to final action on the application.

(C) The temporary certificate is issued upon the express condition that the costs of any facilities not permanently certificated shall be removed from Applicant's rate base.

(D) Issuance of the temporary certificate herein is subject to the conditions in parts (a), (c)(1), (c)(2), (c)(3), and (c)(4) of Section 157.20 of the Commission's Regulations.

(E) Applicant and all interveners in support of the instant application will service their direct presentations, to be relied upon at the hearing, by April 4, 1966, upon the Commission, the Commission's staff, and upon all parties who have filed petitions to intervene.

(F) Pursuant to the authority conferred on the Federal Power Commission by the Natural Gas Act and the Commission's Rules of Practice and Procedure, a hearing will be held April 25, 1966, at 10:00 a.m. (EDST) in a Hearing Room of the Federal Power Commission, 441 G Street, NW., Washington, D.C., respecting the matters set forth in the instant order or any other order issued in the instant proceeding prior to said date of hearing.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

EQUITABLE GAS COMPANY, DOCKET NO. CP66-246

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND ACCEPTING FOR FILING REVISED TARIFF SHEETS

(Issued March 21, 1966)

On February 1, 1966, Equitable Gas Company (Applicant), filed in Docket No. CP66-246 an application together with a supplement thereto filed February 21, 1966, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale and delivery to Carnegie Natural Gas Company (Carnegie) of approximately 6,000 Mcf of gas per year from Applicant's Glover Lease located in Church District, Wetzel County, West Virginia, all as more fully set forth in the application.

Pursuant to an agreement between Applicant and Carnegie dated January 31, 1966, Applicant has agreed to sell and deliver to Carnegie all the gas produced from that certain oil and gas lease referred to as the Glover Lease located in Church District, Wetzel County, West Virginia. Applicant states that it is estimated that sales from wells located on said lease will not be in excess of 6,000 Mcf of gas per year.

Applicant states that the rate of twenty cents per Mcf will be charged for the proposed sale, as set forth in its W-2 Rate Schedule which is on file with the Commission.

Concurrently herewith Applicant filed its Fifth Revised Sheet No. 8, superseding its Fourth Revised Sheet No. 8 to its FPC Rate Schedule W-2, First Revised Volume No. 1.

No new facilities are required to effectuate Applicant's proposals.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on March 17, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and supplement submitted in support of the authorization, and upon consideration of the record,

The Commission finds:

(1) Applicant, Equitable Gas Company, a Pennsylvania corporation having its principal place of business in Pittsburgh, Pennsylvania, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of May 9, 1944, in Docket No. G-275 (4 FPC 558).

(2) The proposed sale and delivery of natural gas by Applicant to Carnegie, as hereinbefore described, and as more fully described in the application and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed sale and delivery of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3) and (e) of Section 157.20 of such Regulations.

(6) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act, and the public convenience and necessity require that Applicant's superseding Revised Tariff Sheet No. 8 to its FPC Rate Schedule W-2 First Revised Volume No. 1 be accepted for filing effective on the date of issuance of this order.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to the Applicant in this proceeding, authorizing the sale and delivery of natural gas hereinbefore described, as more fully described in the application and supplement in this proceeding, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3) and (e) of Section 157.20 of such Regulations.

(C) The service authorized shall be commenced as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations within sixty days of the date on which this order issues.

(D) Applicant's Revised Tariff Sheet No. 8 to its FPC Rate Schedule W-2 First Revised Volume No. 1 is accepted for filing effective on the date of issuance of this order.

(E) The certificate granted in paragraph (A) above is not transferable and shall be effective only so long as Applicant continues the acts or operations authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(F) The grant of the certificate issued in paragraph (A) above shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or of Part 154 or Part 157 of the Commission's Regulations thereunder, and is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceedings now pending or hereafter instituted by or against Applicant. Further, our action in this proceeding shall not foreclose nor prejudice any future proceedings or objections relating to the operation of any price or related provisions in the gas purchase contract herein involved. Nor shall the grant of the certificate aforesaid for service to the particular customer involved imply approval of all of the terms of the contract, particularly as to the cessation of service upon termination of said contract, as provided by Section 7(b) of the Natural Gas Act. Nor shall the grant of the certificate aforesaid be construed to preclude the imposition of any sanctions pursuant to the provisions of the Natural Gas Act for the unauthorized commencement of any sale of natural gas subject to said certificate.

(G) The grant of the certificate issued herein is upon the condition that no increase in rate shall be filed prior to January 1, 1968, at any price which would exceed the ceiling prescribed for the given area by paragraph (d) of the Commission's Statement of General Policy No. 61-1, as amended.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

HUMBLE GAS TRANSMISSION COMPANY, DOCKET NO. CP66-202

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued March 21, 1966)

On December 20, 1965, Humble Gas Transmission Company (Applicant) filed in Docket No. CP66-202 an application, as supplemented on February 9, 1966, pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon certain natural gas facilities located near Baton Rouge, Louisiana, as more fully set forth in the application.

Specifically, Applicant proposes to abandon and remove the facilities which were originally installed to serve the following customers: (1) Kaiser Aluminum & Chemical Corporation (Kaiser Aluminum), (2) Ideal Cement Company (Ideal Cement), (3) Foster-Grant Company, Inc. (Foster-Grant), and (4) The Solvay Process Division, Allied Chemical & Dye Corporation (Solvay).

The facilities to be abandoned consist of approximately 0.8 mile of 6-inch to 10-inch lateral pipelines and related measuring facilities located on Applicant's jurisdictional Fowler-Baton Rouge pipeline system near Baton Rouge, Louisiana.

Applicant states that service to Kaiser Aluminum and Ideal Cement was discontinued from jurisdictional facilities on November 5, 1951. Since that date, service has been rendered from Applicant's nonjurisdictional intrastate Baton Rouge-West system.

Similarly, service to Foster-Grant through the jurisdictional facilities proposed to be abandoned was terminated on July 14, 1957, and service has been continued through Applicant's nonjurisdictional facilities.

Applicant served Solvay through facilities extending from the jurisdictional Fowler-Baton Rouge system until the end of 1965 when the service agreement with Solvay terminated by its own terms. Applicant will no longer render natural gas service to Solvay, and the facilities are no longer required.

Due notice of the filing of the application was published in the Federal Register on January 8, 1966 (31 F.R. 277). No protest, petition to intervene or notice of intervention has been filed.

At a hearing held on March 17, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Humble Gas Transmission Company, a Delaware corporation with its principal place of business in New Orleans, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued January 29, 1963, in Docket No. CP63-56 (29 FPC 162).

(2) The facilities to be abandoned, as hereinbefore described, as more fully described in the application in this proceeding, are subject to the jurisdiction of the Commission and abandonment of such facilities is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The proposed abandonment of the aforesaid facilities is permitted by the public convenience and necessity and approval therefor should be granted as hereinafter ordered.

The Commission orders:

(A) Permission for and approval of the abandonment by Applicant of the facilities hereinbefore described, as more fully described in the application in this proceeding are granted.

(B) Applicant shall advise the Commission of the date of said abandonment within ten days thereof.

(C) The grant of authorization to abandon the facilities in paragraph (A) above should not be construed as precluding the imposition of sanctions or penalties for violations of the provisions of the Natural Gas Act.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

PLATEAU NATURAL GAS COMPANY, DOCKET NO. CP66-222; COLORADO INTERSTATE GAS COMPANY, DOCKET NO. CP66-236

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY AND PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued March 21, 1966)

On January 11, 1966, Plateau Natural Gas Company (Plateau) filed in Docket No. CP66-222 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the acquisition from Colorado Interstate Gas Company and operation of nine natural gas sales meter and regulator stations located in Moore and Sherman Counties, Texas, as more fully set forth in the application.

On January 24, 1966, Colorado Interstate Gas Company (CIG) filed an application, as supplemented on February 14, 1966, in Docket No. CP66-236 pursuant to Sections 7(b) and 7(c) of the Natural Gas Act for permission and approval to abandon certain natural gas facilities and for a certificate of public convenience and necessity authorizing the transportation and sale of natural gas to Plateau for resale, as more fully set forth in the application.

Specifically, Plateau will purchase the nine sales meter and regulator stations to be abandoned by CIG. These stations have heretofore been utilized by CIG to serve irrigation customers along its Fourway-Kit Carson transmission pipeline in Moore and Sherman Counties, Texas, and are identified as follows:

Moore County
Gaston Wells
Arvel Perky
Roy Carroll
Carroll and Taylor
A. J. Harris

Sherman County
B. A. Donelson
B. A. Donelson
Horace D. Sneed
Melvin Phillips

Plateau will continue the service to the irrigation customers with natural gas to be purchased from CIG under CIG's FPC Rate Schedule G-1.

Plateau estimates that its third year peak day and annual requirements to serve the irrigation customers will be 810 Mcf and 94,500 Mcf, respectively.

Plateau will purchase the stations from CIG at their net book value on the first day of the month in which the purchase is made, pursuant to the terms of the agreement between the parties dated November 26, 1965. The book value of the facilities as of October 31, 1965, was $14,073. Plateau will pay for the facilities from cash on hand.

The proposal will result in a reduction in the cost of gas to the irrigation customers. No service will be abandoned.

CIG also requests permission and approval of the abandonment of its South Keyes pipeline lateral which consists of approximately three miles of 4-inch pipeline in Cimarron County, Oklahoma. CIG states that due to changed field operating conditions natural gas from the Keyes Field is now gathered and compressed at the Keyes Compressor Station prior to entering the main transmission pipeline, and the South Keyes lateral is no longer required. CIG will salvage these facilities for possible use on its gas gathering system.

Notices of the filing of the applications by CIG and by Plateau were published in the Federal Register on February 9, 1966, and January 22, 1966, respectively (31 F.R. 922 and 2559). No protest, petition to intervene or notice of intervention has been filed in these proceedings.

At a hearing held on March 17, 1966, the Commission on its own motion received and made a part of the record in these proceedings all evidence, including the applications and exhibits, submitted in support of the authorizations sought herein, and upon consideration of the record,

The Commission finds:

(1) Plateau Natural Gas Company, a Colorado corporation having its principal place of business in Colorado Springs, Colorado, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued January 25, 1966, in Docket No. CP66-154 (35 FPC 153).

(2) Colorado Interstate Gas Company, a Delaware corporation having its principal place of business in Colorado Springs, Colorado, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued June 5, 1945, in Docket No. G-294 (4 FPC 936).

(3) The facilities to be abandoned, as hereinbefore described and as more fully described in the application in Docket No. CP66-236, are subject to the jurisdiction of the Commission and abandonment of such facilities by Applicant is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(4) The abandonment hereinbefore described, as more fully described in the application in Docket No. CP66-236, is permitted by the public convenience and necessity and an order approving same should be issued as hereinafter ordered.

(5) The facilities to be sold and acquired as hereinbefore described in the applications in these proceedings are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the acquisition and operation thereof by Plateau and the transportation and sale of natural gas by CIG are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(6) CIG and Plateau are able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(7) The acquisition and operation of the proposed facilities by Plateau and the transportation and sale of natural gas by CIG are required by the public convenience and necessity, and certificates therefor should be issued as hereinafter ordered and conditioned.

(8) Public convenience and necessity require that the certificates hereinafter issued and the rights granted thereunder be conditioned upon the Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly Plateau's compliance with paragraphs (a), (b), (d)(2), (d)(3) and (e) of Section 157.20, and CIG's compliance with paragraphs (a), (b), (c)(3) and (e) of Section 157.20 of said Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Plateau Natural Gas Company authorizing the acquisition and operation of the facilities and the transportation of natural gas as hereinbefore described and as more fully set forth in the application in Docket No. CP66–222, upon the terms and conditions of this order.

(B) A certificate of public convenience and necessity is issued to Colorado Interstate Gas Company authorizing the transportation and sale of natural gas to Plateau Natural Gas Company for resale, as hereinbefore described and as more fully described in the applications in these proceedings, upon the terms and conditions of this order.

(C) Permission for and approval of the abandonment by Colorado Interstate Gas Company of the facilities hereinbefore described, as more fully described in the application in Docket No. CP66–236, are granted.

(D) Colorado Interstate Gas Company shall advise the Commission of the date of abandonment of the facilities within 10 days thereafter.

(E) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Plateau Natural Gas Company's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (d)(2), (d)(3) and (e) of Section 157.20 of such Regulations.

(F) The certificate issued by paragraph (B) above and the rights granted thereunder are conditioned upon Colorado Interstate Gas Company's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3) and (e) of Section 157.20 of said Regulations.

(G) The facilities authorized to be acquired by paragraph (A) above shall be acquired and placed in actual operation and the transportation and sale of natural gas authorized by paragraph (B) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within six months from the date of this order.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

UNITED STATES DEPARTMENT OF THE INTERIOR, SOUTHEASTERN POWER ADMINISTRATION, DOCKET NO. E–7188

ORDER CONFIRMING AND APPROVING RATES AND CHARGES

(Issued March 21, 1966)

Pursuant to Section 5 of the Flood Control Act of 1944 (59 Stat. 887), the Secretary of the Interior, on behalf of the Southeastern Power Administration (SEPA) on October 12, 1965 filed with the Federal Power Commission a request for confirmation and approval of Wholesale Power Rate Schedules

CR–1–A and CR–2, applicable to the power marketed from the Cumberland River Power System, consisting of six hydroelectric projects. The Cumberland River Power System now includes the Barkley Project with the five Cumberland Projects already in commercial operation. Rate Schedule CR–1–A encompasses and supersedes Wholesale Power Rate Schedule CR–1, now applicable to the sale of power from the Dale Hollow, Center Hill, Wolf Creek, Old Hickory and Cheatham Projects, which was approved by the Commission on December 23, 1964, in Docket No. E–7188, 32 FPC 1523. Rate Schedule CR–2 covers the sale of peaking and standby power from the system to Big Rivers Rural Electric Cooperative Corporation.

Wholesale Power Rate Schedule CR–1–A parallels the format of Rate Schedule CR–1, which it is designed to supersede. The former rate schedule differs from Rate Schedule CR–1 only in that it provides for the sale of the output of Barkley to the Tennessee Valley Authority (TVA) as well as the output of the other five plants and contains a list of credits which are to be used to adjust the annual charge to compensate for the retention of peaking power (up to 150,000 kilowatts) and standby power (up to 100,000 kilowatts) by SEPA and the transfer of retained power and energy for sale by SEPA to other customers—at present Big Rivers Rural Electric Cooperative Corporation (Big Rivers)—under terms of Rate Schedule CR–2.

SEPA proposes to sell the output of Barkley to TVA for an average annual charge of $2.2 million. With the addition of the revenue from Barkley, SEPA estimates the average annual revenue to be received for the sale of power generated at the six projects to be $8.7 million.

Wholesale Power Rate Schedule CR–2 is a new rate schedule available to Big Rivers, which applies to the sale to Big Rivers of peaking power (up to 40,000 kilowatts of capacity with 1,500 hours use per year) and standby power (up to 100,000 kilowatts of capacity with associated energy), generated at the six plants of the Cumberland River System. Rates for the sale of this power are balanced by the credits allowed to TVA in Rate Schedule CR–1–A except for peaking capacity rates. In this case, with 1,500 hours use, there is a differential of $0.35 per kilowatt in favor of SEPA, which amounts to an additional $14,000 a year for 40,000 kilowatts over what SEPA would receive from TVA. By selling the entire 150,000 kilowatts of peaking capacity which SEPA may retain to others under the same terms as those in its contract with Big Rivers, SEPA has the possibility of increasing its revenues over sales to TVA by $52,500 a year.

In support of its proposed rate schedules, SEPA filed a repayment study which indicates that the proposed rates will produce sufficient revenues to recover all costs of production and transmission of power generated by the 6-project Cumberland River System in the 49th year after the Barkley project becomes fully operative. In making its computations, SEPA has computed interest at 2.5 percent on investments in power at Cheatham, Old Hickory, and Barkley, and also at Wolf Creek, Dale Hollow, and Center Hill subsequent to June 30, 1964. Moreover, as agreed in an exchange of letters between the Commission and Interior in October and November 1964, provision is made to apply the 2.5 percent retroactively to the three latter projects in place of the 2.0 percent rate used by Interior prior to July 1, 1964.

The allocations of project costs pertaining to all projects, as used by SEPA have been approved by the Corps of Engineers and, with the exception of the allocation of Barkley costs, have been adopted by the Chief of Engineers. In the case of Barkley, a letter from the Office, Chief of Engineers is to the effect that the costs finally allocated to power will be practically the same as those used by SEPA.

Actual cost and revenue figures are available from fiscal year 1949 through fiscal year 1964, a period of construction and development. These figures show that, at the end of fiscal year 1964, $153,942,050 had been invested in Cumberland River projects of which $24,742,337 has been repaid.

A review of the information filed by Interior in support of proposed Wholesale Power Rate Schedules CR-1-A and CR-2 shows that the anticipated revenues would be sufficient to repay the capital investment in the six Cumberland River projects with interest at 2.5 percent in a reasonable period of years, namely 49 years, following full commercial operation of the Barkley project. The addition of Wholesale Power Rate Schedule CR-2 and the changes proposed in Rate Schedule CR-1-A would make possible a more widespread use of the power produced at the projects in the Cumberland River Power System than heretofore and would provide an opportunity for additional income beyond that relied upon by SEPA in its repayment study.

SEPA's contracts with both TVA and Big Rivers provide for periodic review and adjustment of rates and charges at 5-year intervals, with the change in rates not to become effective unless and until confirmed and approved by the Commission.

SEPA's contract with Big Rivers stipulates that rates and charges shall be subject to adjustment on July 1, 1968, and thereafter at 5-year intervals. Accordingly our confirmation and approval will terminate June 30, 1968.

The Commission finds:

The proposed rates and charges of SEPA for the wholesale sale of electric power and energy from the Wolf Creek, Dale Hollow, Center Hill, Cheatham, Old Hickory and Barkley projects, as set forth in Wholesale Power Rate Schedules CR-1-A and CR-2, referred to above, for a period beginning with the date of the issuance of this order and terminating June 30, 1968 will not be inconsistent with the provisions of the Flood Control Act of 1944.

The Commission orders:

The proposed rates and charges for wholesale sale by SEPA of electric power and energy from the Wolf Creek, Dale Hollow, Center Hill, Cheatham, Old Hickory and Barkley projects, as set forth in Wholesale Power Rate Schedules CR-1-A and CR-2, are hereby confirmed and approved for a period beginning with the date of issuance of this order and ending June 30, 1968.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr. and Carl E. Bagge.

ATLANTIC SEABOARD CORPORATION, RP65-49; UNITED FUEL GAS COMPANY, RP66-2; COLUMBIA GULF TRANSMISSION COMPANY, RP66-22

ORDER INSTITUTING INVESTIGATION, PROVIDING FOR HEARING, CONSOLIDATING PROCEEDINGS AND PERMITTING INTERVENTIONS

(Issued March 22, 1966)

United Fuel Gas Company (United Fuel) on July 20, 1965, tendered for filing Sixth Revised Volume No. 1 to its FPC Gas Tariff which became effective subject to hearing and refund order issued September 14, 1965, in Docket No. RP66-2. The revised tariff proposes basic changes in rates, changes, and classifications of service, which include a new winter service rate schedule and substantially alter the level of demand and commodity charges for service under the CDS Rate Schedule.

In support of the proposed filing, United Fuel filed the material required by Section 154.63 of the Commission's Regulations, reflecting its sales and operations during the test year ending May 31, 1965. Included among the costs claimed in United Fuel's cost of service is the adjusted amount of $45,644,943 for transportation of gas purchased by United Fuel in the State of Louisiana to United Fuel's facilities in Eastern Kentucky. These claimed transportation costs represent charges for such service rendered by Columbia Gulf Transmission Company (Columbia Gulf), an affiliate of United Fuel in the Columbia Gas System. This transportation service is rendered by Columbia Gulf pursuant to a cost-of-service form of rate (Rate Schedule T-1) contained in its FPC Gas Tariff, Original Volume No. 1.[1]

Review of Columbia Gulf's charges as set forth in the material submitted by United Fuel, indicates that those charges are based, in part, on items in issue and subject to investigation and hearing in the *Seaboard* and-*United Fuel* proceedings listed above. Among these issues are: (1) the use of straight-line depreciation instead of liberalized depreciation for tax purposes; (2) the inclusion of accumulated deferred taxes at 1.5 percent in the cost of capital computations of rate of return; (3) the use of a 6.5 percent rate of return; (4) the percentage of tax saving to be used in determining the effective rate; and (5) the propriety of the depreciation rates and depreciation expenses claimed.

Under the circumstances, it appears appropriate to institute an investigation into the lawfulness of Columbia Gulf's rates and charges and to consolidate such proceeding with the proceedings in *Seaboard* and *United Fuel* listed above.

In order to obviate filing of unnecessary petitions, we find it in the public interest, pursuant to our authority under Section 15(a) of the Act, to grant leave to intervene in the Columbia Gulf proceeding to all parties who have been allowed to intervene in the *Seaboard* and *United Fuel* proceedings.

The Commission finds:

It is necessary and proper in the public interest and to aid in the enforcement of the provisions of the Natural Gas Act, that an investigation be instituted into and concerning all rates, charges, or classifications demanded, observed, charged, or collected by Columbia Gulf for or in connection with any transportation or sale of natural gas, subject to the jurisdiction of the Commission, and any rules, regulations, practices, or contracts affecting such rates, charges or classifications.

The Commission orders:

(A) Under the authority of the Natural Gas Act, particularly Sections 4(a) and (b), 5, 9, 10, 14, 15, and 16, an investigation of Columbia Gulf is hereby instituted, and a public hearing is hereby provided, for the purpose of enabling the Commission to determine whether, with respect to any transportation or sale of natural gas, subject to the jurisdiction of the Commission, made or proposed to be made by Columbia Gulf, any of the rates, charges, or classifications demanded, observed, charged, or collected, or any rules, regulations, practices, or contracts affecting such rates, charges or classifications, are unjust, unreasonable, unduly discriminatory, or preferential.

(B) The proceedings hereby instituted (Docket No. RP66-22) are hereby consolidated with the proceedings in Docket Nos. RP65-49 and RP66-2 for the purposes of public hearings and decision on the matters and issues involved therein.

---

[1] Columbia Gulf's FPC Gas Tariff, Original Volume No. 1, was initially accepted for filing and permitted to become effective as of January 1, 1959, by order issued February 12, 1959.

(C) Columbia Gulf, the Commission staff and interveners shall serve their direct testimony and exhibits in the Columbia Gulf proceeding upon the Presiding Examiner and all other parties as follows: (1) the Commission staff on or before April 22, 1966; (2) Columbia Gulf on or before May 6, 1966; and (3) the interveners on or before May 17, 1966.

(D) Each party which has been permitted to intervene in the proceedings in Docket Nos. RP65-49 and RP66-2, is hereby permitted to intervene in Docket No. RP66-22, subject to the rules and regulations of the Commission and subject to the provisions of our orders granting such prior interventions.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr. and Carl E. Bagge.

NAFCO OIL AND GAS INC., DOCKET NO. RI66-249

ORDER ACCEPTING OFFER OF SETTLEMENT REQUIRING FILING OF CONTRACT AMENDMENT, AND TERMINATING PROCEEDING

(Issued March 22, 1966)

On February 24, 1966, Nafco Oil and Gas Inc. (Nafco) submitted an offer of settlement in this proceeding pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure. The offer involves a proposed increased rate for sales of natural gas to Tennessee Gas Transmission Company (TGT) by Nafco made under Supplement No. 8 to Nafco's FPC Gas Rate Schedule No. 7 in Panola County, Texas (Texas R.R. Com. District #6). The proposed increased rate was suspended by order of the Commission for the statutory period in Docket No. RI66-249, and has not been made effective.

Under the terms of the offer, Nafco proposes to eliminate the price escalation provisions from the rate schedule and to establish a 15¢ per Mcf rate at 14.65 psia, subject to downward Btu adjustment, for the subject sale. The notice of change containing the proposed 15¢ per Mcf rate is designated as Supplement No. 9 to Nafco's FPC Gas Rate Schedule No. 7. No protests or objections have been filed to the offer.

The proposed settlement is consistent with the provisions of the Second Amendment to the Commission's Statement of General Policy No. 61-1, issued December 20, 1960, 24 FPC 1107, as amended by Order No. 264, issued March 27, 1963, 29 FPC 589, and its acceptance would serve the public interest.

However, we desire to make it clear that acceptance of Nafco's offer of settlement shall not be construed as approval of any future increased rate filed in accordance with its reservations of the right to file increases to cover future tax increases, and is without prejudice to any findings or order of the Commission in any future proceedings, including area rate or other similar proceedings, involving Nafco's rate and rate schedule.

The Commission finds:

The proposed settlement by Nafco of the above-designated proceeding on the basis described herein, as more fully set forth in the offer of settlement filed with the Commission by Nafco on February 24, 1966, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved and made effective as hereinafter ordered.

The Commission orders:

(A) The offer of settlement filed with the Commission by Nafco on February 24, 1966, is hereby approved in accordance with the provisions of this order.

(B) Nafco shall file, within 30 days from the date of issuance of this order, an executed contract amendment as specified in its offer of settlement, to its FPC Gas Rate Schedule No. 7 eliminating the price escalation provisions therefrom. The contractual amendment shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(C) Upon notification by the Secretary of the Commission that Nafco has complied with the terms and conditions of the order, the rate and charge of 15¢ per Mcf at 14.65 psia, subject to downward Btu adjustment, contained in Supplement No. 9 to its FPC Gas Rate Schedule No. 7 shall be effective as of the date of issuance of this order, the above designated proceeding shall be deemed terminated, and Supplement No. 8 to its FPC Gas Rate Schedule No. 7 shall be deemed withdrawn.

(D) The acceptance by the Commission of Nafco's offer of settlement is without prejudice to any findings or determinations that may be made in any proceeding now pending, or hereafter instituted by or against Nafco, including area rate or other similar proceedings.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

AREA RATE PROCEEDING, DOCKET NO. AR61-1; PHILLIPS PETROLEUM COMPANY, DOCKET NO. G-20405

DECLARATORY ORDER WITH RESPECT TO QUALITY STATEMENT

(Issued March 23, 1966)

Phillips Petroleum Company (Phillips), a respondent in the *Permian* case, submitted on March 9, 1966, in purported compliance with paragraph (F) (1) of Opinion No. 468, as amended by Opinion No. 468-A, 34 FPC 159, 1068, a quality statement with respect to the sale of "old" gas-well gas to El Paso Natural Gas Company (El Paso) from the Crosby Devonian Field, Lea County, New Mexico under Phillips' FPC Gas Rate Schedule No. 274 which is involved in Docket No. G-20405. The quality statement, which was signed by both Phillips and El Paso, shows a deduction of .32¢ per Mcf for total sulphur content (2480 grains per Mcf) and water content in excess of .009 pounds. It also shows an offsetting credit of .21¢ because the gas is delivered at a pressure in excess of 500 psig (actual delivery pressure is 550 psig) together with an unspecified credit for Btu content above 1,000 Btu (actual Btu content is 1,030 Btu per cubic foot). The credits are utilized only to offset the deduction for sulphur and water content. Phillips thus proposes to establish a total rate of 14.44¢ per Mcf (13.5¢ plus .94¢ tax) which is the applicable area *base* rate ceiling determined in Opinion No. 468.

Our Permian decision does not permit under any circumstances upward adjustments for gas delivered at pressures in excess of 500 psig[1] or for Btu content between 1000 and 1050 in determining the applicable area rate. It thus makes no difference whether such upward adjustments are proposed to offset downward quality adjustments or to establish the just and reasonable rate above the area base rate ceiling. Item 6F (with respect to delivery pressure) and Item 6G (with respect to Btu content) in the quality statement submitted by Phillips are therefore both incorrect as are the instructions relating thereto which are included on the reverse side of the quality statement.[2]

---

[1] Order issued February 2, 1966, 35 FPC 175, in *Area Rate Proceeding*, Docket No. AR61-1, involving a quality statement tendered by Monsanto Company. See also Opinion No. 484 issued January 6, 1966, *El Paso Natural Gas Company, et al.*, Docket No. CP64-211, *et al.*, 35 FPC 40.

Examination has not yet been completed with respect to the propriety of the deduction for sulphur and water content or the computation of taxes made in the subject quality statement. In our future determination as to whether Phillips' quality statement is otherwise acceptable, no consideration will be given to the proposed credits for pressure and Btu content.

The Commission orders:

For the reasons set forth above, no consideration will be given to the credits for pressure and Btu content proposed in the quality statement tendered by Phillips on March 9, 1966, with respect to sales under its FPC Gas Rate Schedule No. 274 in determining at a later date whether such quality statement is otherwise acceptable.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

IDAHO POWER COMPANY, DOCKET NO. E-7270

ORDER AUTHORIZING THE ISSUANCE OF FIRST MORTGAGE BONDS

(Issued March 25, 1966)

Idaho Power Company (Applicant), incorporated under the laws of the State of Maine and qualified to do business in the States of Idaho, Nevada and Oregon, with its principal business office at Boise, Idaho, filed an application with the Federal Power Commission on February 14, 1966, for authorization pursuant to Section 204 of the Federal Power Act, to issue and sell at competitive bidding $20,000,000, principal amount of First Mortgage Bonds, due 1996.

Applicant proposes to issue the new Bonds as a series of an issue of First Mortgage Bonds under a Mortgage and Deed of Trust dated as of October 1, 1937, and as supplemented and amended by 15 supplemental indentures and as to be further amended by a 16th supplemental indenture to be dated as of April 1, 1966 between the Applicant and Bankers Trust Company of New York and J. C. Kennedy, as Trustees. The new Bonds are to be dated as of April 1, 1966. The interest rate of the Bonds will be determined by competitive bidding.

On or about April 4, 1966, the Applicant proposes to invite sealed written bids for the purchase of the Bonds by newspaper publication of a public invitation for proposals, setting forth terms and conditions relating thereto. All bids, whether from a single bidder or group of bidders, must be in writing on the Form of Bid furnished by Applicant and must be for the purchase of the entire amount of the Bonds. Each bid must specify, among other things: (1) the interest rate to be borne by the Bonds, which rate shall be a multiple of ⅛ of 1% and (2) the price to be paid to the Applicant, which price shall not be less than 99% of principal amount. Each bid shall provide that accrued interest from April 1, 1966 to date of payment therefor and delivery thereof will be paid to the Applicant by the purchaser or purchasers.

---

[2] Phillips used its own form rather than the form provided by the Commission.

Unless postponed, all bids for the purchase of the proposed issuance of Bonds must be delivered to the Applicant's representative at the Bankers Trust Company, 11th Floor, 100 Broadway, New York, New York, before 11:30 a.m. New York time on April 12, 1966, and be accompanied by the deposit of $600,000. Unless the Applicant shall reject all bids or exclude a bid or bids for reasons set forth in the invitation, it will accept the bid which provides for the lowest cost of money.

Applicant states that the proceeds obtained from the proposed issuance of Bonds will be utilized to pay off Applicant's outstanding short-term notes in the amount of $14,100,000 and for partial payment of the Applicant's 1966 construction program which is estimated at $49,154,000. Principal items in the construction program include $29 million for generating facilities at Hells Canyon, $7.8 million for transmission lines and $7.6 million for distribution and substation facilities.

Written notice of the application has been given to the Idaho Public Utilities Commission, Nevada Public Service Commission, Oregon Public Utility Commissioner and the Governor of each of those states. Notice has also been given by publication in the Federal Register on March 2, 1966 (31 F.R. 3316), stating that any person desiring to be heard or to make any protest with reference to the application, should file petitions or protests on or before March 10, 1966, with the Federal Power Commission, Washington, D.C. 20426. No protest, petition or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 204 of the Federal Power Act, subject to the jurisdiction of the Commission as heretofore described and set forth in the Commission's order issued November 7, 1957, *Idaho Power Company*, Docket No. E-6781 (18 FPC 603).

(2) The proposed issuance and sale of Bonds, as described above, will constitute an issuance of securities within the purview of Section 204 of the Federal Power Act.

(3) Applicant is not organized and operating in a State under the laws of which the security issue here involved is regulated by a State commission within the meaning of Section 204(f) of the Act, and the proposed issuance of securities is, therefore, not exempt by virtue of that Section from the requirements of Section 204 of the Act.

(4) The proposed issuance and sale of Bonds, as hereinafter authorized, will be for lawful object, within the corporate purposes of the Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance by Applicant of service as a public utility and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

(5) The period of public notice given in this matter is reasonable.

The Commission orders:

(A) The proposed issuance and sale of Bonds, upon the terms and conditions and for the purposes specified in the application, as described above, are authorized, subject to the provisions of this order.

(B) The proposed issuance and sale of Bonds at competitive bidding shall not be consummated until:

(i) Applicant shall have amended its application pursuant to the requirements of Section 34.2(g) of the Commission's Regulations under the Federal Power Act relating to compliance with competitive bidding requirements, and Section 34.2(h)(1) of those Regulations relating to affiliation, and shall have either filed such amendments or shall have mailed them and advised the Commission by telephone and telegraph, as contemplated in Section 34.9 of the Regulations.

(ii) The Commission, by further order, shall have approved the price to be received by Applicant for the proposed issuance of Bonds and the interest rate thereof.

(C) This authorization shall expire unless the transaction hereby authorized is consummated within 90 days from the date of issuance of this order.

(D) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determinations of cost, or any other matter whatsoever now pending or which may come before this Commission.

(E) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States with respect to any securities to which this order relates.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

IOWA ELECTRIC LIGHT AND POWER COMPANY, DOCKET NO. E-7269

ORDER AUTHORIZING ISSUANCE OF SHORT-TERM NOTES

(Issued March 25, 1966)

Iowa Electric Light and Power Company (Applicant), filed an application with the Federal Power Commission on February 14, 1966, seeking an order pursuant to Section 204 of the Federal Power Act for authority to issue Short-term Promissory Notes in the aggregate principal amount of not in excess of $18,000,000.

Applicant is organized under the laws of the State of Iowa and is engaged primarily in the electric and natural gas utility business in Iowa and is authorized to transact business in the States of Minnesota, Colorado and Nebraska. Electric service is supplied at retail to 271 incorporated cities and towns and 111 unincorporated communities in 51 counties in the State of Iowa.

According to the application, Applicant proposes to issue up to but not more than $18,000,000 in Promissory Notes payable to the First National Bank of Chicago, the Northern Trust Company of Chicago and to other banks. The Notes are to be issued either originally or upon renewal from time to time as the need for funds arises and they are to have maturity dates not in excess of one year from the date of issuance, with all notes maturing on or before December 31, 1967. The Notes are to bear interest at the prime rate in effect on the date of issuance.

The Applicant represents that the Notes are to be issued to renew presently outstanding Notes which total $5.4 million and are to furnish a portion of the funds for its 1966 construction program which has an estimated cost of $23,514,000. The largest item in the Applicant's construction program, the installation of a 140,000 kw generating unit at its Prairie Creek Plant in Cedar Rapids, Iowa, will require $11.9 million in 1966 and $18.5 million overall. The Applicant states that it plans to redeem all of the notes from the sale of long-term debt securities to be marketed in 1966.

Written notice of the application has been given to the Iowa Public Service Commission, Minnesota Public Service Commission, Colorado Public Service Commission, Nebraska Public Service Commission and the Governor of each of those states. Notice has also been given by publication in the Federal Register on March 4, 1966 (31 F.R. 3435), stating that any person desiring to be heard or to make any protest with reference to the application, should file petitions or protests on or before March 18, 1966, with the Federal Power Commission, Washington, D.C. 20426. No protest, petition or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, a corporation, owns and operates facilities for the transmission and sale at wholesale of electric energy which is generated in the States of Wisconsin, Illinois and South Dakota and consumed in the State of Iowa, all of which facilities are in addition to, and do not include, facilities used for the generation of electric energy or facilities used in local distribution or solely for the transmission of electric energy in intrastate commerce, or facilities for the transmission of electric energy consumed wholly by the transmitter. Applicant, therefore, is a public utility within the meaning of that term as used in Section 204 of the Federal Power Act.

(2) The proposed issuance of Promissory Notes in the aggregate principal amount of $18,000,000, all as described above, will constitute an issuance of securities within the purview of Section 204 of the Act.

(3) The proposed issuance of Promissory Notes in the aggregate principal amount of $18,000,000, all as described above, will be in excess of 5% of the par value of the other securities of Applicant, and, therefore, will not be exempt by virtue of Section 204(e) from the requirements of Section 204(a) of the Act.

(4) Applicant is not organized and operating in a State, under the laws of which the issue here involved is regulated by a State Commission within the meaning of Section 204(f) of the Act, and the proposed issuance is, therefore, not exempt by virtue of that section from the requirements of Section 204 of the Act.

(5) The proposed issuance of Promissory Notes will be exempt from the competitive bidding requirements of Section 34.1a of the Commission's Regulations under the Federal Power Act by reason of paragraph 34.1a(a)(2).

(6) The proposed issuance of securities, as hereinafter authorized, will be for a lawful object within the corporate purposes of Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance of service by Applicant as a public utility, and which will not impair its ability to perform that service, and is reasonable necessary and appropriate for such purposes.

(7) The period of public notice given in this matter is reasonable.

The Commission orders:

(A) The proposed issuance of Promissory Notes in the aggregate principal amount of $18,000,000, outstanding at any one time, upon the terms and conditions and confined to the purposes set forth in the application, all as described above, is hereby authorized, subject to the provisions of this order.

(B) This authorization is expressly conditioned upon the final maturity of said notes being not later than December 31, 1967.

(C) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service accounts, valuation, estimates or determination of cost or any other matter whatsoever now pending or which may come before this Commission.

(D) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States in respect to any security to which this order relates.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

MIDWESTERN GAS TRANSMISSION COMPANY,
DOCKET NOS. CP66-172, CP66-173, CP66-174

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND AMENDING ORDER AUTHORIZING THE IMPORTATION OF NATURAL GAS

(Issued March 25, 1966)

On December 2, 1965, Midwestern Gas Transmission Company (Applicant), filed in Docket No. CP66-172 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale and delivery of natural gas to customers located on its northern system on an interruptible basis for a temporary term commencing upon receipt of authorization and terminating on October 31, 1966. Applicant proposes to purchase the gas from Trans-Canada Pipe Lines Limited (Trans-Canada) at the existing point of interconnection of the two systems on the International Boundary between the United States and Canada, near Emerson, Manitoba. Applicant also filed on December 2, 1965, an application pursuant to Section 3 of the Natural Gas Act in Docket No. CP66-173, requesting an order of the Commission authorizing Applicant to import additional volumes of natural gas from Canada into the United States.[1] The proposals involved are more fully set forth in the aforementioned applications.

Applicant has entered into a precedent Agreement with Trans-Canada dated November 22, 1965, which contemplates the purchase of up to 25,000 Mcf of natural gas per day from Trans-Canada when Trans-Canada has such gas available for sale. The purchases from Trans-Canada will be made only when Applicant has corresponding requests from existing customers on its northern system to purchase this gas. The only purchases by Applicant from Trans-Canada contemplated by the instant applications are those for equivalent volumes to be sold by Applicant to its existing northern system customers who desire to purchase same under Applicant's proposed new Rate Schedule TGS-2, at a rate of 31.4¢ per Mcf.

Trans-Canada has advised Applicant that approximately 8 million Mcf of gas will be available for import during the temporary period ending October 31, 1966, and that of this quantity approximately 1.5 million Mcf should be available during the months of January, February and March.

Applicant's northern system facilities were authorized by order of the Commission on October 31, 1959, issued in Docket No. G-18313, *et al.* (Opinion No. 331, 22 FPC 775), which order authorized Applicant to import from Canada a maximum daily quantity of 204,000 Mcf of gas (Docket No. G-18314) and granted Applicant a Presidential Permit for the construction, operation and maintenance of facilities for the importation of natural gas (Docket No. G-18315). On August 10, 1965, by order issued in Docket No. CP64-308, *et al.* (Opinion No. 469) Applicant was authorized to import from Canada into the United States a maximum of 222,360 Mcf of gas per day, an increase of 18,360 Mcf over the aforementioned authorization issued in Docket No. G-18314.

---

[1] Treated herein as an application to further amend paragraph (M) of the Commission's order issued October 31, 1959 (22 FPC 775, 803 in Docket No. G-18313, *et al.*); amended in Docket No. CP64-308, *et al.*, on August 10, 1965, 34 FPC 457.

The importation and sale of natural gas on an interruptible basis as proposed by the instant applications would be made by means of the aforementioned existing facilities and no additional facilities are required.

The proposed TGS-2 service will be supplied in addition to the existing interruptible service under Rate Schedule I-2 now provided on Applicant's Northern System at 24.92 cents per Mcf. Applicant's CR-2 and CRL-2 customers will first pay for their interruptible gas at 24.92 cents per Mcf and then their allocated TGS-2 gas at 31.4 cents per Mcf. Applicant's CD-2 customer must first take its contract demand volumes plus an additional 2% allowable variation volume of gas @ 37.9 cents per Mcf prior to receiving gas under Rate Schedule I-2 or IGS-2. To insure that Applicant will not bill its customers for a greater volume of gas under the proposed Rate Schedule TGS-2 than it imports from Trans-Canada, Applicant has agreed in writing that "During the term of the certificate issued in Docket No. CP66-172, *et al.*, it agrees to balance, as closely as possible, the billings of its customers under Rate Schedule TGS-2 with the purchases of surplus interruptible gas from Trans-Canada, priced at 24 cents per Mcf, which are in excess of the presently authorized firm contract demand quantity".

As noted hereinbefore Applicant requested authorization in Docket No. CP66-173 to import 25,000 Mcf of natural gas per day from Trans-Canada when Trans-Canada has such gas available, such purchases to be made by Applicant, only when it has corresponding requests from existing customers on its northern system to purchase this gas. The allied request in Docket No. CP66-174 for a Presidential Permit to operate and maintain the facilities at the International Boundary required for importation, was returned to Applicant on December 13, 1965, for the reason that a new permit or an amendment to existing permit is not required when an Applicant presently authorized to import natural gas merely requests authorization to import additional volumes at the existing point of connection, without change in or construction of new facilities.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on March 24, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the applications and exhibits submitted in support of the authorizations, and upon consideration of the record,

The Commission finds:

(1) Applicant, Midwestern Gas Transmission Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of May 12, 1959, in Docket No. G-16841 (21 FPC 653, 663).

(2) The proposed sale and delivery of natural gas, as hereinbefore described and as more fully described in the application, in Docket No. CP66-172 in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed sale and delivery of natural gas to be effective as of the date of issuance of this order are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter in Docket No. CP66-172 and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(6) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that certain conditions relating to the proposed Temporary Gas Service (TGS-2) be attached to the Commission's order in Docket No. CP66-172 authorizing the proposed service, and as related hereinbefore.

(7) It is further necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that Paragraph M of the Commission's order issued October 31, 1959 (22 FPC 775, 803) in Docket No. G-18313, *et al.*, be further amended so as to authorize Applicant to import up to 25,000 Mcf of natural gas per day from Trans-Canada, as proposed in the application filed herein in Docket No. CP66-173, for transportation and resale to its customers on its Northern System on an interruptible basis as proposed.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Midwestern Gas Transmission Company in Docket No. CP66-172 authorizing as of the date of issuance of this order the sale and delivery of natural gas as more fully described in the application in this proceeding, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(C) The Applicant shall file within 15 days from the date of issuance of this order the Temporary Gas Service Rate Schedule in the form submitted in Exhibit P to its application filed in Docket No. CP66-172 and served on its customers. Good cause exists for permitting such rate schedule to be effective as of the date of issuance of this order.

(D) The certificate issued by Paragraph (A) above is expressly conditioned on Applicant (1) limiting its operation of its Northern System to a maximum of 877 psig with existing facilities; and (2) during the term of the certificate issued balancing to the closest possible extent the billings of its customers under Rate Schedule TGS-2 with the purchases of surplus interruptible gas from Trans-Canada as proposed in the application filed in Docket No. CP66-172, which are in excess of the presently authorized firm contract demand quantity.

(E) Paragraph (M) of the Commission's order issued October 31, 1959, in Docket No. G-18313, *et al.*, amended by order issued on August 10, 1965, in Docket No. CP64-308, *et al.*, is further amended so as to authorize Applicant to import up to 25,000 Mcf of natural gas daily from Trans-Canada, as proposed in the application filed in Docket No. CP66-173.

(F) In all other respects the terms, conditions and authorizations set forth in the Commission's order issued October 31, 1959, as amended on August 10, 1965, shall remain in full force and effect, and the grant of the instant authorization, together with the exercise of the rights therein granted, shall be fully subject thereto.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

AREA RATE PROCEEDING, AR61-1; CLAUDE E. AIKMAN, ET AL., G-18466, ET AL.; NORTH CENTRAL OIL CORPORATION (OPERATOR), ET AL., CI60-435, ET AL.

ORDER REJECTING PETITION TO REOPEN PROCEEDING

(Issued March 28, 1966)

On August 5, 1965, we issued Opinion No. 468, 34 FPC 159, in this proceeding establishing just and reasonable rates for producer sales in the Permian Basin area. On September 3, 1965, Hunt Oil Company, *et al.*, filed an application for rehearing of our order and requested reopening of the proceeding to adduce additional evidence which allegedly would demonstrate the invalidity of our order. The proposed evidence included exhibits refused admission in evidence pursuant to orders of the Commission; a recasting of evidence currently in the record; and the presentation of new evidence. In Opinion No. 468-A, 34 FPC 1068, we denied the applications for rehearing and the motion to reopen the proceeding for receipt of additional evidence. See *I.C.C.* v. *Jersey City*, 322 U.S. 503, 514 (1944).

On October 21, 1965, Hunt Oil Company, *et al.*,[1] filed another petition to reopen the Permian Basin proceedings for receipt of additional evidence.[2] In that petition, Hunt again requests the opportunity to recast some portions of the record, update the record and present additional evidence. Hunt asserts that the studies, which are detailed to a somewhat greater extent than in its petition for rehearing, would demonstrate the invalidity of our decision in that proceeding and should have been considered prior to court review thereof.

It is apparent that Hunt's October 21 filing constitutes a second application for rehearing of Opinion No. 468.[3] Neither the Natural Gas Act nor our Rules of Practice and Procedure authorize such a filing. While Hunt asserts that some of the new material would be based upon pleadings introduced in other Commission proceedings after it filed its petition for rehearing, it is clear that none of it relies on facts not available to Hunt at the time it filed its petition for rehearing. In short there is even less reason for setting aside our decision in this most fully adjudicated of cases than existed in the situation presented in the *Jersey City* case *supra*. The petitions should therefore be rejected.

The Commission orders:

The document designated as a petition to reopen proceedings for receipt of evidence filed by Hunt Oil Company, *et al.*, is hereby rejected.

Chairman White and Commissioner Bagge *not participating.*

---

[1] H. L. Hunt, Lamar Hunt, N. B. Hunt, W. H. Hunt, Secure Trusts, Caroline Hunt and Loyd B. Sands, Caroline Hunt Trust Estate, (Lyda Hunt-Caroline Trusts, Lyda Hunt-Bunker Trusts, Lyda Hunt-Lamar Trusts, Lyda Hunt-Herbert Trusts, Lyda Hunt-Margaret Trusts, formerly estate of Lyda Bunker Hunt, deceased; Hunt Industries (formerly estate of Lyda Bunker Hunt, deceased) Placid Oil Company.

[2] On November 1, 1965, Perry R. Bass, (Operator), *et al.*, joined in and adopted that petition.

[3] Hunt asserts that the petition to reopen was filed under Section 1.33 of the Commission's Rules of Practice and Procedure. But this Rule is expressly applicable only before a Commission decision has been issued. See § 1.33(c). Hunt's petition to reopen is directed to the same issues raised in its application for rehearing and not to any modifications made by our order on rehearing, Opinion No. 468-A.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

VILLAGE OF BELLE RIVE, ILLINOIS AND TRUNKLINE GAS COMPANY, DOCKET NO. CP66-221

FINDINGS AND ORDER DIRECTING SALE OF NATURAL GAS

(Issued March 28, 1966)

On January 10, 1966, the Village of Belle Rive, Illinois (Applicant), filed in Docket No. CP66-221 an application, as amended on February 10, 1966 pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Trunkline Gas Company (Respondent) to sell and deliver to Applicant natural gas required for resale in the Village of Belle Rive, Illinois, as more fully set forth in the application and amendment.

Applicant seeks delivery of the gas requirements of Belle Rive from Respondent at the point of delivery heretofore established by Respondent, pursuant to the Commission's order issued April 22, 1965, in Docket No. CP65-250, 33 FPC 846, for the Village of Dahlgren, Illinois. The gas is to be delivered to Dahlgren for the account of Applicant. No new interconnection to the facilities of Respondent will be required. Applicant states that it has made arrangements with Dahlgren to transport the gas for Applicant through the transmission facilities constructed by Dahlgren.

The estimated volumes of natural gas will be purchased under Trunkline's FPC Rate Schedule SG by Applicant and are stated to be:

	First year	Second year	Third year
Annual (Mcf)	9,858	14,444	18,931
Peak day (Mcf)	130	184	240

Applicant states that these volumes are required for the residential, public and commercial customers in the Village of Belle Rive and vicinity and along the transmission line, which do not now have natural gas service. The population of the proposed service area is approximately 331.

Applicant proposes to construct a complete distribution system and approximately three miles of 2-inch lateral pipeline extending from its town border station to the connection with Dahlgren. The estimated cost of the proposed construction is $95,000, which will be financed from the sale of gas revenue certificates.

On February 10, 1966, Respondent filed an answer to the application filed by Applicant in this proceeding stating it would render the requested service on order of the Commission favorably determining the merits of the application.

Due notice of the filing of the subject application and opportunity for hearing thereon have been given by publication in the Federal Register on January 22, 1966 (31 F.R. 926). No protest, petition to intervene or request for hearing has been filed in this proceeding.

The Commission finds:

(1) Trunkline Gas Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 29, 1949, in Docket No. G-882 (8 FPC 250).

(2) Applicant, Village of Belle Rive, Illinois, is legally authorized to engage in the local distribution of natural gas to the public within the meaning of Section 7(a) of the Natural Gas Act.

(3) It is necessary and desirable in the public interest to direct Respondent to sell natural gas to Applicant under a service agreement to be executed by Applicant with Trunkline, in accordance with the Commission's Regulations, and to deliver up to 240 Mcf per day of natural gas for distribution and resale as hereinbefore described.

(4) The requirement that Respondent serve Applicant as hereinafter ordered, will not impair Respondent's ability to render adequate service to its existing customers.

(5) Applicant should be prepared to receive natural gas from Respondent for distribution in Belle Rive, Illinois, environs, and along said lateral within one year from the date of issuance of this order.

The Commission orders:

(A) Trunkline Gas Company is directed to sell up to 240 Mcf of natural gas daily to Applicant and to deliver said gas under a service agreement to be executed by Applicant with Respondent in accordance with the Commission's Regulations, for distribution and resale as hereinbefore described and as more fully described in the application in this proceeding. Such service shall be rendered pursuant to Respondent's presently filed appropriate rate schedule.

(B) Respondent shall report to the Commission in writing the date of commencement of service to Applicant within 10 days thereof.

(C) Applicant shall be prepared to receive service as directed herein within one year from the date of issuance of this order.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

CONSOLIDATED GAS SUPPLY CORPORATION, DOCKET NO. CP66–250

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 28, 1966)

On February 1, 1966, Consolidated Gas Supply Corporation (Applicant) filed in Docket No. CP66–250 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of natural gas facilities during a two year period for the modernization and improvement of Applicant's northern West Virginia segment of its transmission system, all as more fully set forth in the application in this proceeding.

Specifically, Applicant proposes to construct during 1966 a new 25 mile 30-inch transmission pipeline, and related dual 24-inch river crossing, extending from the existing Hastings Compressor Station, Wetzel County, West Virginia, to a proposed new delivery point in Monroe County, Ohio, for the East Ohio Gas Company (East Ohio), an existing customer, together with a measuring station at such new delivery point. Further, Applicant proposes to replace during 1967 the present compressor units and related facilities at Hastings Compressor Station with new compressor units and related facilities providing 7,000 horsepower.

The subject proposals will modernize and improve Applicant's northern West Virginia system by replacement of outmoded compressor facilities at Hastings, by the conversion of two existing high-pressure (1300 psig) 12-inch lines to lower pressure (900 psig) operation, and by the construction of the new 30-inch line. With the replacement and facilities herein proposed, Applicant will have the same overall capacity in this portion of its system as at present but with a rearranged pattern of deliveries to accommodate the reduction in capacity of the high-pressure system. The application indicates that most of the gas presently transported northeasterly through the high-pressure lines for deliveries to Applicant's northern divisions at Preston, Pennsylvania, will now be delivered through the proposed 30-inch line to East Ohio at Mullett, Ohio. Equivalent deliveries to the northern divisions at Preston will be made by Texas Eastern Transmission Corporation from gas the latter is authorized to transport for Applicant and presently delivers for Applicant's account to East Ohio at Mullett. Further, the proposed 30-inch line will be a facility which can be economically expanded to meet future growth of Applicant's markets downstream (north) of the Hastings Station.

The total estimated cost of the proposed facilities is $7,128,000, which cost will be financed with funds on hand and funds to be obtained from Applicant's parent, Consolidated Natural Gas Company.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on March 24, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Consolidated Gas Supply Corporation, a West Virginia corporation having its principal place of business in Clarksburg, West Virginia, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued February 2, 1965, in Docket No. CP63–272 (33 FPC 150).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued authorizing Applicant, Consolidated Gas Supply Corporation to construct and operate the proposed facilities as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized herein shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within two years from the date on which this order issues.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

GENERAL AMERICAN OIL COMPANY OF TEXAS, DOCKET NO. RI66–274; A. H. MEADOWS, DOCKET NO. RI66–275

ORDER GRANTING REHEARING FOR THE PURPOSE OF FURTHER CONSIDERATION

(Issued March 28, 1966)

General American Oil Company of Texas (General American) and A. H. Meadows (Meadows) filed on February 28, 1966, an application for rehearing of the Commission's order issued February 2, 1966, in Docket Nos. RI66–274 and RI66–275, 35 FPC 177, suspending for the statutory period proposed increased rates of 14.8479¢ per Mcf, inclusive of tax reimbursement,[1] tendered by them for their jurisdictional sales of residue gas derived from casinghead gas to El Paso Natural Gas Company (El Paso) in the Permian Basin Area of Texas. The proposed rates are designated as Supplement Nos. 6 and 3 to General American's FPC Gas Rate Schedule No. 32 and Meadows' FPC Gas Rate Schedule No. 1, respectively.

These rates were suspended because the quality statements tendered on January 3, 1966, in support of their filings were based on the quality of the wellhead gas instead of the residue gas. A review of the contracts at that time had indicated that the producers were being paid on the basis of residue volumes. For this reason the quality statements were rejected and the producers were required by the suspension order to submit new quality statements based on the quality of the residue gas.

In their application for rehearing General American and Meadows claim that gas sold under the subject rate schedules has always been delivered and metered at the lease. We need additional time, however, to ascertain whether the producers are being paid on the basis of wellhead volumes, in which case the proper point for determining the quality of the gas under Opinion No. 468, 34 FPC 159, would be at the point of delivery, and to determine the propriety of the various adjustments submitted in their quality statements.

The Commission finds:

To afford further time for consideration of these matters, it is appropriate and proper in the administration of the Natural Gas Act that rehearing be granted.

---

[1] 18¢ base rate less contractual deduction of 3.3499¢ per Mcf for gathering, treating and compression, plus .1978¢ reimbursement.

The Commission orders:

The application for rehearing filed by General American and Meadows on February 28, 1966, in the above-entitled proceedings is granted for the purpose of further consideration of the issues raised therein.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

MISSISSIPPI RIVER TRANSMISSION CORPORATION, DOCKET NO. CP66-251

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 28, 1966)

On February 2, 1966, Mississippi River Transmission Corporation (Applicant) filed in Docket No. CP66-251 an application, as supplemented on February 25, 1966, pursuant to Section 7(c) of the Natural Gas Act, as implemented by Section 157.7(d) of the Regulations under the Act, for a certificate of public convenience and necessity authorizing Applicant, during the three calendar years 1966 through 1968, to construct and operate natural gas pipeline facilities and compression facilities for the testing and development of underground reservoirs for the possible storage of natural gas, all as more fully set forth in the application, as supplemented, in this proceeding.

Applicant states in this "budget-type" application (1) that the volume of natural gas to be injected into the prospective storage fields will not exceed a total of 10,000,000 Mcf with not more than 2,000,000 Mcf being injected into any single reservoir; (2) that the gas will be injected for testing purposes only during off-peak periods; (3) that any storage field developed pursuant to authorization received in this docket will not be utilized to render service without further authorization of the Commission, and (4) the total expenditure for the three-year period will not exceed $3,000,000 with not more than $1,000,000 being spent in any one year period.

Further, Applicant states that it will comply with the provisions of Section 157.7(d) of the Commission's Regulations under the Natural Gas Act.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on March 24, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, supplement and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Mississippi River Transmission Corporation, a Delaware corporation having its principal place of business in St. Louis, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 29, 1960, in Docket No. CP60-95 (24 FPC 1020).

(2) The facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce and the construction and

operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(6) The certificate issued hereinafter should be conditioned upon Applicant's compliance with the provisions of Subparagraphs (1), (2), (3), (4) and (5) of Section 157.7(d) of the Commission's Regulations under the Natural Gas Act.

(7) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit the information required by Subparagraphs (6) and (7) of Section 157.7(d) of the aforesaid Regulations.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity is issued authorizing Applicant, Mississippi River Transmission Corporation, during the three calendar years 1966 through 1968, to construct and operate the proposed facilities for the testing and development of underground reservoirs for the storage of natural gas as hereinbefore described, all as more fully described in the application, as supplemented, in this proceeding and as hereinafter provided.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(C) The certificate issued by paragraph (A) above is conditioned upon Applicant's compliance with the provisions of Subparagraphs (1), (2), (3), (4) and (5) of Section 157.7(d) of the Commission's Regulations under the Natural Gas Act.

(D) Applicant shall submit the information required by Subparagraphs (6) and (7) of Section 157.7(d) of the aforesaid Regulations.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. CP66-258

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 28, 1966)

On February 4, 1966, Panhandle Eastern Pipe Line Company (Applicant) filed in Docket No. CP66-258 an application pursuant to Section 7(c) of the Natural Gas Act, as implemented by Section 157.7(b) of the Regulations under

The Commission orders:

The application for rehearing filed by General American and Meadows on February 28, 1966, in the above-entitled proceedings is granted for the purpose of further consideration of the issues raised therein.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

MISSISSIPPI RIVER TRANSMISSION CORPORATION, DOCKET NO. CP66-251

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 28, 1966)

On February 2, 1966, Mississippi River Transmission Corporation (Applicant) filed in Docket No. CP66-251 an application, as supplemented on February 25, 1966, pursuant to Section 7(c) of the Natural Gas Act, as implemented by Section 157.7(d) of the Regulations under the Act, for a certificate of public convenience and necessity authorizing Applicant, during the three calendar years 1966 through 1968, to construct and operate natural gas pipeline facilities and compression facilities for the testing and development of underground reservoirs for the possible storage of natural gas, all as more fully set forth in the application, as supplemented, in this proceeding.

Applicant states in this "budget-type" application (1) that the volume of natural gas to be injected into the prospective storage fields will not exceed a total of 10,000,000 Mcf with not more than 2,000,000 Mcf being injected into any single reservoir; (2) that the gas will be injected for testing purposes only during off-peak periods; (3) that any storage field developed pursuant to authorization received in this docket will not be utilized to render service without further authorization of the Commission, and (4) the total expenditure for the three-year period will not exceed $3,000,000 with not more than $1,000,000 being spent in any one year period.

Further, Applicant states that it will comply with the provisions of Section 157.7(d) of the Commission's Regulations under the Natural Gas Act.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on March 24, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, supplement and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Mississippi River Transmission Corporation, a Delaware corporation having its principal place of business in St. Louis, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 29, 1960, in Docket No. CP60-95 (24 FPC 1020).

(2) The facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce and the construction and

operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(6) The certificate issued hereinafter should be conditioned upon Applicant's compliance with the provisions of Subparagraphs (1), (2), (3), (4) and (5) of Section 157.7(d) of the Commission's Regulations under the Natural Gas Act.

(7) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit the information required by Subparagraphs (6) and (7) of Section 157.7(d) of the aforesaid Regulations.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity is issued authorizing Applicant, Mississippi River Transmission Corporation, during the three calendar years 1966 through 1968, to construct and operate the proposed facilities for the testing and development of underground reservoirs for the storage of natural gas as hereinbefore described, all as more fully described in the application, as supplemented, in this proceeding and as hereinafter provided.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(C) The certificate issued by paragraph (A) above is conditioned upon Applicant's compliance with the provisions of Subparagraphs (1), (2), (3), (4) and (5) of Section 157.7(d) of the Commission's Regulations under the Natural Gas Act.

(D) Applicant shall submit the information required by Subparagraphs (6) and (7) of Section 157.7(d) of the aforesaid Regulations.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. CP66-258

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 28, 1966)

On February 4, 1966, Panhandle Eastern Pipe Line Company (Applicant) filed in Docket No. CP66-258 an application pursuant to Section 7(c) of the Natural Gas Act, as implemented by Section 157.7(b) of the Regulations under the Act, for a certificate of public convenience and necessity authorizing the construction during the one year period commencing April 2, 1966, and the operation of certain natural gas facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers in the general area of Applicant's existing facilities, all as more fully set forth in the application in this proceeding.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system supplies of natural gas in various producing areas generally coextensive with said system.

The total cost of the facilities covered by this application will not exceed a maximum of $5,000,000, with no single project to exceed a cost of $500,000, which costs are proposed to be financed with funds on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on March 24, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Panhandle Eastern Pipe Line Company, a Delaware corporation having its principal place of business in Kansas City, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of September 23, 1942, in Docket Nos. G-200 and G-207 (3 FPC 273).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, a statement in compliance with Section 157.7(b)(3) of the Commission's Regulations under the Natural Gas Act.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the one year period commencing April 2, 1966, and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $5,000,000, with no single project to exceed a cost of $500,000.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity is issued authorizing Applicant, Panhandle Eastern Pipe Line Company, to construct during the one year period commencing April 2, 1966, the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to said Applicant.

(B) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with Section 157.7(b)(3) of the Commission's Regulations under the Natural Gas Act.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(D) The authorization granted in paragraph (A) above is limited to construction during the one year period commencing April 2, 1966, and the total expenditures for facilities to be constructed thereunder are limited to a maximum of $5,000,000, with no single project to exceed a cost of $500,000.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

TEXAS GAS TRANSMISSION CORPORATION, DOCKET NO. CP64–107

ORDER AMENDING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 28, 1966)

On February 21, 1966, Texas Gas Transmission Corporation (Petitioner) filed in Docket No. CP64–107 a petition to amend the certificate of public convenience and necessity issued in said docket on May 26, 1964, 31 FPC 1292, and amended on December 17, 1964, 32 FPC 1477, 1478, June 2, 1965, 33 FPC 1138, and December 1, 1965, 34 FPC 1408, by authorizing the construction and operation of facilities for one new natural gas delivery point for the City of Henderson, Kentucky, an existing customer, as more fully set forth in the petition to amend.

In the certificate of public convenience and necessity issued in this docket on May 26, 1964, and by the subsequent amendments, Petitioner was authorized to construct and operate certain natural gas facilities to meet increased contract demand requirements of its then existing customers during the 1964–65 and 1965–66 winter heating seasons.

The instant proposal is for an additional delivery point for gas for Henderson's anticipated resales of natural gas in a rural area adjacent to the city. The estimated volumes of natural gas to be delivered through the proposed new facilities are 1,600 Mcf per year, but there will be no increase in Henderson's contract demand.

The estimated cost to install the proposed facilities is $1,370, which will be paid for from cash on hand.

Due notice of the filing of the petition to amend was published in the Federal Register on March 4, 1966 (31 F.R. 3436). No protest, petition to intervene, or notice of intervention has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and public convenience and necessity require that the certificate of public convenience and necessity issued in Docket No. CP64-107 on May 26, 1964, as subsequently amended, be further amended as hereinafter ordered.

The Commission orders:

(A) The certificate of public convenience and necessity issued to Texas Gas Transmission Corporation in Docket No. CP64-107 on May 26, 1964, and amended on December 17, 1964, June 2, 1965, and December 1, 1965, is further amended by authorizing the construction and operation of a new delivery point for use in delivering natural gas to the City of Henderson, Kentucky, as hereinbefore described and as more fully described in the petition to amend.

(B) In all other respects the certificate, as amended, shall remain in full force and effect.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

TEXAS GAS TRANSMISSION CORPORATION, DOCKET NO. CP66-259

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 28, 1966)

On February 4, 1966, Texas Gas Transmission Corporation (Applicant) filed in Docket No. CP66-259 an application pursuant to Section 7(c) of the Natural Gas Act, as implemented by Section 157.7(b) of the Regulations under the Act, for a certificate of public convenience and necessity authorizing the construction during the 12-month period commencing May 30, 1966, and the operation of certain natural gas facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers in the general area of Applicant's existing transmission system, all as more fully set forth in the application in this proceeding.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system new supplies of natural gas in various producing areas generally coextensive with said system.

The total cost of the facilities covered by this application will not exceed a maximum of $3,000,000, with no single project to exceed a cost of $500,000, which costs are proposed to be financed with funds on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on March 24, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Texas Gas Transmission Corporation, a Delaware corporation having its principal place of business in Owensboro, Kentucky, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order, issued March 30, 1949, in Docket No. G-859 (8 FPC 190).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, a statement in compliance with Section 157.7(b)(3) of the Commission's Regulations under the Natural Gas Act.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the 12-month period commencing May 30, 1966, and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $3,000,000, with no single project to exceed a cost of $500,000.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity is issued authorizing Applicant, Texas Gas Transmission Corporation, to construct during the 12-month period commencing May 30, 1966, the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to said Applicant.

(B) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with Section 157.7(b)(3) of the Commission's Regulations under the Natural Gas Act.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(D) The authorization granted in paragraph (A) above is limited to construction during the 12-month period commencing May 30, 1966, and the total expenditures for facilities to be constructed thereunder are limited to a maximum of $3,000,000, with no single project to exceed a cost of $500,000.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

UNITED FUEL GAS COMPANY, DOCKET NO. G-9070

ORDER FURTHER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 28, 1966)

On January 18, 1966, United Fuel Gas Company (Applicant), filed in Docket No. G-9070 an application to amend the order of the Commission issued in said docket on October 13, 1955, 14 FPC 1038, and amended on September 16, 1957, 19 FPC 341, by requesting authorization to sell and deliver 20,000 Mcf of gas per day to the Kaiser Aluminum & Chemical Corporation (Kaiser) in lieu of the presently authorized 13,000 Mcf per day, all as more fully set forth in the application to amend.

In Docket No. G-9070 Applicant was authorized to construct and operate approximately 6 miles of 10-inch diameter pipeline in Jackson County, West Virginia and to sell up to 5,000 Mcf per day to Kaiser, near Ravenswood, West Virginia, on an interruptible basis. The certificate was amended by a Commission order of September 16, 1957, increasing the daily deliveries of gas to 13,000 Mcf.

The application to amend states that Kaiser has informed Applicant by letter dated December 7, 1965, that it anticipates an increase in its natural gas requirements because of planned installation of additional equipment. The application to amend further states that by letter dated January 10, 1966, Applicant and Kaiser have revised their existing sales agreement to permit the sale and delivery of increased volumes of natural gas in quantities up to 20,000 Mcf of gas per day.

Due notice of the filing of the application to amend and opportunity for hearing thereon have been given by publication in the Federal Register on February 9, 1966, (31 F.R. 2559). No protest, petition to intervene, or notice of intervention has been filed in the proceeding concerning this amendment.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued October 13, 1955, as amended September 16, 1957, in Docket No. G-9070 be further amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued October 13, 1955, as amended September 16, 1957, is further amended so as to authorize Applicant to transport and deliver up to 20,000 Mcf of natural gas daily on an interruptible basis to Kaiser in lieu of the 13,000 Mcf of interruptible natural gas presently authorized.

(B) The certificate order issued in Docket No. G-9070 is amended on the express condition that the interruptible service authorized herein shall be curtailed or interrupted to the extent required to meet existing or future contract maximum obligations of Applicant for firm service to its customers.

(C) In all other respects said order shall remain in full force and effect.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

GULF STATES UTILITIES COMPANY, PROJECT NO. 2504

ORDER ISSUING MINOR-PART LICENSE (TRANSMISSION LINE)

(Issued March 29, 1966)

Gulf States Utilities Company (Applicant) of Beaumont, Texas, on February 15, 1965, filed an application for license under Section 4(e) of the Federal Power Act for proposed transmission line Project No. 2504 in Jasper and Tyler Counties, Texas. The project consists of two 138 kv, three-phase, 60 cycle, single circuit lines, carried on wood pole H-frames, connecting the United States' Sam Rayburn development with Applicant's Doucette Bulk and Jasper-Newton substations. Circuit No. 97, to the Doucette Bulk substation, is about 28 miles in length, and Circuit No. 455, to the Jasper-Newton substation, is about 13 miles in length. Both lines extend approximately 1,675 feet across lands of the United States within the Angelina National Forest and lands of the United States in the Sam Rayburn development. Project No. 2504 is subject to license as primary lines of the Sam Rayburn development.

The Southwestern Power Administration of the Department of the Interior markets the power from the Sam Rayburn development. Under a contract dated February 13, 1964, power is sold to the Sam Rayburn Electric Cooperative, Inc. (Sam Dam Co-op), whose members are preference customers under Federal power marketing policies. Under a contract of the same date between the Sam Dam Co-op and Applicant, this power is transmitted across Applicant's Circuits Nos. 97 and 455 and pooled with the energy in Applicant's electric system, and equivalent power is provided to the members of the Sam Dam Co-op. The contracts described above terminate on December 31, 1985.

The Department of Agriculture reported that the proposed lines will not interfere with the purposes of the Angelina National Forest. It requested that the terms and conditions of Form L-8 (17 FPC 1017) be incorporated in the license for the protection of the forest. It recommended that the license be made coterminous with the contracts covering the power marketing arrangements. Applicant, in reply, stated that it has no objections to these proposals, and they are adopted herein. Agriculture proposed, in addition, a provision in the license "that any excess capacity in the lines be made available for the wheeling of power to or for the account of other electric utilities * * *". Applicant responded that a wheeling condition would not be justifiable because the lines, by contract, are for the transmission of power to preference customers. In this connection, the Department of the Interior advised that: "During the period when the * * * contractual arrangement is in force, no wheeling requirement is needed for the Government to have transmission rights over the line since it has an acceptable agreement for marketing the hydroelectric power output from the Sam Rayburn Project." Interior added: "When a suitable marketing arrangement including use of this transmission line no longer exists, the Government should have the right to utilize the excess capacity in the transmission line to market the output of Sam Rayburn Dam hydroelectric power."

It thus appears that no wheeling provision is needed before December 31, 1985. The license herein granted for Project No. 2504 expires on that date, and if the parties are unable to provide further contractual arrangements for transmission, the Commission may, if it deems appropriate, include a wheeling provision in any new license.

The Secretary of the Army and Chief of Engineers reported that the plans of the project structures affecting navigation are satisfactory.

The Parks and Wildlife Department of the State of Texas recommended a provision in the license on soil erosion. This provision is contained in Article 15.

Since Applicant failed to file an Exhibit M showing the general description and specifications of the transmission equipment as required by the Commission's regulations, we are requiring such a filing by Article 18.

The Commission finds:

(1) Applicant is a corporation organized under the laws of the State of Texas, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(2) Public notice has been given. No protest or petition to intervene has been received. There is no conflicting application before the Commission.

(3) The proposed project will affect a Government dam, but the issuance of a license therefor, as hereinafter provided, will not affect the development of any water resources for public purposes which should be undertaken by the United States.

(4) The issuance of a license for the project will not interfere or be inconsistent with the purposes for which any reservation was created or acquired.

(5) The proposed transmission lines are primary lines as defined in Section 3(11) of the Federal Power Act, and are, therefore, subject to the licensing authority of the Commission.

(6) The amount of annual charges to be paid under the license for the project for the purpose of reimbursing the United States for the costs of administration of Part I of the Act, and for recompensing it for the use, occupancy and enjoyment of its lands is reasonable as hereinafter fixed and specified.

(7) The exhibit described in paragraph (B) below conforms to the Commission's rules and regulations and should be approved as part of the license for the project.

(8) The proposed transmission lines are a minor part only of a complete project within the meaning of Section 10(i) of the Act.

(9) It will be in the public interest to waive the following terms and conditions of Part I of the Act:

Sections 4(b), except the second sentence thereof; 4(e), insofar as it relates to approval of plans by the Chief of Engineers and the Secretary of the Army and to public notice; 6, insofar as it relates to public notice and to the acceptance and expression in the license of terms and conditions of the Act which are hereinafter waived; 10(a); 10(c) insofar as it relates to depreciation reserves; 10(d); 10(f); 11; 12; 14, except insofar as the power of condemnation is reserved; 15; 18; 19; 20; 22; and 23(a), insofar as it relates to the determination of fair value.

The Commission orders:

(A) This minor-part license is hereby issued under Sections 4(e) and 10(i) of the Federal Power Act (Act) to Gulf States Utilities Company (Licensee) for a period effective as of March 1, 1966, and terminating as of December 31, 1985, for the construction, operation and maintenance of transmission line Project No. 2504, subject to the terms and conditions of the Act, insofar as not expressly waived herein, which is incorporated by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Transmission line Project No. 2504 consists of:

(i) all lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined;

(ii) two 138,000 volt transmission lines, 3 phase, 60 cycles, single circuit, wood pole H-frame type, extending from the Sam Rayburn Dam, one to the Doucette Bulk-Substation and the other to the Jasper-Newton substation; crossing approximately 1,675 feet of 150 feet wide right-of-way in the Angelina National Forest and lands of the United States in the Sam Rayburn development.

(iii) all other structures, equipment, or facilities used or useful in the maintenance and operation of the project and located on the project area; which lands and project works are more specifically shown and described by a certain exhibit which formed part of the application and which is designated and described as:

Exhibit J & K: (FPC No. 2504–1) "138 K.V. Transmission Lines on United States of America Property at Sam Rayburn Dam.—North of Jasper, Texas—Jasper County—Application by Gulf States Utilities Company" dated February 12, 1965.

(C) This license is also subject to the terms and conditions set forth in Form L–8 dated December 15, 1953, and entitled, "Terms and Conditions of License for Minor-Part Project (Transmission Line) Affecting Lands of the United States," (17 FPC 1017) which terms and conditions, designated as Article 1 through 14 are attached hereto and made a part hereof, and subject to the following special conditions set forth herein as additional articles:

Article 15. The licensee shall be responsible for and shall minimize soil erosion and siltation on lands adjacent to the transmission lines resulting from construction and operation of the project. The Commission upon request, or upon its own motion, may order the licensee to construct and maintain such preventive works to accomplish this purpose and to revegetate exposed soil surface as the Commission may find to be necessary after notice and opportunity for hearing.

Article 16. The licensee shall complete construction of the project on or before May 30, 1966.

Article 17. The licensee shall pay to the United States the following annual charges effective as of March 1, 1966:

(i) For the purpose of reimbursing the United States for the cost of administration of Part I of the Act, $5.00; and

(ii) For the purpose of recompensing the United States for the use, occupancy, and enjoyment of its lands for transmission line right-of-way, $5.00.

Article 18. The licensee shall, within six months from the effective date of this license, file with the Commission an Exhibit M, general description and specification of equipment, in conformance with the Commission's rules and regulations.

(D) The exhibit designated and described in paragraph (B) is hereby approved and made a part of the license.

(E) The terms and conditions of the Act, which it has been found above to be in the public interest to waive, are hereby excluded from this license.

(F) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license amendment. In acknowledgment of the acceptance of this license amendment, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

LANDS WITHDRAWN IN POWER SITE RESERVE NO. 66, DOCKET NO. DA-520-OREGON, BUREAU OF LAND MANAGEMENT, PORTLAND, OREGON

ORDER DENYING APPLICATION UNDER SECTION 24 OF THE FEDERAL POWER ACT

(Issued March 29, 1966)

Application was filed by the Bureau of Land Management (Applicant) of Portland, Oregon, seeking a determination under Section 24 of the Federal Power Act for the purpose of restoring the following described lands of the United States withdrawn for power purposes:

Willamette Meridian, Oregon—T. 6 S., R. 13 E., sec. 24: E½SE¼NE¼; T. 6 S., R. 14 E., sec. 19: lots 17 and 18 (part of former lots 1 and 10) (50.10 acres).

Applicant seeks restoration to permit an exchange of the above-described lands, which were the subject of a Section 24 determination in Docket No. DA-358-Oregon, dated July 29, 1947, for mining purposes only, for other lands owned by the Deschutes Home Owners Association, Inc., (or members of the Association), more accessible to public roadways and which have a much larger river frontage, for use by Applicant for recreational development. Following the Commission's determination in DA-358-Oregon, the subject lands were restored to entry for mining purposes only by Restoration Order No. 1236 of November 7, 1947, and have since been occupied by houses built by the mining company for its supervisory personnel. When the company ceased its mining operations, the buildings were sold to individuals now seeking to obtain title to the lands. According to information made available to the Commission, the present owners of the houses are members of the aforementioned Association who have organized an integrated community on the subject lands, complete with utilities. One of the homes is the permanent home of one of its members and the others are used from six to eight months during the year.

The subject lands, which are withdrawn in Power Site Reserve No. 66, dated July 2, 1910, lie on the west bank of the Deschutes River at the Community of Dant, Oregon, and are located in a reach of the river which would be affected by the development of the Freida site or the downstream Maupin site proposed by both the U.S. Geological Survey and the U.S. Corps of Engineers. The water surface at the Maupin damsite is about 835 feet above sea level and a dam that would raise the water to an altitude of about 1,075 feet, as suggested, would create a gross head of 240 feet and, at average discharge (about 5,400 cfs) and 80 percent efficiency, the site has a power potential of about 88,000 kw. Development of either site would inundate a major portion of the subject lands. While such development is not contemplated in the near future, it is clear that the subject lands have considerable power value, and, in the circumstances, the release of the subject lands from power withdrawal or for restoration subject to the provisions of Section 24 of the Federal Power Act to permit probable additional costly improvements thereon would be adverse to their power values.

The Commission finds:

The subject lands are valuable for power purposes.

The Commission orders:

The aforesaid application is hereby denied.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

NEVADA POWER COMPANY, DOCKET NO. E-6832

ORDER DIRECTING RATE SCHEDULE FILING AND TERMINATING PROCEEDING

(Issued March 29, 1966)

Upon completion of a minor corrective rate schedule filing, as described hereafter, the Commission hereby terminates its investigation of wholesale rates and charges of Nevada Power Company (Nevada Power) for service to the Colorado River Commission of Nevada (CRC), California-Pacific Utilities Company (Cal-Pac), and Southern California Edison Company (Edison). Available data indicate that Nevada Power's rates and charges to these customers will not yield revenues in excess of the company's costs of service.

Following our initiation of this proceeding[1] Nevada Power submitted cost and revenue data. Also, the Commission staff conducted an independent field examination of the Company's operations, books and data.

Our decision to discontinue further investigation and hearing at this time reflects our consideration of those data as well as the continuing nature of our rate regulatory jurisdiction over Nevada Power's wholesale rates and charges, (Section 206 of the Federal Power Act). In addition to formal proceedings the regulatory policies of this Commission contemplate continuing rate review of all jurisdictional rates and charges.

The rates and charges of Nevada Power here under investigation are designated in the files of the Commission as follows:

Designation	*Purchaser*
Rate Schedule FPC No. 1 Supplement No. 1 to FPC No. 1 (Nevada Power's LGS rate schedule)	CRC (for resale to Cal-Pac for the latter's Needles, California operating area[2]
Rate Schedule FPC No. 2 Supplement No. 1 to FPC No. 2 (Nevada Power's LGS rate schedule)	Cal-Pac (for resale in Henderson, Nevada operating area[2]
Rate Schedule FPC No. 3 (Nevada Power's LGS rate schedule)	Edison (for resale in its Death Valley, California operating area[3]

---

[1] See orders of the Commission issued December 3, 1963, 30 FPC 1394, and July 9, 1958, *Nevada Power Company*, Docket No. E-6832 (formerly Southern Nevada Power Company).

[2] Cal-Pac's Needles, California and Henderson, Nevada operating areas are not electrically interconnected by means of facilities of that Company. Intervening and connecting facilities are those of Nevada Power and the Bureau of Reclamation, United States Department of the Interior. CRC is an instrumentality of the State of Nevada and receives power and energy entitlements upon behalf of that State pursuant to Section 5(c) of the Boulder Canyon Project Act, 45 Stat. 1060, 43 U.S.C. § 617d(c) (1964).

[3] Edison's Death Valley, California operating area is electrically isolated from other portions of that Company's electric system located in south and south central California, and west central Nevada. Intervening and connecting facilities are those of Nevada Power and Armagossa Valley Cooperative, Inc.; the latter having purchased the major part of the transmission and related facilities formerly owned and used by Nevada Power to complete deliveries to Edison. See Order Authorizing Sale of Facilities, *Nevada Power Company*, 32 FPC 1385. Presently, Nevada Power completes the monthly billings to Edison remitting the major portion of those charges to Armagossa Valley Cooperative, Inc.

During the twelve-month period ending December 31, 1964, Nevada Power's revenues from service to the three customers totaled $507,954; its billings reflecting the Company's filed LGS rate schedule except in the case of service to CRC for resale to Cal-Pac for its Needles operating area. In that instance Nevada Power observes certain practices designed to accommodate its LGS schedule to the supplemental and standby services supplied to the Needles area. Such practices have been observed for some time and are known to the wholesale customers, CRC and Cal-Pac, by reason of the letter agreements among the parties and Nevada Power's monthly bills. As hereinafter provided, the Company is being directed to incorporate those practices in a supplemental rate schedule completed for filing with this Commission pursuant to Part 35 of the Commission's Regulations under the Federal Power Act. In the course of Staff's field examination of Nevada Power this matter was called to the attention of Company's representatives.

The Nevada Public Service Commission, California Public Utilities Commission, and Edison, intervenors herein, have indicated their lack of objection to termination of this proceeding.

Accordingly, it is necessary and appropriate for the purposes of the Federal Power Act, particularly Sections 205, 206, 308 and 309 thereof, that Nevada Power be directed to complete the specified supplemental rate schedule filing and the above-entitled proceeding be terminated all in the manner as hereinafter provided.

The Commission orders:

(A) Nevada Power shall file with this Commission within a period 30 days hereafter a supplement to its filed rate schedule FPC No. 1, as heretofore supplemented, so as to conform the Company's filed rates with its current billing practices.

(B) Subject to Nevada Power's compliance with the requirement of paragraph (A) above by filing a supplement to its filed rate schedule, in a form satisfactory to the Commission, this proceeding is terminated.

OPINION NO. 487

GEORGIA POWER COMPANY, DOCKET NOS. E-7099 AND E-7193

OPINION AND ORDER MODIFYING AND ADOPTING INITIAL DECISION OF PRESIDING EXAMINER AND DENYING MOTION TO FILE BRIEF

(Issued March 30, 1966) *

Syllabus

1. **Resale load limitation restricting certain municipal customers from reselling power for industrial and commercial loads is clearly discriminatory—bargaining position is no justification or excuse for discriminatory practice. PP. 437, 438, 448.**
2. **Resale credit provision giving all municipal customers a credit for sales below a certain size is unjust and unduly discriminatory. PP. 437, 438, 448.**
3. **Argument in support of substitute and less restrictive load limitation applicable to all municipal customers [based on opinion testimony] is without merit. P. 438.**

---

* Initial decision appears on p. 440. Opinion No. 487-A and order issued May 26. 1966, denies rehearing and stay, 35 FPC 818. Affirmed, *Georgia Power Co.* v. *F.P.C.*, 373 F 2d 485 (CA5-1967).

4. Possible revenue loss on other sales cannot justify retention of a discriminatory provision in a rate schedule. P. 438.
5. Even if load limitations did not discriminate between various municipal customers, they would not necessarily be just and reasonable. P. 438.
6. While Commission does not hold that there can be no circumstances under which load limitations are justified; it does not agree with company that normally it is consistent with public interest for wholesale supplier of electric power to restrict manner in which its customers may resell power. P. 439.
7. Contention that if no load limitations are permitted company should have further hearing to support higher level for WR-4 rate is without merit—under Section 205 of the Power Act, Company may at any time, tender new rate schedules, unless precluded by contractual commitments. P. 439.
8. Power company has not shown good cause to file additional brief. P. 439.
9. In a show cause proceeding, Commission *finds* rate schedules to be unjust, unreasonable and unduly discriminatory within the meaning of Sections 205 and 206 of the Federal Power Act and *requires* respondent to file new rate schedules.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

BAGGE, *Commissioner:*

This proceeding, which was instituted by our order to show cause issued May 27, 1963, 29 FPC 1049, involves the question of whether two provisions in the WR-4 rate schedules of Georgia Power Company (Georgia Power) applicable to wholesale sales to municipally-owned distributors for resale are unjust, unreasonable and unduly discriminatory and therefore unlawful under Sections 205 and 206 of the Federal Power Act, and if so, what remedy should be prescribed.

The first provision, a resale load ceiling provision, restricts 42[1] of Georgia Power's 50 municipal customers from reselling power for industrial and commercial loads above certain specified sizes. The second provision, a resale credit provision applicable to all 50 municipal customers, provides that Georgia

---

[1] Resale load ceiling provisions are not found in the rate schedules applicable to six municipalities: Cartersville, College Park, Dalton, Douglas, Marietta and Sylvester. Also, Thomasville is limited through a franchise granted by it to Georgia Power from serving industrial loads in excess of 40 kw outside its city limits. The rate schedule for service to Cairo proscribes service by that city to any load in excess of 100 kw which Georgia Power assists in locating outside Cairo's city limits as presently constituted.

Power shall grant a credit to the municipal customer on the succeeding month's bill for sales below a certain size. Georgia Power did not defend the resale credit provision. Our discussion therefore relates solely to the resale load ceiling provision.

In his initial decision issued November 17, 1965, *infra*, p. 440, presiding examiner Harry C. Shriver found that the two provisions are unjust, unreasonable, unduly discriminatory and unlawful. He found the resale load ceiling provisions to be unduly discriminatory because they do not apply to all of the 50 municipal customers and are not applied uniformly by Georgia Power even to the towns subject to them. Accordingly, the examiner would require Georgia Power to eliminate the challenged provisions by filing supplemental rate schedules which would delete the provisions and would still provide Georgia Power with approximately the same revenues. The case comes before us on exceptions to the examiner's decision filed by Georgia Power. Briefs opposing Georgia Power's exceptions were filed by the Commission's staff, the Power Section of the Georgia Municipal Association and the City of Dalton, Georgia.

Upon consideration of the facts presented and arguments advanced, we conclude that the examiner's decision is essentially correct and should be adopted for the reasons stated in this opinion. In view of Georgia Power's exceptions, however, we believe that there are several matters which require further treatment.

Georgia Power does not defend the challenged resale load ceiling provisions in their present form. However, Georgia Power does take the position that if such provisions are eliminated, there should be substituted a new and less restrictive load ceiling provision which it has devised. The substitute load ceiling would apply to all 50 municipalities.

In support of its position, Georgia Power argues that when the WR-4 rate was first designed, a "low"[2] rate level was established in consideration of the fact that Georgia Power, and not the municipalities, was given the right to serve the larger industrial and commercial loads in and around the municipalities. It contends that if the load ceiling provisions are eliminated completely and the municipalities are given the right to serve the larger industrial loads, the level of the WR-4 rate must be raised. Georgia Power also contends that removing the load ceilings without increasing the WR-4 rate could cause Georgia Power to lose up to $800,000 in revenues and could give municipalities a competitive advantage over other towns in Georgia in attracting new industry. Georgia Power accordingly recommends its new load ceiling provision as a substitute for the existing provisions, arguing that the examiner never gave adequate consideration to the proposed provision.

We find these arguments to be without merit. The opinion testimony by a company official to the effect that the WR-4 rate was originally set "low" is meaningless. Georgia Power's $800,000 revenue loss figure is irrelevant, for possible revenue loss on other sales cannot justify the retention of a discriminatory provision in a rate schedule. Furthermore, the figure is based upon the assumption that the various municipalities would obtain all of the company's existing industrial loads which they are precluded from serving by the load limitations here in issue, an assumption for which there is no support in the record and which, in view of existing contractual commitments, seems most unlikely, at least in the foreseeable future.

Respondent's recommended new load ceiling provision was shown on the record to be arbitrary and unduly discriminatory. Under this provision, all municipal resale customers, including those which presently have no such limitations imposed upon them, would be limited to loads of "250 kw or 7½%

---

[2] That is, lower than it would have been had the load limitation not been included.

of the demand established at the largest municipal delivery point, whichever is higher, but not more than 1000 kw." While this provision is urged as a method of ending the admitted discrimination between municipal resale customers of Georgia Power resulting from the existing situation, it does not do so.[3]

Even if Georgia Power's resale load limitations did not discriminate between various municipal customers, they would not necessarily be just and reasonable. While we do not here hold that there can be no circumstances under which load limitations are justified, we do not agree with the Company that it is normally consistent with the public interest for a wholesale supplier of electric power to restrict the manner in which its customer may resell the power. Nor has Georgia Power shown any special facts or circumstances which establish the reasonableness of its restriction in this case.

Georgia Power also contends that if no resale load ceilings are permitted, the Company should be permitted a further hearing so that it can support a higher level for the WR–4 rate. This contention is without merit. Staff correctly points out that under Section 205 of the Federal Power Act and Part 35 of the Commission's Regulations thereunder, Georgia Power may, at any time, submit for filing new rate schedules, reflecting increased rates, unless legally precluded from doing so by contractual commitments. Such a filing would, of course, be subject to the provisions of Section 205(e). However, our order here requiring Respondent to file new sales contracts which will eliminate the contract provisions found to be unjust and unreasonable should not be made contingent upon the outcome of such a rate proceeding.

Finally, on February 2, 1966, Georgia Power filed a motion requesting that it be permitted to file an additional brief opposing the arguments theretofore advanced by Staff and the intervenors, which brief Georgia Power submitted with its motion. Staff and the intervenors opposed the motion. We conclude that Georgia Power has not shown good cause to file its additional brief since all the arguments advanced therein have already been extensively made in the briefs, filings, and record in this case and were considered by the Commission in arriving at this decision.

We have considered the exceptions to the examiner's decision not discussed herein. We have concluded that they are without substantial support in fact or reasonable basis in law or that they are immaterial to a decision in this case. They should, therefore, be denied. In conformity with this opinion, the presiding examiner's decision should be adopted as modified, effective as of the date of issuance of this opinion.

The Commission further finds:

(1) Georgia Power Company is a "public utility," within the meaning of that term as used in Section 201 of the Federal Power Act, and is subject to the jurisdiction of the Commission (17 FPC 324).

(2) Georgia Power's sales of electric energy to the municipalities at issue in this case, more fully described in the examiner's decision herein, are "sales of electric energy at wholesale in interstate commerce," within the meaning of Section 201 of the Federal Power Act, and are subject to the jurisdiction of the Commission and to provisions of Sections 205 and 206 of the said Act.

(3) The resale load ceiling provisions and the resale credit provisions at issue in this case, contained in Georgia Power's rate schedules applicable to the wholesale sales to the municipalities, including the provisions applicable to the City of Cairo, as more fully described in the examiner's decision herein, are

---

[3] For example, as the Staff pointed out in its brief in response to exceptions, Albany, the largest of the municipal customers, would be limited to resale loads of 875 kw or less, while Griffin, with a total peak demand of less than one-third of Albany's, could resell loads up to 1000 kw.

unjust, unreasonable and unduly discriminatory within the meaning of Sections 205 and 206 of the Federal Power Act and are therefore unlawful.

(4) It is necessary and appropriate under the Federal Power Act, and required by the public interest, that the provisions referred to in paragraph (3) above be eliminated from Georgia Power's rate schedules on file with the Commission.

(5) It is necessary and appropriate under the Federal Power Act, and required by the public interest, that Georgia Power file supplements to its rate schedules for wholesale service to the 50 municipal customers referred to herein, superseding its present resale credit provisions with a rate returning to Georgia Power approximately the same revenue as under its present rate schedules, and without the resale ceiling provisions contained in the present rate schedules, which rate schedule supplements shall provide that each customer shall pay approximately the same for the first 12 months following the month in which this order is issued, as the customer would have paid during the same 12 months under the present rate.

The Commission orders:

(A) Georgia Power shall, within 75 days of the date of issuance of this order, tender for filing with the Commission, in conformity with Section 205 of the Federal Power Act and Part 35 of the Commission's Regulations thereunder, and satisfactory to the Commission, supplements to its rate schedules for wholesale service to each of its 50 municipal customers referred to herein. Such rate schedule supplements shall contain no unlawful resale load ceiling provisions or resale credit provisions of any kind but, insofar as possible, shall be designed to provide approximately the same revenues to Georgia Power for the first 12 months following the date in which this opinion is issued as would have been received if the rate provisions herein disapproved were in effect for that period, and shall provide, insofar as possible, that each customer during such period shall pay approximately the same as the customer would have paid during such period under the presently existing rate schedule.

(B) Upon Commission acceptance of the new rate schedule supplements required to be filed by paragraph (A) above, and upon compliance by Georgia Power with the other requirements imposed herein and hereinafter in a manner satisfactory to the Commission, this proceeding shall be terminated.

(C) The presiding examiner's initial decision issued herein on November 17, 1965, is, to the extent not inconsistent herewith, adopted by the Commission, to constitute with this opinion and order its decision in this case, effective as of the date of issuance of this opinion and order.

(D) To the extent not herein granted, the exceptions to the examiner's decision are denied.

(E) Georgia Power's motion to file an additional brief is denied.

Chairman White *not participating.*

INITIAL DECISION

OF THE PRESIDING EXAMINER ON CERTAIN SUSPENDED RATE SCHEDULES OF THE GEORGIA POWER COMPANY, AND ON AN ORDER TO SHOW CASE WHY THE COMMISSION SHOULD NOT FIND AND DETERMINE CERTAIN RATE SCHEDULES OF THE COMPANY TO BE UNJUST AND UNREASONABLE PURSUANT TO SECTIONS 205, 206, 307, 308, 309 OF THE FEDERAL POWER ACT

(Issued November 17, 1965)

SHRIVER, *Presiding Examiner:* This is a proceeding which questions the lawfulness of certain rate schedules and practices of the Georgia Power Company

(Georgia Power) pursuant to Sections 205, 206, and 307 of the Federal Power Act. 16 U.S.C. 824d, *et seq.*

The Georgia Power Company, a Georgia corporation, is a public utility within the meaning of Section 203 of the Act, 17 FPC 324, 326. Georgia Power is a wholly owned subsidiary of the Southern Company and participates in the Southern Company Power Pool. Georgia Power distributes electric energy at retail to 645 incorporated and unincorporated communities. Its service also includes supplying electric energy at wholesale to about 50 municipalities and 44 rural electric cooperatives within the State.

The rate schedules under which it supplies energy to its municipal and cooperative customers, among other things, contain dual rates and other restrictive provisions allegedly having "the effect of restricting the rural electric cooperatives and municipalities from reselling to certain classes of potential customers power purchased from Georgia Power under the filed rate schedules and contracts."[1] Georgia Power is asked to justify the provisions restricting the larger loads which its customers might undertake to serve. This proceeding is concerned only with Georgia Power and the municipalities, the issues as to the cooperatives having heretofore been disposed of by the Commission's order of February 8, 1965.[2]

The present case arises out of the following actions. In an order issued on May 27, 1963, 29 FPC 1049 (Docket No. E-7099), the Commission directed Georgia Power to show cause in writing why the Commission should not find and determine that certain provisions contained in its rate schedules to be unjust and unreasonable, and if so found, to order a hearing to determine and fix just and reasonable rates for the service to its municipal and rural electric cooperative customers. On June 19, 1963, the Georgia Public Service Commission filed a notice of intervention. On July 15, 1963, the Commission issued an order accepting for filing Georgia Power's rate schedule FPC No. 634, City of Thomaston, Georgia, at delivery point No. 2, and amended its order of May 27, 1963, to include this schedule, 30 FPC 197. On September 5, 1963, the Commission issued orders granting permission to intervene to the American Public Power Association, and to the Power Section, Georgia Municipal Association (Georgia Municipal). On November 25, 1964, the Commission issued an order accepting for filing four additional rate schedule submittals[3] of Georgia Power for supplying further wholesale electric energy to the City of Cairo, Georgia, suspended for one day 2 other rate schedule submittals and consolidated the docket in this matter for hearing on February 15, 1965, Docket No. E-7193, with the order to show cause in Docket No. E-7099, 32 FPC 1368.

Meanwhile, on October 14, 1963, Georgia Power filed an answer to the Commission's order to show cause of May 27, 1963 in Docket No. E-7099, as amended, and among other things, denied that the sale of energy to the municipalities was a sale in interstate commerce and was subject to the Commission's jurisdiction. By order dated February 8, 1965, the Commission granted permission to intervene to the American Public Power Association in Docket

---

[1] See, Commission order of May 27, 1963, 29 FPC 1049.

[2] At a prehearing conference in this proceeding on January 15, 1965 counsel for the Respondent as well as for the cooperatives submitted an offer of settlement of the issues as between the Georgia Power Company and the Georgia Electric Membership Corporation, which was certified to the Commission by the Examiner on January 19, 1965, and was approved by the Commission in its order of February 8, 1965, 33 FPC 188.

[3] Supplement No. 1 to Rate Schedule F.P.C. No. 671; Supplement No. 2 to Rate Schedule F.P.C. No. 671; Supplement No. 1 to Supplement No. 3 to Rate Schedule F.P.C. No. 671; Supplement No. 2 to Supplement No. 3 to Rate Schedule F.P.C. No. 671.

No. E-7193, and to the City of Dalton, and the City of Cairo, Georgia, in both dockets.

At a prehearing conference held before the Examiner, however, on January 15, 1965, counsel for the Respondent conceded to the general jurisdiction of the Commission in respect to its sales to the municipalities. (T. 78, 84). The Respondent also conceded that to the extent any kilowatt ceiling is less than the greater of either 250 kilowatts or 7½ percent of the demand at the largest municipal feed point of any municipality—that such ceiling is too low (Tr. 64, 80), and agreed that it be raised to whichever is higher, provided that the ceiling does not exceed 1,000 kw. (Br. 2). The Respondent's position in respect to the eight municipalities having no ceiling, including the City of Cairo, is that the restrictions contained in these schedules and contracts are in the public interest (Tr. 79-81, 86, 89-95).

The Respondent, Georgia Power, serves electric energy to approximately 90 percent of the area of the State of Georgia. Its customers as of the end of the year 1963 numbered more than 782,000. It supplies electric energy directly to the City of Atlanta and to some 19 other metropolitan areas. As already indicated, it sells energy for resale to some 50 municipalities in Georgia, and to 44 rural electric cooperatives.

For the year ended December 31, 1965, Georgia Power had a rated generating capacity of 2,085,880 kw and had total sales of about 14,223,329, kw hours. In this proceeding we are concerned only with the Respondent's sales for resale to its municipal customers. A substantial portion of the energy supplied to the Respondent's municipal customers is furnished by the Southeastern Power Administration (Southeastern). In 1963 this portion was approximately 28.5 percent of the total, and in 1964 approximately 27.9 percent of the total (Tr. 100). This energy is wheeled by the Respondent.

The 50 municipalities vary in size from about a thousand or less to more than 30,000 population. Their systems range in size from that of Brinson, with a peak load of 134 kw, to Albany with a load of 52,617 kw. The municipalities are scattered throughout the State of Georgia with a majority located in the western part of the State (Tr. 264, Ex. 22).

Georgia Power serves the 50 cities through some 80 delivery points at voltages of 12 kv, 4 kv, and 2.4 kv. The cities receive energy through the Georgia Power System under three contracts, one with Southeastern[4] as preference customers and two with Georgia Power. The energy generated by Southeastern and wheeled by Georgia Power is billed to the cities directly by Southeastern. Deficiency energy is provided by Georgia Power to the cities at the Southeastern rate. This is represented by the difference between Southeastern's allotment to the municipalities and the energy generated by Southeastern for delivery to them. Georgia Power also provides supplemental energy under contracts with the municipalities for all their electric requirements in excess of their Southeastern allotments (Tr. 100, 101).

The energy furnished by Southeastern to the Respondent for wheeling is commingled with its own energy and is not separately metered after entering the Georgia Power System. The Respondent is compensated by Southeastern for its wheeling service.

In its show cause order of May 27, 1963, the Commission challenges the resale credit provision[5] contained in Georgia Power's contracts (WR-4 Form) with the municipalities. Pursuant to this provision, the municipal system receives a credit on the succeeding month's bill for all services resold to customers utilizing a total of less than 5,000 kwh per month. The municipalities pay a higher rate for energy resold to ultimate consumers using more than 5,000 kwh per month than for the energy resold to consumers using less than 5,000 kwh per month. Each month the municipalities submit to the Respondent a list of ultimate consumers using between 2,500 and 5,000 kwh during the month (Tr. 264, Ex. 23). Since the municipalities pay one price for energy purchased for resale to one size customer, and another price for energy purchased for resale to another size customer, it is said that the resale credit provision constitutes a dual rate. In addition, not all the cities are permitted to serve the same size loads.

---

[4] One city, namely Brinson, does not purchase power from Southeastern (Tr. 628).

[5] See Appendix A hereto reproduced from Exhibit No. 47 consisting of the resale credit provision in Georgia Power Company's schedule WR-4, p. 2.

The second provision challenged by the show cause order relates to load ceilings.[6] This provision limits 42 of the municipalities from reselling electric energy to any customers or loads in excess of a stated size. The variation of the limitations in respect to the municipalities range from 5 horsepower to 600 horsepower.[7] However, Georgia Power's contracts with 7 municipal systems have no load ceiling limitation.[8] In addition, the rate schedule for service to Cairo proscribes service by the city to any load in excess of 100 kw which Georgia Power assists in locating outside of Cairo's city limits as presently constituted (Item C-338). Georgia Power is not permitted to serve industrial loads within the Cairo City limits under its contract to Cairo.

Hearings were held in the case on January 15, 1965 (prehearing conference), and on February 15, March 17, April 19, May 12, May 21, July 26-28, 1965.[9] Two witnesses testified on behalf the Respondent,[10] two on behalf the Staff,[11] one for the City of Cairo,[12] and six for the Georgia Municipal Association and the municipalities.[13]

There are but two basic issues in the case: (1) Are the resale load limitations contained in 42 of the Respondent's 50 wholesale municipal contracts unjust, unreasonable, and unduly discriminatory and, therefore, not lawful under the Federal Power Act, and (2) does the resale credit granted by the Respondent to its wholesale customers under its contracts constitute an unreasonable restriction on those customers?

In justification of the resale credit and the ceiling provisions in its WR-4 schedule the Respondent asserts that it is important to consider the philosophy leading to the establishment of the WR-4 rate, *i.e.* (1) that the rate was offered municipal systems for the purpose of assisting them to extend service to small users, (2) that the Respondent did not contemplate competition with its municipal customers for industrial and other large loads when the WR-4 rate was made available, (3) that the WR-4 schedule was designed to encourage municipalities to extend service to small electric users, and (4) that the schedule and contract "are predicated on the proposition that Respondent will serve customers within the municipality as to which the demand exceeds the specified ceiling amount."

---

[6] See Appendix B hereto reproduced from Exhibit No. 47 consisting of the ceiling provision in Georgia Power Company's schedule WR-4, p. 1.

[7] One horsepower equals 0.746 kw.

[8] These cities are Cartersville, College Park, Dalton, Douglas, Marietta, Sylvester, Thomasville. The City of Thomasville is limited through a franchise granted by it to Georgia Power from serving industrial loads in excess of 40 kw outside its city limits (Tr. 228, Ex. 57). With one exemption, these cities represent the relatively larger municipalities served by Georgia Power.

[9] Settlement negotiations were carried on by the Respondent with representatives of the municipalities for several months, particularly between April and July 1965. The offers of settlement for various reasons were not acceptable to all the municipalities.

[10] Mr. C. M. Wallace, Jr. and Henry H. Strozier.

[11] William S. Syrett and Telford G. Swennes.

[12] John W. Walker.

[13] Messrs. E. K. Overstreet, Charles L. Smith, Herbert M. Crane, Hughes Palmer, W. R. Clayton and John M. David.

This "philosophy" is not borne out by the record. The evidence does not indicate that the WR-4 rate has had the effect of assisting the municipalities to extend service to small users. The Respondent's insistence upon a ceiling in its negotiations with the municipalities at various times belies its assertion that it did not contemplate competition with its wholesale customers for industrial and other large loads when the WR-4 was first made available. The justification claimed by the Respondent for the ceiling limitation is not substantiated by the testimony of its own witness.[14] To assert, as the Respondent does, that the schedule and contract are predicated on the proposition that the Respondent will serve customers within the municipality as to which the demand exceeds the specified ceiling amount is a tautologous way of saying that the Respondent will serve large industrial loads within a city because it is to its best interest to do so. This view is also supported by other testimony. A witness for the Interveners indicated that in practice the WR-4 rate has the effect of discouraging service to large high load factor customers rather than encouraging service to small users.[15]

The Respondent next says that the reasonableness of its ceiling provision cannot be considered without reference to the level of the WR-4 rate. The Respondent argues that more revenue is derived from direct sales to large loads than through indirect sales through a municipal system, and that it must bear a substantial expense to enable a municipal system to serve a large load. One answer to this argument is that it is irrelevant to the issue in this proceeding.

---

[14] The Respondent's Vice President-in-Charge-of-Sales testified on cross-examination:

Q. (By Mr. Miller) Then at the time the rate was made available all of your municipal contracts then had limitations?

A. No, I would not say that all of them did, because some have historically not had limitations in them.

Q. Even at that time?

A. That is right.

Q. And who would those be?

A. Well, I think they are the seven towns or eight towns referred to: Cartersville, Marietta, Dalton, College Park, Douglas, Sylvester, Cairo, Thomasville (Tr. 603-604).

* * * * * * *

Q. Well, let's go back to the eight then. Why had you reason to believe 10 to 15 years ago that you would get no competition from the eight municipalities who had no limitations in their contracts?

A. Well, I think we would get competition from them (Tr. 607).

[15] Mr. W. R. Clayton testified in part as follows:

Q. When did you first execute a contract with the Respondent for the purchase of energy?

A. We (Thomasville) first entered into a contract with the Georgia Power & Light Company and the Georgia Power Company jointly in 1954 for the purchase of a portion of our electric requirements instead of expanding our power plant.

In 1960 we negotiated a contract with the Georgia Power Company for the purchase of all of our power except SEPA allocation and as a result discontinued our own generation facilities. During these 1960 negotiations, the Power Company continued to insist on the right to serve customers over a certain size until the final stages of negotiation. The city was not agreeable and they finally agreed to waive this factor in the overall package of negotiations (Tr. 228-229).

* * * * * * *

For 49 years the city electric system was isolated from any other source of power except its own generation. During this period the city necessarily served all large loads, not only in the city but in the surrounding rural areas up to ten miles from the city limits (Tr. 233).

This is not a proceeding to determine just and reasonable rates. The fact that the Respondent derives more income from the industrial loads which it serves directly is no justification for discrimination. If the removal of the ceiling provision would deprive the Respondent of substantial potential revenue otherwise available to it derived from direct service of loads in the municipalities which the Respondent serves at wholesale, as the Respondent says, then it must be admitted that the Respondent is already deprived of substantial revenue in respect to the eight cities that have no ceiling in their contracts. Again, if the ceiling cannot be considered without reference to a WR-4 rate level that is compensatory, then most of the municipalities (generally the smaller ones) are necessarily making up for the loss of revenue that the Respondent foregoes in respect to the cities which presently have no ceiling.

As to the argument that the Respondent can only supply the capacity needed to enable a municipal system to serve a large load after substantial expense, there is no solid support for this contention. Manifestly, the expense involved in serving a larger load is more than that in serving a smaller one, but it is not clear by and large why the increase should be greater when service is through a municipal system. As the Respondent admits, it must furnish the same generation and transmission to the vicinity of the customer irrespective of whether the municipality or the Respondent serves the load. Since some facilities are already available it would seem that the expense should be less in providing indirect service, but here again the Respondent is confronted with the fact that if the argument is valid under the WR-4 rate level in serving the 42 cities having ceilings, it must be invalid in regard the 8 cities having no ceilings.

The Respondent says that the WR-4 schedule contains no provision or adequate compensation to the Respondent for generation, transmission facilities, or local facilities required to make power available to the municipalities for resale to consumers whose demands exceed the specified ceiling kilowatt amount. In support thereof the Respondent cites figures as to generation and line costs, but these figures are of no significance when considered in isolation or without other costs normally considered in a rate proceeding. The Respondent argues that investors would not countenance the removal of the ceiling provision from the WR-4 rate schedule, and that they would shy away from its securities if large sums were expended on service, generation, and transmission to a locality where service is required by a new load and the Respondent would not be permitted to serve it directly. This argument presupposes that the Respondent's stockholders and investors are familiar with the provisions of the WR-4 rate schedule and that they have a right to have this schedule continued in effect whether it be legal or illegal. The Respondent's assets are held by a holding company; its investors have no vested right in the WR-4 schedule, and the Respondent's argument is not supported by creditable testimony. At best this argument is highly speculative. Accordingly, it must be rejected.

The Respondent argues that its WR-4 schedule is predicated on the Respondent's right to serve loads in excess of the ceilings, and that a municipality which seeks to serve those loads competes with it. When it is considered that the loads vary from 5 hp to 600 hp, that some of the ceilings are enforced and some are not, and that 8 cities have no ceilings, it is apparent that the first part of the Respondent's argument loses considerable of its force. As to the second, even though the municipalities having no ceilings are in competition with the Respondent, this competition, as will be seen hereafter, is not unsound per se.

Another argument brought forward by the Respondent is that competition "with its own power for large loads" is a violation of public policy. In support thereof the Respondent refers to two cases under state laws, *Boston Real Estate Board* v. *Massachusetts Department of Public Utilities*, 136 N.E. 2d 243 (Mass. Sup. Ct. 1956), and *City of High Point* v. *Duke Power Company*, 34 F. Supp. 339 (U.S.D.C., N.C., 1940), and a Tennessee Valley Authority contract limiting the end use of electric energy. We think that neither of the cases cited is controlling here. In the Boston case, the suit was brought by persons owning and operating real estate who engaged in "within-the-block" or "within-the-building" distribution of electricity at retail and purchased it wholesale. The distributors performed no extended transportation. The court properly held that the Department of Public Utilities of the Commonwealth could eliminate the competition between the Boston Edison Company, the supplier, and such distributors. The court based its decision on state policies and the general interest of encouraging a monopoly of supply. In the High Point case, the Respondent relied upon the rationale of the District Court which was not followed by the Circuit Court of Appeals. The Circuit Court held (120 F. 2d 866, 869, CA4–1941) that "we need not consider whether the power company was within its rights in insisting upon the incorporation in the contracts of the clause restricting the resale of current, or whether the provisions of the franchise forbade it to sell current for power purposes in competition with the city. All arguments addressed to these questions become moot in view of the fact that no contract of any sort was executed and consequently no rights arising out of any such contracts are here involved * * *." Thus it is apparent that proliferation of distribution by private parties is not the same as distribution by municipalities and cannot be sanctioned.

But whatever may be said for the cases just cited, cities and towns do not stand on the same footing as a utility company or a private party in the resale of electric energy, and certainly have a different posture under State law as contrasted to Federal law, particularly under the Federal Power Act.

The Tennessee Valley Authority contracts cited (Items A and B) are of no help to the Respondent. Under the TVA Act, the Board of Directors is authorized by Congress (16 U.S.C., 831i) to give priority in the sale of power to public bodies: the State, county, municipalities, and cooperative organizations, over private utility companies and other persons. The Board may lawfully include in its contracts resale price maintenance provisions. *Tennessee Electric Power Co.* v. *T.V.A.*, 306 U.S. 118, 142 (1939).

It does not necessarily follow, as the Respondent contends, that a smaller investment in local facilities is required if the Respondent serves large loads directly rather than through a municipality. The Respondent admits that each service is dependent on local or individual circumstances, with which we agree. Similarly, it is not to be concluded that the Respondent had always furnished better service to industrial loads over that furnished by the municipalities. The Respondent's testimony on this was denied by staff witnesses and was sharply disputed by witnesses for the Interveners.

It is said that the WR–4 rate level is dependent on the continued existence of the ceiling provisions, notwithstanding the variance in the level and that some cities have no ceiling. The Respondent argues that the cost of generation, transmission and delivery point facilities necessary for service to large loads whose demands exceed the contract ceilings are not reflected in this rate, and that the rate provides no protection to Georgia Power. Under the circumstances in this case we think these arguments are invalid and should be rejected. Among other reasons, they in the end come down to a question of reasonableness and an injunction not to remove the ceilings else the rate of return be disturbed. But we are not here concerned with reasonableness in the sense that the rates to the cities are too high or too low, but with discrimination as between the Respondent and the cities. The Respondent's argument cannot stand in the face of the variety of ceilings. The argument as to reasonableness might perhaps be made in most cases of discrimination.

The Respondent asserts that if the ceiling provision is lifted industrial customers would be able to obtain power through the municipalities at lower rates than other industrial customers pay for direct service, which would result in discrimination. The Respondent says that municipal manipulation of rates is foreign to the basic concept of utility regulation, and that the Commission must see that customers are treated alike. This argument is essentially a plea for a complete monopoly in favor of the Respondent. There is no evidence to indicate that industrial loads now served through municipalities having no ceilings are charged uniformly lower rates than the Respondent's customers who receive direct service. If municipal manipulation of rates is foreign to the concept of utility regulation, the same can be said of rates arrived at by negotiation and manipulation by utility companies. We agree with the Respondent that the customers should be treated alike—certainly those in the same class, which is the very purpose of this proceeding.

The Respondent contends that the municipalities can undersell it under the WR-4 rate as to industrial loads. It indicates that the municipalities pay no taxes and that they may grant favors and privileges to industry. Respondent says that the municipal rates are unregulated. But it cannot be assumed that the municipalities are in business for profit or that their sense of public responsibility is less than that of the Respondent. They are public bodies and accordingly, as indicated heretofore, do not stand on the same footing as a private utility company.

In conclusion, the Respondent claims that the ceiling provision is the predicate upon which the level of the present WR-4 rate is based. It says that its resale credit provision is just and reasonable; and that the ceiling provision, which it agrees to adopt in lieu of the present ceilings—namely a ceiling set at the greater of 250 kw or 7½ percent of the demand at the largest municipal delivery point, provided that ceiling does not exceed 1,000 kw, is also just and reasonable. The Respondent then asserts that the Examiner, even if he finds the challenged provisions unreasonable, cannot require a new rate to be put into effect in this proceeding. We think that this argument is erroneous. It is based upon a misconception of the purpose of the proceeding. The instant proceeding is not aimed at determining reasonable rates for Georgia Power but rather at abolishing its discriminatory practices and thereby securing more reasonable and equitable rates for its municipal customers.

The evidence in this case reveals that the load limitations contained in Georgia Power's contracts with the 42 cities and towns which it serves adversely affects them, and that these limitations restrict the development of their electric systems. The municipalities accordingly are handicapped in attracting new industry and in improving their economy. New industry, in turn means new jobs, increased population, increased tax revenue, and additional payrolls. Two witnesses for the cities indicated that the restrictions on serving large loads indirectly affects the allocations to the cities of Southeastern power which are based on historic peak demands. Since the municipalities are hampered in serving large loads, these peaks are kept down and, in turn, the allocations of Southeastern energy. Since Southeastern energy is less costly to the cities than that purchased from Georgia Power, the total cost of energy to the municipalities is not reduced. Under the circumstances, it is certainly not in the public interest that Georgia Power should be permitted to enforce its present limitations, to determine which cities should be permitted new industries, nor provide load limitations for one city and none or a different one for another similarly situated.

Admittedly, the 50 municipalities are served by Georgia Power under the same rate schedule except that 7 of them have no resale load limitation in their contracts, and one city has a resale restriction with limited application outside its city limits. In respect to the 42 cities, the load limitations vary from 5 hp to 600 hp. The explanation for the foregoing is that seven or more of the municipalities, having stronger bargaining positions, refuse to accept the restrictions imposed by Georgia Power. The load limitations imposed on the 42 cities are clearly discriminatory. Bargaining position is no justification or excuse for discriminatory practices. *Otter Tail Power Company*, 2 FPC 134. 142.

As already noted, the evidence discloses considerable variation in the load limitations as between the different cities and towns which are Georgia Power customers, and that some cities have no load limitation. Since there is no uniformity, the municipalities are in a different position as to each other as well as in relation to Georgia Power in securing and serving new industry, new loads, or in improving the load factor of their systems and thus reducing the unit cost of operating their respective systems. When Georgia Power has seen fit, it has insisted upon the enforcement of its load limitations, thereby preventing its customers from securing and serving new loads. In other instances it has not, hence the municipality was free to compete for new loads. Under these circumstances and based on the other evidence of record, it is plain that the load limitations in Georgia Power's schedules for service to its 42 municipal wholesale customers, including the City of Cairo, are unjust, unreasonable and unduly discriminatory.

The Respondent claims that its resale credit provision is designed to encourage the municipalities to extend service to customers of small amounts of electric power. But it might be concluded that it was designed to prevent competition. Under the resale credit provision, the municipality pays a higher rate for energy which it resells to large power consumers than it pays for energy resold to small consumers. The municipality thus pays a dual rate. This has the effect of discouraging municipalities from serving large loads. Accordingly, any unit cost advantage that a municipality gains from a large high load factor industrial customer is offset by the higher rate which the municipality must pay Georgia Power for power with which it serves that load. In this way the municipalities are prevented from competing with Georgia Power for industrial loads, since it is more difficult for a municipality to sell power to large users at low rates. In fact, one of Georgia Power's witnesses stated that, "Respondent makes every effort to prevent competitive resale of energy supplied by it" (Tr. 106). Under the circumstances and the testimony, it can hardly be denied that, although Georgia Power's rate is the same for all its municipal resale customers, they are not treated uniformly and the resale credit provision is unjust, unreasonable, unduly discriminatory, and illegal under the Act, and it is so held.

One additional matter merits consideration. In its brief, Counsel for the Staff says that the Respondent seeks to prevent the competitive resale by the municipalities of energy supplied by the Respondent, that some of the energy supplied is furnished by Southeastern, that the municipalities are engaged in horizontal competition with Georgia Power in the sale of power to industrial customers, and that Georgia Power's restrictive contracts with the municipalities are a violation of the Sherman Antitrust Act (15 U.S.C. 1–7) and of antitrust standards as laid down by the Courts. *White Motor Company* v. *U.S.*, 372 U.S. 253, 259; *Pennsylvania Water & Power Company* v. *Consolidated Gas, Electric Light & Power Company of Baltimore*, 184 F. 2d 552, 558. Although we agree that the restrictions contained in Georgia Power's schedules might be construed as limiting the area of service of the municipalities and as preventing competition, we have held that both the ceiling limitation and the resale credit provision are unjust, unreasonable, unduly discriminatory, and unlawful. Accordingly under the circumstances, it is unnecessary to decide whether the restrictions complained of are in violation of the Sherman Act or of antitrust standards. The numerous cases cited in the briefs have been considered, likewise many minor points raised in the record. It is unnecessary that they be discussed in detail.

FINDINGS AND CONCLUSIONS

Upon consideration of the record, the briefs, and arguments of Counsel, it is found and concluded in addition to the findings and conclusions heretofore stated that:

(1) Georgia Power Company is a corporation organized and existing pursuant to the laws of the State of Georgia. It owns and operates facilities, among others, for the transmission and sale at wholesale for resale of electric energy, which is transmitted from points of generation in the States of Georgia and Alabama, among others, to points of consumption outside the state in which it is generated, which facilities are in addition to, and do not include, facilities used for the generation of electric energy or facilities used in local distribution or only for the transmission of electric energy in intrastate commerce, or facilities for the transmission of electric energy consumed wholly by the transmitter.

(2) Georgia Power Company is a public utility within the meaning of that term as used in Section 201 of the Federal Power Act, and subject to the jurisdiction of the Commission.

(3) Georgia Power Company, in effecting each of the sales of electric energy at wholesale under the rate schedules referred to in the Commission's orders of May 27, 1963, and November 25, 1964, as amended, transmits and sells electric energy at wholesale in interstate commerce for resale within the meaning of Sections 201, 205, and 206 of the Federal Power Act.

(4) The resale load limitations in Georgia Power Company's rate schedules for service to 42 municipal wholesale customers, referred to in the Commission's Order to Show Cause issued May 27, 1963, are unjust, unreasonable, and unduly discriminatory within the meaning of Sections 205 and 206 of the Federal Power Act and are therefore unlawful.

(5) The resale load limitation in the Georgia Power Company's rate schedule with the City of Cairo, suspended by the Commission's order of November 25, 1964, is unjust, unreasonable, and unduly discriminatory within the meaning of Sections 205 and 206 of the Federal Power Act and is therefore unlawful.

(6) The resale credit provision contained in the Georgia Power Company's rate schedules for service to its 50 municipally-owned wholesale customers, referred to in the Commission's order of May 27, 1963, and suspended as to the City of Cairo by the Commission's order of November 25, 1964, is unjust and unreasonable within the meaning of Sections 205 and 206 of the Federal Power Act and is therefore unlawful.

(7) It is necessary and appropriate under the Federal Power Act that the resale load limitations referred to in Findings (4) and (5) above be stricken from the Georgia Power Company's rate schedules on file with the Commission.

(8) It is necessary and appropriate under the Federal Power Act that the Georgia Power Company file rate schedule supplements to its rate schedules

for wholesale service to its 50 municipally owned customers, superseding its present resale credit provisions with a rate returning to the Georgia Power Company approximately the same revenue as under its present rate schedule, but without the resale credit provisions contained in the present rate schedule, which rate schedule supplements shall provide that each customer shall pay approximately the same for the first 12 months following the month in which this order is issued, as the customer would have paid during the same twelve months under the present rate.

ORDER

WHEREFORE *it is ordered*, subject to review by the Commission on appeal, or review on its own motion, as provided in its Rules of Practice and Procedure that:

(A) Within 60 days of the date of this order the Georgia Power Company shall file in accordance with Part 35 of the Commission's Regulations and Section 205 of the Federal Power Act, rate schedule supplementals to its rate schedules for wholesale service to each of its 50 municipal customers. Such rate schedule supplements shall contain no horsepower or kilowatt ceiling limitations or resale credit provisions but, insofar as possible, shall be designed to provide approximately the same revenue to the Georgia Power Company for the first 12 months following the date in which this order is issued as would have been received if the rate herein disallowed were in effect for that period, and shall provide, insofar as possible, that each customer during such period shall pay approximately the same as the customer would have paid during such period under the present rate.

(B) Upon the submission of new rate schedule supplements which are satisfactory and acceptable to the Commission and upon compliance with all the other requirements contained herein by the Georgia Power Company, this proceeding shall be terminated.

HARRY C. SHRIVER,
Presiding Examiner.

APPENDIX A

FOURTH

Resale Credit

Subject to limitations in following paragraph a credit against net bills will be allowed on that part of the total energy purchased each month which is equal to the KWH actually resold to retail customers in the preceding month, the amount of such credit to be determined as follows:

0.50¢ per KWH resold not to exceed the number of KWH billed in the first block of the rate schedule in the current month, plus

0.35¢ per additional KWH resold, if any, not to exceed the number of KWH billed in the second block, plus

0.25¢ per additional KWH resold, if any, not to exceed the number of KWH billed in the third block, plus

0.10¢ per additional KWH resold, if any, in excess of the above.

Determination of KWH resold

For the purpose of billing under this rate schedule, a retail customer is defined as any customer who uses less than 5,000 KWH during the month. Should such customer be served by the distributing agency through two or more meters at one location, then the aggregate consumption by that customer shall determine his eligibility. The municipality shall report to the Company not later than the tenth of each month the number of KWH resold to such retail customers in the preceding month, and such report shall be used by the Company in preparing its bill for the current month's consumption. This report shall show the number of customers and the total KWH resold to them, as a single item for all customers who used less than 1,000 KWH during the month being reported, and as separate items the names and consumptions of all customers who used between 1,000 KWH and 5,000 KWH. Energy resold to larger customers, losses, and energy used by the municipality (even though carried on the books as a sale to some other department of the municipal government) are specifically excluded from eligibility as KWH resold. Should the Company fail to receive such report, the KWH used by the excluded items, enumerated in the preceding sentence shall be estimated by the Company and deducted from the total KWH, the remainder then being treated as KWH resold, but if the KWH resold is estimated in this manner it shall not exceed 40% of the total KWH to be billed * * *.

APPENDIX B

FIRST

* * * The Company reserves the right to sell electric energy in said City, to parties whose initial connected load exceeds horsepower, in accordance with the manufacturer's standard aggregate rating of the electrical apparatus installed or to be installed.

The Company hereby agrees that the Customer shall have the exclusive right to re-sell electrical energy to all other parties in said City, provided, however, that should the Customer fail to sell electrical energy to power users each of whose aggregate capacity installed or to be installed is less than horsepower, the Company shall have the right to sell electrical energy to such users, after securing the Customer's consent to take such business * * *.

ANNUAL REPORT FORM PRESCRIBED FOR NATURAL GAS COMPANIES—MAIN LINE DIRECT INDUSTRIAL SALES, DOCKET NO. R-243

ORDER NO. 300-A

AMENDING ORDER NO. 300 AND CLARIFYING INSTRUCTIONS FOR THE USE OF SCHEDULE (PAGE 520A) IN FPC FORM NO. 2

(Issued March 30, 1966) *

The Commission's Order No. 300, issued June 24, 1965, in this proceeding prescribed a schedule entitled "Curtailments of Main Line Industrial Customers" to be filed as a supplement to the annual report, FPC Form No. 2, required by § 260.1 of the Commission's regulations to be made by Class A and B natural gas companies subject to the jurisdiction of the Commission (30 F.R. 8331, 33 FPC 1286). The order also provided that the schedule would be effective for the reporting year 1965 and is to be filed by March 31, 1966, with, but separate from, Form No. 2.

Recently, we have received informal requests from two of the companies required to submit the schedule. They ask clarification of the instructions

---

* Published in the Federal Register on April 6, 1966 (31 F.R. 5428).

which it contains. The first relates to Instruction No. 1 to the schedule which reads:

> 1. The pipeline company shall report below particulars concerning curtailments of deliveries of natural gas to each customer identified in the preceding schedule (Main Line Industrial Sales of Natural Gas). Curtailments of customers to which sales of less than 50,000 Mcf per year were made may be grouped in totals by states.

The schedule requires the reporting of curtailments of main line industrial customers, the average daily delivery during the system 3-day peak period, and the maximum 24-hour delivery during the year to such customers.

The question raised by one company was whether the delivery information should be reported even if the customer was not curtailed during the reporting year. Our answer is affirmative. Our order in this proceeding not only prescribed the schedule here under discussion but, more basically, completely revised Part 155 of the regulations which requires the companies to furnish copies of, and information with respect to, their contracts and rate schedules for direct industrial sales. Our purpose in so doing is made clear by the following paragraph of that order (*supra*, p. 1287):

> The Commission has no rate jurisdiction over direct industrial sales but it does have certificate jurisdiction pursuant to section 7 of the Act to determine whether the transportation and delivery of natural gas to such customers, and the facilities, if any, meet the standards of public convenience and necessity. In order to exercise this jurisdiction intelligently as well as to make proper allocation between jurisdictional and nonjurisdictional operations of a pipeline in fixing the rates for the jurisdictional sales, we believe we must secure reasonable information as to the nature of the pipeline's direct industrial sales.

Hence, reports on curtailment comprise only a portion of the information needed and Instruction No. 1 in the schedule requires delivery information to be reported for each main line direct industrial customer, whether or not the customer was curtailed during the year. We are here amending the instruction to make this clear.

The second point raised relates to the yearly period for which curtailment is to be reported. The instructions to the schedule make no reference to the subject and one company requests clarification. Although the annual report, of which the schedule is a part, is designed generally for the reporting of information on a calendar year basis, the company suggests that information on curtailments would be more meaningful if it covered a period which includes a single heating season rather than a period including portions of two noncontinuous heating seasons, as the calendar basis does. We recognize that the yearly period covered by the schedule (p. 520) "Main Line Industrial Sales of Natural Gas" is not coterminous with the period for reporting curtailments here being prescribed but we do not believe that this will cause the reporting companies any particular difficulty. We find, therefore, that the suggestion made merits adoption and, accordingly, we are amending ordering paragraph (C) of Order No. 300 and the schedule it prescribes to that effect.

The Commission finds:

(1) It is necessary and appropriate for the administration of the Natural Gas Act that amendments to Order No. 300 and the schedule it prescribed interpreting Instruction No. 1 and adding Instruction No. 7 be adopted.

(2) Since one of the amendments herein ordered involves interpretation of an existing requirement and the other involves a change in procedure not imposing any additional reporting burden on the persons affected thereby, fur-

ther notice pursuant to section 4(a) of the Administrative Procedure Act is not required.

(3) Since the information required by the schedule here being amended is, in all probability, now being compiled by the persons affected thereby, the changes here made should be brought to their attention as soon as possible. To that end we are making the amendments effective forthwith.

The Commission, acting pursuant to the authority heretofore set out in Order No. 300, *orders:*

(A) Ordering paragraph (C) of Order No. 300, issued herein on June 24, 1965 (33 FPC 1286 at p. 1290, 30 F.R. 8331), is amended to read as follows:

> (C) Effective for the 12-month period ending April 30, 1966, a new schedule, "Curtailments of Main Line Industrial Customers," as set out in *Attachment A* hereto*, is prescribed as a supplement to F.P.C. Form No. 2. The schedule shall be filed by May 15, 1966 and shall not be available for inspection in public files of the Commission except pursuant to § 1.36(e) of this chapter. The Commission may, also, when it finds such action to be in the public interest, authorize such schedules to be made public and incorporated in the record of any proceeding before the Commission or the courts.

(B) The schedule "Curtailments of Main Line Industrial Customers", prescribed by ordering paragraph (C) of Order No. 300, as amended by paragraph (A) hereof, is amended as follows:

> 1. Instruction 1. is amended by inserting a sentence, to follow the first sentence thereof, to read:
>
> "If there were none, so state in column (b)."
>
> 2. Add the following Instruction 7:
>
> "7. The information on this schedule shall cover the period May 1 of the reported year through April 30 of the year following the reported year. The schedule shall be filed by May 15 of the year following the reported year."

These amendments are set out on the appended copy of the schedule.*

[Secs. 10, 16; 52 Stat. 826, 830; 15 U.S.C. 717i, 717o.]

(C) These amendments shall be effective upon the issuance of this order.

(D) The Secretary shall cause prompt publication of this order to be made in the Federal Register.

CITIES SERVICE GAS COMPANY, ET AL., DOCKET NO. CP66-226, ET AL.

ORDER GRANTING WAIVER IN PART AND DENYING WITHDRAWAL OF APPLICATION

(Issued April 4, 1966)

On February 25, 1966, Arkansas Louisiana Gas Company (Arkla) filed in this proceeding a petition and supplemental letter requesting recision or waiver of the Commission's letter-order of February 11, 1966 or in the alternative, notice of withdrawal of its certificate application. On March 2, 1966, Cities Service Gas Company (Cities) also filed a petition requesting waiver of the same letter-order. Several answers were filed in support of petitioners; Ashland Oil & Refining Company (Ashland), Socony Mobil Oil Company, Inc. (Socony) and the staff of the Commission filed in opposition.

The contention of Arkla that our letter-order of February 11, 1966 is an "unprecedented direction" which should, therefore, be rescinded is without merit. The subject letter-order requires nothing more than compliance with Section 157.14 of the Commission's Rules and Regulations; as we have stated before, evidence submitted in support of a certificate application must at least comply with the requirements of this Section which sets forth the minimum evidentiary prerequisites. The submission of this data in evidence does not assure the grant of a certificate of public convenience and necessity, but is the foundation for the realistic evaluation of the significant aspects of most major projects.

Arkla further maintains that it cannot prepare the requested system-wide cost of service and revenue studies in less than three months, which would so delay this proceeding that it would be impossible to obtain authorization and construct the facilities in time to render service this coming winter when Cities needs the gas. Arkla points out that it believed Opinion No. 472, issued August 31, 1965 in *Transwestern Pipeline Company, et al.*, Docket No. G-20464, *et al.*, 34 FPC 659, only directed the submission of market and supply data in the supplemental hearing in Arkla's Docket Nos. CP64-125 and CP62-219, and, consequently, Arkla had prepared its case along these lines. We have re-examined Opinion No. 472 and find it was not clear as to the scope of the supplemental hearing and Arkla could very well have been misled to its detriment so that it does not now have sufficient time to prepare the cost of service and revenue studies. Consequently, in view of this unusual situation, we will waive the requirements of our regulations in this instance with respect to these studies (Paragraph Nos. 1 and 2 of our letter-order of February 11, 1966). However, this does not mean that we approve or accept Arkla's incremental cost of service and allocation methods, or its rate design, or every clause of its proposed tariff and contract, particularly the specific dedication and the limitation upon the full utilization of capacity which underlie Arkla's rate design and costing approach. It is not necessary to resolve possible controversy respecting these issues at this time but will make such determinations, to the extent necessary, when the proceeding is before us for decision. Our determinations on issues having rate significance at that time would not be binding in any future proceeding under Section 4 or 5 of the Act when Arkansas Louisiana would be required to submit more complete data including the type hereby waived. This, of course, is true in every certificate case before the Commission.

Ashland and Socony maintain that this consolidated proceeding involves the competitive issue of whether Cities' needs should be met from the Kansas-Hugoton Field or from Arkla, but this issue appears to be somewhat remote in view of the fact that Cities is seeking the necessary authorization to attach both supplies. The two projects are complementary and not mutually exclusive. If it should develop at the hearing that Cities' market is not great enough to absorb both supplies and a question then arises as to which should be certificated, any party who believes additional cost data is necessary may request it.

The revised deliverability schedule required by paragraph No. 3 of the letter-order must be submitted in order to determine whether Arkla has sufficient deliverability to meet the needs of its existing customers as well as Cities. The need for this data was clearly set out in Opinion No. 472. We realize that there are time considerations involved in the making of this study as well, but with some effort, we believe Arkla should be able to submit the schedule within three weeks from the date of this order and go forward with its application. Arkla shall submit within five days from the date of this order a statement of intent to comply with the terms of this order. Arkla's request to withdraw its application should be denied.

The Commission orders:

(A) The requirements of Sections 157.14(a)(18) and 157.14(a)(16) of the Commission's Rules and Regulations, as set out in the Commission's letter-order of February 11, 1966, paragraph Nos. 1 and 2, requiring Arkla to submit system-wide cost of service and revenues, expenses and income studies are hereby waived.

(B) Arkla shall submit the revised deliverability schedule as required by the Commission letter-order of February 11, 1966 within three weeks from the date of this order and shall submit within five days from the date of this order a statement of intent to comply herewith.

(C) Arkla's Notice of Withdrawal is hereby denied.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

IOWA SOUTHERN UTILITIES COMPANY, DOCKET NO. E-7277

ORDER AUTHORIZING ISSUANCE OF SHORT-TERM NOTES

(Issued April 4, 1966)

Iowa Southern Utilities Company (Applicant), filed an application on March 10, 1966, with the Federal Power Commission seeking an order pursuant to Section 204 of the Federal Power Act authorizing the issuance of short-term promissory notes in the aggregate principal amount of not in excess of $20,000,000 outstanding at any one time.

Applicant is incorporated under the laws of the State of Delaware and is qualified to do business in the State of Iowa. It is engaged primarily in the generation, transmission and sale of electric energy in 24 counties in south central and southeast Iowa.

According to the application, Applicant intends to borrow from time to time up to but not exceeding $20,000,000 at any one time under a Revolving Credit Agreement between Continental Illinois National Bank and Trust Company of Chicago and the Applicant, dated March 18, 1966. Each borrowing is to be evidenced by a promissory note in an amount of $100,000 or a multiple thereof, which shall mature six months after its date, but not later than October 31, 1967.

Subject to the sale by the Applicant of $15,000,000 long-term debt securities and subsequent retirement of an equal amount of the then outstanding notes, on or before October 31, 1967, the bank has agreed, upon request by the Applicant, to renew the remaining balance of the then outstanding notes, not to exceed $5,000,000, and to establish a payment schedule of one-half such remaining balance on December 31, 1968, and the other remaining half on December 31, 1969. The Applicant states that the interest rate on the notes will not exceed the prime rate in effect at the time of borrowing on the first $15,000,000, and will not exceed ¼% above such rate on the balance.

According to the Applicant proceeds from the promissory notes will be used to finance the construction, extension and improvement of the Applicant's facilities during 1966, 1967 and 1968. The proposed facilities have a total estimated in place cost over the three year period of about $37,000,000. The principal item in the program is the construction of the Burlington Generating Station at an estimated cost of $24.5 million. Other items include the expenditure for transmission facilities in the amount of $2,318,400 and substations in the amount of $2,051,100.

We note that Applicant has included three items in the construction program which will require purchase of transmission facilities from neighboring utility systems.[1] Accordingly, this order will not authorize the use of funds from the promissory notes for the acquisition of these facilities until the Commission has approved their acquisition pursuant to Section 203 of the Federal Power Act.

Written notice of the application has been given to the Iowa State Commerce Commission and the Governor of that State. Notice has also been given by publication in the Federal Register on March 17, 1966 (31 F.R. 4532), stating that any person desiring to be heard or to make any protest with reference to the application, should file petitions or protests on or before March 29, 1966, with the Federal Power Commission, Washington, D.C. 20426. No protest, petition or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 204 of the Federal Power Act, subject to the jurisdiction of the Commission as heretofore described and set forth in the Commission's order issued July 1, 1963, *Iowa Southern Utilities Company*, Docket No. E-7103 (30 FPC 1).

(2) The proposed issuance of Promissory Notes in the aggregate principal amount of $20,000,000, all as described above, will constitute an issuance of securities within the purview of Section 204 of the Act.

(3) The proposed issuance of Promissory Notes in the aggregate principal amount of $20,000,000, all as described above, will be in excess of 5% of the par

---

[1] Applicant on March 28, 1966 in Docket No. E-7280 filed an application with this Commission for authority to acquire part of these facilities pursuant to Section 203 of the Federal Power Act.

value of the other securities of Applicant, and, therefore, will not be exempt by virtue of Section 204(e) from the requirements of Section 204(a) of the Act.

(4) Applicant is not organized and operating in a State, under the laws of which the issue here involved is regulated by a State Commission within the meaning of Section 204(f) of the Act, and the proposed issuance is, therefore, not exempt by virtue of that section from the requirements of Section 204 of the Act.

(5) The proposed issuance of Promissory Notes will be exempt from the competitive bidding requirements of Section 34.1a of the Commission's Regulations under the Federal Power Act by reason of paragraph 34.1a(a)(2).

(6) The proposed issuance of securities, as hereinafter authorized, will be for a lawful object within the corporate purposes of Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance of service by Applicant as a public utility, and which will not impair its ability to perform that service, and is reasonable, necessary and appropriate for such purposes.

(7) The period of public notice given in this matter is reasonable.

The Commission orders:

(A) The proposed issuance of Promissory Notes in the aggregate principal amount of $20,000,000, outstanding at any one time, upon the terms and conditions and confined to the purposes set forth in the applications, all as described above, is hereby authorized, subject to the provisions of this order.

(B) None of the proposed notes shall be issued to obtain funds for the acquisition of transmission facilities from Iowa Illinois Gas & Electric Company and Southwestern Federated Power Cooperative, Inc. described in the application prior to the issuance of an order issued pursuant to Section 203 of the Federal Power Act authorizing such acquisition.

(C) This authorization is expressly conditioned upon the final maturity of said notes in the amount of $15,000,000 being not later than October 31, 1967 and the final maturity of the balance of said notes not to exceed $5,000,000 being not later than December 31, 1969.

(D) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service accounts, valuation, estimates or determination of cost or any other matter whatsoever now pending or which may come before this Commission.

(E) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States in respect to any security to which this order relates.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. CP63–32

ORDER AMENDING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 4, 1966)

On February 4, 1966, Panhandle Eastern Pipe Line Company (Petitioner) filed in Docket No. CP63–32, 28 FPC 797, a petition to amend the certificate of public convenience and necessity issued in said docket on November 8, 1962, by extending the time during which Petitioner is authorized to construct and operate the facilities necessary to make an evaluation of prospective underground natural gas storage reservoirs, as more fully set forth in the petition to amend.

In the certificate issued on November 8, 1962, Petitioner was authorized to make maximum total and single project expenditures of $6,000,000 and $2,000,000, respectively, in a period of three years, to evaluate prospective reservoirs near its main transmission pipelines in western Indiana. Natural gas to be injected under the authorization was limited to 7,500 MMcf for the whole program and 2,500 MMcf for a single reservoir.

Petitioner has acquired leases by negotiation and has commenced preliminary evaluation ultimately leading to testing operations in several prospective structures. Petitioner states that these steps have consumed a considerable amount of time, due in part to the longer time required to obtain storage leases by negotiation instead of by condemnation. No injection of gas has taken place, although preparations for injection have begun. Petitioner now requests an additional two years to conduct the testing and development of the reservoirs.

Due notice of the filing of the petition to amend was published in the Federal Register on February 24, 1966 (31 F.R. 3090). No protest, petition to intervene, or notice of intervention has been filed.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued November 8, 1962, in Docket No. CP63-32 be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued November 8, 1962, in Docket No. CP63-32 is amended by extending the time during which Petitioner may conduct the testing and development of the reservoirs to November 8, 1967, all as more fully set forth in the petition to amend.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

ST. CROIX PAPER COMPANY, PROJECT NO. 2492

ORDER ISSUING LICENSE (MAJOR)

(Issued April 4, 1966)

Application was filed on November 16, 1964 by St. Croix Paper Company (Applicant) of Woodland, Maine, for a license under Section 4(e) of the Federal Power Act (Act) for proposed Project No. 2492 known as the Vanceboro project, on the St. Croix River, (an international boundary stream in the vicinity of Vanceboro, Maine, United States and St. Croix, New Brunswick, Canada) at the outlet of Spednik Lake.

Applicant states that while there is an existing earth fill dam built over an old timber crib dam, deterioration of the crib timbers, leakage through the fill and downstream erosion, will necessitate the removal by Applicant of the existing dam and its replacement by a new dam to be located slightly upstream; and, in the circumstances, the application for license is for a proposed new dam and reservoir. The new dam, as does the existing one, will regulate the discharge of water from Spednik Lake into the St. Croix River for use in generating power at Applicant's Grand Falls hydroelectric power plant, about 25 miles downstream from the Vanceboro Project, and at Applicant's hydroelectric and hydro-mechanical power plant in the Woodland Pulp and Paper Mill, located about 12 miles downstream from the Grand Falls plant. The new dam and its reservoir is more fully described in paragraph (B) below.

The St. Croix River including its East Branch is approximately 100 miles in length and flows in a southeasterly direction into Passamaquoddy Bay. It forms part of the boundary between the State of Maine and New Brunswick, Canada and is therefore an international water. There is historical evidence of the extensive use of the St. Croix River for log driving from the time of settlement of the area. Such drives originating in the headwater reservoirs of the St. Croix, such as East Grand Lake and Mud Lake, were made downstream to its mouth in Passamaquoddy Bay. Dams were often built across the river for the purpose of impounding water temporarily to improve and regulate depths in the stream below to float logs. The storage in the principal reservoirs, of which Spednik Lake is one, was at one time controlled by the St. Croix Log Driving Company which maintained the dams and reservoirs for log drives down to Baring, Maine, at river mile 19 on the St. Croix. Later, these principal dams and reservoirs were acquired by the St. Croix Paper Company. Vanceboro Project No. 2492 is located on the St. Croix River at river mile 68.

The Secretary of the Army and the Chief of Engineers have advised that the plans of the project structures affecting navigation are satisfactory and have been approved pursuant to the provisions of Section 4(e) of the Act.

The Department of the Interior in reporting on the application has advised that the proposed project, if operated in the same general manner as the existing project, will not harm wildlife resources. The Department requested that the final drawings and specifications of the project fishway be subject to the approval of the Maine Department of Inland Fisheries and Game and the United States Fish and Wildlife Service. The Department of the Interior also requested that a minimum flow of 200 cfs be made below the dam until such time as the licensee, the Maine Department of Inland Fisheries and the Bureau of Sport Fisheries and Wildlife agree upon a schedule of minimum releases appropriate to maintain and develop fish resources. Applicant states that the requests of the Department of the Interior, included herein as Articles 31 and 32, are acceptable to it.

The Department of Health, Education, and Welfare has stated that no adverse effects are expected on water supply control, water pollution control or vector control and that the project should be beneficial for pollution control as its purpose is to provide low flow augmentation.

The State Park and Recreation Commission of the State of Maine in a letter to the Commission indicated that the Applicant's recreational development at the project is satisfactory and that there is no need to impose any license requirements regarding public access, public facilities or other recreational facilities at this time.

Applicant submitted an Exhibit R supplemental to its filing of application for license in which it indicates shoreline properties are rented to the public on an annual basis and that the public is given unrestricted use of Applicant-owned roads, together with the right to pass over its lands at will for purposes of recreation, fishing and hunting. Applicant's Exhibit R does not include plans for future recreational development in the project area. However, Applicant states that it maintains a policy of cooperation with State and Federal agencies when needs for such development are apparent. Since the Exhibit R submitted by Applicant does not conform to Commission regulations, a special license article is included herein to require the filing of a revised Exhibit R within one year of completion of the project.

Applicant has made application in accordance with the provisions of the Boundary Waters Treaty of 1909 to the International Joint Commission which has approved the project subject to certain conditions in an order issued October 15, 1965. In its order the International Joint Commission prescribed for Lake Spednik, a maximum surface water elevation of 385.86 ft. msl, minimum surface water elevations of 371.5 ft. msl between October 1 and April 30 and 376.5 ft. msl between May 1 and September 30 and a minimum discharge therefrom of 200 cfs.

By our order issued December 17, 1965, 34 FPC 1482, we denied a petition to intervene in this proceeding filed by Philip J. Hennessey III (Petitioner) for himself and on behalf of other property owners in the vicinity of Spednik Lake, and by our further order issued March 11, 1966, 35 FPC 372, we denied Petitioner's application for rehearing of our aforementioned order denying intervention.

The Commission finds:

(1) The portion of the St. Croix River within the United States is a navigable water of the United States and a stream subject to the jurisdiction of Congress as an international boundary water.

(2) The part of the Vanceboro Project No. 2492 within the United States is located in navigable waters of the United States.

(3) Applicant is a corporation organized under the laws of the State of Maine, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(4) Public notice of the filing of the application has been given. Except for the above-mentioned petition to intervene, no protests or other petitions have been received. No conflicting application is before the Commission.

(5) The project does not affect a Government dam, nor will the issuance of a license therefor, as hereinafter provided affect the development of any water resources for public purposes which should be undertaken by the United States.

(6) Upon the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving and developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water power development and for other beneficial public use, including recreational purposes.

(7) The amount of annual charges for the purpose of reimbursing the United States for the costs of administration of Part I of the Act is reasonable as hereinafter fixed and specified.

(8) The exhibits described and designated in paragraph (B) below conform to the Commission's Rules and Regulations and should be approved as part of this license.

The Commission orders:

(A) This license is hereby issued to St. Croix Paper Company of Woodland, Maine under Section 4(e) of the Federal Power Act for a period of 50 years effective March 1, 1966, for the construction, operation, and maintenance of Project No. 2492, located on the St. Croix River, an International Boundary stream and navigable water of the United States, subject to the terms and conditions of the Federal Power Act which is incorporated by reference as a part of this license and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Project No. 2492 consists of:

(i) all lands constituting the project area and enclosed by the project boundary or limits which are otherwise defined, and/or interest in such lands necessary or appropriate for the purposes of the project, whether such lands or interests therein are owned or held by the Licensee or by the United States—such project area and project boundary being more specifically shown and described by certain Exhibits of the application for license which designated as follows:

Exhibit	FPC No.	Title
J sheet, 1 of 1	2492-1	Vanceboro Dam.
K sheet, 1 of 2	2492-3	Detail map.
K sheet, 2 of 2	2492-4	Detail map.

Article 34 is included requiring an additional Exhibit K drawing showing a plan of the dam and the area adjacent thereto in sufficient detail to accurately show the location of the International Boundary with respect to the dam.

(ii) project works as follows:

(1) A concrete section about 69 feet long, including (a) — a spillway section with two tainter gates (each about 22.5 feet long) and (b) — a fishway about 8 feet wide; (2) earth embankment at each end (total length about 400 feet); (3) a reservoir (the portion of Spednik Lake within the United States); and appurtenant facilities; the location, nature, and character of which are more specifically shown and described by the exhibits hereinbefore cited and by certain other exhibits which also formed part of the application for license and which are designated and described as follows:

Exhibit	FPC No.	Title
L (revised Aug. 26, 1965)	2492-2	Vanceboro Dam.

Exhibit M: consisting of a typewritten page entitled "General Description of Equipment", filed in the Commission November 16, 1964.

(Only those portions of the project located within the United States are included in the license).

(iii) all other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as part of the project is approved or acquiesced in by the Commission; also, all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance or operation of the project.

(C) This license is subject to the terms and conditions set forth in Form L-4 (Revised June 1, 1964) entitled, "Terms and Conditions of License for

Unconstructed Project Affecting Navigable Waters of the United States", 32 FPC 839, which terms and conditions designated as Articles 1 through 29 are attached hereto and subject to the following special conditions set forth herein as additional articles:

Article 30. For the purpose of reimbursing the United States for the costs of administration of Part I of the Act the Licensee shall pay the United States $50.00 per annum effective March 1, 1966.

Article 31. The Licensee shall construct, operate, and maintain or arrange for the construction, operation, and maintenance of such fish-passage and protective facilities as a part of the proposed Vanceboro project, as may be approved by the Commission upon the recommendation of the International Joint Commission following consultation with the Maine Department of Inland Fisheries and Game, and the United States Fish and Wildlife Service on final design drawings and specifications.

Article 32. Licensee shall consult with the Maine Department of Inland Fisheries and Game and the U.S. Bureau of Sport Fisheries and Wildlife on the effective operation of the project fish ladder and in the event it appears desirable in the interest of maintaining and developing the fishery resources of the St. Croix River, seek modification of water surface elevations of Lake Spednik or of flow release schedules at the dam as prescribed in the order of the International Joint Commission issued October 15, 1965, for which licensee shall make appropriate application to the International Joint Commission.

Article 33. The Licensee shall cooperate with Federal, State, and local agencies in the development of access roads and land areas and such other facilities necessary for full recreational utilization by the public of project lands and waters lying within the United States, consistent with the terms of the license and the operation of the project. Within one year following completion of the project, Licensee shall file for approval with the Commission a revised Exhibit R conforming to the requirements of Section 4.41 R of Regulations under the Federal Power Act.

Article 34. The Licensee shall, within six months from the date of completion of the project, file for Commission approval in accordance with the Commission's Regulations, Sections 4.41 and 4.42 under the Federal Power Act, an Exhibit "K" showing the dam and the adjacent area in sufficient detail to clearly define the project boundary and the location of the International Boundary. The International Boundary shall be referenced to the appropriate on-shore boundary reference monuments.

Article 35. In the design, construction, maintenance and operation of the Vanceboro project, the Licensee shall comply with all applicable provisions and requirements of the Order of Approval (International Joint Commission Docket No. 80) issued October 15, 1965, by the International Joint Commission for the construction of a storage dam in the St. Croix River at Vanceboro, Maine, and St. Croix, New Brunswick, as may be modified by further order of the International Joint Commission.

Article 36. The Licensee shall commence construction of the project works not later than March 1, 1967, and shall thereafter in good faith and due diligence prosecute such construction and shall complete construction of such works not later than December 1, 1967.

(D) The exhibits designated and described in paragraph (B) above are hereby approved as part of the license for the project.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

SKELLY OIL COMPANY, DOCKET NO. RI60-253

ORDER REJECTING OFFER OF SETTLEMENT, AND DENYING MOTION TO TERMINATE PROCEEDINGS

(Issued April 4, 1966)

Skelly Oil Company (Skelly) has filed an offer of settlement, and motion to terminate the above docketed proceeding which involves a proposed increase in rate, filed under Section 4(d) of the Natural Gas Act, from 11.0¢ to 16.8¢ for a sale of natural gas made by Skelly under its FPC Gas Rate Schedule No. 1 from its Velma Plant in Stephens County, Oklahoma to Lone Star Gas Company (Lone Star). The increased rate was filed on March 21, 1960, and was suspended for the statutory period. On June 16, 1964, Skelly made a 15¢ increased rate effective, subject to refund, and waived its right to make the full 16.8¢ increased rate effective.

Skelly proposes a settlement rate of 14.0¢ per Mcf to be effective until July 1, 1968, with periodic increases of 1.0¢ per Mcf on July 1, 1970, and every five years thereafter. It proposes to amend its contract with Lone Star so as to eliminate all indeterminate pricing provisions, including the favored-nation clause, and to extend the contract to June 30, 1984. Additionally, Skelly proposes to refund all monies collected subject to refund above the settlement rate.

Skelly cites our orders approving similar settlement offers in *National Fuels Corporation, et al.*, Docket No. G-20426, 33 FPC 1048 (order issued May 24, 1965) and *Warren Petroleum Corporation, et al.*, Docket No. G-20478, *et al.*, 33 FPC 1212 (order issued June 3, 1965) as precedents for approval of its proposal. The reasons set forth by Skelly for acceptance of its proposal are similar to those which caused us to approve the proposals in *National Fuels* and *Warren*. However, in *National Fuels* the proposal involved the only Section 4(e) proceeding it had pending, and in *Warren* we had before us a proposal made by four co-owners of the Garvin County plant complex, the majority owners having previously entered into company-wide settlements, exclusive of the Garvin County plants. Here, we have a proposal involving only one Section 4(e) proceeding concerning one sale made by Skelly while it has thirty-eight other rate proceedings now pending. Recognizing that twelve of such proceedings concern sales made in the Permian Basin, which are generally excluded from settlement proposals, we believe that an above-ceiling settlement rate should only be considered in the light of a company-wide settlement proposal.[1] Consequently, we shall reject Skelly's proposal, without prejudice to its being refiled as a part of a proposal which shall encompass all of its pending Section 4(e) proceedings, excluding those involving sales of natural gas in the Permian Basin.

---

[1] The applicable increased price ceiling is 11.0¢ per Mcf, in accordance with the Statement of General Policy No. 61-1, 18 CFR 2.56.

The Commission orders:

The settlement proposal filed by Skelly is rejected, and its motion to terminate the proceeding in Docket No. RI60-253 is denied, without prejudice.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

TEXACO INC. (OPERATOR), ET AL., DOCKET NO. CI66-544

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND ACCEPTING FPC GAS RATE SCHEDULE AND SUPPLEMENT THERETO FOR FILING

(Issued April 4, 1966)

On December 27, 1965, Texaco Inc. (Operator), *et al.* (Applicant), filed in Docket No. CI66-544 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale for resale and delivery of natural gas in interstate commerce to Texas Eastern Transmission Corporation (Texas Eastern) for periods of limited duration from unspecified producing properties, all as more fully set forth in the application.

Applicant proposes to make short-term or spot sales of natural gas to Texas Eastern for periods of limited duration as may be agreed upon by Applicant and Texas Eastern from time to time over a period of twenty years. The proposed sales are to be made pursuant to the terms of a gas purchase contract between Applicant and Texas Eastern dated June 1, 1965. Applicant proposes to sell gas from leaseholds owned by Applicant and various co-owners. Gas will not be purchased from others for the subject sales. Because these will be short-term or spot sales, Applicant does not commit or dedicate to the contract any specific producing properties. Any deliveries will be at points on or near Texas Eastern's pipeline system which may be agreed upon in supplemental agreements. Applicant proposes to file each of the supplemental agreements as a supplement to its related FPC gas rate schedule for acceptance by the Commission. If the Commission does not accept the supplemental agreement and permit the same to become effective upon terms and conditions mutually agreeable to Applicant and Texas Eastern within thirty days from the filing date, the supplemental agreement will automatically terminate and be of no further force and effect, and the filing thereof will be withdrawn by Applicant if not theretofore rejected by the Commission.

The contract between Applicant and Texas Eastern provides that the supplemental agreements shall specify the quantity of gas to be sold and purchased; the price, which shall not exceed the then effective area price fixed by the Commission for the area from which deliveries are proposed to be made; and the duration of time for the proposed purchase. Applicant requests that the certificate authorize the subject sales for the specific periods of time set forth in the supplemental agreements.

On July 6, 1964, the Commission issued a certificate to Gulf Oil Corporation (Gulf) in Docket No. CI64-1122 authorizing sales by Gulf to Texas Eastern under circumstances similar to those proposed by Applicant. Like Applicant, Gulf had proposed to make unspecified short-term sales over a period of twenty years. However, the Commission limited the certificate to a period of five years, subject to renewal or extension at the termination thereof, due to the novelty and experimental nature of the authorization. Likewise, it is appropriate to limit Applicant's certificate to an initial five-year term, subject to renewal or extension at the termination thereof.

In granting the basic certificate at this time we believe that we should advise the parties that, in the absence of a showing of extraordinary circumstances, we will not approve supplemental filings for short-term sales, due to the spot nature thereof, at prices which are either above the purchaser's average cost of purchased gas or are not made at a realistic discount from the area ceiling for permanent certificates dedicating gas to the interstate market. Nor will we permit the procedure being instituted here to be abused by the establishment of any pattern of building up gas fields through short-term jurisdictional sales followed at termination by long-term non-jurisdictional sales. We recognize that at the termination of the short-term authorization Applicant will be free to renegotiate a permanent sale at any price at or below the appropriate area ceiling with Texas Eastern or any other purchaser, but we expect that such sales will normally fall into jurisdictional channels. Finally, we reserve the right to hold a formal hearing on any supplemental agreement in the event a protest thereto is filed. Of course, Applicant will be free to withdraw the supplemental filing under such circumstances.

As part of the certificate application. Applicant has submitted details of the first sale proposed to be made under the contract. Applicant proposes to sell an average of 6,000 Mcf of gas per day for a period of five years from the South Bosco Field, Acadia Parish, Louisiana, at 15.0 cents per Mcf at 15.025 psia.

After due notice no notice of intervention or protest to the granting of the application has been received. A petition for leave to intervene was filed by Public Service Electric and Gas Company on February 21, 1966, and was withdrawn on March 17, 1966. No further petitions for leave to intervene have been received.

At a hearing held on April 1, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits thereto, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Texaco Inc. (Operator), *et al.*, is engaged in the sale and delivery of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission, and is, therefore, a "natural-gas company" within the meaning of the Natural Gas Act.

(2) The sales of natural gas hereinbefore described, as more fully described in the application in this proceeding, will be made in interstate commerce subject to the jurisdiction of the Commission, and such sales by Applicant, together with construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed in the supplemental agreement of June 30, 1965, relating to the sale of natural gas from the South Bosco Field, Acadia Parish, Louisiana, and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The sale of natural gas by Applicant proposed in the supplemental agreement described above, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the certificate issued hereinafter should be limited to a term of five years, subject to renewal or extension upon expiration of the initial term upon a showing that the public convenience and necessity so require. Sales of natural gas made pursuant to supplemental agreements filed and approved during the effective period of the certificate issued hereinafter should continue for the unexpired portion of the term of such supplemental agreements.

The Commission orders:

(A) A certificate of public convenience and necessity limited to an initial term of five years from the date of issuance of this order is issued, upon the terms and conditions of this order, authorizing sales for resale in interstate commerce by Applicant on a short-term or spot-sale basis for the period of limited duration specified in each supplemental agreement, together with construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, as Applicant and Texas Eastern may subsequently agree upon provided that such supplemental agreements (after being served on Texas Eastern's customers and the state commissions having jurisdiction over such customers) are filed with and approved by the Commission, all as hereinbefore described and as more fully described in the application in this proceeding.

(B) The certificate issued in paragraph (A) above is not transferable and shall be effective only so long as Applicant continues the acts and operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(C) At the time of the filing of each supplemental agreement Applicant shall submit a statement showing (1) the total contract volumes of gas deliverable under earlier filed supplemental agreements and (2) the total volumes of gas delivered under such earlier filed supplemental agreements.

(D) The certificate issued in paragraph (A) above is subject to renewal or extension at the expiration of the initial term of five years upon a showing that the public convenience and necessity so require. Sales of natural gas made pursuant to supplemental agreements filed and approved during the effective period of the certificate issued in paragraph (A) above shall continue for the unexpired portion of the term of such supplemental agreement.

(E) The Contract dated June 1, 1965, is accepted for filing to be effective on the date of initial delivery and is designated as Texaco Inc. (Operator), *et al.*, FPC Gas Rate Schedule No. 366. The Supplemental Agreement dated June 30, 1965,[1] is accepted for filing to be effective on the date of initial delivery and is designated as Supplement No. 1 to the aforementioned rate schedule.

---

[1] A filing of February 18, 1966, revises the billing statement and percentum of ownership of co-owners.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

UNION GAS SYSTEM, INC., AND CITIES SERVICE GAS COMPANY, DOCKET NO. CP66-219

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued April 4, 1966)

On January 5, 1966, Union Gas System, Inc. (Applicant) filed in Docket No. CP66-219 an application pursuant to Section 7(a) of the Natural Gas Act for an order directing Cities Service Gas Company (Respondent) to make a physical connection between its transmission facilities and Applicant's proposed facilities and to sell and deliver up to 40 Mcf of natural gas per day to Applicant for resale in the Pleasant Valley Road Area, Douglas County, Kansas, as more fully set forth in the application.

Applicant will construct, own and operate a natural gas distribution system in the community known as the Pleasant Valley Road Area, which has a population of approximately 65 and 19 residences. The distribution system and lateral pipelines will consist of 2-inch pipelines extending approximately 0.80 mile westward and 0.75 mile eastward from Respondent's 20-inch transmission pipeline and approximately 1,320 feet of 1¼-inch pipeline extending northward from the westward lateral.

The estimated annual and peak day requirements of natural gas for the area which is proposed to be served by Applicant are as follows:

Mcf	First year	Second year	Third year
Annual	1,837	2,338	3,006
Peak day	24	31	40

This proposed service will be rendered under Respondent's Rate Schedule F-2.

The estimated cost of construction of the facilities to be installed by Applicant is $9,868, which will be financed from treasury cash.

The Kansas State Corporation Commission certified the proposed service area to Applicant in its order issued October 20, 1965, in Docket No. 76,160-U.

Respondent filed an answer to the application on January 20, 1966, objecting to Applicant's request for separate delivery points for service under the instant proposal and under the proposal submitted by Applicant in Docket No. CP66-195 (requesting natural gas for resale and distribution in the Dreher Mobil Home Village, Douglas County, Kansas). This objection was withdrawn by Respondent's letter filed with the Commission on February 7, 1966. Respondent has no objection to the proposal.

Due notice of the filing of the application was published in the Federal Register on January 22, 1966 (31 F.R. 925). No protest, petition to intervene or notice of intervention has been filed.

The Commission finds:

(1) Cities Service Gas Company, a Delaware corporation with its principal place of business in Oklahoma City, Oklahoma, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order issued December 28, 1943, in Docket No. G-298 (4 FPC 471).

(2) Applicant is a public utility company in the State of Kansas and is authorized to construct and operate facilities to distribute and sell natural gas to inhabitants of the communities along its system.

(3) It is necessary and desirable in the public interest that Respondent be directed to establish a physical connection of its transportation facilities with the facilities proposed to be constructed by Applicant and to sell and deliver up to 40 Mcf of natural gas per day to Applicant, as hereinbefore described and as more fully set forth in the application, as hereinafter ordered and conditioned.

(4) The requirement that Respondent serve Applicant, as requested, will not place an undue burden upon Respondent nor impair its ability to render adequate service to existing customers.

The Commission orders:

(A) Respondent is directed to establish a physical connection of its natural gas transmission system with the facilities to be constructed by Applicant and to sell and deliver up to 40 Mcf of natural gas per day to Applicant, under Respondent's Rate Schedule F–2, for resale and distribution in the community known as the Pleasant Valley Road Area, Douglas County, Kansas, all as hereinbefore described and as more fully described in the application.

(B) Applicant shall be prepared to receive natural gas from Respondent at the proposed new connection within one year from the date of this order.

(C) Respondent shall notify the Commission of the commencement of service within 10 days thereof.

(D) Respondent shall execute and file with the Commission a service agreement with Applicant in compliance with the Commission's Regulations under the Natural Gas Act.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

UNITED FUEL GAS COMPANY, DOCKET NO. CP66–35

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 4, 1966)

On July 30, 1965, United Fuel Gas Company (Applicant) filed in Docket No. CP66–35 an application together with supplementary data on October 25, 1965, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain pipeline and regulating facilities, all as more fully set forth in the application.

Applicant seeks authorization for the construction and operation of 20.2 miles of 8-inch transmission pipeline extending northward from its existing 30-inch transmission line in Cabell County, West Virginia, to interconnect with its Point Pleasant distribution plant near Apple Grove in Mason County, West Virginia, for delivery of natural gas into the Point Pleasant distribution area.

The proposed facilities are needed to meet the increased requirements of the Pantasote Corporation, Stauffer Chemical Corporation and Goodyear Tire and Rubber Company and to provide the capacity for anticipated future growth in this Ohio Valley region. Estimated peak day and annual requirements are as follows:

Year	Peak day	Annual
1966	7,900	1,863,400
1967	9,900	2,085,500
1968	11,300	2,376,300

The total estimated cost of the proposed construction is $779,500, which Applicant proposes to finance through the issuance and sale of promissory notes and common stock to its parent company, the Columbia Gas System, Inc.

After due notice, the Public Service Commission of West Virginia filed a notice of intervention on August 27, 1965, and thereafter withdrew the same by letter dated September 14, 1965. No petition to intervene or protest to the granting of the application has been filed.

At a hearing held on April 1, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, supplementary data, and exhibits submitted in support of the authorization sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, United Fuel Gas Company, a West Virginia corporation having its principal place of business in Charleston, West Virginia, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of March 1, 1944, in Docket No. G-341 (4 FPC 534).

(2) The proposed construction and operation of facilities by Applicant as hereinbefore described, and as more fully described in the application, supplementary data and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid construction and operation of facilities is required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to the Applicant in this proceeding, authorizing the construction and operation of facilities, hereinbefore described and as more fully described in the application, supplementary data and exhibits in this proceeding, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations within 6 months of the date on which this order issues.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

BLUEBONNET GAS CORPORATION, DOCKET NO. CP66–252

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 5, 1966)

On February 2, 1966, Bluebonnet Gas Corporation (Applicant) filed in Docket No. CP66–252 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the acquisition, construction and operation of certain natural gas facilities and the transportation and sale of natural gas to Trunkline Gas Company (Trunkline) for resale, as more fully described in the application.

Applicant proposes to purchase volumes of natural gas from Erwin E. Grimes, Operator (Grimes), which gas is to be produced from the Cypress Creek Field, Newton County, Texas. The present estimate of reserves dedicated to Applicant by Grimes as of December 30, 1965, is 4,468 MMcf at 14.65 psia. Recoverable volumes from these reserves are estimated to be 3,339,750 Mcf. Applicant has scheduled the delivery of the reserves to Trunkline over a ten year period at an estimated rate of 1,000 Mcf per day for the first five years and at gradually declining rates during the second five year period. These deliveries will be made pursuant to the contract between Applicant and Trunkline dated January 18, 1966.

On January 24, 1966, Grimes filed an application in Docket No. CI66–640 for certificate authorization to sell the gas to Applicant. Our order authorizing the sale is being issued concurrently herewith.

To carry out the proposal, Applicant will acquire from Grimes approximately three miles of 3.5-inch O.D. pipeline to connect the Cypress Field production with Trunkline's 24-inch transmission system. Applicant will also construct the interconnection of the acquired facilities with Trunkline's pipeline. Trunkline will construct and operate the necessary metering and regulating facilities pursuant to its "budget-type" certificate authorization issued in Docket No. CP66–192 on March 14, 1966, 35 FPC 388.

Applicant estimates that the cost of acquiring the three miles of pipeline from Grimes will be $15,840, and the cost of constructing the interconnection will be $3,000, for a total of $18,840. Applicant is wholly owned by Lumar Gas Corporation (Lumar). Applicant will finance the cost of acquiring and constructing the facilities by issuing 18,800 shares of $1.00 par value common stock to Lumar.

Due notice of the filing of the application was published in the Federal Register on February 18, 1966 (31 F.R. 2907). No protest, petition to intervene or notice of intervention has been filed in this proceeding.

At a hearing held on April 1, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Bluebonnet Gas Corporation, a Texas corporation with its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued May 21, 1965, in Docket No. CP65–326 (33 FPC 1032).

(2) The facilities hereinbefore described and as more fully described in the application in this proceeding are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the acquisition and operation thereof and the transportation and sale of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The acquisition, construction and operation of the proposed facilities and the transportation and sale of natural gas by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), (d)(2), (d)(3), and (e) of Section 157.20 of said Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Bluebonnet Gas Corporation authorizing the acquisition, construction and operation of the facilities and the transportation and sale of natural gas as hereinbefore described and as more fully set forth in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), (d)(2), (d)(3), and (e) of Section 157.20 of such Regulations.

(C) The facilities shall be acquired, construction of the interconnection completed, the facilities placed in actual operation, and the transportation and sale of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within three months from the date of this order.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

ILLINOIS POWER COMPANY AND MISSISSIPPI RIVER TRANSMISSION CORPORATION, DOCKET NO. CP66-220

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued April 5, 1966)

On January 5, 1966, Illinois Power Company (Applicant) filed an application pursuant to Section 7(a) of the Natural Gas Act for an order directing Mississippi River Transmission Corporation (Respondent) to establish a physical connection between its natural gas transmission facilities and the facilities to be constructed by Applicant, to construct a sales meter station and to sell and deliver natural gas to Applicant for resale and distribution in the communities of Ruma and Evansville, Randolph County, Illinois, and environs, as more fully set forth in the application.

Applicant will construct and operate 10 miles of 3-inch lateral pipeline from the proposed new tap on Respondent's interstate transmission line near Prairie du Rocher, Illinois, to the villages of Evansville and Ruma, and will construct and operate the individual gas distribution systems in Evansville and Ruma.

The estimated requirement of natural gas, which is to be used for residential and commercial purposes, is as follows:

	Mcf					
	Ruma		Evansville		Total	
	Peak day	Annual	Peak day	Annual	Peak day	Annual
First year	138	13,985	265	24,441	403	38,426
Second year	159	15,355	342	30,353	501	45,708
Third year	173	16,722	388	35,350	561	52,072

Applicant will serve these new customers from existing contract demand, so no additional volumes will be required from Respondent.

The estimated cost of the facilities to be constructed by Applicant is $227,075, which will be financed from currently available funds. Applicant estimates the cost of Respondent's sales meter station to be $9,350.

Applicant obtained franchises for natural gas service from Ruma and Evansville on October 4, 1965. A certificate of public convenience and necessity was issued on December 20, 1965, by the Illinois Commerce Commission authorizing Applicant to construct and operate the proposed facilities and to perform the proposed service.

By letter dated January 10, 1966, Respondent was notified of the filing of the application and furnished a copy thereof. No answer has been received from Respondent.

Due notice of the filing of the application was published in the Federal Register on January 22, 1966 (31 F.R. 922). No protest, petition to intervene or notice of intervention has been filed.

The Commission finds:

(1) Respondent, Mississippi River Transmission Corporation, a Delaware corporation with its principal place of business in St. Louis, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued November 29, 1960, in Docket No. CP60-95 (24 FPC 1020).

(2) Applicant is a public utility company legally engaged in the local distribution of natural gas to the public in the State of Illinois.

(3) It is necessary and desirable in the public interest that Respondent be directed to establish a physical connection of its transportation facilities with the facilities proposed to be constructed by Applicant, to construct and operate a sales meter station at the proposed interconnection, and to sell and deliver up to 561 Mcf of natural gas per day to Applicant through the interconnection, as hereinbefore described and as more fully described in the application, as hereinafter ordered and conditioned.

(4) The requirement that Respondent serve Applicant, as requested, will not place an undue burden upon Respondent nor impair its ability to render adequate service to existing customers.

The Commission orders:

(A) Respondent is directed to establish a physical connection of its natural gas transmission system with the facilities to be constructed by Applicant, to construct and operate a sales meter station at the point of interconnection, and deliver through the point of interconnection up to 561 Mcf of natural gas per day, from existing contract demand, all as hereinbefore described and as more fully described in the application.

(B) Applicant shall be prepared to receive natural gas from Respondent at the proposed new connection within one year from the date of this order.

(C) Respondent shall notify the Commission of the commencement of service within 30 days thereof.

(D) Respondent shall execute and file with the Commission an amended service agreement in accordance with the Commission's Regulations under the Natural Gas Act.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

THE MONTANA POWER COMPANY, DOCKET NOS. G-17370, G-17371

ORDER DENYING APPLICATION FOR REHEARING

(Issued April 5, 1966)

On February 8, 1966, 35 FPC 191, the Commission issued Opinion No. 486 and accompanying order in the above-entitled proceeding. Application for rehearing of this Opinion and order has been timely filed under Section 19 of the Natural Gas Act by the Independent Petroleum Association of America (applicant or IPAA), an intervener and party in this proceeding.

In Opinion No. 486 and order we authorized The Montana Power Company (Montana Power), subject to certain specified conditions, to increase its previously authorized imports of natural gas from Canada into the United States by an average of 10,000 Mcf per day commencing on or about November 1, 1966, and by an average of 20,000 Mcf per day commencing on or about November 1, 1967, at a point of interconnection on the International Boundary as described in the application filed in Docket No. G-17371. We also found that the Presidential Permit issued to The Montana Power Company on September 19, 1960, in Docket No. G-17370, sufficiently provided for the additional imports of gas proposed and that no amendment or additional Permit was required.

Applicant requests that we grant rehearing and thereafter modify our Opinion and order, alleging that we have erred (1) in relying upon standards and guidelines which were formulated prior to the Mandatory Oil Import Program and which are now in conflict with such Program; (2) in failing to recognize that the Mandatory Oil Import Program created a new consideration to be dealt with in Section 3 cases; and (3) in failing to give consideration to the high degree of dependency of Montana consumers upon foreign source fields.

The arguments advanced here by IPAA are essentially the same as those advanced in its brief to the examiner and rejected by us in our Opinion. No new facts or arguments are called to our attention which would be cause for granting rehearing or disturbing the original Opinion and order.

The Commission finds:

The assignments of error and grounds for rehearing set forth in the above-described application for rehearing present no facts or principles of law which were not considered by the Commission when it issued its Opinion No. 486 and accompanying order on February 8, 1966, or which having now been considered warrant any change or modification of said Opinion and order.

The Commission orders:

The application for rehearing filed by the applicant, Independent Petroleum Association of America, on March 8, 1966, is hereby denied.

Chairman White *not participating.*

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

WESTERN MASSACHUSETTS ELECTRIC COMPANY, PROJECT NO. 2334

ORDER APPROVING EXHIBIT R FOR PROJECT

(Issued April 5, 1966)

On July 13, 1965, Western Massachusetts Electric Company, Licensee for constructed Project No. 2334, filed for Commission approval a recreational use plan for the project. The plan was filed pursuant to Article 30 of the license.

The project, known as the Gardners Falls Project, is located on the Deerfield River in the Towns of Buckland and Shelburne, in Franklin County, Massachusetts.

The recreational use plan, consisting of a map identified as Exhibit R (FPC No. 2334–10) and a written text identified as Exhibit R–1, shows present and proposed recreational uses of the project.

The Department of the Interior, the Department of Health, Education, and Welfare, and the Department of Natural Resources of the Commonwealth of Massachusetts, have reported favorably on the recreational use plan.

The Commission finds:

The following designated and described recreational use plan for the project should be approved as part of the license for the project:

Exhibit R—One sheet (FPC No. 2334–10).
Detail Map of Proposed Recreational Use of Project Area.
Exhibit R–1 (Brochure) entitled: "Recreational Use Plan."

The Commission orders:

The recreational use plan for Project No. 2334, designated and described in the above finding, is hereby approved as part of the license for the project.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

ACCOUNTING FOR MEASURING AND REGULATING STATIONS—UNIFORM SYSTEM OF ACCOUNTS PRESCRIBED FOR CLASSES A, B, AND C NATURAL GAS COMPANIES, DOCKET NO. R–292

ORDER NO. 320

AMENDING GAS PLANT INSTRUCTIONS AND NOTES TO ACCOUNTS 369 AND 379

(Issued April 6, 1966)*

The Commission in this order is amending the Uniform System of Accounts applicable to Classes A, B, and C natural gas companies so as to eliminate the instruction permitting optional accounting for measuring and regulating stations as either a transmission or distribution plant item. Although the elimination of the option now permitted is in keeping with sound uniform accounting practices, the primary purpose of the amendments is to clarify the eligibility of the property concerned with respect to the investment tax credit percentage to be allowed. The existence of the option in the systems of accounts has posed a problem for the Internal Revenue Service because the Internal Revenue Code, as amended in 1962 and 1964 (26 U.S.C. 38, 46(a), 46(c)) provides, in effect, that transmission plant acquisitions would be allowed a 7 percent credit and distribution plant would be allowed a 3 percent credit.

---

* Published in the Federal Register on April 13, 1966 (31 F.R. 5689).

On November 2, 1965, we issued a Notice of Proposed Rulemaking in this proceeding, published it in the Federal Register on November 9, 1965 (30 F.R. 14110) and, thereby, invited the submission of comments with respect to the proposal. Six responses were received.** There were no objections in principle to the proposals although several argued that mere deletions from the existing instructions, as proposed, rendered them unclear and suggested amendatory language. We recognize the merit of the points raised and, although we do not adopt the precise language changes suggested, we believe that the amendments here prescribed will make clear our original intention to require pipeline companies, including those which measure deliveries to their own distribution systems, to classify the equipment in the transmission function, but to make no change in the present classification of the equipment by distribution companies in the distribution function.

The Commission therefore finds:

In view of the foregoing, it is necessary and appropriate for the administration of the Natural Gas Act that the amendments to the Uniform System of Accounts proposed in the notice of proposed rulemaking heretofore issued in this proceeding be revised and, as so revised, now be prescribed.

The Commission, acting pursuant to the authority of the Natural Gas Act, as amended, particularly sections 8 and 16 thereof (52 Stat. 825, 830; 15 U.S.C. 717g, 717o), *orders:*

(A) The Uniform System of Accounts, prescribed for Class A, B, and C natural gas companies by Part 201 and Part 204, respectively, of Subchapter F, Chapter I, Title 18 of the Code of Federal Regulations, are amended as follows:

1. Gas Plant Instruction 14.A. in Part 201 and 12.A. in Part 204 are amended by deleting the last sentence from each and inserting, in lieu thereof, the following:

> Pipeline companies, including those companies which measure deliveries of gas to their own distribution systems, shall include city gate and main line industrial measuring and regulating stations in the transmission function.

2. In the second sentences of the Gas Plant Instruction 14.A. and 12.A. delete the words "inlet side" appearing in each and insert, in lieu thereof, the words "outlet side".

3. Gas Plant Instruction 14.B. in Part 201 and 12.B. in Part 204 are amended by deleting the last two sentences from each and inserting, in lieu thereof, the following:

** Michigan Gas Storage Company; National Fuel Gas Company on behalf of Iroquois Gas Corporation, Pennsylvania Gas Company and United Natural Gas Company; Northern Natural Gas Company; Pacific Gas and Electric Company; Pacific Gas Transmission Company; Public Service Electric and Gas Company.

> The distribution system owned by companies having no transmission facilities connected to such distribution system begins at the inlet side of the distribution system equipment which meters or regulates the entry of gas into the distribution system and ends with and includes property on the customer's premises. For companies which own both transmission and distribution facilities on a continuous line, the distribution system begins at the outlet side of the equipment which meters or regulates the entry of gas into the distribution system and ends with and includes property on the customer's premises. The distribution system does not include storage land, structures, or equipment.

As so amended, paragraphs A. and B. of Gas Plant Instruction 14. in Part 201; and paragraphs A. and B. of Gas Plant Instruction 12. in Part 204 will read as follows:

Gas Plant Instructions

* * * * * * *

14.[12.] *Transmission and distribution plant.* For the purposes of this system of accounts:

A. "Transmission System" means the land, structures, mains, valves, meters, boosters, regulators, tanks, compressors and their driving units and appurtenances, and other equipment used primarily for transmitting gas from a production plant, delivery point of purchased gas, gathering system, storage area, or other wholesale source of gas, to one or more distribution areas. The transmission system begins at the outlet side of the valve at the connection to the last equipment in a manufactured gas plant, the connection to gathering lines or delivery point of purchased gas, and includes the equipment at such connection that is used to bring the gas to transmission pressure, and ends at the outlet side of the equipment which meters or regulates the entry of gas into the distribution system or into a storage area. It does not include storage land, structures or equipment. Pipeline companies, including those companies which measure deliveries of gas to their own distribution systems, shall include city gate and main line industrial measuring and regulating stations in the transmission function.

B. "Distribution System" means the mains which are provided primarily for distributing gas within a distribution area, together with land, structures, valves, regulators, services and measuring devices, including the mains for transportation of gas from production plants or points of receipt located within such distribution area to other points therein. The distribution system owned by companies having no transmission facilities connected to such distribution system begins at the inlet side of the distribution system equipment which meters or regulates the entry of gas into the distribution system and ends with and includes property on the customer's premises. For companies which own both transmission and distribution facilities on a continuous line, the distribution system begins at the outlet side of the equipment which meters or regulates the entry of gas into the distribution system and ends with and includes property on the customer's premises. The distribution system does not include storage land, structures, or equipment.

4. In the "Note" appended to the text of Accounts 369 and 379 contained in both Part 201 and Part 204, delete the "exception" clause in each and amend the Note to read as follows:

Gas Plant Accounts * * *

369 (379) Measuring and regulating station equipment.

* * * * * * *

Note: Pipeline companies, including companies who measure deliveries of gas to their own distribution system, shall include in the transmission function classification city gate and main line industrial measuring and regulating stations.

[Secs. 8, 16, 52 Stat. 825, 830; 15 U.S.C. 717g, 717o.]

(B) The amendments here prescribed shall be effective May 6, 1966.

(C) The Secretary shall cause prompt publication of this order to be made in the Federal Register.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

PLACID OIL COMPANY, ET AL., G-13183, ET AL.; THE SUPERIOR OIL COMPANY, G-16380, G-16388; CALLERY PROPERTIES, INC., G-17340, G-17341; UNITED GAS PIPE LINE COMPANY, RP65-15; TRANSCONTINENTAL GAS PIPE LINE CORPORATION, RP65-31; CONSOLIDATED GAS SUPPLY CORPORATION, RP66-23

ORDER DENYING MOTIONS FOR ESCROW OF REFUNDS TO STOP INTEREST, REQUIRING REPORTS OF INTENDED DISPOSITION, AND REQUIRING RETENTION OF REFUNDS

(Issued April 6, 1966)

On February 11, 1966, The Superior Oil Company (Superior) filed a motion for escrow of refund amounts to stop further interest liability in the above-named dockets. On February 14, 1966, Callery Properties, Inc., (Callery) submitted a motion seeking the same result. Answers in opposition to these motions were filed by the Public Service Commission of the State of New York, United Gas Improvement Company, Consolidated Gas Supply Corporation, and Transcontinental Gas Pipe Line Corporation.

Movants allege that orderly procedure would seem to require that this Commission would wish to order distribution as a single refund of refund amounts required pursuant to paragraph (D) of Opinion No. 398, 30 FPC 283, and the amounts accumulated pursuant to the order of the Fifth Circuit Court of Appeals, dated October 17, 1963, which stayed the order in Opinion No. 398. Superior states that those funds are yet to be disposed of by appropriate order of that court and that "such order will probably be deferred pending disposition by the Fifth Circuit Court of any further issues originally raised before it and not now resolved by it or the reversing opinion of the Supreme Court."

On March 29, 1966, the Fifth Circuit Court of Appeals issued an order affirming our Opinion No. 398, as amended in Opinion No. 398-A, 30 FPC 682, "in all things", and dissolving the stay which it had entered on October 17, 1963.

As a result of the Court's order of March 29, the matter of refunds is now before this Commission. Under ordering paragraph (D) of the Commission's Opinion No. 398-A, movants are required to make refunds, including interest, within 30 days of the order being finally effective. Accordingly, refunds should be made within such time by the producers involved in the proceeding.

There remains, however, a question whether further action is required with regard to these refund amounts. In view of the fact that there is no assurance that the refunds received by the jurisdictional customers of certain of the pipeline companies in turn will be flowed through to their distribution customers for appropriate disposition pursuant to appropriate State Commission order, we have in prior cases required that such pipelines retain refund amounts, pending further order of the Commission directing disposition of those amounts. The purpose of such action by the Commission has been to determine whether the pipeline's immediate customer or the customers of such customers are legally entitled to such refunds.[1]

Similarly, in this proceeding we are concerned that the pipeline purchasers have an obligation to flow through to their customers in an appropriate manner, those refunds received from Superior and Callery.[2] We are not assured that each of the customers of these pipelines subject to our jurisdiction will in turn flow through the refunds which are received from the producers herein. Accordingly, we deem it necessary to require that certain of the refunded amounts be held by the pipeline recipients of the refunds from the producer until such time as it is finally determined whether their pipeline customers who have not indicated they will flow such refunds to their customers (or are not obligated to do so by Commission order) or the jurisdictional customers of such pipeline (either on their own behalf or as trustees for their customers) are equitably entitled thereto.

Because of the considerations discussed above, we are ordering Transcontinental Gas Pipe Line Corporation (Transco) and United Gas Pipe Line Company (United) to retain subject to further order of the Commission those portions of the refunds to be received from Superior[3] which are attributable to purchases by specified companies subject to our jurisdiction. Provision is also made below for the retention subject to further Commission order of amounts attributable to jurisdictional sales which Transco or United might maintain that they are not required to flow through.

Since Hope Natural Gas Company (Hope) has merged into Consolidated Gas Supply Corporation (Consolidated),[4] amounts refundable by Callery to Hope will be received by Consolidated, which has assumed the obligations of Hope with respect to these amounts. We are ordering Consolidated to retain the refunds by Callery,[5] pending approval of Consolidated's plan of disposition.

The Commission orders:

(A) The motions for escrow of refund amounts filed by Superior and Callery on February 11, 1966 and February 14, 1966, respectively, are denied. The disposition of the amounts to be refunded by Superior and Callery shall be in accordance with this order as provided hereinafter.

(B) Superior and Callery are hereby directed to proceed with distribution of the amounts to be refunded (including earnings, if any, on the Court of Appeals' escrow account) in accordance with paragraphs (D), (E) and (F) of Opinion No. 398 and Paragraph (D) of Opinion No. 398-A. Interest on amounts attributable to sales prior to August 16, 1963 shall be computed through the date of distribution. Pursuant to the order entered March 29,

---

[1] *Cf. Texas Eastern Transmission Corporation* v. *F.P.C.*, 357 F. 2d 232 (CA5–1966).

[2] Although Opinion No. 398 indicated that each of the pipelines has an obligation, under its settlement agreement, to pass on all refunds, including interest, there may be some argument on this question in view of the dates under which these sales were made. Since we believe all refunds should be passed on, where appropriate, we will condition this order in the manner hereinafter set forth.

[3] Including amounts held in escrow pursuant to order of the Court of Appeals.

[4] Opinion No. 448, 33 FPC 150.

[5] *Op. cit. supra*, note 4.

1966 by the United States Court of Appeals for the Fifth Circuit, the Commission orders that the disposition of all amounts to be refunded by Superior and Callery shall be as provided herein, whether held by the producer itself or in escrow as ordered by the Court of Appeals.

(C) Transco and United shall file within 30 days after receipt of the refund from Superior described above a report of their intended disposition of the amounts refunded by Superior. The report shall describe in detail the amount payable to each jurisdictional customer, the bases used in computing the amount payable, the periods involved, and the relevant docket numbers. The report shall also show clearly the amount of the refund by Superior which is attributable to non-jurisdictional sales by Transco or United and any amount attributable to jurisdictional sales by Transco or United which they do not intend to flow through to their respective customers. The report should be accompanied by a brief statement of the reasons for Transco's or United's position, if any, that there is no obligation to flow through such amount attributable to jurisdictional sales. Copies of the reports required herein shall be served by Transco and United on their customers and interested state commissions. Except as provided hereinafter, and unless notified to the contrary by the Secretary within 30 days after the reports are filed, Transco and United may proceed to distribute the amounts shown in their respective reports, in the manner provided in relevant settlement agreements and orders, at any time after the time for such notice from the Secretary has expired.

(D) United shall retain subject to further order of the Commission, in accordance with the methods described in Paragraph (H) below, those portions of the refund by Superior which are attributable to purchases from United by:

1. Mississippi River Transmission Corporation
2. Mississippi River Fuel Corporation
3. Natural Gas Pipeline Company of America
4. Southern Natural Gas Company
5. Texas Eastern Transmission Corporation
6. Texas Gas Transmission Corporation

(E) Transco shall retain subject to further order of the Commission, in accordance with the methods described in paragraph (H) below, those portions of the refund by Superior which are attributable to purchases from Transco by:

1. Atlantic Seaboard Corporation
2. Eastern Shore Natural Gas Company
3. The Manufacturers Light and Heat Company
4. New York State Natural Gas Corporation
5. North Penn Gas Company
6. United Natural Gas Company

(F) Transco and United shall also retain subject to further order of the Commission, in accordance with the methods described in paragraph (H) below, any and all portions of the refund by Superior which are attributable to jurisdictional sales by Transco or United, with respect to which Transco or United may claim they are not obligated to flow through to their respective jurisdictional customers.

(G) Consolidated is hereby ordered to retain amounts refunded by Callery in accordance with the provisions of this paragraph. Consolidated shall submit within 30 days after receipt of the refunds a report showing its intended disposition of the money. The report shall set forth in detail the amounts to be refunded to each customer, the periods involved, and the relevant docket numbers. Such report shall be served upon each customer and interested state commissions. If Consolidated claims a right to retain any amounts attributable to jurisdictional sales, a brief statement of the justification for such retention shall be included. Upon notification by the Secretary that the report constitutes a satisfactory plan of disposition, Consolidated shall proceed with distribution of the refunds to its customers.

(H) The amounts ordered to be retained pursuant to paragraphs (D) through (F) shall be retained by the respective pipeline under the following methods. The choice of method is optional to the pipeline required to retain the funds, but notice of the pipeline's choice of methods shall be served within 30 days after the date of this order:

1. Commingled with its general assets but interest at 5 percent per annum shall be paid from the date the funds would flow-through, if not so retained, to the date on which they are paid to the person ultimately determined to be entitled thereto by a final order of the Commission.

2. Deposited in a special escrow account on or before the date the funds would flow-through, if not so retained. If the fund is deposited in such an escrow account, the following conditions must be met:

(a) The retaining party shall submit, at least 45 days prior to the date the funds are to be deposited, an executed escrow agreement conditioned as set out below with a certificate showing service on the party to whom the fund would otherwise be payable. Unless notified to the contrary by the Secretary within 30 days from the date of filing thereof, the Escrow Agreement shall be deemed to be satisfactory and to have been accepted for filing. The Escrow Agreement shall be entered into between retaining party and any bank or trust company used as a depository for funds of the United States Government and the agreement shall be conditioned as follows:

(b) The retaining party, the bank or trust company, and the successors and assigns of each, shall be held and formally bound unto the Federal Power Commission for the use and benefit of those entitled thereto, with respect to all amounts and the interest thereon deposited in a special escrow account, subject to such Agreement, and such bank or trust company shall be bound to pay over to such person or persons as may be identified and designated by final order of the Commission and in such manner as may be therein specified, all or any portion of such deposits and the interest thereon.

(c) The bank or trust company may invest and reinvest such deposits in any short-term indebtedness of the United States or any agency thereof or in any form of obligation guaranteed by the United States which is, respectively, payable within 120 days as the said bank or trust company in the exercise of its sound discretion may select.

(d) Such bank or trust company shall be liable only for such interest as the invested funds described in Subparagraph (c) above will earn and no other interest may be collected from it.

(e) Such bank or trust company shall be entitled to such compensation as is fair, reasonable and customary for its services as such, which compensation shall be paid out of the escrow account to such bank or trust company. Said bank or trust company shall likewise be entitled to reimbursement for its reasonable expenses necessarily incurred in the administration of this escrow account, which reimbursement shall be made out of the escrow account.

(f) Such bank or trust company shall report to the Secretary quarterly, certifying the amount deposited in the trust account for the quarterly period.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP66-243

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 8, 1966)

On January 28, 1966, El Paso Natural Gas Company (Applicant) filed in Docket No. CP66-243 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale and delivery of natural gas to The Washington Water Power Company (Water Power), an existing customer, for transportation to and resale and general distribution in the community of Medical Lake, Washington, and environs, all as more fully set forth in the application.

Deliveries of natural gas to Water Power will be made at the outlet of Applicant's existing Eastern State Hospital and Lakeland Meter Station, and no additional facilities are to be constructed by Applicant. Water Power will transport the gas to the point of resale and distribution in the community of Medical Lake, Washington.

Applicant estimates that the proposed service will require third year peak day and annual requirements of 277 Mcf and 29,368 of natural gas, respectively. These proposed sales to Water Power will be initiated on a firm basis in accordance with the applicable service agreement then in effect between Applicant and Water Power and at rates contained in Applicant's Rate Schedule DS-1, FPC Gas Tariff, Original Volume No. 3.

Applicant states that if the instant application is approved prior to the grant of authorization sought by it in its filing in Docket No. CP66-27, the service embraced by the instant application will be divested by Applicant to Northwest Pipeline Corporation (Northwest), pursuant to the proposal in the application in Docket No. CP66-27 and the complementary filing by Northwest in Docket No. CP66-28. Those filings contemplate the divestiture of certain facilities and service by Applicant to Northwest.

Due notice of the filing of the application was published in the Federal Register on February 16, 1966 (31 F.R. 2800). No protest, petition to intervene or notice of intervention has been filed in this proceeding.

At a hearing held on April 7, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation with its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order issued October 29, 1942, in Docket Nos. G-242 and G-257 (3 FPC 851).

(2) The proposed sale of increased volumes of natural gas hereinbefore described, as more fully described in the application in this proceeding, is to be a sale for resale in interstate commerce subject to the jurisdiction of the Commission and is subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The sale of increased volumes of natural gas, as proposed in the application, is required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), and (e) of Section 157.20 of said Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, El Paso Natural Gas Company, authorizing the sale of increased volumes of natural gas, as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), and (e) of Section 157.20 of such Regulations.

(C) The sale of increased volumes of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within one year from the date of this order.

(D) Applicant shall file a revised service agreement with Water Power to include the community of Medical Lake, Washington, under Applicant's Rate Schedule DS–1, FPC Tariff, Original Volume No. 3, to reflect the deliveries herein authorized pursuant to Section 154.22 of the Commission's Regulations under the Natural Gas Act.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP66–187

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 8, 1966)

On December 6, 1965, Transcontinental Gas Pipe Line Corporation (Applicant) filed in Docket No. CP66–187 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale and delivery of an additional 600 Mcf of gas per day under its FPC Gas Rate Schedule CD–3 to Elizabethtown Consolidated Gas Company (Elizabethtown) and a corresponding decrease of 600 Mcf per day in its FPC Gas Rate Schedule G–3 allocation to The Manufacturers Light and Heat Company (Manufacturers) at the New Village, New Jersey, delivery point, all as more fully set forth in the application in this proceeding.

Applicant's present allocation to Manufacturers at New Village is 2,000 Mcf per day under permanent certification and 1100 Mcf per day under a temporary certificate issued in Docket No. CP65-181. At this location, Manufacturers presently serves the requirements of City Gas Company of Phillipsburg, New Jersey (City Gas). The present CD-3 allocation of Elizabethtown is 46,551 Mcf per day, 2,000 Mcf of such amount having been authorized pursuant to a temporary certificate issued in Docket No. CP65-181.

Applicant states that in September 1965, City Gas was merged into Northwest Jersey Natural Gas, Inc. (Northwest), a wholly-owned subsidiary of Elizabethtown, and that Elizabethtown has undertaken a program of integrating the pipeline gas supplies of Northwest with those of Elizabethtown in order to obtain maximum system flexibility, fullest utilization of pipeline supplies, and lowest system costs. In order to assist Elizabethtown in achieving these objectives, Manufacturers has agreed to relinquish to Elizabethtown 600 Mcf of gas per day of its permanently certificated allocation from Applicant at New Village. Elizabethtown will supply this 600 Mcf per day to Northwest at New Village by an increase in like amount in its firm CD-3 allocation from Applicant. Applicant will provide a new delivery point to Elizabethtown at New Village; no new facilities will be required for the new delivery point since deliveries will be made through the existing metering station used for deliveries to Manufacturers.

The proposed arrangements have been made pursuant to an agreement, dated November 23, 1965, among Manufacturers, Elizabethtown and Northwest.

By letter, dated January 13, 1966, Applicant was issued a temporary certificate authorizing the subject proposals.

Several petitions to intervene in support of the subject application have been filed herein. None of said petitions requests formal hearing or objects to the hearing and disposition of the proceeding under the shortened procedure provided for by the Commission's Rules. Inasmuch as the shortened procedure is being used herein, no further action on said petitions appears necessary.

After due notice, no other petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on April 7, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Transcontinental Gas Pipe Line Corporation, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 18, 1948, in Docket No. G-1143 (7 FPC 145).

(2) The subject sale and delivery of natural gas and the subject decrease in Applicant's allocation of natural gas to Manufacturers are subject to the jurisdiction of the Commission and to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The subject sale and delivery of natural gas and the subject decrease in Applicant's allocation of natural gas to Manufacturers are required by the

public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraph (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued authorizing Applicant, Transcontinental Gas Pipe Line Corporation, to sell and deliver an additional 600 Mcf of natural gas per day to Elizabethtown and to decrease a corresponding 600 Mcf of natural gas per day in Applicant's allocation to Manufacturers at the New Village, New Jersey, delivery point, as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraph (e) of Section 157.20 of such Regulations.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

UNION OIL COMPANY OF CALIFORNIA, DOCKET NOS. G-3711 AND RI60-450

ORDER REJECTING OFFER OF SETTLEMENT, AND DENYING PETITION TO AMEND CERTIFICATE

(Issued April 8, 1966)

On January 21, 1966, Union Oil Company of California (Union) filed related proposals regarding a sale of natural gas made by it to United Gas Pipe Line Company (United) in the Houma Field, Terrebonne and Lafourche Parishes, Louisiana, under Union's FPC Gas Rate Schedule No. 49. Union proposes to reduce its currently effective rate to United, which is being collected subjected to refund, from 23.25¢ to 18¢ per Mcf of natural gas at 15.025 psia. The currently effective rate has been charged and collected by Union since December 2, 1960, and it proposes to refund all monies so collected, subject to refund, above the settlement rate since that date. Union also proposes to dedicate 470 additional acres to its contract with United. However, it proposes to amend the certificate of public convenience and necessity issued to it in Docket No. G-3711, as regards the subject sale to United, so as to delete all horizons below that which it avers are presently known to be productive of natural gas. Union proposes such certificate amendments contingent upon approval of the settlement rate.

The Philadelphia Gas Works Division of the United Gas Improvement Company filed, on February 2, 1966, an opposition to Union's proposal on the ground that as a settlement proposal involving a single sale and rate schedule it was "entirely unsatisfactory".

On April 4, 1966, we issued an order in *Skelly Oil Company*, Docket No. RI60–253, *supra*, p. 463 at p. 463 wherein we stated that "* * * we believe that an above-ceiling settlement rate should only be considered in the light of a company-wide settlement proposal." Here, we have a proposed rate of 18¢ per Mcf of natural gas, and an applicable area increased rate ceiling of 15.75¢ per Mcf. We find no cause or reason to depart from the principle we spelled out in *Skelly*, and we shall therefore reject Union's proposal. The rejection is without prejudice to the submittal of a proposal encompassing all of Union's pending Section 4(e) proceedings, excluding those sales of natural gas in the Permian Basin.

In view of our disposition of this matter, we see no need at this time to determine the propriety of either the proposed settlement rate or the request for certificate amendment. Our action here is therefore without prejudice to any action we may take in the future in the event the subject proposal is incorporated in a company-wide settlement offer.

The Commission orders:

The settlement proposal filed by Union is rejected, and the petition to amend its certificate in Docket No. G–3711, having been made contingent upon approval of said proposal is moot, without prejudice as hereinabove stated.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. G–12569

ORDER FURTHER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 8, 1966)

On October 5, 1965, United Gas Pipe Line Company (United) filed in Docket No. G–12569, as supplemented on January 11, 1966, a motion to amend further the Commission's order issued August 23, 1957, 18 FPC 222 in said docket, as amended, to authorize United to transport and deliver up to 22,000 Mcf of natural gas per day to Coastal Chemical Corporation (Coastal), in lieu of the presently authorized 20,000 Mcf per day, and to change the sale to Coastal from interruptible to firm, all as more fully set forth in the motion to amend in this proceeding.

The order of August 23, 1957, authorized United, among other things, to construct and operate certain facilities and to transport and deliver up to 1000 Mcf of natural gas per day, on an interruptible basis, to Coastal for use by the latter in its chemical plant in Jackson County, Mississippi. By subsequent orders United was authorized to increase deliveries to Coastal; the presently authorized volume is 20,000 Mcf per day. United now requests that the presently authorized volume of 20,000 Mcf per day be increased to 22,000 Mcf per day. No increase in annual volumes is contemplated.

The order of August 23, 1957, and the subsequent amendatory orders in this docket have described the sale by United to Coastal as being interruptible. The contract between United and Coastal provides that, in the event of a gas shortage, the requirements of United's gas utilities customers selling gas to domestic consumers and United's public utility power customers using gas for generation of electricity which is sold to domestic consumers shall first be supplied by United. Since impairment of deliveries to Coastal may occur only under the emergency conditions set forth above, the subject sale is firm and has been so treated by United. Further, United states that it has never curtailed deliveries to Coastal since service began in 1958. Accordingly, United requests that the subject sale, described as interruptible in the order of August 23, 1957, and in the subsequent amendatory orders, be changed to firm.

Due notice of the filing of the motion to amend and opportunity for hearing thereon has been given by publication in the Federal Register on October 19, 1965 (30 F. R. 13299). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued August 23, 1957, in Docket No. G-12569, as amended, be further amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued August 23, 1957, in Docket No. G-12569, as amended, is further amended to authorize United to transport and deliver up to 22,000 Mcf of natural gas per day to Coastal, in lieu of the 20,000 Mcf per day heretofore authorized in this docket, and to change the sale by United to Coastal from interruptible to firm, all as hereinbefore described and as set forth in the motion to amend, as supplemented.

(B) This amended certificate shall not entitle the industrial customer to whom firm deliveries are authorized herein to any priorities to additional gas for meeting any future increase in its requirements at the expense of firm resale customers desiring to acquire additional gas to meet any future increases in their requirements.

(C) In all other respects said order, as amended, shall remain in full force and effect.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

EL PASO NATURAL GAS COMPANY, ET AL.,
DOCKET NO. CP64-211, ET AL.

ORDER EXTENDING TIME FOR CONSIDERATION OF RATE SCHEDULE-QUALITY STATEMENTS

(Issued April 11, 1966)

On January 6, 1966, the Commission issued its Opinion No. 484, 35 FPC 40, and accompanying order in the above-entitled proceeding. Among other things this order required each producer-applicant in this proceeding, other than Socony Mobil Oil Company, Inc., to file with the Commission a Rate Schedule-Quality Statement for each contract of such producer-applicant subject to this proceeding. Subparagraph (2) of paragraph (I) of said order provided that a statement so filed should be deemed accepted by the Commission unless the Commission should otherwise order within 60 days after such filing. Said subparagraph (2) also provided that whereas the Commission determines that "the statement filed is inconsistent with the provisions of ordering paragraph (B) of Opinion No. 468, as modified by Opinion No. 468–A, 34 FPC 159, 1068, the Commission will, after appropriate proceedings, prescribe the applicable area rate to be applied * * *."

The statements which have been filed by the producer-applicants are not consistent with the provisions of ordering paragraph (B) of Opinion No. 468, as modified by Opinion No. 468–A. Said paragraph (B), as modified, sets forth the adjustments which are to be made to the area base rate in computing the rate which shall be applicable to gas sold under a particular contract. The only upward adjustment allowed is for Btu content in excess of 1050. The quality statements here submitted do not conform to the provisions of said paragraph (B) as modified. Said quality statements include an upward adjustment for delivery of gas at pressure substantially in excess of the minimum pressure standard established for the Permian Basin. This is not proper. No credit can be allowed for delivery of gas above minimum pressure, either to cause an upward adjustment in the base area rate or to offset quality deficiencies of a different nature. In our determination as to whether such quality statements are otherwise acceptable, no consideration will be given to the proposed credits for pressure. In order to permit additional time for consideration of the quality statements so far submitted, the period for consideration of these quality statements will be extended to June 6, 1966.

The Commission orders:

(A) The time for consideration by the Commission of the Rate Schedule-Quality Statements heretofore filed by the producer-applicants in this proceeding is extended to June 6, 1966, or such later time as the Commission shall fix by later order.

(B) No consideration will be given to the credits for pressure proposed in the quality statements tendered herein in determining whether such quality statements are otherwise acceptable.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

MISSISSIPPI RIVER TRANSMISSION CORPORATION, DOCKET NO. CP66–261

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 11, 1966)

On February 7, 1966, Mississippi River Transmission Corporation (Applicant), filed in Docket No. CP66–261, an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities, all as more fully set forth in the application.

Applicant seeks authorization to install during the year commencing April 1, 1966, and ending March 31, 1967, and operate additional compressor capacity in the Woodlawn Field, Harrison County, Texas, having up to 750 horsepower in the aggregate.

The proposed compressor facilities are required in order to enable Applicant to maintain deliverability from dedicated reserves in the face of continued pressure declines in the field and individual wells.

The total estimated cost of Applicant's proposed construction is $132,625, which cost will be financed from cash on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on April 7, 1966. the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, and exhibits submitted in support of the authorization sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, Mississippi River Transmission Corporation a Delaware corporation having its principal place of business in St. Louis, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 29, 1960, in Docket No. CP60–95 (24 FPC 1020, 1038).

(2) The proposed construction and operation of facilities by Applicant as hereinbefore described, and as more fully described in the application, and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid construction and operation of facilities is required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (e), and (f) of Section 157.20 and paragraphs (b)(3)(i) and (iii) of Section 157.7 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to the Applicant in this proceeding, authorizing the construction and operation of up to 750 horsepower of compression facilities in the Woodlawn Field during the period April 1, 1966 through March 31, 1967, all as more fully described in the application and exhibits in this proceeding, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (e), and (f) of Section 157.20 of such Regulations.

(C) Applicant shall file with the Commission by May 30, 1967, the statements set forth in Section 157.7(b)(3) (i) and (iii).

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

REQUIREMENT THAT THE TITLE TO A PLEADING INCLUDE THE NAME OF THE PARTY MAKING THE FILING, DOCKET NO. R-300

ORDER NO. 321

AMENDING THE RULES OF PRACTICE AND PROCEDURE

(Issued April 11, 1966)*

The Commission by this order amends its formal requirements as to pleadings, documents, and other papers filed in Commission proceedings. Although the practice is not uncommon, the present rule does not require that the name of the person in whose behalf a filing is made be included in the title of the particular document filed. Since the convenience attendant upon such a practice is obvious, especially in multiparty proceedings, we will now require it by rule.

The Commission finds:

(1) It is necessary and appropriate for the administration of the Federal Power Act and Natural Gas Act that the Rules of Practice and Procedure be amended as herein set forth.

(2) Since the amendment herein prescribed establishes a rule of agency procedure, no notice of proposed rulemaking under section 4 of the Administrative Procedure Act is required.

The Commission, acting pursuant to the authority of the Federal Power Act, as amended, particularly sections 308 and 309 thereof (49 Stat. 858; 16 U.S.C. 825g, 825h) and the Natural Gas Act, as amended, particularly sections 15 and 16 thereof (52 Stat. 829, 830; 15 U.S.C. 717n, 717o), *orders:*

(A) Section 1.15, Rules of Practice and Procedure, Part 1, Sub-chapter A of Chapter I, Title 18 of the Code of Federal Regulations, is amended by adding two sentences to paragraph (a) thereof. As so amended, the paragraph will read as follows:

§ 1.15 Formal requirements as to pleadings, documents and other papers filed in proceedings.

(a) *Title.* Pleadings, documents, or other papers filed with the Commission in any proceeding shall clearly show the docket designation and title of the proceeding before the Commission. They shall also show, in the title of the particular pleading or other document filed, the name of the person in whose behalf the filing is made. If more than one person is involved, a single name only need be included in the title.

(B) The amendment herein prescribed shall be effective May 11, 1966.

(C) The Secretary shall cause prompt publication of this order to be made in the Federal Register.

---

* Published in the Federal Register on April 16, 1966 (31 F.R. 5878).

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., David S. Black, Charles R. Ross and Carl E. Bagge.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP63-92

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 11, 1966)

On November 9, 1965, United Gas Pipe Line Company (Movant) filed in Docket No. CP63-92, as supplemented on January 11, 1966, a motion to amend the Commission's order issued July 5, 1963, 30 FPC 49, in said docket, to authorize Movant to construct and operate a new tap and to transport and deliver natural gas for Texas Eastern Transmission Corporation (Texas Eastern), all as more fully set forth in the motion to amend in this proceeding.

The order of July 5, 1963, authorized Movant, by means of existing facilities, to transport and deliver natural gas for Texas Eastern from Castor to Monroe, Louisiana. Movant now proposes to construct and operate a 2-inch tap on its existing 24-inch Carthage-Sterlington Line, Bienville Parish, Louisiana, in order to transport said gas for redelivery to Texas Eastern at the existing delivery point near Monroe.

The cost of the new tap is estimated to be $525. Movant and Texas Eastern have entered into a letter agreement, dated October 5, 1965, providing for the proposed new tap and for the transportation and delivery of gas by Movant from the Liberty Hill Field to Monroe.

Due notice of the filing of the motion to amend and opportunity for hearing thereon has been given by publication in the Federal Register on November 25, 1965 (30 F.R. 14696).

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued July 5, 1963, in Docket No. CP63-92 be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued July 5, 1963, in Docket No. CP63-92 is amended to authorize Movant to construct and operate the proposed 2-inch tap and to transport and deliver natural gas, all as hereinbefore described and as set forth in the motion to amend.

(B) The new 2-inch tap herein authorized shall be constructed and placed in actual service within two months from the date on which this order issues.

(C) In all other respects said order shall remain in full force and effect.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

GEORGE H. COATES, ET AL., DOCKET NOS. G-19824 AND RI61-369

ORDER GRANTING IN PART REQUEST FOR TIME EXTENSION

(Issued April 12, 1966)

George H. Coates (Coates) on March 23, 1966, filed a motion requesting an extension of time within which to comply with certain refund requirements provided for in the order issued August 20, 1965, 34 FPC 550, approving a settlement in the above-entitled proceedings.

The request for a time extension is related to Coates' motion for clarification filed on September 23, 1965, in which he sought relief from the obligation imposed in the August 20 order to pay interest with respect to refund amounts collected in the above-entitled proceedings relating to increased production taxes paid to the State of Texas.[1] He states therein that he will not be paid any interest by the State of Texas on any portion of the increased production taxes which is refunded to the purchaser as a result of the settlement order. No action has been taken by the Commission on Coates' motion pending disposition of the rulemaking proceeding in Docket No. R-280 relating to this same subject.

Coates has computed the refund amount due, inclusive of applicable interest, under the August 20 order, to be $49,816.79. This apparently includes the interest due with respect to refund amounts relating to the increased production tax. He has not, however, submitted a statement from his purchaser, Tennessee Gas Transmission Company (TGT), agreeing to the correctness of his computation, nor has he made any refunds, as required by the order of August 20, 1965.[2]

We believe it is appropriate to defer Coates' obligation to pay interest on refund amounts relating to increased production taxes paid to the State of Texas until action is taken on his motion for clarification. We see no need, however, to further postpone the payment of those refund amounts, including interest, which are not in dispute here. Coates shall therefore be required to refund such amounts promptly.

The Commission orders:

(A) Coates shall compute the difference between the rates collected subject to refund and the settlement rate of 15.0¢ per Mcf for sales to TGT in Docket Nos. G-19824 and RI61-369, with applicable interest to August 20, 1965 (exclusive of the interest due on refund amounts relating to increased production taxes paid to the State of Texas), and shall within 15 days from the date of issuance of this order submit a report to the Commission, with a copy to TGT, setting out the amount of refunds (showing separately the principal and applicable interest) the bases used for such determination, the periods covered, and ten days thereafter file a letter from TGT agreeing to the correctness of such amounts, and shall within ten days from such filing refund such monies to TGT.

(B) Coates shall not be required to refund any interest due on refund amounts relating to increased production taxes paid to the State of Texas as provided in the August 20, 1965, order in the above-entitled proceedings, until such time as the Commission takes action on Coates' motion for clarification of that order.

---

[1] According to the appendix attached to the September 23 motion, the amount of interest in dispute is $310.43.

[2] Coates has obtained a number of time extensions from the Secretary of this Commission within which to comply with these requirements.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

IDAHO POWER COMPANY, DOCKET NO. E-7270

SUPPLEMENTAL ORDER AUTHORIZING ISSUANCE OF FIRST MORTGAGE BONDS

(Issued April 12, 1966)

By order issued March 25, 1966, 35 FPC 412, in the above-entitled matter, the Commission authorized Idaho Power Company (Applicant), to issue and sell at competitive bidding $20,000,000, principal amount of First Mortgage Bonds, due 1996, subject among others, to the provisions set forth in paragraph (B) of that order as follows:

(i) Applicant shall have amended its application pursuant to the requirements of Section 34.2(g) of the Commission's Regulations under the Federal Power Act relating to compliance with competitive bidding requirements, and Section 34.2(h)(1) of those Regulations relating to affiliation, and shall have either filed such amendments or shall have mailed them and advised the Commission by telephone and telegraph, as contemplated in Section 34.9 of the Regulations.

(ii) The Commission, by further order, shall have approved the price to be received by Applicant for the proposed issuance of Bonds and the interest rate thereof.

Applicant, on April 12, 1966, filed an amendment, pursuant to the requirements of the aforementioned Commission order, setting forth, among other things, that it proposes to accept as providing the lowest annual cost of money to it, the bid of Blyth & Co. Inc., Lazard Freres & Co., The First Boston Corporation, to purchase the proposed issuance of $20,000,000, principal amount of Bonds, for the price of 99.28% of principal amount, with an interest rate of 5¼%.

The Commission finds:

(1) Applicant has satisfactorily complied with the requirements of paragraph (B) of the Commission's order issued March 25, 1966, in the above docket, and under the bid it proposes to accept for the Bonds, the price to be received by Applicant therefor and the interest rate thereof are reasonable.

(2) The proposed issuance and sale of Bonds, as hereinafter authorized, will be for a lawful object, within the corporate purposes of the Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance by the Applicant of service as a public utility and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

The Commission orders:

(A) The price to be received by Applicant for the proposed Bonds and the interest rate thereof under the bid referred to above, are approved as reasonable.

(B) The proposed issuance and sale of Bonds referred to above upon the terms and conditions and for the purposes specified in the application, as supplemented by the amendment referred to above, are authorized, subject only to the provisions of paragraphs (A), (C), (D), and (E) of the Commission's order issued March 25, 1966, in the above docket.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

TEXAS GAS TRANSMISSION CORPORATION, DOCKET NO. CP66-149 (PHASE I)

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT AND ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 12, 1966)

On November 10, 1965, Texas Gas Transmission Corporation (Applicant), filed in Docket No. CP66-149 an application pursuant to Sections 7(b) and 7(c) of the Natural Gas Act for permission and approval to abandon certain natural gas facilities and for a certificate of public convenience and necessity authorizing the construction and operation of certain other facilities together with increases in Contract Demand Service to existing customers for the 1966-67 and 1967-68 winter heating seasons, all as more fully set forth in the application.

Applicant proposes to construct and operate over a two-year period the following facilities:

(a) approximately 148.19 miles of pipeline varying in diameter from 4 to 36 inches,

(b) one 30-inch Cumberland River crossing in Kentucky,

(c) one 30-inch Ohio River crossing near Madison, Indiana,

(d) one 26-inch Atchafalaya River crossing near Morgan City, Louisiana,

(e) one 16-inch Ohio River crossing near Evansville, Indiana, and

(f) 23,430 compressor horsepower.

Applicant states that the service proposed is for its existing customers and that the proposed increases in Contract Demand are based upon a detailed market survey and include all of the increases in peak day volumes which Applicant has been requested to provide.

Applicant also proposes to increase the deliverability from the existing Hanson, Kentucky, Storage Field by 40,000 Mcf of gas per day and to activate the White River Storage Field located in Pike County, Indiana, with an initial withdrawal capacity of 5,000 Mcf of gas per day.

Applicant requests authority to abandon approximately 34.65 miles of pipeline varying in diameter from 2 to 4 inches. Applicant states that the pipelines to be abandoned are in poor condition and will be replaced with new pipe in order to assure continuity of service in the affected areas of its pipeline.

Applicant also requests authority to reduce the Contract Demand of Arkansas Louisiana Gas Company (Ark La) to 28,110 Mcf of gas per day effective November 1, 1966. Service of the reduced Contract Demand will be rendered under Applicant's CD-1 Rate Schedule.

Applicant proposes to deliver an additional 55,429 Mcf per day of Contract Demand gas to existing customers commencing with the 1966-67 winter heating season, and an additional 61,040 Mcf to existing customers commencing with the 1967-68 winter heating season. The total estimated cost of Applicant's proposed project is $21,579,000.

On February 14, 1966, Applicant filed in Docket No. CP66-149 an amendment to its original application which requests changes in the length of pipeline proposed to be constructed in the states of Louisiana and Kentucky and proposes an additional compressor unit to be constructed in Mississippi, all as more fully set forth in the amendment to the application.

The facilities initially proposed by Applicant for construction and operation in the instant docket were designed to be installed concurrently with or subsequent to the construction of the facilities proposed by it in its pending application filed on July 14, 1965, in Docket No. CP66–13 (30 F.R. 9418). The facilities originally requested for construction and operation in the instant docket, if built prior to those requested in Docket No. CP66–13, will not provide the needed capacity to meet the increased requirements sought therein by Applicant for its existing customers for the winter heating seasons of 1966–67 and 1967–68.

The application filed in Docket No. CP66–13 requested authorization from the Commission to build and operate facilities needed to meet the service sought from Applicant by the City of Hamilton, Ohio, in its application filed on June 16, 1965, in Docket No. CP65–420 pursuant to Section 7(a) of the Natural Gas Act (30 F.R. 8352). Subsequently, The Ohio Fuel Gas Company filed a competitive application on December 23, 1965, in Docket No. CP66–207 (31 F.R. 463). The Commission has consolidated Docket Nos. CP66–13, CP65–402 and CP66–207 (31 F.R. 1218), and the proceeding has gone through the hearing phase (March 2, 3 and 4, 1966) and is now in the briefing stage.

Applicant states that in view of the foregoing, it is incumbent upon it to amend its original application filed in the instant docket by requesting authorization for the construction and operation of facilities which, if built independently of any facilities pending authorization, will provide sufficient capacity to serve the increased requirements of its customers for the heating seasons of 1966–67 and 1967–68. Accordingly, Applicant proposes a reduction of approximately 9.11 miles from the 54.95 miles of 36-inch pipeline originally proposed to be constructed in Tennessee and Louisiana, an increase of approximately 1.51 miles in the total 30.54 miles of 30-inch pipeline originally proposed to be constructed in Kentucky, and the addition of one 9,100 horsepower unit to be constructed in the Lake Cormorant, Mississippi Compressor Station.

The total estimated cost of Applicant's proposed project, as amended, is $22,427,000, which cost will be financed through the issuance of long-term debt securities.

On February 16, 1966, Applicant requested certificate authorization, for certain "First Phase Facilities and Service" (Phase I) described in the instant amended application.

Of the facilities proposed in the subject application, Phase I facilities include: (1) construction of 94.50 miles of pipeline along with three river crossings; (2) installation of 30,530 additional horsepower of compression; (3) development of the Hanson Storage Field; (4) activation of the White River Storage Field and; (5) the abandonment of 34.65 miles of pipe, all to be completed during 1966. The estimated cost of the additional facilities proposed in Phase I is $14,788,715.

Phase I service includes serving an additional 55.429 Mcf/d of Contract Demand to existing customers during the 1966–67 winter and reducing the Contract Demand of Ark La. an existing customer, to 28,110 Mcf/d beginning November 1, 1966. The remaining facilities and service (Phase II) proposed in the subject application as amended will be considered by the Commission in a future formal hearing.

After due notice of the application published in the Federal Register on November 30, 1965 (30 F.R. 14823) petitions to intervene in support of the application filed by Applicant were filed by The Ohio Fuel Gas Company and Louisville Gas and Electric Company, on December 13, and December 23, 1965, respectively. Tennessee Gas Transmission Company filed a petition to intervene on December 13, 1965, and subsequently thereto on February 24, 1966, filed a letter with the Commission stating it has no objection to the Commission granting to Applicant authorization with respect to the First Phase Facilities and Service (Phase I). No other petitions to intervene, or notice of intervention or protest to the granting of the application with respect to Phase I have been filed, or to the amendment to the application filed February 14, 1966, notice of which was published in the Federal Register on March 4, 1966 (31 F.R. 3434).

At a hearing held on April 7, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, supplement and amendment thereto and exhibits; submitted in support of the authorizations sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, Texas Gas Transmission Corporation, a Delaware corporation having its principal place of business in Owensboro, Kentucky, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of March 30, 1948, in Docket No. G-855 (7 FPC 213).

(2) The facilities proposed to be abandoned by Applicant, as hereinbefore described and as more fully described in the application, supplement and amendment thereto filed in this proceeding, are used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and such abandonment is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The proposed abandonment of the aforesaid facilities is permitted by the public convenience and necessity and permission and approval thereof should be granted as hereinafter ordered.

(4) The proposed construction and operation of facilities, and the transportation and sale of natural gas in interstate commerce, as hereinbefore described as Phase I and as more fully described in the application, filed in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(5) The aforesaid proposed construction and operation of facilities, and the transportation and sale of natural gas in interstate commerce are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(6) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(7) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), (e), and (f) of Section 157.20 of such Regulations.

The Commission orders:

(A) Permission for and approval of the abandonment by Applicant, Texas Gas Transmission Corporation, of the facilities hereinbefore described in connection with Phase I as more fully described in the application, supplement and amendment thereto and exhibits filed in this proceeding, are granted.

(B) A certificate of public convenience and necessity is issued to Applicant, Texas Gas Transmission Corporation, authorizing the construction and operation of the Phase I facilities, and the sale and transportation of natural gas as hereinbefore described, all as more fully described in the application, upon the terms and conditions of this order.

(C) The certificate issued by paragraph (B) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), (e), and (f) of Section 157.20 of such Regulations.

(D) Applicant shall advise the Commission of the date of abandonment of the facilities as authorized in paragraph (A) above within ten days of such abandonment.

(E) The facilities authorized in Phase I shall be constructed and placed in actual operation, and the transportation of gas authorized in paragraph (B) above shall commence as provided in paragraph (b) of Section 157.20 of the aforesaid Regulations within 12 months of the date on which this order is issued.

(F) The certificate issued by paragraph (B) for Phase I facilities is conditioned upon Applicant's compliance with the following requirements:

(1) that the maximum withdrawal capacity limitation of the Hanson Storage Field is increased from 30,000 Mcf/d to 50,000 Mcf/d.

(2) that the new White River Storage Field is limited to a maximum withdrawal capacity of 5,000 Mcf/d, a maximum storage capacity of 500,000 Mcf, and a maximum average shut-in well pressure of 660 psig.

(3) that the following information regarding the new White River Storage Field is submitted semiannually, in writing, to coincide with the termination of the injection and withdrawal cycles:

(a) Volumes of natural gas injected and withdrawn during each cycle.

(b) Volume of natural gas in the storage reservoir at the end of each cycle.

(c) Maximum daily injection and withdrawal rates experienced during the cycle.

(d) Shut-in wellhead pressure of each well in the storage field and the average of such pressures.

(e) Map of the storage field showing shut-in wellhead pressures at all storage wells in the area immediately adjacent to storage field.

(f) Reports will be filed semiannually until the average shut-in wellhead pressure has reached or has closely approximated the maximum storage pressure permitted in the Commission's order, and thereafter until two additional injection and withdrawal cycles have been completed. Upon completion of those two cycles, the filing of reports shall be discontinued unless otherwise ordered by the Commission.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

AREA RATE PROCEEDING (HUGOTON-ANADARKO), DOCKET NO. AR64-1 AND PIPELINE PRODUCTION AREA RATE PROCEEDING, DOCKET NO. RP66-24

ORDER SEVERING PROCEEDINGS AND PRESCRIBING PROCEDURES

(Issued April 13, 1966)*

The Commission, by order issued June 29, 1964, 31 FPC 1595, enlarged the issues in the Hugoton-Anadarko Area Rate Proceeding, Docket No. AR64-1, to provide that there be included in that proceeding "consideration of the extent to which, if any, the rates or cost allowances for pipeline gas production should be regulated on an area basis." On December 30, 1965, the Commission staff moved to sever the pipeline production question from this proceeding and for the institution of a separate proceeding to deal with the matter. Staff further moved that (1) a prehearing conference be held to delineate issues in evidence and (2) that all pipelines engaged in production be required to submit evidence and (3) that the examiner in the new proceeding consider the feasibility of a two-phase hearing respecting gas produced from dedicated reserves and that produced from future reserves.

On January 19, 1966, 35 FPC 98, the Commission postponed all hearings and other procedure with respect to pipeline production pending action on the staff motion.

Staff's motion is supported by Texas Independent Producers and Royalty Owners Association (TIPRO), Municipal Gas Group (American Public Gas Association, the City of Chicago, the City of Denver, and the Memphis Gas And Water Division), the State of California and the California Public Utilities Commission (Cal PUC), and the Philadelphia Gas Works Division of The United Gas Improvement Company (PGW). PGW suggests that the matter be dealt within a rulemaking proceeding.

Opposing the staff motion are two independent producers (Phillips and Humble), Union Producing Company, the Cities Service Group (classified as independent producers but affiliated with a pipeline company), two distributors (Michigan Gas Utilities Company and Central Illinois Light Company), and two groups of producing pipelines and their affiliates.[1] Most of the independent producers not represented by TIPRO take no position. A large percentage of the nation's producing pipelines are not parties to this proceeding or have taken no position.

Whether the Commission may or should depart from the cost-of-service method in fixing the price of pipeline produced gas is the precise issue to be determined in this investigation. The issue was originally consolidated with this proceeding for the principal reason that Hugoton-Anadarko is an area of considerable pipeline production and thus this proceeding provided an appropriate vehicle for evaluating the general pipeline production issue. For the reasons hereinafter stated we do not now believe that such a determination can be made within the context of the present proceeding.

---

* Rehearing denied, 35 FPC 1033. Petition to Review dismissed, *Colorado Interstate Gas Co.* v. *F.P.C.*, 370 F. 2d 777 (CA10–1967).

[1] The Pipeline Production Group and the Pipeline Division of INGAA. A number of pipelines filed separate briefs in opposition to staff's motion. Most of the companies filing separate briefs, however, are also represented in the group briefs. Only the Pipeline Division of INGAA, and not the entire membership, opposes staff motion.

A group of pipelines asserting an interest in encouraging pipeline production activity have introduced considerable general evidence into the record detailing the reasons why they believe pipeline production is in the public interest and should be encouraged. The staff and some of the other parties have now introduced separate historical cost studies as of 1962 for pipeline production nationally and in the two regions involved in Docket Nos. AR64-1 and AR64-2 (taken from the all area questionnaire). However, no evidence has been introduced upon which a determination could be made of the impact upon the consumers of the various pipelines of substituting an area rate for one based upon each company's individual cost, nor has evidence been introduced which permits any meaningful judgment whether gas from leases or properties acquired by the pipelines during the formative period of the pipeline industry should be separately treated. Neither is there any evidence as to the relative acquisition costs over the years of pipelines which have engaged extensively in pipeline production as against those which have not.

While the evidence introduced in the proceeding thus far is incomplete, it does appear to indicate that pipeline production in the Hugoton-Anadarko area is by no means typical of pipeline production throughout the nation. Our experience in pipeline rate cases would also indicate that much of the production in the area is of low cost, with the result that on a historic cost-of-service basis, it is significantly lower in cost than the nationwide cost of service for all gas. On the other hand, there is no evidence that nationwide all pipeline production, on a historical cost-of-service basis, has costs any lower than those of independent producers. Thus, there is no reason to believe that a determination with respect to the pipelines having production in the Hugoton-Anadarko area would or should necessarily be applicable to pipelines with production centered in other areas of the country. This situation is aggravated by the fact that not all pipeline producers are parties to the proceeding and some of the major pipeline producers with no production in the Hugoton-Anadarko region have not participated to date.

In view of the present state of the record it appears probable that, if the pipeline production issues were left in the present proceeding, the Commission would be compelled to make its determination upon an inadequate record. The only other alternative would be to attempt at this late stage in the proceeding to remedy the present deficiencies in the record. This would inevitably delay substantially the final determination of proper area rates in *Hugoton-Anadarko* and *Texas Gulf Coast* areas to the clear detriment of both the producers and their jurisdictional customers.

It is regrettable that the pipeline production issue has been continued as part of this proceeding until such a late date. If the effect of staff's motion was merely to relieve it from the burden of proceeding we would deny the motion out of hand. We think, however, that this would be a disservice to all parties including those who oppose the motion. A principal basis for the opposition to the motion is that if the pipeline production issue is severed, much of the labor and expense of this proceeding will be wasted, especially that expended to putting in the evidence so far received. Examination of the evidence so far presented reveals that it consists principally of prepared questions and answers submitted for copying by the reporter. Such evidence may readily be received and considered in another proceeding. It should be supplemented rather than supplanted. Cross-examination has not yet been had. Under these circumstances little of the effort and expense will be wasted.

Mere severance, however, is clearly not enough. The question remains whether there is any way in which resolution of at least part of the pipeline production issue can be expedited in the light of the very real problems discussed above. We believe that there is. The essential question after all is whether future and additional pipeline production activities should be encouraged (or at least not penalized) and, if so, what is the most appropriate lawful pricing technique to achieve this objective. It is apparent that if putting pipeline production on an area price basis does not make sense for the future lease acquisitions, that it will make even less sense for the past acquired leases where we have high and low cost pipeline production depending upon combination of such factors as vintage and area of exploratory efforts. At the same time, it would appear that many of the most difficult evidentiary and policy problems can be avoided or at least deferred if, in any separate proceeding on pipeline production costing, consideration is initially limited to a determination of whether pipeline produced and self-consumed gas or leases acquired after the date of any final Commission policy determination—by rule or otherwise—should be priced on an area basis and, if so, the exact nature of such area rate.[2]

In severing this issue we hesitate to impose any rigid format on the interested parties at this time. Instead, we shall direct the hearing examiner in the separate proceeding to hold a prehearing conference which will expeditiously and firmly establish the specific issues which will be considered in the first phase of this proceeding which is denominated as follows:

> What is the most appropriate pricing method to be applied to natural gas utilized in a pipeline's interstate system which is produced by the pipeline or its affiliated producing company from leases acquired after the date of determination of this issue?

Without in any way limiting the prerogatives of the Presiding Examiner to rule on the materiality and relevancy of the specific issues the parties may urge must be answered to resolve the foregoing question, we would suggest that the general areas of investigation, among others, should include evidence and data relating to: (1) the effect of pipeline production area rates on various aspects of individual pipeline rate determinations, such as but not limited to, rate of return and income tax allowance (2) the impact on the independent producer segment of the natural gas industry, if pipeline production is to be encouraged; (3) the claimed advantages and benefits to the pipeline and the consumers from pipeline production as reflected in the past operations of producing pipelines and as compared with the operations of pipelines not engaged in production activities.

Clearly, the formulation of a meaningful record which will provide as broad a base as possible for resolving the overall issue set out above, requires participation of all pipeline companies engaged in the production of natural gas in more than an incidental capacity and of a substantial capacity and of a substantial segment of other pipeline companies whose rates and charges are subject to the jurisdiction of the Commission. Accordingly, each of the pipeline companies listed in Appendix A attached hereto are made respondents in this severed proceeding.

Attention is directed to the Commission's views with respect to the use of the conference technique and the ultimate objective of expediting the Commission's hearing proceedings as set forth in Order No. 217, 22 FPC 872. Each of the respondents shall, at the pre-hearing conference, set forth on the record a statement summarizing the extent to which it proposes to participate in the first phase of this proceeding (as set out above), the specific issues relating thereto which it deems relevant and material, the nature of the evidence it proposes to present on such issues, and other matters germane and relevant to this phase of the proceeding which will aid the determination thereof. The requirements of the aforementioned statement shall also be applicable to Commission staff and any other party permitted to participate as a respondent or intervener in this proceeding. It is also our intent that the parties, at the prehearing conference herein provided, shall stipulate, to the maximum feasible extent, on all issues of fact not in dispute, items to be officially noticed, relevant material which may profitably be incorporated into the record of this severed proceeding either from the responses to the All Area Questionnaire and evidence introduced in AR64-1 and other proceedings.

---

[2] Presumably, much if not all of the information already introduced by the pipeline production group and other parties who have directed themselves to this issue would be relevant to such a determination.

The Examiner is requested to exercise to the full his powers to expedite these proceedings and to provide a full and complete record by requiring service of the facts relating to each specific issue he determines material and relevant by the party or parties in control of the facts relating to that issue upon all other parties to this proceeding.

Certain of the parties have requested oral argument on Staff's motion. It is our view that oral argument is not necessary or appropriate since the actions herein relate to procedural matters, and grant of such request could only result in further delay. Moreover, the views of the several parties are fully set forth in the briefs submitted. Accordingly, the requests for oral argument are hereby denied.

The Commission orders:

(A) The proceedings promulgated by our "Order Enlarging Issues" issued June 29, 1964, 31 FPC 1595, concerning the methods to be used in pricing pipeline produced gas which were consolidated for hearing and decision with the Hugoton-Anadarko Area Rate Proceeding, Docket No. AR64-1, *et al.*, are hereby severed from that docket.

(B) A separate proceeding entitled "Pipeline Production Area Rate Proceeding, Docket No. RP66-24, is hereby instituted, pursuant to Sections 4, 5, 10, 14, 15, and 16 of the Natural Gas Act, to determine the proper method to be used by the Commission in pricing natural gas produced by pipelines and or acquired by them from their affiliated producers.

(C) A prehearing conference shall be held in a hearing room of the Commission at 441 G Street, N.W., Washington, D.C. commencing 10 a.m. May 17, 1966 before Presiding Examiner Allan C. Lande in the proceeding instituted by paragraph (B) above, limited to the first phase of this proceeding as denominated in the text of this order, and to achieve the purposes set forth in the text of this order.

(D) Each of the pipeline companies listed in Appendix A attached hereto are joined as parties-respondent in the proceeding instituted by paragraph (B) above.

(E) At the conclusion of the prehearing conference prescribed by paragraph (C) above, or shortly thereafter as he deems necessary, the Presiding Examiner shall set forth on the record or by separate order his determination of the specific issues material and relevant to the first phase of this proceeding on which evidence is to be adduced on the record and shall designate, if necessary, the party or parties which are in control of the facts relating to any such specific and set the date on which such facts shall be furnished to each party to the proceeding.

(F) Concurrently with the actions taken under paragraph (E) above, the Presiding Examiner shall also set the dates for service of testimony and exhibits by the parties and the date for commencement of the hearing and cross-examination.

(G) Nothing herein shall be deemed to limit the authority of the Presiding Examiner's control of these proceedings to modify or enlarge on the procedures here provided consonant with our underlying and expressed purpose to adduce a full and complete record on the first phase of this proceeding as expeditiously as possible.

(H) Any interested person, other than the respondents specifically listed in Appendix A, who desires to participate as an intervener in the proceeding here instituted shall, on or before May 2, 1966, file a notice of intervention or petition to intervene in accordance with Section 1.8 of the Commission's Rules of Practice and Procedure.

Commissioner Bagge *concurring.*

Bagge, *Commissioner, concurring:*

I must join my colleagues in ordering the pipeline production issue severed from this proceeding since I, like they, believe that such a severance will enable both the Hugoton-Anadarko Area Rate Proceeding and Pipeline Production Area Rate Proceeding to be decided more expeditiously than they could be if left in the same proceeding. However, I cannot join them without expressing my reluctance to do so.

It is embarrassing to be placed in a situation where we must grant a motion which is procedurally abhorrent in order to obtain an objective which is substantively necessary.

That this motion was filed some eighteen months after the Commission ordered the issues combined and that it was filed after many parties had expended considerable time, money and effort preparing testimony in accordance with that order does not obviate the substantive necessity for severance.

So, although I fear that this will be misinterpreted as a high-handed and collusive action taken by the Commission and our staff in derogation of the rights of those most immediately affected, I must, with great misgivings, join in today's decision.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

PAN AMERICAN PETROLEUM CORPORATION, DOCKET NO. G-9279, ET AL.[1]

ORDER APPROVING RATE SETTLEMENT PROPOSAL, SEVERING AND TERMINATING PROCEEDINGS, AND PRESCRIBING REFUNDS

(Issued April 13, 1966)

There is before us for consideration a Motion for Approval of Settlement Proposal, Termination of Rate Proceedings and for Shortened Procedure Certification filed on January 24, 1966, by Pan American Petroleum Corporation (Pan American) encompassing the rates for 257 of its currently effective FPC Gas Rate Schedules. Comments have been filed by some of the parties to these proceedings, all of which have been given due consideration. In summary, the settlement proposal as filed by Pan American provides:

(1) Settlement rates, including tax reimbursement, equal to or less than the Commission's applicable area rate ceilings with eight exceptions hereinafter discussed;

(2) Pan American waives the right to file for contractually authorized increased rates to be effective prior to January 1, 1969, for all of the rate schedules involved in the settlement. However, Pan American reserves the right to file for any increased rates, if contractually authorized, up to the applicable area-rate levels established by any order or rule of the Commission, or to file for any contractually authorized increase in tax reimbursement;

(3) Pan American will delete any favored nation, price redetermination and periodic pricing provisions in Rate Schedule Nos. 3, 8, 10, 12, 13, 19, 27, 31, 58, 63, 64, 72, 73, 79, 83, 86, 87, 98, 108, 150, 172, 176, 177, 178, 179, 186

---

[1] The additional dockets involved herein are set forth in Appendices A, B, C, and D attached hereto.

(except for Supplement Nos. 5 and 6 thereto), 208, 241, 253, 254, 286, 287, 379, and 387 in accordance with the Second and Seventh Amendments to the Commission's Statement of General Policy No. 61-1, 18 CFR 2.56;

(4) Refunds with interest at the applicable rates, under rate schedules where collection was made subject to refund, of the difference between the revenues actually collected and those collectable at the settlement rate, in each instance, commencing with July 1, 1962, to the date of issuance of this order, for all of Pan American's rate schedules, excepting certain of its rate schedules for sales of natural gas in the San Juan Basin in the State of New Mexico under which partial refund will be made of monies charged and collected in accordance with the one-cent per Mcf minimum guarantee for liquids provisions contained in said rate schedules;

(5) Exclusion from the settlement proposal of all Permian Basin sales; twenty-one sales related to previous offers of settlement accepted by the Commission; sixteen sales to other producers and gatherers; one sale that is presently under court review; twelve sales in South Louisiana and those matters relating to the rate schedules shown on Appendix D hereto insofar as the proceedings thereunder pertain to the New Mexico Emergency School Tax Reimbursement portion of the rates.

In support of its proposal, Pan American states that the settlement rates, refunds, the moratorium period, and other provisions thereof not specifically noted herein, are in the public interest in that they are reasonable and will provide price stability for a long period of time for natural gas moving in interstate commerce.

With respect to refunds, the parties to the settlement conferences utilized cost-of-service studies and revenues based on contract rates to determine Pan American's revenue-cost relationship. These studies indicate that it is appropriate that we require that refunds should be computed for sales where monies were collected subject to refund on and after July 1, 1962, as hereinafter ordered. Such refunds will approximate $14,000,000, plus applicable interest computed to January 1, 1966, which approximates 80.5% of the monies collected subject to refund above the settlement rates. For all the reasons stated in our order in *Humble Oil & Refining Company*, Docket No. G-9287, *et al.*, 32 FPC 49, we shall order Pan American to retain the amounts of refund ordered herein until further action by the Commission directing their disposition; except, however, those refund monies due and owing Iroquois Gas Corporation, Lone Star Gas Company and Southern Union Gathering Company may be paid as hereinafter ordered since the amounts concerned are *de minimis.*

Pan American's presently effective rates will be reduced under the settlement proposal so as to effectuate an annual reduction of approximately $5,600,000 in its jurisdictional revenues. Thus, approval of Pan American's proposal will result in disallowance of approximately sixty-two percent of the increased rates currently being collected in Section 4(e) proceedings. Additionally, concurrent with the filing of the instant proposal, Pan American filed a voluntary reduction below the "last-firm-rate" for four sales and proposes to withdraw a filed increase for a fifth sale, all in South Louisiana, conditioned upon final approval of its settlement proposal. These unilateral rate decreases will result in a further reduction in Pan American's annual jurisdictional revenues of approximately $328,325.

Settlement rates which are exceptions to the applicable area increased rate ceiling are proposed by Pan American for five sales of natural gas made by it to United Fuel Gas Company (United Fuel) in South Louisiana. The sales are made under Pan American's FPC Gas Rate Schedule Nos. 78, 173, 174, 190, and 384, and along with sales made to United Fuel under Pan American's FPC Gas Rate Schedule Nos. 198, 219, and 240 were considered by the parties to the settlement conferences as a unit. Pan American proposes to reduce the presently effective rates to a settlement rate of 18¢ per Mcf of natural gas at 15.025 psia under its Rate Schedule Nos. 78, 174, 198, 219, 240, and 384. This would constitute a reduction of permanently certificated rates of 18.7¢ per Mcf under Rate Schedule No. 198; 22.1¢ per Mcf under Rate Schedule No. 219; and 19.1¢ per Mcf under Rate Schedule No. 240. It proposes to reduce the presently effective rates of 21.6¢ and 21.4¢ per Mcf respectively under its Rate Schedule Nos. 173 and 190 to 18.375¢ per Mcf as a part of the "package". Under these latter rate schedules, Pan American has committed additional productive acreage to the contracts which resulted in increased deliveries of natural gas to United Fuel. The proposed settlement rates exceed the applicable increased rate ceiling, but are below the applicable initial rate ceiling.

Another settlement rate which is an exception to the area ceiling applicable to it is a sale by Pan American to Tennesssee Gas Transmission Company (TGT) in South Louisiana made under its FPC Gas Rate Schedule No. 14. This sale was considered by the parties to the settlement conferences in conjunction with a sale to TGT made under Pan American's FPC Gas Rate Schedule No. 226 also in South Louisiana. Pan American proposes to reduce the presently effective rates under both of these rate schedules to 18.0¢ per Mcf of natural gas at 15.025 psia. Rate Schedule No. 226 was permanently certificated by the Commission at an initial rate of 18.5¢ per Mcf, and the presently effective rate, subject to refund is 23.6¢ per Mcf. The volumes of natural gas which Pan American delivers to TGT under Rate Schedule No. 226 far exceeds those which it delivers under its Rate Schedule No. 14.

Pan American proposes under its FPC Gas Rate Schedule Nos. 84, 338, and 410, rates which are exceptions to the applicable area ceiling for three sales it makes to Cities Service Gas Company (Cities) in the Kansas Hugoton Field. It proposes to reduce the presently effective rate of 14.5¢ per Mcf of natural gas at 14.65 psia for each of the sales to 12.5¢ per Mcf. These sales were also considered by the parties to the settlement conference as a unit. Pan American proposes to dedicate horizons from sea-level to the base of the Pennsylvanian formation underlying thirty-five thousand acres of the acreage now dedicated to Rate Schedule No. 84. Rate Schedule No. 84, which covers most of the acreage dedicated in the Kansas Hugoton Field by Pan American to Cities, presently provides for a contractual redetermination of prices every five years. As a part of the settlement, Pan American proposes to renegotiate Rate Schedule Nos. 84, 338, and 410 to provide for a one-cent per Mcf escalation every five years commencing June 23, 1971.

Consideration of all of the circumstances, particularly the added acreage and horizons, the reduction of permanently certified rates and the contractual renegotiations, causes us to believe that these sales, which were considered by the parties to the settlement conferences as units, are similar to others where we have considered such unique situations to warrant exceptions to the applicable area ceilings, *Shell Oil Company, et al.*, Docket No. G–9446, *et al.*, 28 FPC 257; *Gulf Oil Corporation, et al.*, Docket No. G–9520, *et al.*, 29 FPC 837; and *Sinclair Oil & Gas Company*, Docket No. G–9291, *et al.*, 30 FPC 5. Therefore, we find the settlement rates of 18¢ per Mcf for eight sales and of 18.375¢ per Mcf for two sales made by Pan American in South Louisiana, and 12.5¢ for three sales made by it in the Kansas Hugoton Field to be proper and approve the same.

The settlement proposal includes rates for which issuance of related permanent certificates is pending, some of which are for deliveries presently being made under temporary authority.[2] We propose to set such applications for abridged statutory hearing in accordance with Section 7 of the Natural Gas Act, indicating that the settlement rates, as provided for herein, shall be the initial price. Included among the pending certificate applications are three sales which are presently involved in court review. They are Pan American's Rate Schedule No. 358, Docket No. CI63–1445 (consolidated with *H. L. Hawkins, et al.*, Docket No. G–18077, *et al.*) and Rate Schedule Nos. 362 and 391, Docket Nos. CI63–1263 and CI64–377, respectively (consolidated with *Turnbull & Zoch Drilling Co., et al.*, Docket No. G–17960, *et al.*) Pan American proposes that the settlement rates for these sales be subject to the final disposition of said proceedings whether after court review or otherwise.

On February 21, 1966, Philadelphia Electric Company (PEC)[3] filed its objection to the proposed settlement. PEC contends that "* * * Pan American's Southern Louisiana rate schedules should be treated uniformly and excluded from the settlement because of the pendency of the South Louisiana area rate proceedings (AR61–2) * * *". In the alternative, PEC avers that, if included, the rates for such sales should be at a level proposed by the staff of the Commission in that proceeding. That matter is now pending before the examiner who presided at the hearings, and the propriety of any rates proposed by any party to said proceeding is not now before us. Consequently, we believe PEC's contention in this regard is premature, and not relevant to whether our approval of Pan American's proposal is in the public interest.

Further, PEC contends that previous settlements, proposed by Pan American and approved by us, to some of which PEC was a signatory party, should have been included in the instant negotiations by the parties. Those settlements had their own moratoria periods which have not yet expired and under those circumstances the parties to the numerous company-wide settlement conferences, which have resulted in proposals being filed for our consideration, have uniformly excluded previous settlements. We do not believe PEC's contention that since previous settlements have achieved "* * * a reasonable measure of price stability * * *" is reason for us to depart from our policy of honoring settlements we have found to be in the public interest. In every order approving such settlements the Commission has made clear that its approval is "* * * unqualifiedly subject to final determination in area proceedings, or proceedings of a similar nature." *Southwest Gas Producing Company, Inc. (Operator), et al.*, Docket No. G–16714, *et al.*, 31 FPC 192, 193 and it is in the area proceeding, Docket No. AR61–2, that the matters urged by PEC will be before us. The same is true as to PEC's contention that the proposed settlement rates are in some manner discriminatory.

On March 10, 1966, PEC supplemented its objection by letter, in response to a reply to its objection which Pan American filed with the Commission on March 4, 1966. In its letter, PEC refers to a producer motion filed in Docket No. AR61–2 where it is asserted that no justification has been shown "for reducing Southern Louisiana rates to alleged Southern Louisiana cost levels when in other producing areas, such as the Permian Basin, *contract limitations* foreclose producers from recovering their costs incurred in such area, thereby leading to the inevitable result that the total revenues generated under such a system of area rates will be substantially less than the producing industry's total Continental U.S. costs "(Emphasis supplied)". PEC concludes that approval of the Pan American settlement would inevitably constitute a prejudgment of this issue in Docket No. AR61-2.

---

[2] See Appendix B attached hereto.

[3] PEC is an intervener in Docket Nos. RI61–204 and AR61–2, *et al.*

While it is clear that approval of any settlement proposal does not prejudice future findings or orders of the Commission or positions of the parties, our approval of the present proposal would not in any event constitute prejudgment of the issue referred to by Philadelphia Electric. With the exception of settlements made under the Second and Seventh Amendments to our Statement of General Policy where higher rates are permitted when certain escalation clauses are removed, no changes have been made in the contracts. The rates set forth in Pan American's contracts remain unchanged, but they are voluntarily reducing their filed rates and their revenues under such contracts. Approval of such voluntary reductions without change in contract rates does not affect, to say nothing of prejudging, any issue raised in Docket No. AR61-2.

As we have stated in other orders approving settlements, we consider the refunds, which are based on cost-of-service determinations; the reduction in rates; and the stability in rates gained through moratoria, pending determination of just and reasonable rates in the area rate proceedings, to be in the public interest, *e.g.*, *Humble Oil & Refining Company*, Docket No. G-9287, *et al.*, 32 FPC 49. It should be noted that as a result of our approval of Pan American's proposal ten of its "last-firm-rates" will be reduced, of which five are not subject to Section 4 proceedings. We believe that the principles underlying the present settlement proposal are consistent with those utilized in previous major independent producer rate settlements, and shall approve the same.

Our action herein should not be construed as constituting approval of future rate increases, if any, that may be filed under the subject rate schedules, and is without prejudice to any findings or orders of the Commission in pending or future proceedings, including area rate or similar proceedings, involving Pan American's rates and rate schedules.

The Commission finds:

The proposed settlement of the subject proceedings on the basis described herein, as more fully set forth in the Settlement Proposal filed by Pan American on January 24, 1966, is in the public interest and it is appropriate in carrying out the provisions of the Natural Gas Act, that it be approved and made effective as hereinafter ordered, and good cause exists for approving the settlement rates, for severing and terminating certain proceedings and providing for refunds.

The Commission orders:

(A) The settlement of these proceedings on the basis of the settlement proposal, filed by Pan American on January 24, 1966, is approved.

(B) The applicable settlement rates set out in Appendix A hereto are approved, and such rates shall be effective as of January 1, 1966.

(C) The approved settlement rates shall be applicable during the moratorium period herein provided for all sales of natural gas from all acreage dedicated as of the date of issuance of this order under each of the rate schedules currently on file with the Commission whether such sales are made by Pan American, its successors or assignees.

(D) Pan American shall compute the difference between the rates collected subjected to refund and the related settlement rates or rate not subject to refund, whichever rate is the greater, for the period from July 1, 1962, to the date of this order, together with interest as specified in each docket to January 1, 1966. Pan American shall within 45 days from the date of this order submit a report to the Commission, and serve a copy on each of the purchasers involved, setting out by purchasers the amount of refunds related to each rate schedule (showing separately the principal and applicable interest), the bases used for such determination and the periods covered.

(E) Pan American shall retain the amounts shown in the report required under paragraph (D) above, subject to further action of the Commission directing the disposition of those amounts, *provided, however*, Pan American shall within 90 days from the date of this order, (1) refund with interest as specified in each docket computed to January 1, 1966, the difference between rates collected subject to refund and the related settlement rates, on and after July 1, 1962, to the date of this order for all of such of Pan American's Rate Schedules, where the rates were collected subject to refund for sales of natural gas to Iroquois Gas Corporation, Lone Star Gas Company, Southern Union Gathering Company and (2) report to the Commission in writing, the amount of refunds made to Iroquois Gas Corporation, Lone Star and Southern Union Gathering Company showing separately the amount of principal and interest so paid, and the basis used for such determination, together with releases from its purchasers showing receipt of the refunds in conformity with the settlement proposal as approved herein.

(F) If Pan American elects to commingle these retained refunds with its general assets and use them for its corporate purposes, it shall pay interest thereon at the rate of 5½% per annum on all funds thus available from May 20, 1966, to the date on which they are paid over to the person ultimately determined to be entitled thereto by final action of the Commission.

(G) If Pan American elects to deposit the retained refunds in a special escrow account, Pan American shall tender for filing on or before, May 20, 1966, an executed Escrow Agreement, conditioned as set out below accompanied by certificate showing service of a copy thereof upon each of its jurisdictional customers. Unless notified to the contrary by the Secretary within 30 days from the date of filing thereof, the Escrow Agreement shall be deemed to be satisfactory and to have been accepted for filing. The Escrow Agreement shall be entered into between Pan American and any bank or trust company used as a depository for funds of the United States Government and the Agreement shall be conditioned as follows:

(1) Pan American, the bank or trust company, and the successors and assigns of each, shall be held and formally bound unto the Federal Power Commission for the use and benefit of those entitled thereto, with respect to all amounts and the interest thereon, deposited in a special escrow account, subject to such Agreement, and such bank or trust company shall be bound to pay over to such person or persons as may be identified and designated by final order of the Commission and in such manner as may be therein specified, all or any portion of such deposits and the interest thereon.

(2) The bank or trust company may invest and reinvest such deposits in any short-term indebtedness of the United States or any agency thereof, or in any form of obligation guaranteed by the United States which is, respectively, payable within 120 days as the said bank or trust company in the exercise of its sound discretion may select.

(3) Such bank or trust company shall be liable only for such interest as the invested funds described in Paragraph (2) above will earn and no other interest may be collected from it.

(4) Such bank or trust company shall be entitled to such compensation as is fair, reasonable and customary for its services as such, which compensation shall be paid out of the escrow account to such bank or trust company. Said bank or trust company shall likewise be entitled to reimbursement for its reasonable expenses necessarily incurred in the administration of this escrow account, which reimbursement shall be made out of the escrow account.

(5) Such bank or trust company shall report to the Secretary quarterly, certifying the amount deposited in the trust account for the quarterly period.

(H) The pending certificate proceedings set out in Appendix B hereto shall not be determined on the basis of the approval of the settlement proposal, but shall be determined after hearing in accordance with Section 7 of the Natural Gas Act.

(I) Within 90 days from the date of this order, Pan American shall make such filings under its rate schedules as are required to make effective the terms of the settlement proposal.

(J) Upon full compliance by Pan American with all the terms and provisions of this order, the Section 4(e) proceedings listed in Appendices A and B hereto, except the suspension dockets shown on Appendix D insofar as they are related to the rate schedules shown thereon and Docket Nos. G–16515, G–19642, RI61–137, RI62–99, RI63–144, and RI64–223 insofar as they are related to the interests of Austral Oil Company Incorporated, Agent for Oil Participations Incorporated; Docket Nos. G–20001 and RI61–123 insofar as they cover the interest of Christie, Mitchell & Mitchell and Docket No. RI62–236 insofar as it is related to the interests of Theodore R. Johnson, and the Section 5(a) proceeding in Docket No. G–9279, shall terminate.

(K) Upon termination of the Section 4(e) proceedings listed in Appendix C hereto, in accordance with Paragraph (J) above, said proceedings shall be severed from the consolidated proceedings in Docket Nos. AR61–2, AR64–1, and AR64–2, respectively; and the consolidation order issued December 6, 1957, 18 FPC 782, in Docket No. G–9279, is rescinded.

(L) This order is without prejudice to any findings or orders which have been or may be made hereafter by the Commission, and is without prejudice to claims or contentions which may be made by Pan American, the Commission staff, or any affected party hereto, in any proceedings now pending, including area rate or similar proceedings, or hereafter instituted by or against Pan American or any other companies, person or parties affected by this order.

---

[1] Unless otherwise indicated, all rates are expressed in cents per Mcf at the pressure base shown for the Commission pricing area in which each field is located. Unless otherwise indicated, all rates include applicable tax reimbursement and are subject to Btu adjustment as provided in the various contracts.

[2] Settlement rate at the area rate for increased rates under Sections 2.56(b)(1) and 2.56(c)(1) of FPC rules of practice and procedure. Where necessary, contract term to be extended so contract will remain in effect a minimum of 5 years from the effective date of the settlement herein.

[3] Redetermined price at this level to be filed in connection with this settlement.

[4] Contract price increased to 15.4850 cents on Oct. 1, 1965. Rate increase filing to be withdrawn.

[5] Increase to 15.0000 cents was filed on Nov. 4, 1965 to be effective Jan. 21, 1966.

[6] Ex parte filing of price increase to 15.0000 cents has been made. Future increases waived for 5 years from the effective date of the settlement herein.

[7] Settlement rate for increased rates applicable to Texas RR. Commission Dist. No. 6 under Section 2.56(b)(1) of the FPC rules of practice and procedure. If necessary, contract term to be extended so contract will remain in effect a minimum of 5 years from the date of the settlement herein.

[8] Rate shown includes charge for services performed by seller.

[9] Subject to service charge deductions on portions of the gas sold as provided by contract.

[10] Rate shown includes 1.0 cent per Mcf payment for liquids. Last firm rate is 17.0 cents for gas sold under Supp. No. 14 and 16.5 cents for gas sold from remaining acreage under contract. These are the settlement rates.

[11] Refunds to be made pursuant to the Commission order dated Jan. 29, 1965, in docket No. G-3216, *et al.*

[12] Subject to upward adjustment to area price for new gas if the area boundary between Oklahoma Panhandle area and other Oklahoma area is changed.

[13] 15.3840 cents for gas above 860 psig.

[14] Subject to service charge deductions as provided by contract.

[15] Last firm rate is 17.0 cents per Mcf for the portion of sales applicable to Oklahoma Panhandle area.

[16] These rates include 1.0 cent per Mcf minimum guarantee for liquids.

[17] These 4(e) cases are applicable only to the increase in tax reimbursement resulting from an increase in the New Mexico emergency school tax.

[18] Section 4(e) docket involved to remain in effect as to this supplement for determination of the correct level of tax reimbursement only. Docket shown on appendix D.

[19] This docket terminated as to this supplement.

[20] See the settlement proposal of Pan American for an explanation of categories A, B, C, D, and E.

[21] Superseded by R.S. No. 417, June 3, 1965, except for formations below the base of the Wolfcamp Series of the Permian System.

[22] Contract price recently increased to 11 cents and filing made.

[23] Rate is expressed at a pressure base of 16.40 psia.

[24] Contract has been canceled; production ceased. R.S. to be terminated.

[25] See "Amendment to Gas Purchase Contract" attached as an exhibit to Pan American's motion for approval of settlement proposal. This amendment and amendments providing for like price schedules on R.S. No. 338 and R.S. No. 410 are to be executed.

[26] Portion of sale is made at a firm rate of 20.3000 cents as established by prior settlement.

[27] Last firm rate for gas sales from added acreage under Supp. No. 18 is 20.0000 cents per Mcf. Initial deliveries from this acreage began on Feb. 3, 1965.

APPENDIX B

---

[1] Unless otherwise indicated, all rates are expressed in cents per Mcf at the pressure base shown for the Commission pricing area in which each field is located. Unless otherwise indicated, all rates include applicable tax reimbursement and are subject to Btu adjustment as provided in the various contracts.

[2] Settlement rate at the area rate for increased rates under Sections 2.56(b)(1) and 2.56(c)(1) of FPC rules of practice and procedure. Where necessary, contract term to be extended so contract will remain in effect a minimum of 5 years from the effective date of the settlement herein.

[3] Supplement Nos. 5 and 6 only (acreage additions).

[4] Temporary certificate issued at 17.5 cents with refund floor of 16.0 cents. Commission authorized sale at 17.0 cents in *Hawkins* decision.

[5] Authorized by Commission in *Turnbull & Zoch* proceeding.

[6] Rate shown includes charge for services performed by seller.

[7] Temporary certificate issued with refund floor of 14.5 cents.

[8] Basic contract and acreage additions set out in Supplement Nos. 2, 3, 4, and 5.

[9] Supplement No. 24 only (acreage addition). Covers acreage in both Oklahoma—Other and Oklahoma Panhandle.

[10] Last firm rate is 17.0 cents per Mcf for the portion of sales applicable to Oklahoma Panhandle area.

[11] Subject to upward adjustment to area price for new gas if the area boundary between Oklahoma Panhandle area and other Oklahoma area is changed.

[12] Supplement No. 8 only (acreage addition).

[13] Supplement No. 8 only (acreage addition).

[14] Supplement Nos. 8 and 9 only (acreage additions).

[15] Supplement No. 3 only (acreage addition).

[16] This docket terminated as to this supplement.

[17] These 4(e) cases are applicable only to the increase in tax reimbursement resulting from an increase in the New Mexico emergency school tax.

[18] Price applies to corrected volumes at plant outlet, computed in accordance with subject contract.

[19] Basic contract and supplement No. 2 (acreage addition).

[20] Initial sale: Temporary certificate at 17.7 cents with refund floor of 15.0 cents. Sale from added acreage: Temporary certificate conditioned price to 15.0 cents.

[21] 15.3840 cents for gas above 860 psig.

[22] Subject to service charge deductions as provided by contract.

[23] Supplement No. 18 only (acreage addition).

[24] See the settlement proposal of Pan American for an explanation of categories.

DEPARTMENT OF WATER RESOURCES OF THE STATE OF CALIFORNIA, PROJECT NO. 2100

ORDER MODIFYING PROJECT LICENSE

(Issued April 15, 1966)

On January 12, 1965, the Department of Water Resources of the State of California, licensee for Project No. 2100, filed for Commission approval an application and attached Exhibit L drawings showing proposed changes in the license requirements (Article 38) for clearing the proposed Oroville Reservoir of the project which is located on the Feather River and its tributaries in Butte County, California and affects lands of the United States within the Plumas and Lassen National Forests and other lands held in trust by the United States for Indians.

Article 38 requires, among other things, the complete clearing of all lands in the bottom and margin of the Oroville Reservoir between certain stated elevations and the cutting of all trees and brush within the reservoir so that no part thereof shall protrude above a stated elevation.

Under the aforementioned application and attached Exhibit L drawings, vegetation in certain coves of the Oroville Reservoir would be retained for the enhancement of fish and wildlife. It appears that the proposed restrictive clearing was originated by the California Department of Fish and Game in cooperation with the California Department of Conservation, the California Department of Parks, the U.S. Forest Service and the Fish and Wildlife Service of the Department of the Interior.

The U.S. Forest Service has advised that the proposed restrictive clearing proposal will not affect adversely the protection of the Plumas and Lassen National Forests.

The Department of the Interior has advised that its Fish and Wildlife Service concurs in the restrictive clearing proposal as an improvement and contribution towards increased fishing and hunting benefits.

The Department of Health, Education, and Welfare has advised that while the execution by the licensee of the restricted clearing proposal is not expected to create or intensify water supply or water pollution problems, the Department recommended that the licensee maintain liaison with the Bureau of Vector Control, California State Department of Public Health, for specific guidance on clearing operations related to vector prevention and control. This recommendation is included in modified Article 38 of the license.

We are informed by the Department of the Interior that certain lands held in trust by the United States for Indians, which would be affected by the construction of the project, have been conveyed to the State of California. The sale was authorized by Act of Congress of August 20, 1964 (Public Law 88–453). According to the deed of conveyance, a copy of which was transmitted to us by the Department of the Interior by letter dated October 18, 1965, the conveyance was executed on January 22, 1965. In the circumstances, it is appropriate to further modify the license for Project No. 2100 to eliminate therefrom Article 35 which provides for compensation by the licensee to affected Indians for damage to Indian properties caused by construction of the project.

The Commission finds:

It is consistent with the public interest to modify the license for the project to the extent herein ordered.

The Commission orders:

(A) The following described Exhibit L drawings, each entitled "Oroville Reservoir Vegetation Retention Areas", are hereby approved as part of the license for Project No. 2100:

Exhibit L-19 (FPC No. 2100-93)
Exhibit L-20 (FPC No. 2100-94)
Exhibit L-21 (FPC No. 2100-95)

(B) The license for Project No. 2100 is hereby modified to eliminate therefrom Article 35, and to modify Article 38 to reflect the changes shown on the approved Exhibit L drawings with respect to restrictive clearance of Oroville Reservoir and HEW's recommendation: said modified Article 38 to read as follows:

Article 38. The Licensee shall, prior to impounding water, clear all lands in the bottoms and margins of the reservoirs of Thermalito Diversion Dam, Thermalito Forebay Dam, and Thermalito Afterbay Dam. The Licensee shall, prior to impounding water in the reservoir of Oroville Dam, (except for the selected coves shown on the exhibits described in paragraph (A) above for enhancement of fish and wildlife) clear all land in the bottom and margin of the reservoir of Oroville Dam between high water elevation 900.0 (U.S.C. & G.S. datum, 1929 adjustment), and a plane at elevation 640.0 (U.S.C. & G.S. datum, 1929 adjustment), and shall cut all trees and brush within the elevation 640.0 contour area so that no part thereof will protrude above said elevation; shall clear and keep clear to an adequate width lands of the United States along open conduits; and shall dispose of all temporary structures; unused timber, slash, refuse, or inflammable material resulting from the clearing of the lands or from the construction and maintenance of the project works. In addition, all trees along the high-water line of the reservoirs which die during the operation of the project shall be removed. The clearing of the lands and the disposal of the material shall be done with due diligence and to the satisfaction of the authorized representative of the Commission. Licensee shall maintain liaison with the Bureau of Vector Control, California State Department of Public Health, for specific guidance on clearing operations related to vector prevention and control.

(C) This order is effective as of March 1, 1966.

(D) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this order. In acknowledgment of the acceptance of this order, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

VILLAGE OF HARRISONBURG, LOUISIANA AND TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NO. CP66-267

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued April 15, 1966)

On February 14, 1966, the Village of Harrisonburg, Louisiana (Applicant), filed in Docket No. CP66-267 an application pursuant to Section 7(a) of the

Natural Gas Act for an order of the Commission directing Tennessee Gas Transmission Company (Respondent) to establish physical connection of its transportation facilities with the facilities proposed to be constructed by Applicant and to sell and deliver to Applicant volumes of natural gas for resale and distribution by Applicant in the Village of Harrisonburg, and in the communities of Enterprise, Manifest, Wallace Ridge and in other rural areas located in the Northwestern section of Catahoula Parish, Louisiana, all as more fully set forth in the application.

Applicant proposes to construct a gas transmission system extending from a point of interconnection with the facilities of Respondent, to be located in the vicinity of Louisiana Highway 124 where Respondent's main transmission line crosses the highway to the Village of Harrisonburg, and consisting of approximately 94,000 feet of 3-inch pipeline and a regulator station. Applicant also proposes to construct, own and operate a natural gas distribution system which will provide gas service for the aforementioned communities. Applicant states that its proposed service area will include approximately 596 residential, 16 small commercial and 8 large commercial customers by the end of the third year of proposed operations.

The total estimated volumes of natural gas necessary to meet Applicant's annual and peak day requirements for the initial three year period of proposed operations are stated to be:

Mcf	First year	Second year	Third year
Annual	39,648	52,248	58,128
Peak day	489	651	727

The total estimated cost of Applicant's proposed gas transmission and distribution systems is $500,000, which cost will be financed by the issuance of revenue bonds.

Respondent was duly notified by letter of the Commission dated February 16, 1966, of the filing of the application in this matter. Respondent did not make any objection to granting the application or to the rendition of the requested service.

Due notice of the filing of the subject application and opportunity for hearing thereon have been given by publication in the Federal Register on March 4, 1966 (31 F.R. 3435). No protest, petition to intervene, notice of intervention or request for hearing has been filed in this proceeding.

The Commission finds:

(1) Tennessee Gas Transmission Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued July 15, 1947, in Docket No. G–910 (6 FPC 777).

(2) Applicant, Village of Harrisonburg, Louisiana, is legally authorized to engage in the local distribution of natural gas to the public within the meaning of Section 7(a) of the Natural Gas Act.

(3) It is necessary and desirable in the public interest to direct Tennessee to establish physical connection of its transmission facilities with the facilities proposed to be constructed and operated by Applicant, and to sell and deliver to Applicant under a service agreement to be executed by Applicant with Tennessee in accordance with the Commission's Regulations, up to 727 Mcf per day of natural gas for distribution and resale as hereinbefore described and as more fully described in the application in this proceeding.

(4) Applicant should be prepared to receive natural gas from Tennessee for distribution in the Village of Harrisonburg, Louisiana, within one year from the date of the issuance of this order.

(5) The requirement that Tennessee serve Applicant, as requested, will not place an undue burden upon it nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) Tennessee Gas Transmission Company is directed to establish physical connection of its facilities with the facilities proposed to be constructed and operated by Applicant, as herein described, and to sell up to 727 Mcf of natural gas daily to Applicant under a service agreement to be executed by Applicant with Tennessee in accordance with the Commission's Regulations, for distribution and resale as hereinbefore described and as more fully described in the application in this proceeding. Such service shall be rendered pursuant to Tennessee's presently filed appropriate rate schedule.

(B) Tennessee shall report to the Commission in writing the date of commencement of service to Applicant within 10 days thereof.

(C) Applicant shall be prepared to receive service as directed herein within one year from the date of issuance of this order.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

M. F. MCCAIN (OPERATOR), ET AL., DOCKET NO. CI66-181

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 15, 1966)

On September 3, 1965, M. F. McCain (Operator), *et al.* (Applicant) filed in Docket No. CI61-181 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale for resale and delivery of natural gas in interstate commerce to Texas Gas Transmission Corporation (Texas Gas) from the Maurice Field, Lafayette and Vermilion Parishes, Louisiana, at a total initial rate of 20.625 cents per Mcf at 15.025 psia, all as more fully set forth in the application.

By letter dated February 3, 1966, Applicant agreed to accept a permanent certificate conditioned to provide that the amount of reimbursement for additional taxes shall be limited to fifty percent.

Concurrently with the subject application Applicant submitted its contract with Texas Gas which has heretofore been accepted for filing as Applicant's FPC Gas Rate Schedule No. 5.

The contract between Applicant and Texas Gas provides that deliveries in excess of the maximum contract quantity if deliverability is higher than that quantity, a provision that quantities taken in excess of the annual minimum takes will be deleted from subsequent minimum-take obligations, a build-up in daily contract quantity from 7,287 Mcf per day to 10,410 Mcf per day on January 1, 1971, a five-year make-up period for deficient takes, stringent deliverability requirements in that Applicant must sustain a deliverability of the contract quantity for fourteen consecutive days with failure to do so resulting in a reduction in contract quantity, a buyer's option to include reserves developed in excess of 170,030,000 Mcf, a delivery pressure of 1,100 psig, and a firm rate of 20.625 cents per Mcf for the first ten years of the contract.

While the initial price is in excess of the Commission's "in-line" determination, it is below the guideline price set forth in the Statement of General Policy No. 61-1 and combined with other contract provisions more favorable than those usually provided in this area. Therefore, the application will be granted.

After due notice no protests to the granting of the application have been received. A notice of intervention was filed by the Public Service Commission of the State of New York on October 11, 1965, and withdrawn on February 11, 1966. Petitions for leave to intervene were filed by Long Island Lighting Company on October 7, 1965, and Brooklyn Union Gas Company on October 8, 1965, and were withdrawn on November 1, 1965, and February 17, 1966, respectively. A petition for leave to intervene in opposition to the granting of the application was filed by The Philadelphia Gas Works Division of The United Gas Improvement Company on October 6, 1965, and amended on October 11, 1965. By letter dated February 14, 1966, the latter petitioner advised the Commission that it would not apply for rehearing of an order granting the subject application but that it does not concur in the granting of the application. On October 22, 1965, Texas Gas filed a petition for leave to intervene in support of the granting of the application. No further notices of intervention or petitions for leave to intervene have been received.

At a hearing held on April 7, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits thereto, submitted in support of the application herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, M. F. McCain (Operator), *et al.*, is engaged in the sale for resale of natural gas in interstate commerce for ultimate public consumption and is, therefore, a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission.

(2) The sale of natural gas hereinbefore described, as more fully described in the application in this proceeding, will be made in interstate commerce subject to the jurisdiction of the Commission, and such sale by Applicant, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, is subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The proposed sale of natural gas by Applicant is required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

The Commission orders:

(A) A certificate of public convenience and necessity is issued upon the terms and conditions of this order authorizing the sale by Applicant of natural gas in interstate commerce for resale for ultimate public consumption, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, all as hereinbefore described and as more fully described in the application in this proceeding.

(B) The certificate issued herein is not transferable and shall be effective only so long as Applicant continues the acts or operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(C) The grant of the certificate issued in paragraph (A) above shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or of Part 154 or Part 157 of the Commission's Regulations thereunder and is without prejudice to any findings or orders which have been or which may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against Applicant. Further, our action in this proceeding shall not foreclose nor prejudice any future proceedings or objections relating to the operation of any price or related provisions in the gas purchase contract herein involved. The grant of the certificate herein for service to the particular customer involved shall not imply approval of all of the terms of the contract, particularly as to the cessation of service upon termination of said contract, as provided by Section 7(b) of the Natural Gas Act. The grant of the certificate herein shall not be construed to preclude the imposition of any sanctions pursuant to the provisions of the Natural Gas Act for the unauthorized commencement of any sale of natural gas subject to said certificate.

(D) The certificate issued herein is conditioned upon the submittal by Applicant of a contract amendment as a supplement to its related rate schedule which amendment shall provide for a reduction in future tax reimbursement from seventy-five percent to fifty percent.

Commissioner Ross *not participating.*

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

MICHIGAN GAS STORAGE COMPANY, DOCKET NO. CP66-284

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 15, 1966)

On March 7, 1966, Michigan Gas Storage Company (Applicant) filed in Docket No. CP66-284 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing Applicant to use its existing facilities for the transportation, of up to 350,000 Mcf of natural gas per day for and in behalf of its sole customer, Consumer Power Company (Consumers), all as more fully set forth in the application.

By order of the Commission issued in Docket No. CP65-245 on April 13, 1965, 33 FPC 727, Applicant was authorized to transport up to 275,000 Mcf of natural gas per day for and in behalf of Consumers commencing November 1, 1965. The gas contemplated by said authorization was to be supplied to Consumers by Trunkline Gas Company (Trunkline). An amendment dated December 29, 1965, to an agreement between Consumers and Trunkline dated October 29, 1963, provides, *inter alia*, for the delivery to Consumers of 350,000 Mcf of gas per day commencing November 1, 1966, 400,000 Mcf per day commencing November 1, 1967, 450,000 Mcf per day commencing November 1, 1968, 500,000 Mcf per day commencing November 1, 1969 and 575,000 Mcf per day commencing November 1, 1970. The Commission on February 11, 1966, in Docket No. CP66-131, 35 FPC 224, approved, *inter alia*, the 1966 increase in deliveries by Trunkline to Consumers.

In connection with the receipt by Consumers of the additional deliveries from Trunkline commencing November 1, 1966, pursuant to the aforementioned order issued in Docket No. CP66–131, Applicant desires to commence transporting, for and in behalf of Consumers, up to 350,000 Mcf of natural gas per day commencing November 1, 1966. These transportation services will be provided by Applicant without any additional facilities and all costs arising from said service will be passed on to Consumers pursuant to Applicant's cost of service tariff.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on April 14, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, Michigan Gas Storage Company, a Delaware corporation having its principal place of business in Jackson, Michigan, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of December 3, 1946, in Docket No. G–731 (5 FPC 965).

(2) The proposed transportation of natural gas by Applicant as hereinbefore described, and as more fully described in the application and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid transportation of natural gas is required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Michigan Gas Storage Company in this proceeding, authorizing the transportation of up to 350,000 Mcf of natural gas per day commencing November 1, 1966, as described hereinbefore and more fully described in the application and exhibits in this proceeding, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

FLAMBEAU POWER COMPANY, PROJECT NO. 2421

ORDER ISSUING LICENSE (MINOR)

(Issued April 19, 1966)

Application was filed on October 31, 1963 by Flambeau Power Company (Applicant) of Park Falls, Wisconsin, for a license under Section 4(e) of the Federal Power Act (Act) for constructed minor Project No. 2421, known as Lower Hydro-Electric, located on North Fork, Flambeau River in the City of Park Falls, in Price County, Wisconsin. No lands of the United States are affected by the project.

The project was originally constructed in 1896. In 1922 and the year following the project was rebuilt and the present generating units totalling 1,500 kva were installed.

The Secretary of the Army and the Chief of Engineers have reported that the plans of the project structures affecting navigation are satisfactory insofar as the interests of navigation are concerned.

The Department of the Interior, in reporting on the application, recommended, for inclusion in any license for the project, terms and conditions in the interests of fish and wildlife and recreational resources usually included in licenses for such projects, and a special condition for the protection of such resources—all as provided for in Articles 4 and 7 of attached Form L-9 and Article 12.

The Department of Health, Education, and Welfare has advised that there does not appear to be any pollution problem caused or intensified by the operation of the project.

The Conservation Department of the State of Wisconsin recommended that any license for the project contain provisions in the interests of public recreation, as provided for in Article 4 of attached Form L-9 and Article 13 herein.

In a proceeding on an application for license filed by Lake Superior District Power Company for Project No. 2390 on the Flambeau River, the Commission on May 25, 1965, 33 FPC 1067, found that the Flambeau River from its confluence with the Chippewa River to at least the North and South Forks of the Flambeau is a navigable water of the United States. In the same order, the Commission stated that after the long supply had been depleted on the lower tributaries of the Chippewa, logs were floated down the Flambeau and that during the log season from 4,000 to 5,000 men were employed on the North and South Forks of the Flambeau and on its tributaries, the Jump and Elk Rivers and their tributaries, in connection with running logs on those streams. Additional research reveals that logging was an inducement to the settlement around 1876 of Park Falls on the North Fork, Flambeau River and became an important industry of that town. The logs, cut from dense forests of pine, hemlock and hardwood located upstream and in the vicinity of Park Falls, were floated down the Flambeau River into the Chippewa to Chippewa Falls and Eau Claire, with a considerable number continuing down the Chippewa into the Mississippi River as far downstream as St. Louis. Lower Hydro-Electric Project No. 2421 is located at Park Falls on North Fork, Flambeau River at approximately river mile 95 above the confluence of the Flambeau and Chippewa Rivers.

In our order on rehearing issued February 17, 1965, in *Wisconsin Power & Light Company*, Project No. 2347, *et al.* (33 FPC 275) we stated that we would have no objection to the issuance of licenses for minor projects without waiving Sections 14 and 15 of the Federal Power Act and the other provisions of the Act necessary to the effectuation of those sections, provided the minor project applications are timely supplemented pursuant to Section 4.50 of our Regulations under the Act (18 CFR § 4.50), which relates to applications for major projects. In the event the Applicant herein wishes a license in which those provisions of the Act are not waived it should so advise us within 30 days from the date of issuance of this order and file its supplemental application within 30 additional days thereafter.

For the reasons set forth in our April 25, 1962 Opinion No. 357 (27 FPC 830), the license herein granted shall have an effective date of April 1, 1962 and a termination date of December 31, 1993.

The Commission finds:

(1) The North Fork, Flambeau River and the South Fork, Flambeau River are navigable waters of the United States.

(2) Lower Hydro-Electric Project No. 2421 is located on navigable waters of the United States.

(3) Applicant is a corporation organized under the laws of the State of Wisconsin, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purpose of a license for the project.

(4) Public notice of the filing of the application has been given. No protests or petitions to intervene have been received. No conflicting application is before the Commission.

(5) The project does not affect a Government dam, nor will the issuance of a license therefor, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

(6) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving or developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes.

(7) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is 1,600 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the project, for the costs of administration of Part I of the Act is reasonable as hereinafter fixed and specified.

(8) It will be in the public interest to waive pursuant to Section 10(i) of the Act the terms and conditions contained in the following sections of Part I of the Act:

Sections 4(b), except the second sentence thereof; 4(e), insofar as it relates to approval of plans by the Chief of Engineers and the Secretary of the Army and to public notice; 6, insofar as it relates to public notice and to the acceptance and expression in the license of terms and conditions of the Act which are hereinafter waived; 10(c), insofar as it relates to depreciation reserves: 10(d); 10(f); 14, except insofar as the power of condemnation is reserved: 15; 19; 20; 22; and 23(a), insofar as it relates to the determination of fair value.

The Commission orders:

(A) This license is hereby issued to Flambeau Power Company of Park Falls, Wisconsin, under Sections 4(e) and 10(i) of the Act, for a period effective as of April 1, 1962, and terminating December 31, 1993, for the continued operation and maintenance of Project No. 2421, located on the North Fork, Flambeau River, a navigable water of the United States, subject to the terms and conditions of the Act insofar as not expressly waived herein, which Act is hereby incorporated by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Project No. 2421 consists of:

(i) All lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined; and

(ii) A concrete gravity type dam 186 feet long and 32 feet high with earth filled abutments, a reservoir about 1.6 miles in length, headgates and trashracks, a log sluiceway, a powerhouse containing three turbines direct-connected to three generating units totaling 1,500 kva, a substation and appurtenant mechanical and electrical facilities.

(C) This license is also subject to the terms and conditions set forth in Form L-9 (July 1, 1964) entitled, "Terms and Conditions of License for Constructed Minor Project Affecting Navigable Waters of the United States" (32 FPC 757), which terms and conditions, designated as Articles 1 through 11, are attached hereto, and made a part hereof, and subject to the following special conditions set forth herein as additional articles:

Article 12. The Licensee shall provide minimum water releases from the reservoir into the river below the dam amounting to 300 c.f.s. or the natural inflow, whichever is less.

Article 13. The Licensee shall provide land at no cost and cooperate with the State and local agencies in developing and maintaining access roads, areas, a canoe portage, and such facilities needed for full public utilization of outdoor recreation opportunity, including fishing and hunting, at the project consistent with the terms of the license and the operation of the project.

Article 14. The Licensee shall pay to the United States the following annual charge effective April 1, 1962:

For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, an annual charge of $80.00.

(D) The terms and conditions of the Act, which it has been found to be in the public interest to waive, are hereby excluded from this license.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

OPINION NO. 488

KNOXVILLE UTILITIES BOARD, ET AL. v. EAST TENNESSEE NATURAL GAS COMPANY, DOCKET NO. RP65-4

OPINION AND ORDER MODIFYING AND ADOPTING INITIAL DECISION OF PRESIDING EXAMINER DETERMINING RATES

(Issued April 19, 1966)*

1. Costs of recent major extension should be included in Respondent's cost-of-service on a "rolled-in" basis. P. 537.

---

*Initial decision appears on P. 546.

2. Although not a part of Company's system at end of test year, extension was constructed and costs thereof incurred well within nine month adjustment period provided in Section 154.63(e)(2) of the Regulations. P. 537.
3. Recognizing general principle favoring treatment of individual pipeline as a unified entity wherever possible, Commission *concludes* there is not sufficient reason here to exclude new extension from cost-of-service. P. 537.
4. Judgment as to economic feasibility of extension was made on basis of estimated revenue of third year as submitted by pipeline in certificate proceeding. P. 537.
5. While Commission policy encourages maximum reasonable extension of natural gas service by pipelines, companies must realize that incremental rate of return during initial development period will, in most instances, be less than return on system as a whole. P. 537.
6. It is proper to use third year estimated operational revenues for new extension in establishing East Tennessee's rates here. P. 537.
7. Factors, beyond mere temperature alone, which must be considered and lack of adequate evidence precludes allowance for claimed weather normalization adjustment. P. 538.
8. While not concluding that weather normalization adjustments can never be effected, Commission cautions that a high standard of proof will be required to establish a variance from actual test period experience. P. 538.
9. Amortization of claimed regulatory expense over a five-year rather than a three-year period is proper. P. 538.
10. Finding Relative Use Method of cost allocation not yet sufficiently refined for application to East Tennessee or pipelines in general, Commission continues use of *Atlantic Seaboard* method here. P. 539.
11. For the interim, East Tennessee's cost-of-service tax allowance is computed on basis of straight-line depreciation conditioned on additional rate reductions in event liberalized depreciation is found appropriate in separate proceeding. P. 539.
12. It was proper to exclude balance in Account 282, Accumulated Deferred Income Taxes—Liberalized Depreciation, from the rate base, allowing no return thereon. P. 540.
13. Commission *concludes* that 6.5 percent is just and reasonable rate of return for East Tennessee. P. 541.
14. In a proceeding under Section 5(a) of the Natural Gas Act, Commission *determines* just and reasonable rates for East Tennessee Natural Gas Company.

Commissioner O'Connor *concurring with one exception.*

James L. Bomar, Jr. and *John C. Shofner* for Knoxville Utilities Board, United Cities Gas Company, Volunteer Natural Gas Company, Cleveland Natural Gas Company, Athens Utility Board, Citizens Gas Utility District, Cookeville Gas Department, Elk River Public Utility District, Englewood Natural Gas System, First Utility District of Maury County, Gallatin Natural Gas System, Harriman Utility Board, Jefferson-Cocke Utility District, Lenoir City Utilities Board, Lewisburg Gas Department, Livingston Gas Department, Loudon Utilities Board, Madisonville Gas Company, Marion County Natural Gas Company, Middle Tennessee Utility District, Oak Ridge Utility District, City of Rockwood Natural Gas Company, Sevier County Utility District, City of Sweetwater, Unicoi Natural Gas Utility District.

W. D. Spears, Norman T. Hayes, Jr. and *J. David Mann, Jr.* for Chattanooga Gas Company.

William W. Bedwell, Frank E. Barnett, Harold L. Talisman and *H. F. Aby* for East Tennessee Natural Gas Company.

Eugene W. Ward and *George Shuff* for Tennessee Public Service Commission.

Wilbur L. Hazlegrove for Roanoke Gas Company and Colonial Natural Gas Company.

Samuel B. Ross for the Staff of the Federal Power Commission.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

BAGGE, *Commissioner:*

This proceeding arose as a result of a formal complaint under Section 5(a) of the Natural Gas Act filed by a group of gas distribution companies, municipalities, and political subdivisions of the State of Tennessee (Knoxville, *et al.*) against their natural gas pipeline supplier, East Tennessee Natural Gas Company (East Tennessee). The complaint alleged that based on the principles employed by the Commission in its last determination of the rate levels of East Tennessee and using data contained in the 1963 Annual Report to the Federal Power Commission, the jurisdictional revenues being collected by East Tennessee are excessive and, consequently, that its rates are not at the lowest reasonable level. By order dated October 22, 1964, 32 FPC 1161, an investigation was instituted into the reasonableness of the rates and charges levied by East Tennessee, with interventions by Chattanooga Gas Company (Chattanooga), Roanoke Gas Company and Colonial Natural Gas Company (Virginia Interveners), the Tennessee Public Service Commission and the State Corporation Commission of Virginia.

The proceeding is a complete rate determination of East Tennessee encompassing the issues of proper costs and cost levels, rate of return, rate base cost allocation, rate design and zone rate differentials. In addition, there is an issue of whether or not to include the estimated cost and revenues of a recent major extension of facilities into a new territory. The case is before us at this time for decision on exceptions[1] to Examiner Seymour Wenner's decision issued August 23, 1965, *infra* p. 546, which would have required East Tennessee to reduce its system-wide rates by approximately $700,000 commencing in December 1965, with a further decrease of $119,000 to be effective in December 1966.

In general, we conclude that the Examiner properly determined each of the substantial issues, but that relatively minor adjustments should be effected on certain points. The matter of the Federal income tax allowance to be included in the cost-of-service will be discussed separately since our present disposition of this issue will be only an interim treatment, rather than the final resolution proposed by the Examiner.

Four of the parties requested opportunity for oral argument before the Commission. Except for the tax item we concluded, as expressed in our February 24, 1966 order, that the issues have been fully briefed and that oral argument hereon was unnecessary. We affirm that ruling herein.

1. *Treatment of Virginia Extension*

The Virginia extension was certificated in Opinion No. 435 and order issued July 17, 1964.[2] Construction was begun in October 1964 and completed in

---

[1] Filed by East Tennessee, Knoxville, *et al.*, Chattanooga and the Staff. Briefs opposing exceptions also were filed by these parties, as well as by the Virginia Interveners.

[2] *East Tennessee Natural Gas Company*, Docket No. CP64-21, 32 FPC 158, rehearing denied 32 FPC 734.

December of the same year. The extension constitutes Zone 3 of East Tennessee's system. Although service to Roanoke Gas Company began immediately upon construction of the extension, the start-up of Colonial Natural Gas Company was delayed by its inability to get its distribution lines timely laid. East Tennessee indicated in the record that limited service was to begin to Colonial in May 1965 and that the first full year's operations were to have commenced in December 1965.

The test period agreed to by all parties in this proceeding for determining the reasonableness of East Tennessee's rates and charges is the year ending September 30, 1964. The issue is whether the cost-of-service should be adjusted to reflect the added facilities involved in the Virginia extension. Further, if it is determined that these facilities are to be included, it then becomes necessary to fix the appropriate revenue adjustment to match the test year cost-of-service.

We agree with the Examiner, and with the position of most of the parties, that the costs of the Virginia extension should be included on a "rolled-in" basis. The extension is in service and will be almost fully operational when the rates herein prescribed become effective. Although not a part of East Tennessee's system at the end of the test year, it was constructed, and the costs thereof were incurred, well within the nine month adjustment period provided for in Section 154.63(e)(2) of the Regulations under the Natural Gas Act. In short, and recognizing the general principle favoring the treatment of the individual pipeline as a unified entity wherever possible,[3] we conclude that no sufficient reason has been advanced for excluding the Virginia extension from the cost-of-service.

We do not accept, however, the two step revenue adjustment made in the Examiner's initial decision, that is, using second year estimated revenues to fix rates until December 18, 1966, and third year revenues to determine the rates thereafter. Our judgment as to the economic feasibility of the extension was made on the basis of the estimated revenue results of the third year as submitted to us by East Tennessee in seeking its certification. While it is our policy to encourage the maximum reasonable extension of natural gas service by pipelines under our jurisdiction,[4] these companies must realize that the incremental rate of return during the initial developmental period for such extensions will, in most instances, be less than the return rate on the systems as a whole. In applying for and receiving authorization to extend its lines into a new area, the pipeline is presented with an opportunity for expansion and increased revenues; as with most businesses, however, it must expect to underwrite a share of the developmental expenses incident to the opportunity thereby provided for increased earnings in the later period.

East Tennessee's sales and revenue estimates for the Virginia extension are lower than the original estimates submitted in the certificate proceeding in that the Colonial revenues are shown to lag one year behind the original estimate. Thus, a significant adjustment has already been made to the third year operating revenues. In our opinion the third year estimated operational revenues of $2,152,000, reflecting anticipated sales of 3,850,558 Mcf is the proper figure to be used in establishing East Tennessee's rates in this proceeding.[5] Whether this same conclusion will be reached in cases involving similar situations will depend upon the circumstances present in those cases.

[3] *Battle Creek Gas Co.* v. *F.P.C.*, 281 F. 2d 42 (CADC–1960) and cases cited, footnote 9 at p. 46.

[4] *Southern Natural Gas Company*, Opinion No. 424, 31 FPC 789, 796.

[5] Accord, *Midwestern Gas Transmission Co.*, 24 FPC 303, rehearing denied, 24 FPC 844; affirmed *Midwestern Gas Transmission Co.* v. *F.P.C.*, 292 F. 2d 119 (CA5–1961).

In its desire to expeditiously construct the Virginia extension, East Tennessee incurred construction costs exceeding the original $5,139,000 estimate by $1,908,000, an excess of 37 percent. *Knoxville, et al.*, contends that the record herein is not sufficiently complete to determine whether the excess costs were prudently incurred. While it does not ask for elimination of the "crash program" construction costs, it does request that the Commission not resolve this item and reserve Knoxville's opportunity to question the expense in a later proceeding.

The final costs for the Virginia extension were not known until East Tennessee submitted its rebuttal material. While we shall include the entire $7,047,000 cost in the cost-of-service in this case, such action should not be construed to foreclose Knoxville's or any other parties' right, within a reasonable period, to question the appropriateness of any part thereof at a later suitable occasion.

2. *Other Test Year Adjustments*

East Tennessee has excepted to the Examiner's refusal (1) to effect a claimed weather normalization adjustment, and (2) to adjust the future sales to Chattanooga to reflect the loss of certain sales of interruptible gas now purchased by Chattanooga for resale to the Farmer's Chemical Association, an industrial consumer. We are in accord with the Examiner's disposition of these issues. The variety of other factors, beyond mere temperature alone, which must be considered and the lack of evidence adequate to prove the representative of the temperatures submitted as the basis for the adjustment preclude the allowance of an adjustment in this case. While we do not conclude that a weather normalization adjustment can never be effected, we do caution those seeking to claim such a variation, whether upward or downward, that a high standard of proof will be required to establish a variance from actual test period experience.

The matter of the Farmer's Chemical sale by Chattanooga is currently under Commission review on consideration of the exceptions filed to the initial decision in the comparative certificate proceeding at Docket No. CP64–270, *et al.* At this time no decision has been reached on whether another supplier will be certificated to satisfy the needs of Chattanooga and the Association. Apart from the prejudgment which would be involved, an adjustment in this case to meet only one of the possible outcomes of that proceeding would not be in order. Moreover, the adjustment would be for a change, if any, occurring almost two years after the close of the test period, well beyond the normally accepted interval.[6] We further find that the condition suggested by East Tennessee that it flow-through all net revenues from the Chattanooga-Farmer's Chemical sale if we ultimately allow the company to continue to make the sale is not appropriate because we cannot assume that the loss of the sale would in fact result in a reduction in the net jurisdictional revenues.

Next, East Tennessee contends that the Examiner erred in amortizing its claimed regulatory expense, $152,400, over a five-year period rather than three years. The difference would add $20,800 to the cost-of-service. East Tennessee's last formal rate hearing was in 1959. Five years is the normal amortization period, with exceptions being limited to their peculiar factual circumstances. Normalization at $30,000 per year meets fully the foreseeable needs of East Tennessee. The exception is denied.

The Examiner deducted $60,000 from operating expenses on the Virginia extension facilities based on an estimated saving in this amount from automation of the Tri-Cities and Glades Springs compressor stations. The estimate of the annual savings was made by East Tennessee's witness. Since East Tennessee's ratepayers will be paying the fixed charges incident to the additional investment, it was appropriate for the Examiner to adjust his operating expense allowance to reflect the cost saving.[7]

---

[6] *United Gas Pipe Line Company*, Opinion No. 428, 31 FPC 1180, 1186; Opinion No. 428–A, 32 FPC 687, 689; rehearing denied 32 FPC 879.

3. *Method of Allocation to Determine Jurisdictional Costs*

In past decisions[8] we have had occasion to express our growing disfavor of the principles of classification established in *Atlantic Seaboard Corp.*, Opinion No. 225, 11 FPC 43, and *Northern Natural Gas Co.*, Opinion No. 228, 11 FPC 123, and commonly referred to as the *Atlantic Seaboard* formula. While continuing to show a standard *Seaboard* allocation, staff introduced a new allocation method, denominated Relative Use, as a "possible alternative." The Relative Use method, its distinguishing characteristics and its asserted advantages over *Seaboard* are fully described in the Examiner's decision.

We have considered the Relative Use method and find that it is not yet sufficiently refined for application to East Tennessee or to pipeline companies in general. On this record staff has failed to supply the evidentiary support necessary to justify the method. Although we will require our staff to direct further attention to allocation methods in hope that improvements will be forthcoming, we shall continue to follow the *Atlantic Seaboard* method of cost classification in this proceeding.

4. *Federal Income Tax Allowance*

East Tennessee had been using liberalized depreciation since 1954, as permitted by Section 167 of the Internal Revenue Code. In December 1964, after the institution of this proceeding, East Tennessee's board of directors instructed its officers to convert to straight-line depreciation and to use this for its 1964 Federal tax return, due September 15, 1965. East Tennessee has now filed its tax return on the basis of straight-line depreciation and any future change can be made only with the approval of the Commissioner of Internal Revenue. The issue is whether the tax allowance in the cost-of-service should be based on liberalized or straight-line depreciation in this circumstance.

The Examiner concluded that the test period cost-of-service should be based on liberalized depreciation, irrespective of how East Tennessee chooses to file its tax return. East Tennessee's exceptions on this item are not before us for consideration at this time since, by order issued February 24, 1966, 35 FPC 249, we in effect severed this one issue from the others and consolidated it for oral argument with the identical reserved issue in *Midwestern Gas Transmission Company*, Docket Nos. RP61-19, RP62-7 (Reopened). Oral argument was held April 5, 1966. Accordingly, in accordance with our action in a number of other cases,[9] we shall, for the interim, compute East Tennessee's cost-of-service tax allowance on the basis of straight-line depreciation with a condition requiring additional rate reductions in the event liberalized depreciation is found appropriate in the decision in the consolidated proceedings.

---

[7] No exceptions were taken to the disallowance of minimum bank balances and special deposits in working capital. The credit to working capital has been revised from 41.55% to 30.00% of the current portion of F.I.T. to take into account the enactment on March 15, 1966, of the Tax Adjustment Act of 1966.

[8] See *Southern Natural Gas Co.*, Opinion No. 379, 29 FPC 323, 341–42; *United Fuel Gas Co.*, 31 FPC 1342, 1347–48; *Midwestern Gas Transmission Co.*, Opinion No. 477, 34 FPC 973, pp. 981, 982.

[9] *Midwestern Gas Transmission Co.*, Opinion No. 444, 32 FPC 993, 996; *Alabama-Tennessee Natural Gas Co.*, Docket No. RP65-58, 34 FPC 767, order issued September 8, 1965.

Assuming, *arguendo*, that liberalized depreciation is required, one of the issues will be the time at which such recomputation should be made effective. It would be inappropriate, therefore, to specify any effective date at this time.

Pursuant to *Alabama-Tennessee*, Opinion No. 417, 31 FPC 208, staff and the Examiner deducted the balance, $244,400, in Account No. 282, Accumulated Deferred Income Taxes—Liberalized Depreciation, from the rate base, allowing no return thereon. East Tennessee has excepted on the ground that its rates should not be reduced for this item until the *Alabama-Tennessee* decision is judicially reviewed and finally affirmed.[10] In that event East Tennessee says that it will refund to the date new rates become effective herein the amounts owed thereby.

On March 25, 1966, the Court of Appeals for the Fifth Circuit issued its decision on review of *Alabama-Tennessee* unanimously affirming Opinion No. 417. There is thus no valid reason for affording any treatment to these balances other than their complete excision from the rate base. The balance in Account No. 282 will be excluded.

5. *Rate of Return*

Knoxville, *et al.* suggests a 5.75 percent rate of return, staff recommends 6.5 percent and East Tennessee seeks 7.25 percent. East Tennessee's capitalization is approximately 35 percent equity, 65 percent debt. A 6.5 percent rate overall yields 8.53 percent on equity, compared to 6.38 percent at the 5.75 percent rate and 10.68 percent on equity at 7.25 percent.

East Tennessee is 91 percent owned by Tennessee Gas Transmission Company. Both staff and Knoxville urge recognition of this fact through cognizance of the return allowed the parent on its common equity invested in the common equity of East Tennessee, *i.e.*, the "double leverage" argument.[11] The place of the "double leverage" theory in fixing a pipeline's rate of return was considered most recently in the *Midwestern* case.[12] While refraining from placing any particular reliance thereon, we did conclude that this information is helpful in showing that the return on equity to a subsidiary is not a measure of the return to the parent's stockholders whose funds have been invested in the subsidiary.

The *Midwestern* decision supports the 6.5 percent rate of return recommended by staff and the Examiner. Both companies are almost wholly owned subsidiaries of Tennessee Gas Transmission Company; the somewhat higher return on equity allowed Midwestern, 9.26 percent, is largely offset by the greater equity capitalization of East Tennessee.[13] In both cases the rate seemingly would be adequate to attract all necessary capital.[14] Moreover, as brought out by the Examiner, East Tennessee has a substantial nonjurisdictional business, adequate at a 6.5 percent rate to produce a total return on equity of 11.7 percent. While the rate of return we determine here for the jurisdictional business is the rate we deem necessary if the jurisdictional business is to provide its fair share of the return to which East Tennessee is entitled, we are not precluded from considering the total return thereby resulting in determining the rate of return necessary for maintenance of the jurisdictional operations.[15]

---

[10] *Alabama-Tennessee Natural Gas Co.* v. *F.P.C.*, CA5, No. 21610.

[11] The levered return at the various recommended rates are: 5.7%=10.66%; 6.5%=18.46%; 7.25%=26.29%.

[12] 32 FPC at pp. 998–1000.

[13] 34.81% compared to Midwestern's 19.66%.

[14] There is nothing in this record to indicate that East Tennessee has any plans for raising additional equity funds in the public market.

[15] *Alabama-Tennessee Natural Gas Co.*, Opinion No. 360, 27 FPC 1180, 1189 (1962); *Mississippi River Fuel Corp.*, Opinion No. 234, 11 FPC 288, 299 (1952).

In essence, and considering fully all points made in the briefs on exceptions, we see no justification for a rate in excess of 6.5 percent. By the same token there is little warrant for a rate as low as 5.75 percent which even Knoxville, its proponent, admits is at the lower fringe of the zone of reasonableness. We conclude that 6.5 percent is a just and reasonable rate of return for East Tennessee and is in accord with the judicially established criteria.[16]

6. *Rate Design*

East Tennessee's present basic rate for Zone 1 is $3.25 demand and 28.62 cents commodity. The Zone 2 and Zone 3 rates are each 25 cents higher in the demand charge and 2.5 cents on the commodity side. Knoxville and Chattanooga, Zone 1 customers, oppose allowing the Zone 3 Virginia extension customers to participate in the rate reductions ordered from the excess earnings determination on the ground that the present Virginia rates are not sufficient to absorb fully their properly allocated costs even in the third year of projected operations.[17]

The greatest share of the excess revenues are generated in Zone 1. As determined by the Examiner, Zone 2 is operating at a slight excess and Zone 3, by its third year, will have a slight deficiency. With staff's and the Virginia customers' concurrence, he applied his rate reductions equally across the three zones. There is some merit to the claim that the Virginia extension should not share equally with Zone 1 in a rate reduction. The same argument can be made, however, albeit to a lesser extent, in regard to Zone 2. Hopefully, Zone 3 sales will increase beyond the third year forecast as time goes on [18] and the anticipated deficiency will be reduced, if not entirely eliminated. This can best be promoted by rates set as low as possible.

To the extent that East Tennessee's system is to be unitized, the zone rate differentials should be minimized to the greatest extent permissible. The fact that Zone 3 has increased transportation costs over Zones 1 and 2 is taken into account in the staff's Mcf-mile allocation method and is reflected in the existing variation in rates between the zones. The differentials are reasonable and should not be expanded. The revenue reductions will be applied equally to all three zones.[19]

No exception has been taken to the method of reducing rates set out by the Examiner. Several parties have noted, however, that he did not comply with his expressed 2:1 ratio in reducing the two-part commodity rates over the one-part rates. The omission is obviously inadvertent and has been corrected in the rates here ordered.

Knoxville excepts to the Examiner's failure to order flow-through of supplier refunds and rate reductions hereafter ordered by the Commission. East Tennessee agreed to this in its last rate settlement and has no objection to the continuance thereof. An appropriate requirement will be included.

The exceptions not discussed herein are disposed of by the Examiner's discussion or are immaterial to the result in this case. Except to the extent herein granted, all the exceptions filed are without substantial support or reasonable basis in law and should be denied. The Examiner's decision should be modified in accordance with this decision and, as so modified, should, with this opinion, constitute the decision of the Commission in this case.

---

[16] *Bluefield Water Works and Improvement Co.* v. *P.S.C. of W. Va.*, 262 U.S. 679; *F.P.C.* v. *Hope Natural Gas Co.*, 320 U.S. 591.

[17] The Zone 3 commodity rate is down slightly from the certification rate due to a recent flow-through of a reduction from TGT in purchased gas costs. Knoxville and Chattanooga seek to have the rate at least restored to the original level.

[18] Exhibit 17, Sch. 1 and 2 reflect added sales of 267,110 Mcf in the fourth year.

[19] The reductions apply only to the commodity charges. There has been no suggestion for a charge in the demand rates.

The Commission further finds:

(1) East Tennessee is a "natural-gas company" subject to the provisions of the Natural Gas Act, and the sales of natural gas for resale which are the subject of this opinion and order are sales of natural gas in interstate commerce and are subject to the jurisdiction of this Commission.

(2) East Tennessee's just and reasonable rates from and after the date of this opinion and order, subject to the provisions for refunds, reductions and adjustments set forth in Paragraphs (B) and (C) below, and until changed by further order of the Commission, are as set out in Appendix C attached hereto.

(3) East Tennessee should be required to file substitute tariff sheets, subject to the approval of the Commission, containing the rates herein found to be just and reasonable as set forth in Appendix C.

(4) East Tennessee is not entitled to any return on accumulated amounts in F.P.C. Account 282, Accumulated Deferred Income Taxes — Liberalized Depreciation, so that amounts included in Account 282 should be excluded from the rate base.

(5) The accumulated deferred tax balance in Account 282 should be maintained intact and retained by East Tennessee and withdrawn only to offset any increased taxes resulting from a decline in overall tax depreciation deductions, attributable to earlier use of liberalized depreciation, on all depreciable properties used in rendering public service, below the level of the normal tax deductions under straight-line depreciation, or until otherwise ordered by the Commission.

The Commission orders:

(A) Within 45 days from the date of issuance of this opinion and order, East Tennessee shall file substitute tariff sheets, effective as of the date of this order and satisfactory to the Commission, containing the rates herein found to be just and reasonable, as set forth in Appendix C attached hereto.

(B) The question of the depreciation to be used as a deduction in computing the tax allowance in East Tennessee's cost-of-service is reserved in accordance with the foregoing opinion and the order issued February 24, 1966. The rates herein fixed on the basis of straight-line depreciation are subject to adjustment upon further order of the Commission to reflect the Commission's final disposition of this issue.

(C) East Tennessee shall continue to flow-through all refunds and rate reductions received from Tennessee Gas Transmission Company, as agreed to in the settlement approved December 16, 1960, 24 FPC 1079.

(D) Except as heretofore granted and amended by the orders issued November 18, 1965, and February 24, 1966, the motions for opportunity to present oral argument before the Commission are denied.

(E) Except as herein granted, the exceptions to the Examiner's decision are hereby denied.

(F) The Examiner's decision, to the extent not inconsistent herewith, is hereby adopted as part of this opinion and order.

Commissioner O'Connor *concurred* in the opinion with the exception of the majority's insistence on re-emphasizing their "double leverage" theory, and he cited his separate views in *Midwestern Gas Transmission Co.*, 32 FPC at 1011–1012 (1964).

APPENDIX A

EAST TENNESSEE NATURAL GAS CO.

Cost of service adjusted for third year of operation of Virginia Extension

[Accumulated deferred income taxes, account 282, deducted from the rate base; excess liberalized depreciation over straight-line tax depreciation not used as a tax deduction in the calculation of the Federal income tax]

Item	Cost of integrated system [1]		
	Total	Demand	Commodity
Operating expense:			
Gas supply expense	$16,550,753	$4,491,786	$12,058,967
Transmission expense	536,930	246,221	290,709
Customer accounting expense	39,887		39,887
Sales expense	105,172		105,172
Administrative and general expense	515,156	187,671	327,485
Total operating expense	17,747,898	4,925,678	12,822,220
Depreciation	1,170,075	585,037	585,038
Taxes:			
Other than income	670,889	335,444	335,445

Wenner, ***Presiding Examiner:*** **This is a rate proceeding concerning prospective rates for East Tennessee Natural Gas Company (ET), a natural gas pipeline serving Tennessee and southwestern Virginia. It was initiated by a complaint under Section 5 of the Natural Gas Act brought by the Knoxville**

Utilities Board and twenty-five cities and distributor gas companies in Tennessee alleging that ET's rates are unreasonably high. These complainants are listed in Appendix A, and will be referred to hereinafter as Knoxville. Chattanooga Gas Company (Chattanooga) of Tennessee, and Roanoke Gas Company (Roanoke), and Colonial Natural Gas Company (Colonial), Virginia gas distributors purchasing gas from ET's Virginia extension, were permitted to intervene. Roanoke and Colonial jointly are sometimes referred to below as the Virginia extension.

The primary questions for decision are whether the rates of ET are unjust or unreasonable, and if so, what rates should the Commission determine in lieu thereof.

I

TEST YEAR: SELECTION AND INCLUSION OF VIRGINIA EXTENSION

In determining the reasonableness of prospective rates the Commission generally selects a recent period as a test year, and then makes adjustments for certain types of expected changes. *United Gas Pipe Line Company*, Opinion No. 428, 31 FPC 1180 at pp. 1185, 1186 (1964).[1]

Three questions arise in connection with the test year: (1) the test year to be used; (2) whether the results of the Virginia extension should be excluded from or "rolled-in" with ET's cost of service; and (3) if the Virginia extension is included, should the test year for ET be adjusted to reflect the first year of actual operations on the Virginia extension, the second, or the third?

1. *The test year.*

The twelve months ending September 30, 1964, is the most recent period for which data was available at the hearing and this is selected as the test year. There is no serious dispute about the selection of the test year.

2. *Excluding or "rolling-in" the Virginia extension.*

The Virginia extension was certificated in *East Tennessee Natural Gas Company*, Docket No. CP64-21, Opinion No. 435, July 17, 1964, 32 FPC 158. It was built between October and December, 1964, after the test year. The second issue regarding the test year is whether ET's cost of service should be adjusted to reflect these added facilities.

The Virginia extension is simply one more addition into an adjacent area of a system that has been growing steadily since 1948. In Appendix B are listed some twelve of the principal grants to ET between 1948 and 1964. The Virginia extension is physically connected and operationally unified with ET's system. In these circumstances, it is proper that for ratemaking purposes ET be treated as a single entity.

> Since the system of East Tennessee is integrated and unified, and operated as such, the Examiner correctly concluded that the only proper and feasible method of allocating costs in this instance is on a system-wide basis. *East Tennessee Natural Gas Company*, 13 FPC 549, 562 (1954).

Treating an integrated pipeline as an entity has been the typical method in ratemaking, *Tennessee Gas Transmission Company*, 27 FPC 202, 206, 208, 209 (1962).

Two cases are distinguishable. In *United Gas Pipe Line Company*, Opinion No. 428, May 14, 1964, *supra* * * * and Opinion Nos. 428-A and B, 32 FPC 687, 879, the Commission stated that while it

> * * * has, historically, favored rolled-in methods of allocation * * * United, however, has traditionally been regarded as an exception to this principle,

---

[1] The Commission formerly referred to "adjustments for known changes occurring within a reasonable time." *United Gas Pipe Line Company, supra*, at p. 1186.

> mainly because it has, in the past, operated as two essentially separate jurisdictional systems * * * p. 1195.

However, even in this case the Commission noted that:

> This is in the process of change; and we expect that future allocations of United's costs will trend in the direction of a complete roll-in. p. 1197.

In *Trunkline Gas Co.*, 21 FPC 704, 711, aff'd as *Battle Creek Gas Co.* v. *F.P.C.*, 281 F. 2d 42 (CADC–1960), the Commission affirmed the general principle of "rolled-in" cost of service and applied it to the existing system, but permitted an exception for an extension built to serve a single customer. The *Northeastern case*, 9 FPC 271 (1950) and the *Algonquin* case, 12 FPC 209 (1963), are also distinguishable: they were certificate cases, and they did not involve extensions of existing systems but sales to separate subsidiary companies, which results in significant operating and tariff differences.

Knoxville argues that the revenues from the Virginia extension are insufficient to cover the cost (including return) of providing service in Virginia for the next few years, even on an incremental cost basis; therefore, says Knoxville, the Virginia extension with its costs and revenues should be excluded in determining whether ET's test year revenues yield an excess over its cost of service; and correspondingly, the issue of ET's excess revenues should be determined by considering the Tennessee portion of ET as a segregated unit with its own cost of service and revenues. For to treat ET as a single system by "rolling-in" the Virginia extension costs and revenues with the Tennessee system would throw the burden of the Virginia deficiency upon the Tennessee customers; and deprive them of rate reductions which they would receive if the Tennessee portion of ET were considered as a separate entity.

The certificate case, Docket No. CP64–21, was the forum for determining whether the Virginia extension should be certificated. In that proceeding Knoxville expressed its fears about the possible unprofitability and resulting burdens on the existing Tennessee customers if this extension were certificated. But the Commission certificated the extension, and the situation is now governed by normal ratemaking principles. On this score, Knoxville's argument that the Virginia extension is going to be unprofitable for a while, and should therefore be excluded from ET's test year cost of service constitutes in some respects a relitigation of what is *res judicata* in Docket No. CP64–21. The Commission having heard the argument decided that case. And ET is now a pipeline that operates in Tennessee and Virginia and must be treated as such.

The conditions in the ordering clause in Docket No. CP64–21 do not provide that the Virginia extension should be excluded from ET's cost of service. Clauses B ii and vi provide:

a. ET is to keep data to show the costs and revenues for the Virginia extension for five years;

b. This is without prejudice to the method to be used in any future proceeding "for allocating costs of [for] determining rates;" and

c. The results of ET's operation in the Virginia zone during the first year may not be used as a basis for a rate *increase* under Section 4(e).

The last two provisions are neutral regarding a proposed rate *decrease* under Section 5, or a method for costing the Virginia extension. The first limitation, the requirement of keeping separate records for the Virginia extension, suggests that the Commission wanted to maintain some surveillance in the event that the Virginia extension should become an undue burden on the Tennessee portion of the system. The accomplishment of this objective does not require that the Virginia extension be excluded from the pipeline's cost of service for purposes of setting rates in this proceeding. The principle of including all its segments into an integrated pipeline's cost of service can, where proper, be harmonized with the principle of avoidance of an undue burden on other parts of the system by adjustments to the test year to reflect a representative future year for the new segment, or by appropriate rate design. Had the Commission desired to provide against the inclusion of the Virginia extension in future rate cases, it could easily have done so by express language in Docket No. CP64–21. Indeed one would expect that if it had desired a result so contrary to established ratemaking principles, it would have said this plainly. Nor is such an intention to be derived by construction of the conditions relating to the Virginia extension. It is therefore concluded that the test year should not exclude the Virginia extension from ET's cost of service.

3. *What year of operations should be used for adjusting the test year?*

In the Virginia certificate case the economic feasibility of the extension was based on the hypothesis that it would earn a fair return by the third year of operation. During the first two years the revenues were not expected to cover the cost of service including full return and associated income taxes for the Virginia extension even on an incremental cost basis.

The Virginia extension was built to serve two distributors, Roanoke and Colonial. In Docket No. CP64–21, it was expected that Colonial would purchase about twice as much the annual volume of gas that Roanoke would. Roanoke began taking gas on December 18, 1964. However, Colonial's start was delayed until May 1965. ET and Colonial renegotiated their precedent agreement so as to postpone by one year Colonial's contract demand charge from December 1964 to December 1965.

By December 1965, Roanoke will have been in operation a full year, and Colonial about a half year. It is reasonable to expect that a decision by the Commission in this case (and on a petition for reconsideration) will not issue until late in 1965, about the end of the first year of actual operation.

In the instant proceeding ET submitted sales and revenue estimates for operations on the Virginia extension, and these were accepted by all parties. ET adhered to its original estimates submitted in the certificate case except that it estimated that the Colonial revenues would lag a year behind the original estimates. ET's estimates for the annual sales from the Virginia extension are:

Year of operation of Virginia Extension:	
1	$850,000
2	1,651,000
3	2,152,000
4	2,474,000

These estimates are based in considerable part on the provisions in the service agreements between ET and Roanoke and ET and Colonial, under which the two distributors are obligated to make payments to ET for gas on a fixed incremented demand schedule over the first three years of their respective operations (and in the case of Roanoke an obligation to pay for increasing annual volumes purchased). Thus the Virginia customers have to pay a considerable part of the projected revenues whether their sales to retail customers materialize on schedule or not, mitigating the impact of any inaccuracy in the sales estimates.

In the *United* case, *supra*, the Commission explained the purpose of adjusting the test year for future events.

> The objective is to present adjustments to the test year figures which will match additional expenses with additional income as close as is reasonably possible, p. 1186.

Under the "rolled-in" adjustment substantially all the cost of facilities for the Virginia extension, some $7,000,000 is included in the cost of service for the first year. But the sales and the revenues derived therefrom are expected to escalate regularly for the first several years. A test year revenue adjustment for the Virginia extension to match the test year cost of service is therefore appropriate: but which year's revenues are representative?

ET argues that the revenue adjustment should be on the basis of the expected sales during the first year's actual operation, estimated first year for Roanoke and (because of the delay) half of the estimated first year for Colonial. This isn't representative of the future because by the time the Commission's final decision issues, the first year's actual operations will have been virtually completed and ET will be operating in the second year, when its sales from the Virginia extension will have virtually doubled.

Staff proposes to use the sales (with appropriate adjustments in costs) for the second year of operations, *i.e.*, second year sales for Roanoke and first full year sales for Colonial. These are appropriate levels for the second year. But a year later the Virginia sales will have increased and will be producing excess revenues. For this reason Knoxville and Chattanooga urge that if the costs of the Virginia extension are to be rolled-in, the sales level for the third year of operations should be the minimum adjustment. In the fourth year of operations Colonial's purchases will again increase because this will be only the third year of the Colonial operation. Thus use of third year sales would produce excess revenues in the fourth year and each year thereafter, without giving consideration to any further growth.

On the other hand, if rates are based on third year sales, ET will have to bear a deficiency of some $80,000[2] during the second year, a result which would tend to contravene the Commission's policy of encouraging pipelines to extend their service to new areas, "provided that no undue burden is placed on the existing customers." *Southern Natural Gas Company*, Opinion No. 424, April 6, 1964, 31 FPC 789 at 796, cited in Opinion No. 435, 32 FPC 158 at 161. While the third year standard is more representative of the long term future than the second, its immediate adoption would impose a burden on ET; and the second year standard would yield excess revenues after being in effect only one year, imposing an undue burden on the rate payers.

In these circumstances the fairest solution is to use the sales estimate for the second year of the Virginia operation for determining rates for the year immediately following the decision herein, and then to use the third year sales level for setting rates for the years thereafter. As the Commission stated in this connection in the *United* case, *supra*, "What is reasonable obviously depends on the circumstances."

As a practical way of effectuating this two-step test period standard, the rates to be prescribed herein will be fixed in the first instance on the basis of the second year of operation of the Virginia extension; and on and after December 18, 1966, ET's rates will be determined on the basis of the third year of operation of the Virginia extension.

Knoxville argues that ET will have been earning excess revenues under present rates until the present rates are revised and this will compensate for any deficiency in the year following the prescription of rates herein; and that as a result any burden arising from using third year sales during the second year will have already been offset. But it is settled law that excess earnings under a prior closed rate cannot be used to offset a deficiency under a prospective rate. *Galveston Electric Company* v. *City of Galveston*, 258 U.S. 388 (1922).

---

[2] This deficiency would reduce the allowed rate of return from 6.5 percent to 6.1 percent during the second year of operation of the Virginia extension.

In *United Gas Pipe Line Company, supra*, and in *Southern Natural Gas Company*, 29 FPC 323, 433 and 779 (1963), the pipelines had placed substantial new facilities in operation some nine months after the close of the test period. The Commission adjusted test year costs to include the added facilities, and adjusted revenues to include the first year's revenues.

In *Midwestern Gas Transmission Company* v. *Federal Power Commission*, 292 F. 2d 119, (CA5–1961), the Court sustained the Commission's requirement that Midwestern's rates be established on the basis of its third year of operation. The Commission had imposed a rate condition in a certificate. The case involved the problem whether the rate level arising under the rates submitted by the pipeline several years later was in consonance with the original rate condition. The Commission applied rate case principles to decide the matter in *Midwestern Gas Transmission Company*, 24 FPC 844, 846 (1960), and the Court on review considered the problem to be one for "rate fixing purposes." In affirming the Commission's decision the Court stated:

> During the first two years it was expected that considerably less gas would be purchased, transmitted and sold by Midwestern than during the third and succeeding years. It did not expect and was not entitled to expect that it would be permitted, during the development period, to charge rates that would produce revenue of an amount equal, or even comparable, to that which it would be entitled to receive when the full capacity of operations had been attained. Midwestern is not entitled to the return for the lesser volume of business during the development years that it will become entitled to receive during the post-development period from the larger volume.
>
> * * * * * * *
>
> The third year of operation was a proper year upon which to base a rate of return for rate-fixing purposes. It would be the first full year of normal operations. The use of an earlier year as a test year would have produced a rate which would have resulted in an excessive cost to the consumer * * * (120, 121).

Although there are problems in making forecasts for several years, large businesses prepare and use them. The Commission requires three-year forecasts for the operations of proposed new facilities in certificate cases. When lending institutions consider substantial long-term loans, they often obtain from the borrower forecasts of costs and revenues for several years. In connection with borrowings by Tennessee Gas Transmission Company (TGT), ET's parent, a TGT official who appeared in the instant proceeding as an ET witness, prepared cost and revenue forecasts some of which involved projections for as far as five years in the future. The economic feasibility of the Virginia extension in the certificate case was based on the revenue results of the third year of operation. It is reasonable that the prospective permanent rate level in this case be based on third year results where these are reasonably expected to be considerably higher than the earlier years, provided an undue burden is not imposed on the pipeline during the build-up period, which is accomplished by an interim rate based on second year operations.

II

TEST YEAR: OTHER ADJUSTMENTS

1. *Weather Normalization.*

In its decisions the Commission has consistently rejected claims that test year revenues should be adjusted downward because of abnormally low temperatures during the test year.[3] ET argues that such an adjustment should be made in this case. Staff, Knoxville and Chattanooga oppose.

Among the reasons for not making a test year adjustment for temperature is the difficulty of determining an appropriate adjustment. For example:

a. Factors other than temperature should also be considered in an adjustment for weather: for example, wind velocity and cloud cover directly affect heat consumption. The measurement of these factors is a practicable impossibility.

b. The measurement of a representative temperature adjustment followed through to its effect on gas volumes requires relating representative temperatures to representative heating load centers. Also normalization for cold weather involves a determination not only of the proper decrease in firm sales but also of the proper increase in interruptible sales. These can be complex problems.

c. An adjustment for cold weather would require corresponding adjustments in many cases for warmer than average weather. The complications and proof which this would require are considerable.

Some of these problems are indicated by the evidence presented in this case. ET's temperature results are for Knoxville, which it is asserted is a representative center for the system. But the temperature statistics from other points indicate that Knoxville's temperatures are not representative. Hence it would be necessary to correlate temperature fluctuations with sales volumes at the heating load centers, which ET has not done. In this and in other respects the claims for and the measurement of a weather adjustment "have not been sufficiently supported to justify the adjustments claimed." *Alabama-Tennessee Natural Gas Co., supra,* at 1187.

2. *Sales to Farmer's Chemical.*

Chattanooga currently sells interruptible gas purchased from ET to the Farmer's Chemical Association for manufacturing fertilizer. In Docket No. CP64–270, proposals have been made for Chattanooga to purchase firm gas for this purpose from other pipelines. However, since ET has an exclusive contract to supply gas to Chattanooga, another proceeding has been instituted, *Chattanooga Gas Company,* Docket No. RP65–3, 32 FPC 882, to determine whether Chattanooga can legally purchase gas from another supplier. In Docket No. CP64–270, ET is proposing to increase its capacity in order to increase sales to Farmer's Chemical.[4] The alternative proposals are numerous and their consequences varied. The outcome of the two proceedings and the nature and effects that the decisions therein may have on these sales are still conjectural.[5] Consequently at this stage it would be unsound to provide an adjustment for the loss of these sales; for if this were done, present customers would be paying rates on the basis that ET is not making such sales even though it is and may well continue to do so.

3. *Savings from Automatic Equipment.*

ET automated the compressor stations on the Virginia extension at a cost of $200,000 which it estimates will save $60,000 on annual labor costs. It included the investment in its accounts but made no reduction in estimated operating expenses. An approximate adjustment in operating expenses should be made.

---

[3] In two cases the Commission has indicated that weather normalization might be proper in prescribing future rates if abnormal weather during the test year were proved. *Home Gas Company,* 13 FPC 241, 245 (1954); *Alabama-Tennessee Natural Gas Company,* 27 FPC 1180, 1186, 1187 (1962).

[4] The record herein shows that proposals to reduce ET's rates for these sales were stricken in Docket No. CP64–270.

[5] Exceptions to the decision of the Presiding Examiner in RP65–3, modifying the contract in some respects, were filed on May 20, 1956. Briefs to the Presiding Examiner in CP64–270 were filed June 17, 1965.

4. *Regulatory Expenses.*

To determine the allowance for rate case expenses the Staff used the average of ET's regulatory expense for certificate as well as rate cases over the most recent five years then available, 1959–1963, $29,000 per year. If the 1964 figure is included the 6-year average is $25,000.

ET estimates its rate case expense for this case and for Docket No. RP65-3 to be $152,400, which it amortizes over three years for an average of $50,800.

ET had one rate case in 1959; it has two in progress now and had none during the interval. Two rate cases in one year are unusual for East Tennessee, so these expenses should not be treated as recurrent; for the amount allowed for regulatory expenses becomes imbedded in the rate and continues to be a charge in the indefinite future until a new rate is finally determined. In the instant case ET's witnesses and its attorney were company employees of either ET or its parent, TGT. The amounts estimated are largely allocations of their annual salaries. Moreover RP65-3 did not require elaborate preparation as the problem involved is primarily legal. The Commission has frequently used an amortization period of five years for regulatory expense. *Alabama-Tennessee Natural Gas Company*, 11 FPC 75, 82 (1952). In *Alabama-Tennessee*, 27 FPC 1180 (1962), the Commission amortized the amounts over eight years. In *Michigan Wisconsin Pipe Line Company*, 13 FPC 326, 357 (1954), the Commission deviated from its usual practice of five-year amortization of rate case expense because of special circumstances including the filing of one rate case immediately after another, and in effect used a 3-year amortization period. In *Midwestern Gas Transmission Company*, Opinion No. 444, December 30, 1964, 32 FPC 993, 1548, the Commission approved a settlement with a 3-year amortization period. But the order approving the settlement states that the settlement shall not constitute an agreement on ratemaking principles or methods, but that it is only a dollar settlement of Midwestern's rate proceedings. In the circumstances of this case it is concluded that the amount claimed by East Tennessee should be accepted and amortized over a 5-year period with the sum rounded to $30,000 per year. If future rate proceedings occur before the cost of the instant proceedings has been fully amortized an apropriate adjustment can be made in a subsequent proceeding. *Cf. Alabama-Tennessee Natural Gas Company, supra*, at p. 82.

5. *Working Capital and Inclusion of Special Deposits and Minimum Bank Balances.*

ET includes in its working capital allowance special deposits amounting to $25,000. The Staff allowance for working capital is based on the Commission's pipeline formula, ⅛ annual operating expenses less the cost of purchased gas, plus materials and supplies and prepayments. The Commission has never included such special deposits in working capital. Although these items were challenged, ET introduced no evidence to show that these are required at all, or whether they are for more than a temporary period.

ET included in its working capital minimum bank balances of $400,000. ET has not shown that the normal bank balances it maintains in the ordinary course of its business are insufficient to cover the service expenses of the banks, or that the maintenance of such balances results in savings in interest rates at least equal to the return ET would earn if these deposits were included in its rate base. The bank balances arising out of the ordinary business of a company like ET are attractive to banks. There is no evidence that ET ever sought better arrangements with competitive banks. Moreover, ET has available to it substantial cash accruals of *ad valorem* taxes paid in advance for which no offset has been made by the Staff. In these circumstances the Commission has disallowed claims for minimum bank balances, *Michigan Wisconsin Pipe Line Company*, 13 FPC 326, 364 (1954), and ET's claims therefor are rejected.

6. *Atlantic-Seaboard vs. Relative Use Methods of Allocation To Determine Jurisdictional Costs.*

For many years the Commission has used the Atlantic-Seaboard formula to allocate costs between jurisdictional and non-jurisdictional operations. In the instant case the Staff presented its exhibits to show its results on the basis of the Seaboard method and also a new method called the Relative Use method. The other parties have used the Seaboard method, except that on brief Knoxville suggested averaging the results of the Seaboard and the Relative Use methods. The excess earnings are some $500,000 greater under the Relative Use method than under Seaboard.

Staff explains that the primary purpose of the Relative Use method is "an allocation method which gives a more precise measure of the use of the pipeline system by the various classes of customers than that afforded by the Atlantic-Seaboard method." Under Seaboard fixed costs are allocated on the basis of fifty percent in the ratio of gas delivered to various classes of customers on the three-day coincident peak, and fifty percent on the basis of annual sales. Under the Relative Use method fixed costs are allocated on the basis of the average of three factors: the above two, coincidental peak and annual sales, plus a new factor, the non-coincidental peak day, the ratio of use by each class of customer on its respective maximum use day. Staff states that this new factor "measures the relative maximum use of the facilities" by each class of customer and that "plant and operating costs of joint facilities used by various classes of customers should be allocated in proportion to the facilities which would be necessary to supply each class of customer." Staff offered no further elaboration. Staff is apparently arguing that the Relative Use method gives a better measure of the use of the pipeline by the various classes of customers than does Seaboard. Staff does not show in what way the addition of the factor of maximum use on the respective non-coincident peak days provides a better measure, or what is the economic significance of the non-coincident peak day.[6]

No party suggests that the Seaboard method is not satisfactory for purposes of this case. On brief Staff recommends the Relative Use method as a "possible alternative" to the Seaboard method. The evidence and argument presented are insufficient to justify the replacement of the Atlantic-Seaboard method by the Relative Use method in this proceeding.

---

[6] There are several unexplained features in the Staff's application of the Relative Use method including:

(1) Removal from the coincidental peak day sales of the interruptible purchases from TGT. No explanation is offered for making this apparent judgment modification in the Relative Use method and not in the Atlantic-Seaboard method.

(2) Reduction of the non-coincidental peak day purchases of interruptible customers by a factor determined by deducting the coincidental peak day sales from the non-coincidental peak day sales, and then dividing the remainder by the coincidental peak day sales. The use of this factor as a measure of interruptibility in service is not explained.

III

TEST YEAR: LIBERALIZED DEPRECIATION

In *Alabama-Tennessee Natural Gas Company*, 31 FPC 208 (1964), the Commission reached the following conclusions regarding the federal income tax consequences arising from the use by a pipeline of liberalized depreciation instead of straight-line depreciation.

1. Use of liberalized depreciation results in a permanent reduction of federal income taxes by pipelines which maintain either a growing or a stable plant.
2. Alabama-Tennessee, in particular, and the gas pipeline industry, in general, will maintain a growing or stable plant in the foreseeable future.
3. The prime purpose of permitting liberalized depreciation is to promote expansion in the capital goods industry. This result will best be subserved if the tax savings are reflected in lower rates, which will tend to generate higher sales, in turn requiring more capital facilities for gas transmission.
4. Therefore, where the pipeline is using liberalized depreciation and its plant is likely to be either growing or stable, its cost of service and rates should reflect the tax savings resulting from the use of liberalized depreciation. In other words, in these circumstances it must pass through the tax savings from liberalized depreciation to its customers.[7]

The Commission agreed to a stay issued by the Court of Appeals for the Fifth Circuit on condition that Alabama-Tennessee resume and continue the use of liberalized depreciation for federal income tax purposes and continue the use of the Commission prescribed tax accounts. In *Natural Gas Pipeline Company of America*, Opinion No. 456, March 18, 1965, 33 FPC 574, the Commission followed the *Alabama-Tennessee* decision.

In *United Gas Pipe Line Company*, Opinion No. 428, May 14, 1964, and *Wisconsin Michigan Power Company*, Opinion No. 432, June 9, 1964, 31 FPC 1445, the respondents had always used straight-line depreciation in filing their tax returns. In these circumstances the Commission permitted their cost of service and rates to be determined on that basis.

The Commission's decisions on this subject may be summarized thus: Where a pipeline is using liberalized depreciation the Commission requires that it lower its current rates to the extent that its current taxes are lowered as a result of its use of liberalized depreciation, provided the facts show that the use of liberalized depreciation probably will result in tax savings. Where a pipeline has never used liberalized depreciation its cost of service may be based upon the straight-line depreciation it is actually using.

ET had been using liberalized depreciation since the beginning of 1954. In December 1964, after the institution of this proceeding, ET's board of directors decided to switch to straight-line depreciation and to use this for its next federal income tax return, which is to be filed by September 15, 1965. Until then ET is free to file under liberalized depreciation. But if it then files on the basis of straight-line depreciation, thereafter it will not be able to change back to liberalized depreciation unless the Commissioner of Internal Revenue consents. ET's parent, TGT, continues to use liberalized depreciation wherever it is available. However, Midwestern, another subsidiary, has indicated an intention to switch to straight-line depreciation for tax purposes and this matter is being heard in *Midwestern Gas Transmission Company*, Docket No. RP61–19.

---

[7] The Commission further ruled that no return should be allowed on the accumulated reserves for deferred taxes arising from the past use of liberalized depreciation. The pipeline is permitted to continue to have the use of this capital interest free.

The issue in this case is new: do the facts of this case warrant the Commission's basing its tax allowance in the cost of service on liberalized depreciation where ET says it is switching from liberalized to straight-line depreciation for the reasons advanced?

Several factors bear on this issue:

1. *Future growth in plant facilities.* The annual additions to ET's gas plant facilities are shown in the table below:

Year	Annual additions to gas plant	Annual retirements to gas plant	Net annual additions to gas plant
1954	$5,417,104	$48,535	$5,368,569
1955	107,917	16,036	91,881
1956	292,188	39,478	252,710
1957	471,147	57,831	413,316
1958	174,023	8,026	165,997
1959	609,311	32,776	576,535
1960	450,011	67,923	382,088
1961	1,174,024	61,409	1,112,615
1962	388,286	48,402	339,884
1963	1,231,317	141,633	1,089,684
1964	6,668,182	50,335	6,617,847

Source: (1954-62, inclusive) FPC, Statistics of Natural Gas Companies; (1963-64) Annual Report (FPC Form No. 2) filed with the Commission by ET.

It is evident that over the years ET's facilities have been increasing.

The Tennessee and Virginia areas are growing at about the national average. For example, during the ten years 1954–63 personal income in the Tennessee area grew 62 percent and in the Virginia area 70 percent compared to a national average growth of 61 percent.[8] ET's growth should accompany that of the area. ET states "that the requirements of its existing customers increases an average of about 5 percent a year, so that there would be an increase, just normal growth of existing customers." While such increases in sales are not necessarily translated year by year into increased construction of facilities, in the long run they will tend to lead to increases in capacity because "as the customer requirements increase we will naturally have to beef up the system and increase the capacity." ET has pending an application in Docket No. CP65–66 for expansion which involves a substantial increase in facilities in the Tennessee area. Also it has now expanded into the Virginia area offering it new opportunities for further expansion.

Under the investment tax credit provisions ET can subtract seven percent of the cost of certain new property from its federal income taxes. This is a stimulus for ET to expand its facilities.

For these reasons it is reasonable to expect that ET will maintain a growing plant over the foreseeable future.[9]

2. *Need for increased sales and advantages of lower rates.* The success of the Virginia extension depends on an increase in sales. Yet ET's present rates to Roanoke are higher than those of Atlantic Seaboard Corporation, which also supplies Roanoke. ET was certificated into this competitive situation at its own request; higher rates will lessen its competitive ability. Also, ET's Tennessee zones are subject to competition by TVA; and in Docket No. CP64–270 Transcontinental Gas Pipe Line Corporation and Southern Natural Gas Company

---

[8] *Survey of Current Business*, August 1964, 1962, 1959. Personal Income By Major Source. Since Northern Virginia is growing faster than the rest of the state, it may be that the Roanoke and Bristol areas are growing less rapidly.

[9] No consideration has been given to the question whether in determining growth, ET should be considered as part of a consolidated group with its parent TGT.

seek to compete in ET's area. Lower rates will help ET develop its market and also meet competition in both the Virginia and Tennessee areas it serves.

3. *Lower rates with no loss in net income.* If ET uses liberalized depreciation it can reduce its cost of service and its rates by some $300,000 for the second year of operation for the Virginia extension, and some $450,000 for the third year of operation, while receiving the same net income as if it had used straight-line depreciation. (Appendix D).

4. *Rate stability.* ET advances two primary reasons for giving up liberalized depreciation: (a) "The rate treatment to be accorded pipeline companies by the Federal Power Commission who are utilizing liberalized depreciation is in a state of uncertainty because of appeals pending in the courts with respect to the Federal Power Commission's decisions in Opinion Nos. 417 and 417-A"; and (b) "East Tennessee is desirous of bringing about rate stability for the future."

The *Alabama-Tennessee* case has been argued in the Fifth Circuit and a decision is awaited. There is always the question whether the Commission's decision will be sustained on judicial review; this is true of every Commission decision of general import which is appealed. But ET offers no convincing reasons why the uncertainty in this instance has such adverse effects that it should abandon the advantages of liberalized depreciation.[10]

Under the decision in *Alabama-Tennessee* providing for flow-through to the customer of the benefits of liberalized depreciation and with abandonment of the tax deferrals ("normalization"), depreciation expense will tend to vary to some extent merely with the passage of time, which would not occur under straight-line depreciation.[11] This variance could result in some changes in taxes and in rates over time. However, for a company with the characteristics and size of ET, the difference in depreciation is not likely to be substantial in relation to the total cost of service, not more than a few percent. Also, the total cost of service is likely to be affected by many other factors over time. ET has a deferred tax reserve of $239,000 which it has collected from its customers in the past for the express purpose of offsetting higher taxes arising from the use of liberalized depreciation. ET is thus in a different position from a pipeline which has never used liberalized depreciation.[12]

The factor of rate stability primarily concerns the distributor customers. ET's customers participating in the hearing, Knoxville and the twenty-five companies associated with it, Chattanooga, and the Virginia extension, all want the rate savings arising from the continued use of liberalized depreciation even at the risk of some potential instability in rates.

5. *Managerial discretion.* ET on brief argues that the tax law gives it the option of computing its taxes either on the basis of straight-line depreciation or liberalized depreciation, and that to fix its rates on the basis of liberalized depreciation if it doesn't use this method "constitutes substitution of regulatory authority for managerial judgment and deprives the company of rights specifically granted it by the tax laws."

Whatever decision is made here, ET is free to choose its own method for filing its federal income taxes. The issue in this case is whether ET should be permitted to make its customers pay for what may be an unreasonable decision by its management. The issue in this case is whether ET, having just been authorized under the Natural Gas Act to expand into an area requiring rapid development if the results are to be economic, and whose distributors in other areas face competition—whether such a pipeline is fulfilling its duty under the Natural Gas Act to charge reasonable rates when it voluntarily takes an action that will substantially raise its costs and rates—for the reasons it has presented in this proceeding. There is an area of managerial discretion in pipeline management, but it is not a license to collect and spend the customer's money unreasonably. For here ET is insisting that its consumers bear the burden of its asserted managerial decision.

---

[10] In view of ET's expressed worry about uncertainty, it is surprising that it does not await the outcome of the Commission's decision on this subject before abandoning liberalized depreciation.

[11] While there will be a variance, under liberalized depreciation the variance is predictable in a particular situation.

[12] Where a pipeline has never used liberalized depreciation, it is arguable that requiring it to do so may involve policing problems. Since ET's accounts have been set up for liberalized depreciation the problem is diminished.

These statements by the Supreme Court and the Fifth Circuit are apposite:

> The contention is that the amount to be expended for these purposes is purely a question of managerial judgment. But this overlooks the consideration that the charge is for a public service, and regulation cannot be frustrated by a requirement that the rate be made to compensate extravagant or unnecessary costs for these or any purposes. *Acker* v. *United States*, 298 U.S. 426, 430 (1936).
>
> It is the obligation of all regulated public utilities to operate with all reasonable economies. This applies to tax savings as well as economies of management. *El Paso Natural Gas Co.* v. *Federal Power Commission*, 281 F. 2d 567, 573 (1960) cert. den. 366 U.S. 912.

The adoption of liberalized depreciation by a pipeline involves an evaluation of many factors. Perhaps because of this the Commission decided not to compel a pipeline to institute liberalized depreciation. In the present case, however, ET's management, after evaluating all the factors involved, decided that liberalized depreciation was desirable. Of the reasons given by ET for its proposed change from its original decision, the first, uncertainty because of pending court appeals, will be resolved in due course. The second, instability in rates is conjectural and not deemed substantial by those for whose benefit it is advanced—the distributor customers. ET has not shown that continued use of liberalized depreciation will adversely affect, it, its customers, or the public interest. Abandoning its established method will substantially raise its cost of service, raise its rates, adversely affect its customers'—and ET's—ability to develop the market, without apparent or demonstrated offsetting benefits. In these circumstances ET's proposal is improvident and unreasonable. The ambit of managerial discretion is exceeded by a proposal which will raise costs by some $300,000 and $450,000 for the insufficient reasons adduced at hearing and in brief. Accordingly, it is concluded that ET's test period cost of service should be based on liberalized depreciation, however ET chooses to file its federal income taxes.

IV

RATE OF RETURN

The proposals for rate of return range from 5.75 percent advocated by Knoxville, to 6.5 percent by staff and 7.25 percent width by ET.

Midwestern Gas Transmission Company, Opinion No. 444, decided October 13, 1964, 32 FPC 993, is almost an exact precedent. There the Commission allowed a return of 6.5 percent, which is the highest it has allowed for any substantial pipeline in a formal proceeding

ET is a subsidiary of Tennessee Gas Transmission Company (TGT) which owns some 89 percent of its stock just as it owns 90 percent of Midwestern's stock. The parent TGT controls ET, just as it controls Midwestern. TGT's officials determine policy for ET: for example, TGT's assistant comptroller supervises ET's accounting, and TGT's rate department is responsible for ET's rate matters. Four of ET's five witnesses were TGT officials.

ET's common stock is 35 percent of its capitalization and its debt 65 percent. In the *Midwestern* case the Commission found that a 6.5 percent over-all return (yielding a 9.26 percent return on Midwestern's equity) was "adequate to meet MGT's needs in attracting capital and preserving its financial integrity." (*supra*, p. 1000, 1001). A 6.5 percent over-all return on ET's capitalization would yield an 8.53 percent return on its equity.

Three factors affect ET's financial position more favorably than Midwestern's:

a. ET has a thicker equity, 35 percent compared to Midwestern's 20 percent, reducing the company's risk.

b. ET is an established company whereas Midwestern was a new company.

c. ET's non-jurisdictional gas business is more profitable than its jurisdictional business and is growing; Midwestern had no such non-jurisdictional business.

ET's non-jurisdictional business comes from its sales of interruptible gas to industrial concerns. These non-jurisdictional sales are made possible because of the Commission's certification of ET; they come from ET's jurisdictional pipeline built over a right-of-way acquired under ET's power of eminent domain. Under a 6.5 percent rate of return (equivalent to 8.53 percent return on equity) on jurisdictional business, the additional non-jurisdictional revenues are sufficient to increase the total return on equity to 11.7 percent. This compares favorably with the average return on equity (equivalent) of 9 percent for the five-hundred largest corporations in the United States for the year 1963, as shown by the Fortune Magazine Survey.

The Commission does not have jurisdiction over industrial sales. For this reason the non-jurisdictional costs are allocated out and the non-jurisdictional revenues excluded. But the non-jurisdictional business has consequences upon the financial situation of the company and its ability to raise capital because ET is a single company and investors can invest only in the company as a unit. If the non-jurisdictional business of ET produced a low rate of profit it would raise the cost of capital for ET; in such circumstances it would be idle for the Commission to philosophize about ET's ability to raise capital under a rate adequate for the jurisdictional business as a theoretical entity. The cost of capital for such a company would be what the market requires for that company as a whole to raise capital. Thus, the results of the non-jurisdictional business cannot be ignored as a factor in the financial picture of the company—which is what investors consider. As the Commission stated in *Alabama-Tennessee Natural Gas Company*, 27 FPC 1180, 1189 (1962):

> We have no jurisdiction over direct industrial rates and our methods of cost allocation are designed to exclude the related costs in fixing jurisdictional rates. Moreover, the rates of return we determine here for the jurisdictional business are those we deem necessary if the jurisdictional business is to provide its fair share of the return to which the company is entitled. Nevertheless, we need not close our eyes to the beneficial effects of such sales on the company's economic strength in valuating its ability to finance its operations.

And in *In the Matter of Mississippi River Fuel Corp.*, 11 FPC 288, 299 (1952), the Commission stated:

> A 6 percent return for Mississippi means that, on the part of the common equity and surplus deemed associated with the business over which we have rate jurisdiction, the stockholders would realize a return of approximately 9 percent. However, the direct industrial sales are not regulated, so the stockholders will likely realize a higher return on their investment.

The higher equity of ET and the favorable effects on ET's cost of capital of the non-jurisdictional business compensate for the 0.73 percent higher return which the 6.5 percent rate yields on Midwestern's equity.

With a 6.5 percent rate of return, ET should be in position to raise capital for new facilities, for it would be able to offer the public equity which would, in fact, yield over 11 percent.[13]

V

CONCLUSIONS ON COST OF SERVICE AND EXCESS EARNINGS

The cost of service for ET adjusted for both the second and third year of operation of the Virginia extension is shown in Appendix C. The methods used are the same as those used in the Staff cost of service, with these modifications: (a) the use of liberalized depreciation; (b) the exclusion of $60,000 from operating expenses for labor eliminated by automation; (c) inclusion in the rate base of the Elk river facilities which are jurisdictional; (d) although the Atlantic-Seaboard formula was applied with a mileage factor, no mileage factor here was applied to customer accounting expense, sales expense, and general expense, since these items do not vary with milage. *Northern Natural Gas Co.*, 14 FPC 11, 30 (1955).

The excess of jurisdictional revenues under current rates over jurisdictional costs determined pursuant to the principles set forth above, and adjusted for the second and third year of operation of the Virginia extension is shown on the following table:

	Excess revenues
Second year	$700, 000
Third year	819, 000

Source: Appendix F.

VI

RATE DESIGN

This section, Rate Design, discusses the methods for translating the required reductions arising from the excess revenues into appropriate rates.

1. *Participation of the Virginia Extension in Rate Reductions.*

ET's system has three zones. Zones 1 and 2 are in Tennessee and zone 3 is the Virginia extension. To determine Virginia rates, ET has adopted the same 25-cent differential per Mcf of demand and 2.5 cents per Mcf of commodity between zones 2 and 3 as has existed between zones 1 and 2. The present level of rates in the Virginia extension is slightly below that proposed in the certificate case because TGT (from whom ET purchases all its gas) subsequently reduced its rates to ET which in turn lowered its rates in all its zones.

The primary rate design question is whether the Virginia extension should participate in rate reductions resulting from excess revenues.

Knoxville and Chattanooga argue that rate reductions should not be extended to the Virginia extension because it is now receiving service at rates even below the level forecast in the certificate case, because the extension cost $1,900,000 more than estimated in the certificate case, because the interest cost on ET's debt, which was refunded and increased in part for financing the Virginia extension, exceeded the cost ET had estimated therefor in the certificate case, and because the revenues from Colonial will lag a year behind the original estimates. Staff and the Virginia extension argue that the Virginia extension should share in any rate reduction on the same basis as zones 1 and 2. ET asserts that its actions were reasonable and necessary to enable it to begin service to Virginia for the 1964–65 heating season. It argues only that the Virginia extension should be included in its cost of service, and that there are no excess revenues. But it takes no position on the issue whether, if there are excess revenues, the Virginia extension should share in rate reductions arising therefrom.

---

[13] Investment by TGT in additional equity of ET yielding 8.53 percent would provide a return of 18.5 percent to TGT's stockholders because of the leverage in TGT's common stock. TGT's common equity is 28 percent of its capitalization: TGT's chief financial officer arranged for ET to borrow money at 5.4 percent under a mortgage in November 1964, while the parent TGT sold debentures at 5 percent in December 1964. If TGT had raised the money for its subsidiary directly it would not have had the advantage of the resulting thin equity arising from its pyramided investment. Of course, TGT would secure the same return from any investment yielding a similar return on its equity. But industrials rarely have the capital leverage of ET.

Knoxville and Chattanooga do not claim that the additional costs and the revenue lag are due to such improvidence that they should be disallowed in this case, nor has proof been offered to warrant such a conclusion. These considerations are therefore irrelevant. As a matter of law, the Virginia extension is entitled to just and reasonable rates on the same basis as zones 1 and 2, as determined by the facts in this proceeding.

It is argued, chiefly by Staff, that since the differential adopted between zones 3 and 2 is the same as that between zones 1 and 2, the zone 3 differential rests on a historical basis which should not be changed. But there is no *a priori* reason why all zone differentials should be identical. There are many instances in the industry where zone differentials are not equal. The result should depend on the economic and operational facts. Moreover the history of the zone 3 differential dates only from December 1964, and a change is not likely to disrupt long established relationships. The historical relationship with respect to zone 3 is hardly a weighty factor on this issue.

A second consideration in rate design, competitive and demand factors, is also not decisive on the question whether zone 3 should participate in a rate reduction. Roanoke in zone 3 purchases from both Atlantic-Seaboard and ET. ET's rates are higher than Atlantic-Seaboard's and will be higher even under the reductions prescribed in this case. But at peak periods Roanoke purchases the maximum amounts of gas that are available from Atlantic; indeed it was because Roanoke could no longer obtain enough gas from Atlantic during the winter that made the extension by ET important to it. Although Roanoke is obligated to pay ET for minimum amounts under its partial requirements tariff, it is reasonable to expect that its purchases from ET would increase if the rates were lower. It is also reasonable to expect that lower rates in zones 1 and 2 would stimulate further growth there. The comparative results will depend on the shape of the demand schedule for the zones and the point on these respective schedules that has been reached. The record does not permit a conclusion whether net demand would be increased more by permitting Virginia to participate in rate reductions or by confining them to zones 1 and 2.

A third consideration in rate design is the relation between zone costs and zone revenues since this gives some indication of the comparative profitability or deficiency of each zone. The following table shows the excess or deficiency of revenues to costs by zones during the third year of operation of the Virginia extension under current rates and under the rates prescribed below:

Excess or (deficiency) over costs: Third year

Zone	Current rates	Prescribed rates
1	$815,000	$211,000
2	22,000	(9,000)
3	(19,000)	(202,000)

Source: Appendices F and G.

Knoxville and Chattanooga stress the deficiency in zone 3 under current rates. They argue that zone 3 should not participate in rate reductions at this time so that it will bear a greater share of its own burden. However, zone 2's excess revenues under current rates are slight and if its rates are reduced substantially it too will incur a deficit. Hence it is also arguable that zone 2 should not share fully in rate reductions. But the parties from zones 1 and 2, Chattanooga and Knoxville, assert that they have agreed that zone 1 will absorb zone 2's loss and that zone 2 should share in any rate reductions even though the excess arises from zone 1. They claim that this will not prejudice zone 3. But an increase in the differential between zones 2 and 3 can be prejudicial to zone 3 even though zone 1 bears zone 2's burden: *e.g.*, under the existing differential, the decision to build a factory in zone 2 or 3 may be marginal; whereas zone 2 might become more attractive if its rates were lowered but not zone 3's. Moreover any agreement between zones 1 and 2 is not controlling because rates are decided pursuant to the law and not by the private agreement of the parties.

In evaluating the zonal revenue-cost relationship, two elements which favor zone 3 should be considered. First, the costing allocations tend to increase the deficiency in zone 3 compared to the results in zones 1 and 2. This is because the third year results are obtained by combining the sales estimates for the third year for Virginia with sales estimates for the first year for the Tennessee zones. However, sales volumes in Tennessee will probably increase during the second and third years, although in the adjusted cost of service they are held constant. Since sales volumes are one of the bases of cost allocation, less costs are allocated to the Tennessee segment and more to the Virginia segment.

A second element favoring zone 3 is that it contributes a disproportionately large share of the total tax savings arising from liberalized depreciation. The Virginia extension constitutes some 25 percent of ET's total investment. But a considerable portion of the Tennessee segment was constructed before 1954 and is therefore not eligible for liberalized depreciation, whereas the Virginia extension facilities being new, are almost entirely eligible. The larger contribution made by the Virginia extension toward tax savings under liberalized depreciation is not fully revealed in the zonal cost-revenue results because the cost allocation formulae tend to spread this saving throughout the system.

At this stage the earnings differential between zones 1 and 3 is still substantial under the prescribed rates, though less than under the current rates. The differential is, however, mitigated when consideration is given to the distorting effects produced from spreading zone 3's excess contribution to tax savings across ET's system, and to the statistical bias which reduces the allocated costs of zones 1 and 2. Also ET estimates that in the fourth year sales in zone 3 will increase by a further $320,000, and this will tend to reduce the deficiency in that zone. Taking these matters into consideration, it is concluded that the reductions in rates should be applied to the three zones on an equivalent basis.[14]

2. *Method of Reducing Rates.*

It is uncontested that the two-part rates for jurisdictional sales in Tennessee as presently set recover more than the cost of service allocated to such sales and that the one-part rates for jurisdictional sales recover less than their cost of service. The methods for effectuating rate reductions recommended by Staff and Chattanooga and which are concurred in by Knoxville are sound. They apply the following principles to reduce the general rate level and also to readjust the relationship between the one-part and the two-part rates: (a) The present rates should be reduced so as to eliminate the over-all excess jurisdictional earnings; (b) the reductions should be in the commodity side only of the two-part rates; (c) the reduction in the two-part rates should be twice that of the one-part rates; (d) the interruptible rates should not be changed because these are largely based on competitive factors. The rates determined on the basis of these principles are set forth in Appendix H.

---

[14] In the table on *supra*, p. 561, the disparity between zones 1 and 3 is reduced from $834,000 under current rates to $413,000 under the rates prescribed below. Since the prescribed reductions are related to volumes and since zone 1 uses greater volumes than zone 3, the reduction in the rate per Mcf produces greater dollar savings in zone 1 than in zone 3. As a result, the excess of revenues in zone 1 is reduced more than the deficiency in zone 3 is increased.

VII

ADDITIONAL FINDINGS, CONCLUSIONS AND ORDER

ET's jurisdictional costs by zones adjusted for the second and third year of the Virginia operation are shown in Appendix E. The excess or deficiency by zones of jurisdictional revenues over jurisdictional costs adjusted for the second and third years of operation of the Virginia extension under current rates is shown in Appendix F. A similar comparison under the rates prescribed herein is shown in Appendix G. The current rates and the rates determined to be just and reasonable herein for the second and third year of operation of the Virginia extension are shown in Appendix H.

In addition to the foregoing, it is further found that:

(1) The rates of ET are unjust and unreasonable to the extent that they exceed the rates prescribed above;

(2) The rates of ET shall be fixed in accordance with the principles and at the levels set forth in the preceding portion of this decision.

ORDER

WHEREFORE, *It is Ordered*, subject to review by the Commission,

That the rates set forth in the foregoing decision be and they hereby are fixed as the lawful rates for ET to be hereafter observed and in force.

SEYMOUR WENNER,
Presiding Examiner

OPINION NO. 489

CITIES SERVICE GAS COMPANY, DOCKET NO. RP64–17

DECLARATORY OPINION AND ORDER DETERMINING JURISDICTION

(Issued April 20, 1966)*

Syllabus

1. Pipeline's sale to Army under Disciplinary Barracks contract is a nonjurisdictional direct sale. PP. 573; 582, *et seq.*
2. Since gas is sold under Fort Leavenworth contract for both direct and resale uses and sale for resale is identifiably separate from nonjurisdictional direct sale, Army is entitled to purchase the resale gas under pipeline's resale tariff without such rate being extended to the nonjurisdictional gas. P. 573.
3. Although gas for Disciplinary Barracks sale is commingled with gas for the Fort Leavenworth sale, the two sales are identifiably separate in their relevant respects so that the former remains a nonjurisdictional direct sale. P. 574.

---

*Initial decision appears on p. 578.

4. Commission observes that *City of Hastings* remains good law and is not affected by Supreme Court decision in *Lo-Vaca*. P. 574.
5. Unlike Federal Power Act, under Gas Act, Commission must certificate any sale for resale as well as any transportation of gas for purpose of making a direct sale. P. 575.
6. As a matter of law, no sale for resale may take place, regardless of contractual provisions therefor, without Commission authorization. P. 575.
7. Should pipeline be unwilling to apply for certificate covering the jurisdictional gas, Army has authority, under Section 7(a), to seek an order directing such sale. P. 575.
8. Construing Section 1(b) of the Natural Gas Act, Commission *issues* declaratory opinion and order *determining* jurisdiction.

Chairman White *not participating*.

Commissioner Ross *dissenting*.

Conrad C. Mount, C. H. Mullendore, Jr., Harry S. Littman, Jack Werner and *Melvin Richter* for Cities Service Gas Company.

Major James E. Macklin, Jr. and *Curtis L. Wagner, Jr.* for The Secretary of the Army.

Robert C. Londerholm and *E. Edward Johnson* for Kansas State Corporation Commission.

Joel Yohalem for the Staff of the Federal Power Commission.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

O'CONNOR, *Commissioner:*

The issue in this case is whether certain sales of natural gas by Cities Service Gas Company (Cities) to the U.S. Army (Army) at Fort Leavenworth, Kansas, are "sales for resale" within the meaning of Section 1(b) of the Natural Gas Act (Act), and so subject to the jurisdiction of the Federal Power Commission.[1] This issue first arose in Cities' rate case in Docket No. RP64-9, where Army contended that the sales, which had previously been regarded by Cities and Army as nonjurisdictional direct sales, are jurisdictional sales for resale under the Act. By order issued February 24, 1964, we provided that this issue be severed from Cities' rate proceedings and be determined by declaratory order, pursuant to Section 1.7(c) of our Rules of Practice and Procedure.

The facts of this case are fully described by Presiding Examiner Robert M. Weston in his initial decision issued January 26, 1965, and need only be summarized here. They disclose that the sales here in issue are made by Cities to Army under two contracts, which we shall refer to as the Disciplinary Barracks contract and the Fort Leavenworth contract. The examiner held that the sale under the Disciplinary Barracks contract is not jurisdictional. No party excepted to this conclusion. The examiner also held that the sale under the Fort Leavenworth contract is a jurisdictional sale for resale, since Army resells a portion of the gas bought from Cities under such contract. Cities filed exceptions to this conclusion, and Army and the Commission's Staff filed answers to such exceptions.

---

[1] Section 1(b) provides in part pertinent that "The provisions of this Act shall apply * * * to the sale in interstate commerce of natural gas for resale * * *, but shall not apply to any other * * * sale of natural gas * * *" Sales of gas not resold but consumed by the purchaser, *i.e.*, direct sales, are not subject to Commission jurisdiction. *F.P.C.* v. *Transcontinental Gas Pipe Line Corp.*, 365 U.S. 1, 4, (1961). There is no question but that the sales in this case are "in interstate commerce."

We affirm the examiner's conclusion that the Disciplinary Barracks sale is nonjurisdictional. However, we must reverse his conclusion that the Fort Leavenworth sale in its entirety constitutes a jurisdictional sale for resale. The facts are clear that only a small proportion—some 6.7 percent—of the gas covered by the Fort Leavenworth contract is resold. This sale for resale clearly is identifiably separate from the nonjurisdictional direct sale to Army for its own consumption which involves the great bulk of the gas. Consequently, while we believe for the reasons set forth below that the Army is entitled to purchase the gas it sells for resale under Cities' resale tariffs on file with this Commission, we do not see any basis for concluding that Cities must extend this same tariff rate to the gas it sells to the Army for its direct use.

The relevant facts are stipulated by Cities and Army and are not seriously disputed by any party. They reveal that Cities owns and operates a 16-inch transmission line extending from a point in northeastern Kansas to St. Joseph, Missouri. En route the line crosses the Fort Leavenworth, Kansas, military reservation where the sales to Army are made. At a point near the built-up area of the reservation, Cities operates a central meter from which volumes of gas flow into two laterals Cities owns and operates: a twelve-inch lateral (narrowing to six and four inches) which delivers gas to the Disciplinary Barracks; and a 6-inch lateral which delivers gas to the Federal Penitentiary under a contract with the Justice Department not in issue here. Cities' sale to Army under the Disciplinary Barracks contract, which involves interruptible service, is made at the end of the aforesaid Disciplinary Barracks lateral. Cities' sale to Army under the Fort Leavenworth contract, which involves firm service, is made principally from several taps on the above two laterals through which gas is delivered into small diameter lines operated by Army. Also, at the central meter, gas sold under the Fort Leavenworth contract flows directly into other Army facilities extending northward to housing in that area. The volumes of gas delivered to Army under the Disciplinary Barracks contract are actually measured, while the volumes delivered under the Fort Leavenworth contract are determined by deducting from the volume metered at Cities' central meter, the volume metered at the Disciplinary Barracks and the volume delivered to the Federal Penitentiary.

Cities commenced its sales to Army in 1928 and has continued them to the present time under successive contracts. Up to the time of the Army's intervening complaint here, Army and Cities always considered such sales to be nonjurisdictional direct sales. Likewise, on December 28, 1943, 4 FPC 471, five years after the enactment of the Natural Gas Act, we issued a certificate to Cities under the "grandfather clause" of Section 7(c), authorizing Cities to transport gas to Army as a mainline, industrial customer. Cities has never been required to file these contracts with the Commission, but has been furnishing them for informational purposes pursuant to Section 155.1 of the Commission's Regulations under the Act which provides for the filing of contracts and rate schedules for direct industrial sales. The present Fort Leavenworth contract, which is dated May 1, 1958, provides for termination by either party upon notice.

In concluding that the Disciplinary Barracks sale is not a jurisdictional sale for resale, the examiner relied primarily on *City of Hastings, Nebraska* v. *F.P.C.*, 221 F. 2d 31 (CADC–1954), cert. den., 349 U.S. 920 (1955). In that case, the City of Hastings filed a complaint with the Commission against a natural-gas company with respect to a direct sale by the company of gas the city consumed in its own power plant, which gas was commingled with gas resold in its distribution operations. The Commission dismissed the city's complaint for lack of jurisdiction over the direct sale. The court affirmed, holding that even though the gas for the two sales was commingled, the Commission had no jurisdiction over the direct sale, where in fact the direct sale and the sale for resale are in relevant respects identifiably separate transactions. On the facts of that case, the relevant factors included the rates, contracts, delivery points, measuring facilities, billing, and other features of the two transactions. Applying this holding to the facts of this case, the examiner concluded that although the gas for the Disciplinary Barracks sale is commingled with gas for the Fort Leavenworth sale (which latter sale he thought was jurisdictional), the two sales are in fact identifiably separate in their relevant respects so that the Disciplinary Barracks sale remains a nonjurisdictional direct sale.

We agree with the result reached by the examiner on this point. Specifically, we believe that the *City of Hastings* case remains good law and is not affected by the decision of the Supreme Court in *California* v. *Lo-Vaca Gathering Co.*, 379 U.S. 366. The facts are clear that none of the Disciplinary Barracks gas is resold. Considering the relevant factors, it is clear that whatever the status of the Fort Leavenworth sale, the Disciplinary Barracks sale is a direct sale.

Turning to Cities' sale under the Fort Leavenworth contract, to support his conclusion that Army's resale of a small portion of this gas makes the entire transaction a jurisdictional sale for resale, the examiner relied principally on *California Electric Power Co.* v. *F.P.C.*, 199 F. 2d 206 (CA9–1952), cert. den., 345 U.S. 934. In that case California Electric sold energy to Navy which resold approximately 18.7 percent to residents of a civilian housing project and private business concessionaires on the Depot. The circuit court held the entire flow to be a jurisdictional sale for resale primarily because it believed the commingling of the power sold to Navy made it impossible to identify separately or distinguish the sale of energy for consumption by Navy, and the sale for resale by Navy.

The *California Electric Power Company* case clearly cannot be determinative on this point in the light of the Supreme Court's subsequent decision in *United States* v. *Public Utilities Commission of California*, 345 U.S. 295, 316–318. For there, the Supreme Court made clear that while "the impossibility of separating interstate from intrastate electricity" once it is commingled, requires Federal rate jurisdiction over all sales of such power, the question of whether power from a commingled flow resold by the purchaser may be distinguished from power which the purchaser utilizes for its own purposes is "a different one." While the court did not find it necessary in that case to decide whether commingling of electric power at the generating source required entire Federal jurisdiction or whether it could be "proportionally limited," we think insofar as the transmission and sale of natural gas is concerned, in appropriate circumstances, it can. See *City of Hastings*, *supra*.

This does not dispose of the question we have before us. As the Supreme Court made clear in the *United States* v. *Public Utilities Commission of California*, *supra*, even assuming that there can be a proportional separation between the gas sold for resale and the gas sold for the purchaser's direct use, whether or not such a distinction had been made in a particular case "would turn, of course, on whether an essentially separate transaction covering the power directly consumed by the purchaser is identifiable." Moreover, the court made clear that (1) in the absence of such separate transactions the sale in its totality is jurisdictional and (2) it is not enough that "as an engineering proposition" the two uses be separately identifiable and instead that any jurisdictional bifurcation must be in terms of "separate rate, separate negotiations, separate contracts, or separate rate regulation by official bodies."

Nevertheless, the fact that both the Commission and the parties have previously treated the Cities-Army transaction as a single direct sale and the fact that the existing contract between Cities and the Army does not distinguish between that part of the gas which the Army uses for its own purposes and that which it resells, does not, in our opinion, mean either that the Army must continue to take all of its gas pursuant to the original direct sale authorization or that Cities must now sell all of the gas the Army purchases pursuant to its resale tariffs because some small part thereof is resold. On the contrary, the Natural Gas Act provides the appropriate remedy which is fully consistent with the decision of the Supreme Court in *United States* v. *Public Utilities Commission of California, supra.* Unlike the Federal Power Act, under the Natural Gas Act, the Commission must certificate any sale for resale as well as any transportation of gas for the purpose of making a direct sale. As a matter of law, no sale for resale may take place, regardless of contractual provisions therefor, in the absence of Commission authorization. Since it seems clear, in the light of the facts discussed above, that prior to the initiation of the Army's complaint herein, the Commission had not consciously authorized any sale for resale, the entire sale by Cities to the Army up to the time appropriate relief procedures, if necessary, are prescribed, must be treated as a sale for the Army's own use.

The fact that Cities sale to the Army was originally treated as a direct sale, and only the interstate transportation required therefor was previously certificated, does not, however, mean that we are without power to modify the certificate when it is properly brought to our attention that the original factual situation has changed. On the contrary, the Natural Gas Act provides a specific procedure for dealing with just this type of situation. For if Cities is unwilling to apply for a certificate to sell the Army under its jurisdictional tariffs whatever portions of the gas may be resold by the Army, the Army has the authority in view of its long and unchallenged right to receive service for the sales herein, under Section 7(a) of the Natural Gas Act to seek an order from the Commission directing Cities to sell gas to it under its appropriate resale tariff to the extent it is in fact reselling it. It is clear as the record before us that Army does separately identify, by separate billings based upon measurements or estimates, the customers or classes of customers to whom it resells gas. The Army need not fear that, if in the absence of agreement with Cities it finds itself required to exercise its right to cancel its existing contract and seek relief pursuant to the provisions of Section 7(a) of the Act, Cities could cease providing the Army with the gas it needs for its own consumptive uses. Regardless of the termination of contractual relationships between the two parties, Cities would not be authorized to abandon service to the Army in the absence of an order by the Commission pursuant to the provisions of Section 7(b) of the Act.

In short, we believe that, while the Army is not in a position here to require Cities to provide all of the gas it uses at Fort Leavenworth under Cities' resale tariffs, merely because a small percentage thereof is sold for resale, the Army does have the means to require Cities to sell it the portion of gas the Army resells within Fort Leavenworth at Cities applicable resale tariff. However, we shall not attempt herein to enter any definitive order implementing these views. Instead, we shall give the parties a reasonable time to conduct negotiations consistent with views expressed herein looking towards a mutually satisfactory resolution of their conflicting interests. In the event such negotiations are not fruitful the Army will, of course, be authorized to file such applications pursuant to Section 7(a) of the Act as it may then deem appropriate.

In view of the declaratory opinion rendered above, we shall terminate this proceeding, for no further immediate relief has been requested by the parties.

The Commission further finds:

Except for the volumes of gas in fact resold by Army referred to hereinabove and described more fully in the examiner's decision, sales to Army at issue in this proceeding are not "sales for resale" within the meaning of Section 1(b), and are not subject to the Commission's jurisdiction.

The Commission orders:

(A) The examiner's decision issued in this case on January 26, 1965, is adopted in part and reversed in part, as more fully set forth hereinabove.

(B) Except to the extent granted herein, the exceptions to the examiner's decision are denied.

(C) This proceeding is terminated.

Commissioner Ross *dissenting.*

Chairman White *not participating.*

Ross, *Commissioner, dissenting:*

At issue here is whether the sale of gas by Cities Service to the U.S. Army under the so-called Fort Leavenworth contract is a sale for resale in interstate commerce within the meaning of Section 1(b) of the Natural Gas Act. The parties have stipulated that the sale is in interstate commerce, so that the principal question is whether the Army resells the gas.

Under the Fort Leavenworth contract, the Army has a right to resell all or a portion of the gas. In addition, the majority does not dispute that the Army resells some of the gas. Indeed, the stipulation signed by all the parties lists the various persons and organizations to whom the Army makes resales, and Cities Service does not appear seriously to contest this point. Nor does the majority disagree that the authorities upon which Staff and the Examiner relied, notably the *California Electric Power Company* cases and the *City of Hastings* case, are controlling.[1] My disagreement with the majority centers on the meaning of these authorities. More specifically, our disagreement hinges on the significance of the resale by the Army of some of the gas it purchases under the Fort Leavenworth contract.

It seems clear that there can be a jurisdictional and non-jurisdictional sale of gas between the same parties. This was suggested by *U.S.* v. *P.U.C., supra,* and applied in the *City of Hastings, supra.* However, the Supreme Court established very precise guidelines controlling the jurisdictional determination of transactions. The Court held that the determinant for making a proportional division between jurisdictional and non-jurisdictional power sold in interstate commerce is the delineation of "sale for resale." That determination, in turn, hinges on whether an essentially separate transaction covering the power directly consumed by the purchaser is identifiable. In the *California* case, the Court found no such showing. It stated:

> The present record will not permit such a finding. It may be that as an engineering proposition, accurate measurement of the volume resold and the volume directly consumed by the two parties is possible for each billing period. But there is no record evidence of separate rates, separate

---

[1] *California Electric Power Company,* 10 FPC 152, affirmed 199 F. 2d 206, cert. den., 345 U.S. 934. *United States* v. *Public Utilities Commission of California,* 345 U.S. 295, which resulted from the same Commission's jurisdiction over the sales there in question; *City of Hastings* v. *F.P.C.,* 221 F. 2d 31 (D.C. Cir.) cert. den. 349 U.S. 920.

> negotiations, separate contracts or separate rate regulation by official bodies, in short that the "sales" themselves were separate, and it is in these terms that the Act would require us to fix the limits of the jurisdictional grant. (345 U.S. 318)[2]

There is, in this case, an example where this principle can be applied to limit federal jurisdiction. Cities Service has two contracts with the Army. One is the aforementioned Fort Leavenworth contract. The other is the Disciplinary Barracks contract. The latter constitutes an essentially separate transaction from the Fort Leavenworth agreement. The volumes sold thereunder are accurately measured and separately billed. All of the gas is used directly by the Army. While this gas is originally commingled with that sold under the Fort Leavenworth contract, this may be construed as a non-jurisdictional sale.

However, the same cannot be said for volumes sold under the Fort Leavenworth contract. There is but one Fort Leavenworth contract which does not involve "essentially separate transactions." Part of the gas is resold by the Army under this contract, and "there is no evidence of separate rates, separate negotiations, separate contracts, or separate rate regulations by official bodies." Thus, the Commission is without authority to split its jurisdiction under this single contract, and the entire transaction comes within the purview of the Gas Act.

There is a suggestion on page 575 of the opinion that the entire transaction must be treated as non-jurisdictional because "the Commission had not consciously authorized any sale for resale." This suggestion necessarily assumes that there is a substantial difference in the reach of Federal jurisdiction under the Natural Gas Act and the Federal Power Act on the basis of the certificate authority provided in the former. In other words, the same factual situation may be a sale for resale under the Power Act but not under the Gas Act, somehow because of the existence of certification of authority in the Gas Act. Apart from the basic difficulty in trying to comprehend how certification could possibly change the underlying factual situation where energy is sold for resale, for years, it has been assumed that the jurisdiction granted under both Acts was the same. Cases decided under one Act are used interchangeably by parties, commissions and courts in determining the meaning of the other. Indeed, in the *Colton* case,[3] which involved a question very similar to that presented here, the Supreme Court held:

> The Natural Gas Act grew out of the same judicial history as did the part of the Federal Power Act with which we are here concerned; and Section 201(b) of the Power Act has its counterpart in section 1(b) of the Gas Act, 15 U.S.C., section 717(b), which became law three years later in 1938.

While I certainly appreciate the difficulties experienced by the majority in preparing an opinion supporting its predetermined result, it nevertheless is asking a lot to accept the proposition that the Commission's certificate authority designed to give the Commission *more* authority, constitutes a basis for finding that the Commission was granted less.

Other readers may completely disagree that the majority made such an extreme suggestion. They may claim that the majority did not repudiate the California authorities in favor of a new test: "the Commission's conscious exercise of its certification authority." They would contend that this Commission would never abandon such sound authority of the California decisions in favor of speculating on the psychic taste of Commissions, long since departed, in issuing routine certificates. They too would point to language in the majority opinion also on page 575 which states that certification cannot control jurisdiction determinations "when * * * the original factual situation has changed." In other words, the basic factual situation, presumably in light of applicable legal precedent, and not certification is what controls jurisdictional determinations under the Gas Act, as well as the Power Act.

---

[2] The majority seems to agree with this statement of the law. I say seems to agree, because while the language of the *California* decision is correctly included in the opinion, as controlling, it is strangely not applied to the circumstances of this case, or otherwise used in reaching the decision.

[3] *F.P.C. v. Southern California Edison Co.*, 376 U.S. 205 (1964).

To some, a jurisdictional finding might represent a harsh decision since Cities Service always considered this a non-jurisdictional transaction. Fortunately, or unfortunately depending on one's point of view, jurisdictional determinations are not based on equitable factors. In any event, to the extent the majority seeks to achieve a "practical result" in this case, it should have considered the difficulty its decision creates. Under the decision, the volumes resold by the Army are subject to Cities Service's applicable interstate tariffs upon a 7(a) application by the Army. This means that annually, or even monthly, the Army may be filing successive 7(a) applications as the volume of its resales change. To the extent Cities Service disagrees with the Army's representations, the Commission is faced with a contested proceeding, a decision in which might well require an unconscionable period of time if this case is any example. This problem is highlighted by: 1) volumes billed under the Fort Leavenworth contract are not independently metered, and include line losses and other unaccounted-for gas; 2) the volumes resold by the Army are not metered, but only estimated. Thus, the decision here intensifies rather than resolves the issue.

In summary, I dissent to the majority's determination of the jurisdictional nature of the Fort Leavenworth contract. The record is clear that this gas moves in interstate commerce. It is further conceded that some of the gas is resold. Since essentially separate transactions are not involved, it necessarily follows that gas sold by Cities Service to the Army under this contract constitutes a sale for resale in interstate commerce within the meaning of Section 1(b) of the Natural Gas Act.

INITIAL DECISION

OF THE PRESIDING EXAMINER DETERMINING JURISDICTIONAL ISSUE

(Issued January 26, 1965)

WESTON, *Presiding Examiner:* This proceeding was instituted by order of February 24, 1964 as a "separate proceeding looking toward the issuance of a declaratory order" to settle a question first presented in the pending Cities Service rate case, Docket No. RP64–9. The question is, whether sales of gas by Cities Service to the U.S. Army at Fort Leavenworth, Kansas, are "sales in interstate commerce of natural gas for resale" within the meaning of Section 1(b) of the Natural Gas Act, and therefore subject to the jurisdiction of the Commission. The issue arises because the Army believes itself eligible to take most of such gas under Cities Service's Rate Schedule F–2, applicable to gas sold for resale, rather than under the terms of a certain contract described later.

Procedural matters. The facts were stipulated by Cities Service and the Army on July 1, 1964. Staff and the Kansas State Corporation Commission did not become formal parties to the stipulation, but have not presented other facts, or arguments in derogation of the stipulation. The stipulation and exhibits thereto will accordingly be accepted as the evidence herein. It should be noted that the stipulation has saved the parties and the consumers the needless expense of lengthy hearings.

On July 21, 1964, Cities Service moved for the omission of the intermediate decision procedure. The motion was opposed by Staff and the Army, and was denied by Commission order of August 5, 1964, 32 FPC 518.

Reply briefs were filed October 7, 1964. The Kansas State Corporation Commission, which had not filed an original brief, filed a reply brief which in general (1) states the existence of proceedings in their Docket 73,100–U for the determination of the jurisdiction of that Commission over the sales from Cities Service to the Army at Fort Leavenworth, (2) agrees with certain legal arguments made by Cities Service in its brief, and (3) draws attention to the possibility of administrative confusion if the sales are determined to be subject to both Federal and State regulation.

Staff Counsel on October 13, 1964 moved to strike substantially all such reply brief on the ground that the material therein "consists of arguments which should have been presented in an initial brief", and Staff Counsel also submitted responsive arguments for consideration in the event the motion to strike were to be denied. Staff's thesis in presenting the response is that if the Kansas presentation had been made in an initial brief, "Staff surely would have responded."

The matter is best settled by accepting Staff's alternative and considering both the Kansas brief and Staff's response. The motion to strike is denied and the Response of the Commission Staff filed October 13, 1964 is accepted for consideration as a brief filed herein.

On November 13, 1964 Cities Service moved for leave to file a supplemental brief, alleging that the reply briefs of the Army and the Staff "both contain new material and allegations." The motion was opposed by the Army and the Staff in respective filings of November 20 and 23, 1964. The proposed supplemental brief has been read. It contains no new material of substance, and extends unnecessarily the arguments on the basic issue contained in the initial and reply briefs. The motion is therefore denied.

Facilities and contracts in general. A Cities Service 16″ pipeline from the south en route to St. Joseph, Missouri traverses the Fort Leavenworth military reservation in Kansas. The built-up area of the reservation consists of two large installations—the U.S. Federal Penitentiary and the U.S. Army Disciplinary Barracks—and numerous houses, three schools, and a variety of commercial and recreational service facilities. Fort Leavenworth has its own gas distribution system, consisting of about 18 miles of distribution lines.

At a point where the 16″ pipeline enters the built-up area, Cities Service has located a metering station, which measures the input. Two Cities Service laterals originate at the metering station: a 12″ high pressure main part way, succeeded by a 6″ and a 4″ main, goes to the Disciplinary Barracks; and a 6″ main goes to the Penitentiary.

Several taps on these Cities Service laterals feed gas into the Army's distribution system. At the metering station, one tap takes gas down a 4″ distribution line along Biddle Boulevard. On the Disciplinary Barracks lateral, taps feed into three distribution lines serving various houses and buildings in the area. On the Penitentiary lateral two taps feed into the lines serving the Capehart Housing Area.

The gas is sold under the terms of two contracts between Cities Service and the Army which the parties describe as the "Fort Leavenworth", or principal contract, and the "Disciplinary Barracks" contract. In general, the Fort

Leavenworth contract of May 1, 1958 provides for firm service of unlimited quantities of gas into the Army's distribution system through the taps just described. In general, the Disciplinary Barracks contract of November 5, 1957 provides for interruptible service to the said Barracks, which lie at the end of one of the two laterals just described, and where the gas served to the Barracks is metered. The rate provided by the principal contract is 31 cents per Mcf. The rate for the Disciplinary Barracks contract starts at 47 cents per Mcf for the first 300 Mcf each month, and decreases to 32 cents per Mcf for the next 700 Mcf and 22 cents per Mcf for all additional gas taken during the given month.

The Fort Leavenworth contract recites an estimated maximum demand of 200 Mcf per hour, 4,000 Mcf per day, and 300,000 Mcf per annum at an estimated annual cost as of the date of the contract of $84,000 (based on the rate of 31 cents per Mcf for deliveries from July 1, 1959 to date). In contrast to the actual measurement of gas delivered under the Disciplinary Barracks contract, the "total volumes of gas sold and delivered under the terms of the Fort Leavenworth contract are determined by deducting from the amount metered at" the Cities Service input metering station described above, (a) "the amounts metered and delivered" at the Disciplinary Barracks and (b) the amounts delivered at the Penitentiary. (Stip., par. 11). It will be noted that under this method, the Army bears the cost of line losses and unaccounted-for gas, and that the Fort Leavenworth contract therefore involves a small degree of estimation of actual deliveries rather than the metering of actual deliveries.

As mentioned above, the gas sold to the Army under the Fort Leavenworth contract is supplied by the Army over its own distribution system to housing and service consumers. Some of these consumers pay the Army for the gas service. The following table, derived from Exhibit 9 and the Cities Service annual Form 2 reports, shows for the years 1961, 1962 and 1963 the Mcf and dollar amounts of gas (a) purchased by the Army, and (b) supplied by the Army to paying customers:

	1961		1962		1963	
	Mcf	Dollars	Mcf	Dollars	Mcf	Dollars
(a)	718, 886	$222, 854. 66	725, 280	$224, 836. 80	724, 973	$224, 741. 63
(b)	47, 501	19, 825. 40	48, 957	20, 351. 48	48, 287	20, 118. 13

The Army and its consumers. There are about 152 housing and other facilities supplied with gas sold by the Army and included in the above line (b) totals. Three principal categories of such sales are sales to—(1) 128 sets of inadequate housing, in which families have elected to live at rentals less than their quarters allowance, and who pay monthly charges on account of gas and other services, (2) "private associations * * * permitted by the Army to operate within Fort Leavenworth because of participation therein, or benefits accruing therefrom, to Army personnel assigned to Fort Leavenworth and/or their dependents" (Stip., par. 17), including three public schools, and (3) 12 occupants of quarters, "who, as civilians or foreign liaison officers, are authorized to live in Government quarters, but who must pay both for rental and for utility service," and as to which the "flat monthly charge for gas furnished by the Army varies depending upon the size of the quarters and the appliances used." (Stip. par. 18.)

Relatively minor amounts of gas and revenues are involved in service to other paying customers, such as: Armed Forces Co-operative Insurance Association, Boughton Memorial (Masonic Lodge), Post Nursery, Beauty Shop, Book Department, Party Shop, various post exchanges, coffee and barber shops, a restaurant, a filling station, a golf club and a hunt club. As to all categories except the "128 sets of inadequate housing" (who pay flat amounts for gas, as well as flat amounts for other utility service)[1] "a statement of account for natural gas, among other things, is sent at the end of each month by the Finance and Accounting Division, Fort Leavenworth" to the consumer, and the consumer then "pays in cash, or remits a check" for his charges, whereupon the said Division credits the funds from gas payments "to the appropriation from which Cities is paid for gas purchased by the Army under the Fort Leavenworth contract." (Stip. par. 19.)

General considerations of fact. Cities Service has been selling gas to Fort Leavenworth since July 1, 1928 under successive contracts; it was not until September 25, 1963 that the Army advanced its claim that it was entitled to a "sale for resale" rather than a contract rate. Cities Service since 1948 has furnished the Commission with copies of the contracts pursuant to Sec. 155.1 of the Regulations under the Natural Gas Act, covering "the direct sale of natural gas to industrial consumers for consumption where such contract involves the sale of 100,000 Mcf per year or more."

The total amount of gas sold to paying customers, which the Army claims are "sales for resale" under the Natural Gas Act, during the test years 1961–1963 inclusive amounted to only about 6.7% of the total volumes purchased under the Fort Leavenworth contract. All the rest of the gas was paid for by the Army.

According to paragraph 7 of the stipulation, at no time prior to September 25, 1963 "did the Army advise Cities nor was Cities aware that the Army allegedly was reselling a portion of the gas sold to the Army under the Fort Leavenworth contract."

According to paragraph 22 of the Stipulation, "some of the gas purchased from Cities under the Fort Leavenworth contract is used in the Government housing of types not previously mentioned", *i.e.*, to service personnel who receive "housing and utilities at Government expense."

Discussion of the facts. As is clear from the exhibits to the stipulation, Leavenworth shares the characteristics of a typical Army post. It is a substantially self-contained compound, providing utility and other services to meet the living requirements of families and personnel stationed there. From the standpoint of gas engineering, the service to the Fort Leavenworth distribution system is indistinguishable from service to a system supplying civilians. See "General Gas Map," Exhibit 6 herein. Fort Leavenworth can for all practical purposes relevant to gas consumption be characterized as a "company town". The town has certain "industries"—including the Disciplinary Barracks—related to the military establishment. The town is also the site of the Federal Penitentiary, which as a matter of common knowledge is operated by the Department of Justice. Cities Service supplies the heating and other gas needs of the military establishment and its paying customers.

The fact that the supply under the Fort Leavenworth contract is under firm, rather than interruptible, commitment is not without significance. Firm service is consistent with service to other Cities Service distribution customers under its Rate Schedule F–2. The distinction between the Army and other distribution customers is that the Army pays for the gas service to some of the consumers (military personnel who live in adequate quarters, and receive "housing and utilities at Government expense", Stip., par. 22), and collects money for gas service only from certain other categories of consumers using a relatively minor proportion of total consumption. The record is silent as to the proportion of total consumption used by Army personnel who receive utility service at Government expense.

---

[1] The sales to this category are billed on the basis of estimates of consumption which are in turn based on tables for the various kinds of gas appliances and heaters. (Exh. 9.) As a matter of bookkeeping, the Army makes a single debit by adding the separate amounts for rent, gas, and other services and enters the debit in on the military pay vouchers of each service person living in the inadequate quarters. (Stip., par. 20.)

Contentions of the parties. In general, Staff concedes, and the Army does not contend otherwise, that the Disciplinary Barracks contract does not involve a sale for resale and is not subject to the Commission's jurisdiction. Staff and the Army argue that some of the supply under the Fort Leavenworth contract is resold, and that all of such supply is therefore jurisdictional.

In general, Cities Service, supported by the Kansas Commission, argues that the Army does not really resell the gas supplied to the occupants of the inadequate quarters and the other paying customers described above, and that the Fort Leavenworth contract is non-jurisdictional, because (a) "the bulk of these alleged resales are not metered'" but estimated, (b) the resales are not typically to civilians, but to military personnel and tenants of Army housing and service units, (c) the sale to the tenants of Army housing is "only a bookkeeping transaction", (d) if resales are made, they are *de minimis* and without Cities Service's knowledge, and finally (e) under the circumstances, the Commission's jurisdiction should be limited at most to the amounts resold, as to which the Commission should "allow Cities a reasonable opportunity to negotiate a separate contract with the Army." Initial Brief of Cities Service, *passim*.

The arguments of all parties are based on a thoroughgoing analysis of the judicial precedents, ably presented by Major Macklin, Staff Counsel, and counsel for Cities Service, backed by the Kansas Commission. In view of the numerous pending cases involving the coverage of Section 1(b) of the Natural Gas Act, rather extensive quotations from the authorities are warranted.

The Disciplinary Barracks Contract and the City of Hastings Case

We have seen that the Cities Service lateral to the Disciplinary Barracks also serves Fort Leavenworth's distribution system, from which, as later concluded herein, some sales for resale are made by the Army. We have seen that the Disciplinary Barracks contract and physical connection is separate and distinct from the principal contract and the supply thereunder in respect of metering, rates, type of service, and billing.

In *City of Hastings* v. *F.P.C.*, 221 F. 2d 31 (CADC), cert. denied, 349 U.S. 920, Hastings bought gas at the town border under two contracts; (1) Rate Schedule G–1, applicable to gas for resale by the City, and (2) a contract covering supply to the City's electric power plant (the supply being through City facilities covered by a transportation charge), at which point the gas for this industrial use was separately measured. The Court held that since the Commission had found with basis "the existence of separate rates, separate billings, separate negotiations, separate contracts, separate allocation of gas and effective separate measurement facilities" (221 F. 2d at 36), a delivery of the power plant gas at the meter at the power plant, and an intentional exclusion of the gas there supplied from the G–1 resale rate schedule, the Commission's conclusion—that it had no jurisdiction to require the utility to supply the power plant gas under its G–1 resale rate schedule—should be affirmed. Judge Fahy dissented.

On the authority of this case, Staff concedes that sales under the Disciplinary Barracks contract are non-jurisdictional. The Army does not argue otherwise. See also *Panhandle Eastern Pipe Line Co.* v. *P.S.C. of Indiana*, 332 U.S. 507, and *Panhandle Eastern Pipe Line Co.* v. *P.S.C. of Michigan*, 341 U.S. 329.

Staff recognizes, however, that the issue is not entirely settled. In *United States* v. *Public Utilities Commission of California*, 345 U.S. 295, the utility generated electricity in California and delivered it in the same State to Navy lines, which transmitted the power to Hawthorne, Nevada, where it was stepped down and used in the Navy's ammunition depot, "largely in official industrial operations; between 15% and 29%, however, is distributed for consumption in the private households and enterprises of tenants at the Navy's low-cost housing project nearby." (345 U.S. at 298.)

The Supreme Court reversed a California determination asserting jurisdiction over the rates for this and another sale, stating the relevant crucial issue to be whether the sale to the Navy is a "sale for resale," which the Court said was a "different" problem from the problem whether sales are "in interstate commerce." The Court found the "sale for resale" issue "not ripe for our consideration" in the absence of evidence "whether an essentially separate transaction covering the power directly consumed by the purchaser is identifiable." (345 U.S. at 317–18.) The record did not contain evidence as to the existence or non-existence of "separate rates, separate negotiations, separate contracts or separate rate regulation by official bodies, in short that the "sales" themselves were separate * * *." (345 U.S. at 318.)

Staff (Br. 4) construes this case to be a reservation of judgment on the issue of whether or not an essentially separate direct sale is nonetheless subject to Commission jurisdiction where the supply is commingled with supply furnished for resale. The Supreme Court notes (345 U.S. at 318, ftn. 28) the decision in *California Electric Power Co.* (later cited and considered herein), "now pending before us on a petition for certiorari," with a more complete record, holding that the so-called "Penn Water" case, later discussed, controlled where direct supply was commingled with resale supply. The Supreme Court, citing cases, concludes the footnote as follows: "We do not decide the question but rather note that the Commission's own view of the matter may still be in the formative stage."

In view of Cities Service's extensive reliance thereon (Br. 29–31, Reply Br. 4–5), it is appropriate to consider more carefully Mr. Justice Reed's observation, noted above, that the "in interstate commerce" issue is "different" from the "sale for resale" issue. (345 U.S. at 317). Cities Service does not adduce any *reasons* for a rule distinguishing case (a)—"where some of the supply is interstate, all of the supply is jurisdictional"—from case (b)—"where some of the supply is for resale, all of the supply is jurisdictional". No distinction can be built upon the language of Section 1(b) of the Act. As will be seen, the Ninth Circuit, in the case cited by Mr. Justice Reed, in footnote 28 cited above, found no distinction in principle, and used authorities on the "in interstate commerce" issue to decide the "sale for resale" issue.

On careful consideration, in the context here presented, it is concluded that the (1) "in interstate commerce" issue is substantially identical to the (2) "sale for resale" issue, and that the authorities bearing on the first issue are not only pertinent, but controlling on certain arguments and contentions advanced by Cities Service herein relating to the second issue. In both cases, the utility seeks to escape Federal regulation by way of contractual arrangements in the form of non-jurisdictional sales (intrastate sales in the one case, direct sales in the other). In both cases, the utility eludes or seeks to discount the engineering and scientific facts as to the flow of utility service—in part interstate in the one case, in part for resale in the other. In both cases, the utility relies on matters of subjective intent expressed in the contracts—the intent that the gas or electricity is destined for consumption intrastate, or the intent that the sales are not "for the purpose, or at the very least, with a view to such resale". (C. S. Br., 24) In both cases, the contractual arrangements may or may not reflect the operating realities.

There may be factual situations in which the judicial authorities dealing with the interstate commerce issue have no relevance to problems of whether or not the utility is selling gas for resale, on a showing that the gas is actually resold. To conclude our consideration of Mr. Justice Reed's observation, we may note that the facts, arguments and policy of the "sale for resale" issue in the case at bar are identical with the facts, arguments and policy of the many authorities on the "in interstate commerce" issue, and that no distinction in principle has been shown.

However, the facts as to the supply of gas over the lateral to the Disciplinary Barracks do not present a clear cut controverted issue of commingled supply. Cities Service owns the lateral. The gas furnished to the Disciplinary Barracks is measured at the end of the line under an interruptible contract. The gas taken off from the taps on the line is charged to the Army under the Fort Leavenworth firm contract. The paying customers are not affected by prices charged for gas at the Disciplinary Barracks. We therefore may accept *City of Hastings* as controlling as a matter of sound administrative discretion for the purposes of this case, without an acceptance rising "to the dignity of an agency 'policy' " (345 U.S. at 314) applicable under other circumstances of commingled supply.

The Fort Leavenworth Contract and the Controlling Authorities

In *California Electric Power Co.* v. *F.P.C.*, 199 F. 2d 206 (CA9), cert. denied, 345 U.S. 934, reh. denied 345 U.S. 961, referred to and made controlling by Mr. Justice Reed in the case just discussed, the Federal Power Commission order *inter alia* directed California Electric Power Company to charge the Navy only the Commission-filed rates for power supplied for ultimate consumption at the Naval Depot, Hawthorne, Nevada. The presently relevant issue was whether or not the sale to the Navy was "for resale within the intendment of the Act." (199 F. 2d at 209.) The Navy used the power for its various facilities at the Depot, and resold an average of 18.7% to residents of a housing project occupied by Depot employees and business concessions serving such employees. The utility contention that the sales were not for resale was based on (a) the minor percentage resold, (b) the low rate charged by the Navy, (c) lack of reference to resale in the utility–Navy contract, and (d) the want of any intention to deliver power for resale.

The Ninth Circuit held the lack of "express agreement or an intention on the Company's part that the energy shall be resold" immaterial, where the Commission had found actual resales and knowledge thereof. As to the low rates charged by the Navy—equally applicable to billing methods by way of Army estimates involved in the case at bar—"the public interest is involved in the Company's rate to the Navy," rather than "whether the burden of possibly excessive rates were to fall on the ultimate consumers of the energy or on the nation's taxpayers." (199 F. 2d at 209.)

On the broad issue, the court says (199 F. 2d at 209–210)—

> Here, as in the Penn Water case, the supposed nonjurisdictional part of the energy is indistinguishable at the point of sale from the remainder. Moreover the amount resold is not constant, but fluctuating. The Com-

> mission contends that it is not practicable to segregate the jurisdictional part. It seems clear, although petitioner contends otherwise, that the only mode of segregation would be by separating the two loads and supplying each by an independent transmission line from the point of metering and purchase to the Depot. * * * It would create untold difficulty and confusion if petitioner's argument in respect of severability for rate regulation purposes were to be given countenance.

Finally, this case disposes of the Cities Service "*de minimis*" and "dual jurisdiction"[2] contentions by reference to the "Penn Water" case (*Pennsylvania Water and Power Co.* v. *F.P.C.*, 343 U.S. 414, 419–20). In that case, the Supreme Court, dealing with the allegation that about 83% of Pennsylvania generated power was sold by the Pennsylvania utility to Pennsylvania customers, held that the Federal Power Commission had "complete authority to regulate all of this commingled power flow." It is important to note that the Ninth Circuit thus used a case involving the "in interstate commerce" issue as an authoritative disposition of the conventional contentions in connection with the "sale for resale" issue.

Unless viable distinctions, so far not even essayed, can be made between these two issues in the context of the facts presented in the case at bar, *Connecticut Light & Power Co.* v. *Federal Power Commission*, 324 U.S. 515, disposes of the *de minimis* argument presented by Cities Service. There, the Court first cites the utility's contention and then rules in the following successive portions of the opinion (p. 535–6)—

> that the volume of energy passing over certain of these facilities is insignificant in proportion to the total. Only about one-fifth of one percent of all the energy received and generated by the Company throughout the State of Connecticut was transmitted out of the state during the time of the connection of Fishers Island with the Borough of Groton. Congress appears to have left to the Commission's sound administrative discretion to determine whether or not to assert its authority in such situations. * * * We do not find that Congress has conditioned the jurisdiction of the Commission upon any particular volume or proportion of interstate energy involved * * *.

The final Cities Service argument about the Fort Leavenworth contract that is worthy of note is the argument that Cities Service did not know about the Army's resales, and did not intend to supply the Army with gas for resale. It should certainly be apparent by this time from the 25-year history of Supreme Court authorities that *scienter* is not the touchstone of Federal regulation. See in an exactly analogous situation involving the "in interstate commerce" issue, *Jersey Central Power & Light Co.* v. *Federal Power Commission*, 319 U.S. 61, as clarified by the approach taken in the dissenting opinion, pp. 82–84.[3]

Conclusion. Under the authorities, there is a single flow of gas in interstate commerce "for resale for ultimate public consumption for domestic, commercial, industrial, or any other use" within the meaning of Section 1(b) of the Natural Gas Act from Cities Service to the Army and the Army's customers under the Fort Leavenworth contract. This contract must be filed as a rate schedule with the Commission. The price and other provisions of the contract are subject to price and other regulation by the Commission.

---

[2] The argument, as stated by Judge Healy, that "the percentage [of power or gas] consumed by the Navy [here, the Army] should be held subject to State regulation, and only the part resold regarded as subject to regulation by the Commission." 199 F. 2d at 209.

[3] Cities Service cites the *Catco* case, 360 U.S. 378, 387–8, to the point that the undertaking of jurisdictional service is a "matter of wholly voluntary choice", and that it did not know of the sales for resale, and has not chosen to make such service. (Br. 27). The *Catco* case observation was made in and is pertinent to a totally different context. In the case at bar, and all other pertinent cases, the deliberate action taken by the utility in hooking up its lines determines its status with regard to Federal regulation.

ORDER

WHEREFORE, *It is Ordered*, subject to review by the Commission, that Cities Service Gas Company shall in accordance with Section 4 of the Natural Gas Act and the applicable portions of Part 154 of the Commission's Regulations under the Natural Gas Act file its contract of May 1, 1958 with the United States Army as a Rate Schedule, and shall in respect of such Rate Schedule comply with all the requirements of the Natural Gas Act and the Commission's Regulations thereunder.

ROBERT M. WESTON,
Presiding Examiner.

TEXACO INC., DOCKET NO. RI66-333

DECLARATORY ORDER WITH RESPECT TO SECTION 2.56(B)(2) OF THE COMMISSION'S GENERAL POLICY AND INTERPRETATIONS

(Issued April 20, 1966)

Texaco Inc. (Texaco) on March 21, 1966, in connection with some of the proposed rate increases subsequently suspended in the above-entitled proceeding by order issued April 1, 1966,[1] requested clarification of the interpretation of Section 2.56(b)(2) of the Commission's General Policy and Interpretations which relates to settlements under the Second Amendment to the Commission's Statement of General Policy No. 61-1. These proposed increased rates do not reflect the tax reimbursement increases which Texaco by its request for clarification seeks the right to file. Although the original notices of change did reflect such tax reimbursement increases they were revised to exclude them pending Commission action on Texaco's motion. All of the underlying rates herein, except for certain sales under Texaco's Rate Schedule No. 55,[2] are 14.6¢ settlement rates approved by the Commission in accordance with the Second Amendment.

Section 2.56(b)(2) provides in pertinent part:

> For rate schedules from which all price escalation clauses are being eliminated except for periodic escalation provisions as specified below and provisions for future changes in tax reimbursement, the area price level for increased rates for natural gas sales by independent producers in Texas District Nos. 2, 3, 4, and 6 is 14.6 cents per Mcf at 14.65 psia, including tax reimbursement: *Provided, however*, that such revised rate schedules may contain escalation clauses providing future separate increases in rate not in excess of one cent per Mcf, * * *

Texaco claims that this section does not purport to limit provisions for future changes in tax reimbursement, and, in fact, specifically exempts such clauses from those required to be eliminated. Texaco therefore contends that under this section it is entitled to file for any tax reimbursement authorized by its contracts in addition to its undisputed right to file for the one cent periodic escalation authorized by such contracts. Texaco argues that if Section

---

[1] Texaco's request relates only to its Rate Schedule Nos. 54, 55, 56, 57, 58, 132, 137, 141, 260, 261, and 263.

[2] Since the rate for such sales was not approved under the Second Amendment, they are not involved in the subject issue.

2.56(b)(2) is interpreted as imposing a one cent total increase limitation on its right to file, then the language authorizing rate increases for future changes in tax reimbursement becomes superfluous.

The settlement rates set forth in the Second Amendment are inclusive of tax reimbursement at the existing rates. Similarly, the right to file in the future for one cent increases from time to time has also been interpreted consistently, to be inclusive of any right under the contract to tax reimbursement (except as noted below). The sole purpose in allowing a producer to retain a tax reimbursement provision in its contract is that in the event the State of Texas were to increase the rate of its production tax above 7%,[3] or to impose a new tax on the producer, which it has not done, the producer from a contractual viewpoint would be in a position to file for a rate increase relating to that portion of the tax increase which the buyer had agreed to reimburse it. The producer under the Second Amendment was thus protected against any unforeseen tax increase which might take effect subsequent to the approval of a settlement. The tax increases sought here by Texaco clearly do not fall into this category. Accordingly, we conclude that Texaco has no right at this time under the subject rate schedules to file for tax reimbursement increases in addition to the one cent increases suspended in the above-entitled proceeding.

The Commission orders:

For the reasons set forth above, it is determined that Texaco's interpretation of Section 2.56(b)(2) of the Commission's General Policy and Interpretations as contained in its request for clarification is not correct, and that Texaco is not entitled at this time to file for rates in excess of those now under suspension in Docket No. RI66-333.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

UTAH POWER & LIGHT COMPANY, PROJECT NO. 814

ORDER APPROVING REVISED PROJECT EXHIBIT K AND ADJUSTING ANNUAL LAND CHARGES

(Issued April 20, 1966)

On July 1, 1965, as supplemented on December 13, 1965, Utah Power & Light Company, licensee for Project No. 814, filed for Commission approval revised prints of license Exhibit K (FPC No. 814-46) showing the acreage of public and private lands within the project area and the metes and bounds description of the subject area following the reconstruction of the LaBaron Dam, authorized by the Commission in its February 18, 1965, 33 FPC 297, order amending the license for the project. The filings were accompanied by letters authorizing our staff to reflect the revisions on the license Exhibit K. The filings were made pursuant to Article 24 which was included in the license by the February 18, 1965 order.

The project is situated on LaBaron Creek in Beaver County, Utah, and affects lands of the United States within the Fishlake National Forest.

The revised Exhibit K shows that the project area has been reduced by narrowing the margin of land around the LaBaron reservoir. Specifically lands of the United States occupied by the reservoir have been reduced from 41.35 acres to 32.50 acres, with a resultant reduction in the amount of annual charges for the occupancy of such lands by the project.

---

[3] The 7% production tax became effective on September 1, 1956, and has remained at that level ever since that time.

The Commission finds:

(1) Exhibit K (FPC No. 814–46), revised by our staff to reflect the reduction in lands of the United States presently occupied by the project, conforms to the Commission's rules and regulations and should be approved as part of the license for the project.

(2) The decreased amount of annual charges for recompensing the United States for the occupancy of its lands by the project is reasonable as hereinafter fixed and specified.

The Commission orders:

(A) Exhibit K (FPC No. 814–46) entitled "LaBaron Reservoir Dam Reconstruction", as revised, is hereby approved as part of the license for Project No. 814.

(B) Subparagraph B of Article 17 of the license is hereby amended, effective as of January 1, 1966, as follows:

> B. For the purpose of recompensing the United States for the use, occupancy, and enjoyment of its lands, $204.35.

(C) This order shall become final 30 days from the date of its issuance unless application for rehearings shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this order. In acknowledgment of the acceptance of this order, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

CITY OF BROOKSVILLE, KENTUCKY AND KENTUCKY GAS TRANSMISSION CORPORATION, DOCKET NO. CP66–152

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued April 21, 1966)

On November 15, 1965, the City of Brooksville, Kentucky (Applicant) filed in Docket No. CP66–152 an application, as supplemented on December 23, and 29, 1965, pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Kentucky Gas Transmission Corporation (Respondent) to establish physical connection of its transmission facilities with the proposed facilities of Applicant and to sell natural gas to Applicant for resale and distribution in Brooksville, and environs, all as more fully set forth in the application, as supplemented, in this proceeding.

Applicant proposes to construct and operate 4.74 miles of 4-inch lateral pipeline from the proposed connection with Respondent's 24-inch transmission line to Brooksville in Bracken County, Kentucky. Applicant will also construct and operate the necessary distribution facilities to provide the proposed service.

Applicant's estimated peak day and annual requirements are:

Year	Mcf	
	Peak day	Annual
1	141	21,830
2	240	37,286
